John Kaisershot , Dickinson called. His phone number is 1-701-227-0109. He reminded me that he was one of the people who attended the MDU Natural Gas Hearing in Dickinson last year. Today he was calling about the proposed increase in MDU electric prices. He said that MDU stock has gone from a –18% return on Oct. 1, 2002 to +32% return as of July 3, 2003. I told him that I would put this information in the public input file

Dear Mrs. Beaudoin:

Thank you for writing us concerning your MDU gas rate increase. In 2002, Montana Dakota Utilities filed an application with the Public Service Commission to increase its gas utility rates for North Dakota customers. MDU was authorized to implement an increase in rates effective December 12, 2002.

Almost the entire increase approved by the Commission for natural gas service is noticed in the "Basic Service Charge" which is now expressed as 29 cents per day. Before January 18, the basic service charge was $6.50 per month.

Another increase you might notice is in the PGA. This increase is primarily an increase in the price of the natural gas purchased by MDU from gas producers. A gas utility typically buys gas wholesale and sells it to customers at cost. In the current situation, higher gas prices are the result of price increases at the wellhead for what is called commodity gas. Natural gas is a commodity, and the price of natural gas shifts depending on supply and demand. The price of commodity gas was deregulated by Congress starting in 1978, with state and federal regulators having no jurisdiction over the commodity price. Rather, the market sets the price largely on the basis of actual and expected supply and demand conditions. Changes in the price of commodity gas get passed through to consumers on a monthly basis through a "gas adjustment" mechanism. That price fluctuates from month to month and has been going up the last couple months.

Sincerely,

Sharon Helbling

Public Service Commissioners

I would like to thank you for the 1½ increase on the Natural gas prices. To me it doesn't Make much sense to increase your give to Them so they Can go out buy up more Business the rich get richer and poorer get more poor. Turn your Thermostat down to 60 at Nite and 65 in the day time and your Gas prices are still high. Ya people Wonder about the Economy going up. Have Can it go up, When Jobs go up 200.00, Gas gets way up and the increase in your Natural Gas prices don't help it one bit. We are tired. I think you people we elect should thinking about the people that are making ends meet house payments and raising a family. or is it just the me game.

We are tired of and living on a
fixed income. Maybe ok should
pitch a tent and live in it.
You like people to stay in state of No Dak.
the low wages & high taxes don't
help and but plus the high utilities Bills
Thank you
Sincerely Myrtle Beaudoin

Mrs. Myrtle Beaudoin
1706 6th St NW
Minot, ND 58703-1304

Dear Mrs. Beaudoin,

Thank you for your concern about North Dakota. I agree with you that it is hard for young people to make a good living in North Dakota. That is often the case in rural states and rural areas with limited resources and business enterprises. The Public Service Commission is not directly involved in state economic development activities. However, we work hard to keep electric and gas rates as low as possible and hopefully that will aide in the development of business activity.

Your letter speaks of high gas prices in 2000 as well as projected increases of 45% for this winter. The prices seen in early 2000 were extremely unusual and record gas prices were set all over the country. The prices you pay for natural gas are based on the cost of the gas itself, transmission costs to get it to town and then distribution costs to deliver the gas around town. Of these three components, the commission has regulatory control over the distribution costs. These costs change during rate cases and are normally quite small and infrequent.

The cost of gas itself is market driven and goes up and down depending on available supply and demand for gas. The U.S. gas supply comes from domestic wells, foreign imports and gas in storage. Once that available supply begins to erode, prices go up to reflect the change in the availability of gas. The opposite is true when extra gas reserves are available. The cost of the gas itself is primarily responsible for the big changes in natural gas bills. This is true for 2000 and the projected increases this winter. The cost of gas is not controlled by the commission or any other governmental agency but reflects current market conditions normally found in the buying and selling of any commodity.

Based on current gas storage levels, it is unlikely that we will see 45% increases in natural gas prices. However, there are many factors that can

affect the supply and demand of natural gas making it impossible to predict its price with any degree of certainty.

I hope this letter is useful. Thanks again for your interest in our state and the price of natural gas.

Sincerely,

Mike Diller

10-29-02,

To the Public Service Commission

I recently heard there is a 45% increase in our heating bills. I myself think it outrageous. We went to a Meeting here at the College in Jefferson Hall. I can't quite understand as a Caring person. How you people that we vote in, give these big companies these increases. As you people know many young people work for less than $8.00 pay hr hours on their Homes and try to raise a family and pay all their utilities besides. Just because some people are born with a gold spoon in their mouths. Is a sign Everyone has the same chance. We vote for these

Attention Tony
and Rest of Industrial Comm. members

I'm ~~co~~writing in Regard to the Increase in the price of M.D.U. gas that they want to take effect I think this is a very excessive increase. I'm a council member in a small town in western N.D. and we are trying to keep our Resident's in there homes as long as we can so the propety taxes are paid and not returned to the city. We have a lot of elder people in our community and they are on a fixed income and they have trouble with these extra bills. I personally dont see why M.D.U. needs such an increase to double there base charge. I hope you people consider this increase very careful for everybodies good not just M.D.U.'s.

RE: Case No. PU-399-02-183

Dear Ms. Heidt:

Thank you for your recent letter concerning MDU recent natural gas rate increase application. Your letter has been filed in the Public Input file for this case, and copies have been provided to the Commissioners.

We appreciate your interest. The formal hearing on this matter has been scheduled for October 7, 2002 in the Commission Hearing Room on the 12th Floor of the Capitol Building. You are welcome to attend. Public Input sessions have also been scheduled, one in Dickinson. A copy of the Notice of Hearing is enclosed.

Sincerely,

This is not a good time to raise utility rates for Montana-Dakota. The economy is at a stand still. Full time jobs are replaced by part-time or lost. Early retirement is asked for with lost benefits.
Take a look at the top wages and out of control bonus packages MDU is handing out to their executives.
Perhaps they could put a freeze on their wages.
I hope you consider the economy before you grant the increase.

Sincerely,
Eulalie Hiedt

Name of Respondent	This Report is:	Date of Report (Mo, Da, Yr)	Year of Report
MDU Resources Group, Inc.	(1) X An Original (2) __ A Resubmission	12/31/2001	Dec 31, 2001

NOTES TO FINANCIAL STATEMENTS (Continued)

NOTE 1
Summary of Significant Accounting Policies
Basis of presentation
The consolidated financial statements of MDU Resources Group, Inc. and its subsidiaries (company) include the accounts of the following segments: electric, natural gas distribution, utility services, pipeline and energy services, natural gas and oil production, and construction materials and mining. The electric and natural gas distribution segments and a portion of the pipeline and energy services segment are regulated. The company's nonregulated operations include the utility services, natural gas and oil production, and construction materials and mining segments, and a portion of the pipeline and energy services segment. For further descriptions of the company's business segments see Note 10. The statements also include the ownership interests in the assets, liabilities and expenses of two jointly owned electric generation stations.

The company's regulated businesses are subject to various state and federal agency regulation. The accounting policies followed by these businesses are generally subject to the Uniform System of Accounts of the Federal Energy Regulatory Commission (FERC). These accounting policies differ in some respects from those used by the company's nonregulated businesses.

The company's regulated businesses account for certain income and expense items under the provisions of Statement of Financial Accounting Standards No. 71, "Accounting for the Effects of Regulation" (SFAS No. 71). SFAS No. 71 requires these businesses to defer as regulatory assets or liabilities certain items that would have otherwise been reflected as expense or income, respectively, based on the expected regulatory treatment in future rates. The expected recovery or flowback of these deferred items is generally based on specific ratemaking decisions or precedent for each item. Regulatory assets and liabilities are being amortized consistently with the regulatory treatment established by the FERC and the applicable state public service commissions. See Note 2 for more information regarding the nature and amounts of these regulatory deferrals.

Prior to the sale of the company's coal operations as discussed in Note 10, intercompany coal sales, which were made at prices approximately the same as those charged to others, and the related utility fuel purchases are not eliminated in accordance with the provisions of SFAS No. 71. All other significant intercompany balances and transactions have been eliminated in consolidation.

Allowance for doubtful accounts
The company's allowance for doubtful accounts as of December 31, 2001 and 2000, was $5.8 million and $4.1 million, respectively.

Property, plant and equipment
Additions to property, plant and equipment are recorded at cost when first placed in service. When regulated assets are retired, or otherwise disposed of in the ordinary course of business, the original cost and cost of removal, less salvage, is charged to accumulated depreciation. With respect to the retirement or disposal of all other assets, except for natural gas and oil production properties as described below, the resulting gains or losses are recognized as a component of income. The company is permitted to capitalize an allowance for funds used during construction (AFUDC) on regulated construction projects and to include such amounts in rate base when the related facilities are placed in service. In addition, the company capitalizes interest, when applicable, on certain construction projects associated with its other operations. The amount of AFUDC and interest capitalized was $6.6 million, $5.2 million and $1.7 million in 2001, 2000 and 1999, respectively. Generally, property, plant and equipment are depreciated on a straight-line basis over the average useful lives of the assets, except for natural gas and oil production properties as described below.

Name of Respondent	This Report is:	Date of Report (Mo, Da, Yr)	Year of Report
MDU Resources Group, Inc.	(1) X An Original (2) _ A Resubmission	12/31/2001	Dec 31, 2001

NOTES TO FINANCIAL STATEMENTS (Continued)

Goodwill and other intangible assets
The excess of the cost over the fair value of net assets of purchased businesses is recorded as goodwill and was being amortized on a straight-line basis over estimated useful lives for recorded goodwill in place at June 30, 2001. However, Statement of Financial Accounting Standards No. 142, "Goodwill and Other Intangible Assets" (SFAS No. 142), which the company adopted as of January 1, 2002, as discussed later in Note 1, requires the discontinuance of goodwill amortization for the company's recorded goodwill at June 30, 2001, on January 1, 2002. Goodwill acquired after June 30, 2001, was subject immediately to the nonamortization provisions of SFAS No. 142.

Goodwill, net of accumulated amortization, was $174.2 million and $91.4 million as of December 31, 2001 and 2000, respectively. Goodwill is included in deferred charges and other assets. Goodwill amortization expense was $4.8 million, $7.0 million and $2.0 million for 2001, 2000 and 1999, respectively.

Impairment of long-lived assets and intangibles
The company reviews the carrying values of its long-lived assets, including goodwill and identifiable intangibles, whenever events or changes in circumstances indicate that such carrying values may not be recoverable and annually for goodwill as required by SFAS No. 142. The determination of whether an impairment has occurred is based on an estimate of undiscounted future cash flows attributable to the assets, compared to the carrying value of the assets. If an impairment has occurred, the amount of the impairment recognized is determined by estimating the fair value of the assets and recording a loss if the carrying value is greater than the fair value. In 2000, the company experienced significant changes in market conditions at one of its energy marketing operations, which negatively affected the fair value of the assets at that operation. Due to the significance of the decline, the company recorded an impairment charge against goodwill of $3.9 million after-tax in 2000. The amount related to this impairment is included in depreciation, depletion and amortization. Excluding this impairment, no other long-lived assets or intangibles have been impaired and accordingly, no other impairment losses have been recorded in 2001, 2000 and 1999. Unforeseen events and changes in circumstances could require the recognition of other impairment losses at some future date.

Impairment testing of natural gas and oil properties
The company uses the full-cost method of accounting for its natural gas and oil production activities. Under this method, all costs incurred in the acquisition, exploration and development of natural gas and oil properties are capitalized and amortized on the units of production method based on total proved reserves. Any conveyances of properties, including gains or losses on abandonments of properties, are treated as adjustments to the cost of the properties with no gain or loss recognized. Capitalized costs are subject to a "ceiling test" that limits such costs to the aggregate of the present value of future net revenues of proved reserves based on single point in time spot market prices, as mandated under the rules of the Securities and Exchange Commission, and the lower of cost or fair value of unproved properties. Future net revenue is estimated based on end-of-quarter spot market prices adjusted for contracted price changes. If capitalized costs exceed the full-cost ceiling at the end of any quarter, a permanent noncash write-down is required to be charged to earnings in that quarter unless subsequent price changes eliminate or reduce an indicated write-down.

Due to abnormally low spot natural gas prices that existed on the last trading day of the third quarter of 2001, the company's capitalized costs under the full-cost method of accounting exceeded the full-cost ceiling at September 30, 2001. The lower natural gas prices were largely attributable to a sharp decline in nationwide spot market prices, especially natural gas prices in the Rocky Mountain region, over a relatively short period of time following the terrorist attacks on New York and Washington, D.C. on September 11, 2001, and prior to October 1, 2001. Oil prices likewise experienced a sharp drop during this same period. The company believes the decline in natural gas prices did not reflect

Name of Respondent	This Report is:	Date of Report	Year of Report
MDU Resources Group, Inc.	(1) X An Original (2) __ A Resubmission	(Mo, Da, Yr) 12/31/2001	Dec 31, 2001

NOTES TO FINANCIAL STATEMENTS (Continued)

the economics of its production assets in that natural gas prices actually being received by the company at the end of the third quarter of 2001 were significantly higher than the spot market prices at that time. In addition, historic natural gas prices have also generally been much higher and only a small portion of the company's natural gas is sold using spot market pricing. As of September 30, 2001, the capitalized costs exceeded the full-cost ceiling and would have resulted in a write-down of the company's natural gas and oil properties in the amount of approximately $32 million after-tax. However, subsequent to September 30, 2001, natural gas prices both nationwide and in the Rocky Mountain region increased significantly, thereby eliminating the need for a write-down of the company's natural gas and oil producing properties.

At December 31, 2001, the company's full-cost ceiling exceeded the company's capitalized cost. However, sustained downward movements in natural gas and oil prices subsequent to December 31, 2001, could result in a future write-down of the company's natural gas and oil properties.

Natural gas in underground storage
Natural gas in underground storage for the company's regulated operations is carried at cost using the last-in, first-out method. The portion of the cost of natural gas in underground storage expected to be used within one year is included in inventories and amounted to $28.6 million and $11.0 million at December 31, 2001 and 2000, respectively. The remainder of natural gas in underground storage is included in property, plant and equipment and was $43.1 million and $43.6 million at December 31, 2001 and 2000, respectively.

Inventories
Inventories, other than natural gas in underground storage for the company's regulated operations, consist primarily of materials and supplies of $22.5 million and $20.4 million, aggregates held for resale of $31.1 million and $22.7 million and other inventories of $13.1 million and $9.9 million as of December 31, 2001 and 2000, respectively. These inventories are stated at the lower of average cost or market.

Revenue recognition
Revenue is recognized when the earnings process is complete, as evidenced by an agreement between the customer and the company, when delivery has occurred or services have been rendered, when the fee is fixed or determinable and when collection is probable. The company recognizes utility revenue each month based on the services provided to all utility customers during the month. The company recognizes construction contract revenue at its construction businesses using the percentage-of-completion method as discussed below. The company recognizes revenue from natural gas and oil production activities only on that portion of production sold and allocable to the company's ownership interest in the related well. The company generally recognizes all other revenues when services are rendered or goods are delivered.

Percentage-of-completion method
The company recognizes construction contract revenue from fixed price and modified fixed price construction contracts at its construction businesses using the percentage-of-completion method, measured by the percentage of costs incurred to date to estimated total costs for each contract. Costs in excess of billings on uncompleted contracts of $29.7 million and $13.9 million for the years ending December 31, 2001 and 2000, respectively, represents revenues recognized in excess of amounts billed and is included in accounts receivable. Billings in excess of costs on uncompleted contracts of $17.3 million and $8.0 million for the years ending December 31, 2001 and 2000, respectively, represents billings in excess of revenues recognized and are included in accounts payable. Also included in accounts receivable are amounts representing balances billed but not paid by customers under retainage provisions in contracts which amounted to $20.5 million and $13.7 million as of December 31, 2001 and 2000, respectively.

NOTES TO FINANCIAL STATEMENTS (Continued)

Advertising
The company expenses advertising costs as incurred and the amount of advertising expense for the years 2001, 2000 and 1999, was $2.9 million, $2.0 million and $1.3 million, respectively.

Natural gas costs recoverable or refundable through rate adjustments
Under the terms of certain orders of the applicable state public service commissions, the company is deferring natural gas commodity, transportation and storage costs which are greater or less than amounts presently being recovered through its existing rate schedules. Such orders generally provide that these amounts are recoverable or refundable through rate adjustments within a period ranging from 24 months to 28 months from the time such costs are paid. Natural gas costs refundable through rate adjustments amounted to $27.7 million and $8.8 million for the years ended December 31, 2001 and 2000, respectively, and are included in other accrued liabilities.

Income taxes
The company provides deferred federal and state income taxes on all temporary differences. Excess deferred income tax balances associated with the company's rate-regulated activities resulting from the company's adoption of SFAS No. 109, "Accounting for Income Taxes," have been recorded as a regulatory liability and are included in other accrued liabilities. These regulatory liabilities are expected to be reflected as a reduction in future rates charged customers in accordance with applicable regulatory procedures.

The company uses the deferral method of accounting for investment tax credits and amortizes the credits on electric and natural gas distribution plant over various periods which conform to the ratemaking treatment prescribed by the applicable state public service commissions.

Earnings per common share
Basic earnings per common share were computed by dividing earnings on common stock by the weighted average number of shares of common stock outstanding during the year. Diluted earnings per common share were computed by dividing earnings on common stock by the total of the weighted average number of shares of common stock outstanding during the year, plus the effect of outstanding stock options and restricted stock grants. For the years ending December 31, 2001 and 1999, 150,630 shares and 76,500 shares, respectively, with an average exercise price of $36.86 and $23.44, respectively, attributable to the exercise of outstanding options were excluded from the calculation of diluted earnings per share because their effect was antidilutive. For the year ending December 31, 2000, there were no shares excluded from the calculation of diluted earnings per share. For the years ending December 31, 2001, 2000 and 1999, no adjustments were made to reported earnings in the computation of earnings per share. Common stock outstanding includes issued shares less shares held in treasury.

Use of estimates
The preparation of financial statements in conformity with accounting principles generally accepted in the United States requires the company to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Estimates are used for such items as property depreciable lives, tax provisions, uncollectible accounts, environmental and other loss contingencies, accumulated provision for revenues subject to refund, costs on construction contracts, unbilled revenues and actuarially determined benefit costs. As additional information becomes available, or actual amounts are determinable, the recorded estimates are revised. Consequently, operating results can be affected by revisions to prior accounting estimates.

Name of Respondent	This Report is:	Date of Report (Mo, Da, Yr)	Year of Report
MDU Resources Group, Inc.	(1) X An Original (2) __ A Resubmission	12/31/2001	Dec 31, 2001

NOTES TO FINANCIAL STATEMENTS (Continued)

Cash flow information
Cash expenditures for interest and income taxes were as follows:

Years ended December 31,	2001	2000	1999
		(In thousands)	
Interest, net of amount capitalized	$42,267	$41,912	$30,772
Income taxes	$75,284	$30,930	$32,723

The company considers all highly liquid investments purchased with an original maturity of three months or less to be cash equivalents.

Reclassifications
Certain reclassifications have been made in the financial statements for prior years to conform to the current presentation. Such reclassifications had no effect on net income or stockholders' equity as previously reported.

New accounting pronouncements
In June 2001, the Financial Accounting Standards Board (FASB) approved Statement of Financial Accounting Standards No. 141, "Business Combinations" (SFAS No. 141). SFAS No. 141 requires that all business combinations be accounted for using the purchase method of accounting. The use of the pooling-of-interest method of accounting for business combinations is prohibited. The provisions of SFAS No. 141 apply to all business combinations initiated after June 30, 2001. The company is accounting for business combinations after June 30, 2001, in accordance with SFAS No. 141.

In June 2001, the FASB approved SFAS No. 142. SFAS No. 142 changes the accounting for goodwill and intangible assets and requires that goodwill no longer be amortized but be tested for impairment at least annually at the reporting unit level in accordance with SFAS No. 142. Recognized intangible assets with determinable useful lives should be amortized over their useful life and reviewed for impairment in accordance with Statement of Financial Accounting Standards No. 144, "Accounting for the Impairment or Disposal of Long-Lived Assets" (SFAS No. 144). The provisions of SFAS No. 142 are effective for fiscal years beginning after December 15, 2001, except for provisions related to the nonamortization and amortization of goodwill and intangible assets acquired after June 30, 2001, which were subject immediately to the provisions of SFAS No. 142. The company adopted SFAS No. 142 on January 1, 2002. The company ceased amortization of its recorded goodwill at June 30, 2001, on January 1, 2002. Goodwill at each reporting unit will be tested for impairment as of January 1, 2002. The company will perform this transitional goodwill impairment test within six months of the date of adoption of SFAS No. 142. However, the amounts used in the transitional goodwill impairment test shall be measured as of January 1, 2002. The company believes the adoption of the goodwill impairment provisions of SFAS No. 142 will not have a material effect on its financial position or results of operations.

In June 2001, the FASB approved Statement of Financial Accounting Standards No. 143, "Accounting for Asset Retirement Obligations" (SFAS No. 143). SFAS No. 143 requires entities to record the fair value of a liability for an asset retirement obligation in the period in which it is incurred. When the liability is initially recorded, the entity capitalizes a cost by increasing the carrying amount of the related long-lived asset. Over time, the liability is accreted to its present value each period, and the capitalized cost is depreciated over the useful life of the related asset. Upon settlement of the liability, an entity either settles the obligation for the recorded amount or incurs a gain or loss upon settlement. SFAS No. 143 is effective for fiscal years beginning after June 15, 2002. The company will adopt SFAS No. 143 on January 1, 2003, but has not yet quantified the effects of adopting SFAS No. 143 on its financial position or results of operations.

Name of Respondent	This Report is:	Date of Report	Year of Report
MDU Resources Group, Inc.	(1) X An Original (2) __ A Resubmission	(Mo, Da, Yr) 12/31/2001	Dec 31, 2001

NOTES TO FINANCIAL STATEMENTS (Continued)

In August 2001, the FASB approved SFAS No. 144. SFAS No. 144 supersedes Statement of Financial Accounting Standards No. 121, "Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to Be Disposed Of." SFAS No. 144 addresses accounting and reporting for the impairment or disposal of long-lived assets, including the disposal of a segment of a business. SFAS No. 144 is effective for fiscal years beginning after December 15, 2001. The company adopted SFAS No. 144 on January 1, 2002. The adoption of SFAS No. 144 did not have an effect on the company's financial position or results of operations.

The company adopted Statement of Financial Accounting Standards No. 133, "Accounting for Derivative Instruments and Hedging Activities" (SFAS No. 133), amended by Statement of Financial Accounting Standards No. 137, "Accounting for Derivative Instruments and Hedging Activities - Deferral of the Effective Date of FASB Statement No. 133" and Statement of Financial Accounting Standards No. 138, "Accounting for Certain Derivative Instruments and Certain Hedging Activities" (all such statements hereinafter referred to as SFAS No. 133) on January 1, 2001. SFAS No. 133 establishes accounting and reporting standards requiring that every derivative instrument (including certain derivative instruments embedded in other contracts) be recorded on the balance sheet as either an asset or liability measured at its fair value. SFAS No. 133 requires that changes in the derivative instrument's fair value be recognized currently in earnings unless specific hedge accounting criteria are met. Special accounting for qualifying hedges allows derivative gains and losses to offset the related results on the hedged item in the income statement, and requires that a company must formally document, designate and assess the effectiveness of transactions that receive hedge accounting treatment.

SFAS No. 133 requires that as of the date of initial adoption, the difference between the fair market value of derivative instruments recorded on the balance sheet and the previous carrying amount of those derivative instruments be reported in net income or other comprehensive income (loss), as appropriate, as the cumulative effect of a change in accounting principle in accordance with APB 20, "Accounting Changes." On January 1, 2001, the company reported a net-of-tax cumulative-effect adjustment of $6.1 million in accumulated other comprehensive loss to recognize at fair value all derivative instruments that are designated as cash-flow hedging instruments, which the company reflected in earnings over the 12 months ended December 31, 2001. The transition to SFAS No. 133 did not have an effect on the company's net income at adoption.

Comprehensive income
Upon the adoption of SFAS No. 133 on January 1, 2001, the company recorded a cumulative-effect adjustment in accumulated other comprehensive income to recognize all derivative instruments designated as hedges at fair value. As of December 31, 2001, the company has recorded unrealized gains and losses on swap agreements in accordance with SFAS No. 133. These amounts are reflected in the Consolidated Statements of Common Stockholders' Equity. For additional information on the adoption of SFAS No. 133, see new accounting pronouncements in Note 1, and Note 3. For the years ended December 31, 2000 and 1999, comprehensive income equaled net income as reported.

NOTE 2
Regulatory Assets and Liabilities
The following table summarizes the individual components of unamortized regulatory assets and liabilities included in the accompanying Consolidated Balance Sheets as of December 31:

	2001	2000
	(In thousands)	
Regulatory assets:		
Deferred income taxes	$ 13,417	$ 263
Long-term debt refinancing costs	6,829	8,125
Plant costs	2,499	2,668

Name of Respondent	This Report is:	Date of Report	Year of Report
MDU Resources Group, Inc.	(1) X An Original (2) __ A Resubmission	(Mo, Da, Yr) 12/31/2001	Dec 31, 2001

NOTES TO FINANCIAL STATEMENTS (Continued)

Postretirement benefit costs	722	833
Other	5,929	7,052
Total regulatory assets	29,396	18,941
Regulatory liabilities:		
Natural gas costs refundable through rate adjustments	27,706	8,772
Taxes refundable to customers	12,318	11,656
Plant decommissioning costs	8,243	7,601
Reserves for regulatory matters	7,132	6,087
Deferred income taxes	5,661	3,554
Other	5,053	1,193
Total regulatory liabilities	66,113	38,863
Net regulatory position	$ (36,717)	$ (19,922)

As of December 31, 2001, substantially all of the company's regulatory assets, other than certain deferred income taxes, are being reflected in rates charged to customers and are being recovered over the next one to 15 years.

If, for any reason, the company's regulated businesses cease to meet the criteria for application of SFAS No. 71 for all or part of their operations, the regulatory assets and liabilities relating to those portions ceasing to meet such criteria would be removed from the balance sheet and included in the statement of income as an extraordinary item in the period in which the discontinuance of SFAS No. 71 occurs.

NOTE 3
Derivative Instruments
As of December 31, 2001, the company held derivative instruments designated as cash flow hedging instruments. All derivative instruments are recognized on the Consolidated Balance Sheets at fair value.

Hedging activities
The cash flow hedging instruments in place at December 31, 2001, are comprised of natural gas and oil price swap agreements. The objective for holding the natural gas and oil price swap agreements is to manage a portion of the market risk associated with fluctuations in the price of natural gas and oil on the company's forecasted sales of natural gas and oil production. The company also entered into an interest rate swap agreement which expired in the fourth quarter of 2001. The objective for holding the interest rate swap agreement was to manage a portion of the company's interest rate risk on the forecasted issuance of fixed-rate debt under Centennial Energy Holdings, Inc.'s (Centennial), a direct wholly owned subsidiary of the company, commercial paper program. The company designated each of the natural gas and oil price swap agreements as a hedge of the forecasted sale of natural gas and oil production and designated the interest rate swap agreement as a hedge of the risk of changes in interest rates on the company's forecasted issuances of fixed-rate debt under Centennial's commercial paper program.

The company's policy allows the use of derivative instruments as part of an overall energy price and interest rate risk management program to efficiently manage and minimize commodity price and interest rate risk. The company's policy prohibits the use of derivative instruments for speculating to take advantage of market trends and conditions and the company has procedures in place to monitor compliance with its policies. The company is exposed to credit-related losses in relation to hedged derivative instruments in the event of nonperformance by counterparties. The company has policies and procedures, which management believes minimize credit-risk exposure. These policies and procedures include an evaluation of potential counterparties' credit ratings, credit exposure limitations, settlement of natural gas and oil price swap agreements monthly and settlement of interest rate swap agreements within 90 days. Accordingly, the company does not anticipate any material effect to its financial position or results of operations as a

Name of Respondent	This Report is:	Date of Report (Mo, Da, Yr)	Year of Report
MDU Resources Group, Inc.	(1) X An Original (2) _ A Resubmission	12/31/2001	Dec 31, 2001
NOTES TO FINANCIAL STATEMENTS (Continued)			

result of nonperformance by counterparties.

Upon the adoption of SFAS No. 133, the company recorded the fair market value of the natural gas and oil price swap agreements on the company's Consolidated Balance Sheets. On an ongoing basis, the company adjusts its balance sheet to reflect the current fair market value of its swap agreements. The related gains or losses on these agreements are recorded in common stockholders' equity as a component of other comprehensive income (loss). At the date the underlying transaction occurs, the amounts accumulated in other comprehensive income (loss) are reported in the Consolidated Statements of Income. To the extent that the hedges are not effective, the ineffective portion of the changes in fair market value is recorded directly in earnings.

For the year ended December 31, 2001, the company recognized the ineffectiveness of all cash flow hedges, which is included in operating revenues and interest expense for the natural gas and oil price swap agreements and the interest rate swap agreement, respectively. For the year ended December 31, 2001, the amount of ineffectiveness recognized was immaterial. For the year ended December 31, 2001, the company did not exclude any components of the derivative instruments' gain or loss from the assessment of hedge effectiveness and there were no reclassifications into earnings as a result of the discontinuance of hedges.

Gains and losses on derivative instruments that are reclassified from accumulated other comprehensive income (loss) to current-period earnings are included in the line item in which the hedged item is recorded. As of December 31, 2001, the maximum length of time over which the company is hedging its exposure to the variability in future cash flows for forecasted transactions is 12 months and the company estimates that net gains of approximately $2.2 million will be reclassified from accumulated other comprehensive income into earnings, subject to changes in natural gas and oil market prices, within the 12 months between January 1, 2002 and December 31, 2002, as the hedged transactions affect earnings.

In the event a derivative instrument does not qualify for hedge accounting because it is no longer highly effective in offsetting changes in cash flows of a hedged item; or if the derivative instrument expires or is sold, terminated, or exercised; or if management determines that designation of the derivative instrument as a hedge instrument is no longer appropriate, hedge accounting will be discontinued, and the derivative instrument would continue to be carried at fair value with changes in its fair value recognized in earnings. In these circumstances, the net gain or loss at the time of discontinuance of hedge accounting would remain in other comprehensive income (loss) until the period or periods during which the hedged forecasted transaction affects earnings, at which time the net gain or loss would be reclassified into earnings. In the event a cash flow hedge is discontinued because it is unlikely that a forecasted transaction will occur, the derivative instrument would continue to be carried on the balance sheet at its fair value, and gains and losses that were accumulated in other comprehensive income (loss) would be recognized immediately in earnings. The company's policy requires approval to terminate a hedge agreement prior to its original maturity.

Energy marketing
The company had entered into other derivative instruments that were not designated as hedges in its energy marketing operations. In the third quarter of 2001, the company sold the vast majority of its energy marketing operations. The derivative instruments entered into by these operations prior to the sale in the third quarter of 2001 were natural gas forward purchase and sale commitments. These commitments involved the purchase and sale of natural gas and related delivery of such commodity. These operations sought to match natural gas purchases and sales so that a margin was obtained on the transportation of such commodity as distinguished from earning a margin on changes in market prices. The net change in fair value representing unrealized gains and losses resulting from changes

Name of Respondent	This Report is:	Date of Report (Mo, Da, Yr)	Year of Report
MDU Resources Group, Inc.	(1) X An Original (2) _ A Resubmission	12/31/2001	Dec 31, 2001

NOTES TO FINANCIAL STATEMENTS (Continued)

in market prices on these derivative instruments was reflected as operating revenues or purchased natural gas sold. Net unrealized gains and losses on these derivative instruments were not material for the years ended December 31, 2001, 2000 and 1999.

NOTE 4
Fair Value of Other Financial Instruments
The estimated fair value of the company's long-term debt and preferred stock subject to mandatory redemption is based on quoted market prices of the same or similar issues. The estimated fair value of the company's long-term debt and preferred stock subject to mandatory redemption at December 31 is as follows:

	2001		2000	
	Carrying Amount	Fair Value	Carrying Amount	Fair Value
	(In thousands)			
Long-term debt	$ 794,794	$ 894,652	$ 747,761	$772,127
Preferred stock subject to mandatory redemption	$ 1,400	$ 940	$ 1,500	$ 927

The fair value of other financial instruments for which estimated fair value has not been presented is not materially different than the related carrying amount.

NOTE 5
Short-term Borrowings
The company has unsecured short-term lines of credit from a number of banks totaling $110 million at December 31, 2001. These line of credit agreements provide for bank borrowings against the lines and/or support for commercial paper issues. The agreements provide for commitment fees at varying rates. There were no amounts outstanding on the short-term lines of credit at December 31, 2001. The amount outstanding on the short-term lines of credit was $8 million at December 31, 2000. The weighted average interest rate for borrowings outstanding at December 31, 2000, was 6.6 percent.

NOTE 6
Long-term Debt and Indenture Provisions
Long-term debt outstanding at December 31 is as follows:

	2001	2000
	(In thousands)	
First mortgage bonds and notes:		
Pollution Control Refunding Revenue Bonds, Series 1992, 6.65%, due June 1, 2022	$ 20,850	$ 20,850
Secured Medium-Term Notes, Series A at a weighted average rate of 7.59%, due on dates ranging from October 1, 2004 to April 1, 2012	110,000	110,000
Total first mortgage bonds and notes	130,850	130,850
Senior notes at a weighted average rate of 7.34%, due on dates ranging from July 31, 2002 to October 30, 2018	405,200	294,300
Commercial paper at a weighted average rate of 2.43%, supported by a revolving credit agreement	219,700	261,350
Revolving line of credit, 4.75%, due December 31, 2003	25,000	46,302

Name of Respondent	This Report is:	Date of Report (Mo, Da, Yr)	Year of Report
MDU Resources Group, Inc.	(1) X An Original (2) _ A Resubmission	12/31/2001	Dec 31, 2001

NOTES TO FINANCIAL STATEMENTS (Continued)

Term credit agreements at a weighted average rate of 7.38%, due on dates ranging from February 1, 2002 through December 1, 2013	11,769	12,731
Pollution control note obligation, 6.20%, due March 1, 2004	2,500	2,800
Discount	(225)	(572)
Total long-term debt	794,794	747,761
Less current maturities	11,085	19,595
Net long-term debt	$ 783,709	$ 728,166

Centennial has a revolving credit agreement with various banks that supports Centennial's $350 million commercial paper program. There were no outstanding borrowings under the Centennial credit agreement at December 31, 2001. Under the commercial paper program, $219.7 million and $261.4 million were outstanding at December 31, 2001 and 2000, respectively. The commercial paper borrowings are classified as long term as Centennial intends to refinance these borrowings on a long-term basis through continued commercial paper borrowings and as further supported by the revolving credit agreement, which allows for subsequent borrowings up to a term of one year. Centennial intends to renew this existing credit agreement, which expires September 27, 2002, on an annual basis.

Centennial has an uncommitted long-term master shelf agreement that allows for borrowings of up to $300 million. Under the master shelf agreement, $210 million was outstanding at December 31, 2001, and $150 million was outstanding at December 31, 2000. The amount outstanding is included in senior notes in the preceding long-term debt table.

Under a revolving line of credit, the company has $40 million available as of December 31, 2001. The amount outstanding under the revolving line of credit was $25.0 million at December 31, 2001. At December 31, 2000, the company had $46.3 million outstanding under revolving lines of credit.

The amounts of scheduled long-term debt maturities for the five years and thereafter following December 31, 2001, aggregate $11.1 million in 2002; $266.8 million in 2003; $21.9 million in 2004; $70.2 million in 2005; $85.2 million in 2006 and $339.6 million thereafter.

Substantially all of the company's electric and natural gas distribution properties, with certain exceptions, are subject to the lien of its Indenture of Mortgage. Under the terms and conditions of the Indenture, the company could have issued approximately $305 million of additional first mortgage bonds at December 31, 2001. Certain other debt instruments of the company contain restrictive covenants, all of which the company is in compliance with at December 31, 2001.

NOTE 7
Preferred Stocks
Preferred stocks at December 31 are as follows:

	2001	2000
	(Dollars in thousands)	
Authorized:		
Preferred -- 500,000 shares, cumulative, par value $100, issuable in series		
Preferred stock A -- 1,000,000 shares, cumulative, without par value, issuable in series (none outstanding)		
Preference -- 500,000 shares, cumulative, without par

NOTES TO FINANCIAL STATEMENTS (Continued)

value, issuable in series (none outstanding)		
Outstanding:		
Subject to mandatory redemption --		
Preferred --		
5.10% Series -- 14,000 shares in 2001 and 15,000 shares in 2000	$ 1,400	$ 1,500
Other preferred stock --		
4.50% Series -- 100,000 shares	10,000	10,000
4.70% Series -- 50,000 shares	5,000	5,000
	15,000	15,000
Total preferred stocks	16,400	16,500
Less sinking fund requirements	100	100
Net preferred stocks	$ 16,300	$ 16,400

The preferred stocks outstanding are subject to redemption, in whole or in part, at the option of the company with certain limitations on 30 days notice on any quarterly dividend date on certain series of preferred stock.

The company is obligated to make annual sinking fund contributions to retire the 5.10% Series preferred stock. The redemption prices and sinking fund requirements, where applicable, are summarized below:

Series	Redemption Price (a)	Sinking Fund Shares	Sinking Fund Price (a)
Preferred stocks:			
4.50%	$105 (b)	---	---
4.70%	$102 (b)	---	---
5.10%	$102	1,000 (c)	$100

(a) Plus accrued dividends.
(b) These series are redeemable at the sole discretion of the company.
(c) Annually on December 1, if tendered.

In the event of a voluntary or involuntary liquidation, all preferred stock series holders are entitled to $100 per share, plus accrued dividends.

The aggregate annual sinking fund amount applicable to preferred stock subject to mandatory redemption is $100,000 for each of the five years following December 31, 2001, and $900,000 thereafter.

NOTE 8
Common Stock
At the Annual Meeting of Stockholders held in April 1999, the company's common stockholders approved an amendment to the Certificate of Incorporation increasing the authorized number of common shares from 75 million shares to 150 million shares and reducing the par value of the common stock from $3.33 per share to $1.00 per share.

The company's Automatic Dividend Reinvestment and Stock Purchase Plan (Stock Purchase Plan) provides participants the opportunity to invest all or a portion of their cash dividends in shares of the company's common stock and to make optional cash payments for the same purpose. Holders of all classes of the company's capital stock, legal residents in any of the 50 states, and beneficial owners, whose shares are held by brokers or other nominees through participation by their brokers or nominees, are eligible to participate in the Stock Purchase Plan. The company's 401(k) Retirement Plan (K-Plan), is funded with the company's common stock. Since January 1, 1999, the Stock Purchase Plan and K-Plan have been funded primarily by the purchase of shares of common stock on the open market, except from January 1, 1999 through March 31, 1999, when shares of authorized but unissued common stock were used to fund the Stock Purchase Plan. At December 31, 2001, there were 8.1 million shares of common stock reserved for original issuance under the Stock Purchase

NOTES TO FINANCIAL STATEMENTS (Continued)			

Plan and K-Plan.

In November 1998, the company's Board of Directors declared, pursuant to a stockholders' rights plan, a dividend of one preference share purchase right (right) for each outstanding share of the company's common stock. Each right becomes exercisable, upon the occurrence of certain events, for one one-thousandth of a share of Series B Preference Stock of the company, without par value, at an exercise price of $125 per one one-thousandth, subject to certain adjustments. The rights are currently not exercisable and will be exercisable only if a person or group (acquiring person) either acquires ownership of 15 percent or more of the company's common stock or commences a tender or exchange offer that would result in ownership of 15 percent or more. In the event the company is acquired in a merger or other business combination transaction or 50 percent or more of its consolidated assets or earnings power are sold, each right entitles the holder to receive, upon the exercise thereof at the then current exercise price of the right multiplied by the number of one one-thousandth of a Series B Preference Stock for which a right is then exercisable, in accordance with the terms of the rights agreement, such number of shares of common stock of the acquiring person having a market value of twice the then current exercise price of the right. The rights, which expire on December 31, 2008, are redeemable in whole, but not in part, for a price of $.01 per right, at the company's option at any time until any acquiring person has acquired 15 percent or more of the company's common stock.

The company has stock option plans for directors, key employees and employees, which grant options to purchase shares of the company's stock. The company accounts for these option plans in accordance with APB Opinion No. 25 under which no compensation expense has been recognized. The option exercise price is the market value of the stock on the date of grant. Options granted to the key employees automatically vest after nine years, but the plan provides for accelerated vesting based on the attainment of certain performance goals or upon a change in control of the company, and expire 10 years after the date of grant. Options granted to directors and employees vest at date of grant and three years after date of grant, respectively, and expire 10 years after the date of grant. In addition, the company has granted restricted stock awards under a long-term incentive plan, deferred compensation agreements and a restricted stock agreement totaling 350,392 shares, 348,021 shares and 105,250 shares in 2001, 2000 and 1999, respectively. The restricted stock awards granted vest to the participants at various times ranging from two years to nine years from date of issuance but certain grants may vest early based upon the attainment of certain performance goals or upon a change in control of the company. The weighted average grant date fair value of the restricted stock grants was $31.55, $20.81 and $22.91 in 2001, 2000 and 1999, respectively. Compensation expense recognized for restricted stock grants was $4.5 million, $1.6 million and $722,000 in 2001, 2000 and 1999, respectively. Under the stock option plans and long-term incentive plan, the company is authorized to grant options and restricted stock for up to 9.8 million shares of common stock and has granted options and restricted stock on 4.8 million shares through December 31, 2001.

Had the company recorded compensation expense for the fair value of options granted consistent with SFAS No. 123, "Accounting for Stock-Based Compensation," net income would have been reduced on a pro forma basis by $3.8 million in 2001, $529,000 in 2000, and $498,000 in 1999. On a pro forma basis, basic and diluted earnings per share for 2001 would have been reduced by $.06. On a pro forma basis, there would have been no effect on basic earnings per share for 2000, and diluted earnings per share would have been reduced by $.01. On a pro forma basis, basic and diluted earnings per share for 1999 would have been reduced by $.01.

A summary of the status of the stock option plans at December 31, 2001, 2000 and 1999, and changes during the years then ended are as follows:

Name of Respondent	This Report is:	Date of Report (Mo, Da, Yr)	Year of Report
MDU Resources Group, Inc.	(1) X An Original (2) __ A Resubmission	12/31/2001	Dec 31, 2001

NOTES TO FINANCIAL STATEMENTS (Continued)

	2001		2000		1999	
	Shares	Weighted Average Exercise Price	Shares	Weighted Average Exercise Price	Shares	Weighted Average Exercise Price
Balance at beginning of year	1,224,959	$20.61	1,427,262	$19.46	1,516,808	$19.17
Granted	2,693,120	30.14	74,000	20.54	22,500	23.31
Forfeited	(74,282)	27.24	(84,135)	21.18	(57,966)	20.38
Exercised	(371,590)	20.23	(192,168)	11.84	(54,080)	11.95
Balance at end of year	3,472,207	27.90	1,224,959	20.61	1,427,262	19.46
Exercisable at end of year	770,142	$21.41	129,763	$18.11	301,681	$13.89

Summarized information about stock options outstanding and exercisable as of December 31, 2001, is as follows:

	Options Outstanding			Options Exercisable	
Range of Exercisable Prices	Number Outstanding	Remaining Contractual Life in Years	Weighted Average Exercise Price	Number Exercisable	Weighted Average Exercise Price
$10.50 - 17.50	41,966	3.7	$13.36	41,966	$13.36
17.51 - 24.50	789,371	6.3	21.15	698,176	21.16
24.51 - 31.50	2,490,240	9.2	29.74	---	---
31.51 - 38.55	150,630	9.2	36.86	30,000	38.55
	3,472,207			770,142	

The fair value of each option is estimated on the date of grant using the Black-Scholes option pricing model. The weighted average fair value of the options granted and the assumptions used to estimate the fair value of options are as follows:

	2001	2000	1999
Weighted average fair value of options at grant date	$ 7.38	$ 5.07	$ 4.82
Weighted average risk-free interest rate	5.19%	6.76%	5.98%
Weighted average expected price volatility	26.05%	23.55%	22.03%
Weighted average expected dividend yield	3.53%	3.84%	4.22%
Expected life in years	7	7	7

State	4,773	8,060	3,690
Investment tax credit	(731)	(853)	(888)
	21,014	36,530	15,704
Total income tax expense	$ 98,341	$ 69,650	$ 49,310

Components of deferred tax assets and deferred tax liabilities recognized in the company's Consolidated Balance Sheets at December 31 are as follows:

	2001	2000
	(In thousands)	
Deferred tax assets:		
Regulatory matters	$ 21,000	$ 7,650
Accrued pension costs	9,349	10,325
Accrued land reclamation	1,648	1,941
Deferred investment tax credit	1,413	1,697
Other	21,691	18,213
Total deferred tax assets	55,101	39,826
Deferred tax liabilities:		
Depreciation and basis differences on property, plant and equipment	302,103	264,635
Basis differences on natural gas and oil producing properties	61,684	36,763
Regulatory matters	5,661	3,554
Other	9,092	7,826
Total deferred tax liabilities	378,540	312,778
Net deferred income tax liability	$ (323,439)	$ (272,952)

The following table reconciles the change in the net deferred income tax liability from December 31, 2000, to December 31, 2001, to the deferred income tax expense included in the Consolidated Statements of Income:

	2001
	(In thousands)
Net change in deferred income tax liability from the preceding table	$ 50,487
Deferred taxes associated with acquisitions	(29,807)
Other	334
Deferred income tax expense for the period	$ 21,014

Total income tax expense differs from the amount computed by applying the statutory federal income tax rate to income before taxes. The reasons for this difference are as follows:

Years ended December 31,	2001		2000		1999	
	Amount	%	Amount	%	Amount	%
	(Dollars in thousands)					
Computed tax at federal statutory rate	$ 88,966	35.0	$ 63,237	35.0	$ 46,686	35.0
Increases (reductions) resulting from:						
State income taxes, net of federal income tax benefit	11,311	4.5	8,044	4.4	5,921	4.4
Investment tax credit amortization	(731)	(.3)	(853)	(.5)	(888)	(.6)
Depletion allowance	(1,820)	(.7)	(1,631)	(.9)	(1,300)	(1.0)

Total income tax expense	$ 98,341	38.7	$ 69,650	38.5	$ 49,310	37.0

NOTE 10
Business Segment Data
The company's reportable segments are those that are based on the company's method of internal reporting, which generally segregates the strategic business units due to differences in products, services and regulation.

The company's operations are conducted through six business segments. Substantially all of the company's operations are located within the United States. The electric segment generates, transmits and distributes electricity and the natural gas distribution segment distributes natural gas. These operations also supply related value-added products and services in the northern Great Plains. The utility services segment consists of a diversified infrastructure company specializing in engineering, design and build capability for electric, gas and telecommunication utility construction, as well as industrial and commercial electrical, exterior lighting and traffic signalization throughout most of the United States. Utility services provides related specialty equipment manufacturing sales and rental services. The pipeline and energy services segment provides natural gas transportation, underground storage and gathering services through regulated and nonregulated pipeline systems primarily in the Rocky Mountain and northern Great Plains regions of the United States. Energy-related marketing and management services as well as cable and pipeline locating services also are provided. The pipeline and energy services segment includes investments in domestic and international growth opportunities. The natural gas and oil production segment is engaged in natural gas and oil acquisition, exploration and production activities primarily in the Rocky Mountain region of the United States and in the Gulf of Mexico. The construction materials and mining segment mines aggregates and markets crushed stone, sand, gravel and other related construction materials, including ready-mixed concrete, cement and asphalt, as well as value-added products and services in the north central and western United States, including Alaska and Hawaii.

In 2001, the company sold its coal operations to Westmoreland Coal Company for $28.2 million in cash, including final settlement cost adjustments. The sale of the coal operations was effective April 30, 2001. Included in the sale were active coal mines in North Dakota and Montana, coal sales agreements, reserves and mining equipment, and certain development rights at the former Gascoyne Mine site in North Dakota. The company retains ownership of coal reserves and leases at its former Gascoyne Mine site. Including final settlement cost adjustments, the company recorded a gain of $10.3 million ($6.2 million after-tax) included in other income - net from the sale in 2001.

On August 30, 2001, MDU Resources International, Inc. (MDU International), a wholly owned subsidiary of the company, through an indirect wholly owned Brazilian subsidiary, entered into a joint venture agreement with a Brazilian firm under which the parties have formed MPX Holdings, Ltda. (MPX) to develop electric generation and transmission, steam generation, power equipment, coal mining and construction materials projects in Brazil. MDU International has a 49 percent interest in MPX. MPX is currently developing, through a wholly owned subsidiary, and has under construction a 200-megawatt natural gas-fired power plant (Project) in the Brazilian state of Ceara. The Project is expected to enter commercial operation in the second quarter of 2002. MPX expects to enter into an agreement with Petrobras, the state-controlled energy company, under which Petrobras would purchase all of the capacity and market all of the Project's energy. Petrobras would also supply natural gas to the Project when energy is dispatched. The Project has a total estimated construction cost of approximately $96 million. At December 31, 2001, MDU International's investment in the Project was approximately $23.8 million. In addition, the company's subsidiaries had guaranteed Project obligations and loans for approximately $17.3 million as of December 31, 2001.

(a) In accordance with the provision of SFAS No. 71, intercompany coal sales are not eliminated.
(b) Includes, in the case of electric and natural gas distribution property, allocations of common utility property.
(c) Corporate assets consist of assets not directly assignable to a business segment (i.e., cash and cash equivalents, certain accounts receivable and other miscellaneous current and deferred assets).

Capital expenditures for 2001, 2000 and 1999, related to acquisitions, in the preceding table include the following noncash transactions: issuance of the company's equity securities of $57.4 million in 2001; issuance of the company's equity securities and the conversion of a note receivable to purchase consideration of $132.1 million in 2000; and issuance of the company's equity securities of $77.5 million in 1999.

NOTE 11
Acquisitions

Name of Respondent	This Report is:	Date of Report	Year of Report
MDU Resources Group, Inc.	(1) X An Original (2) _ A Resubmission	(Mo, Da, Yr) 12/31/2001	Dec 31, 2001

NOTES TO FINANCIAL STATEMENTS (Continued)

In 2001, the company acquired a number of businesses, none of which was individually material, including construction materials and mining businesses in Hawaii, Minnesota and Oregon; utility services businesses based in Missouri and Oregon; and an energy services company specializing in cable and pipeline locating and tracking systems. The total purchase consideration for these businesses, consisting of the company's common stock and cash, was $170.1 million.

In 2000, the company acquired a number of businesses, none of which was individually material, including construction materials and mining businesses with operations in Alaska, California, Montana and Oregon; a coalbed natural gas development operation based in Colorado with related oil and gas leases and properties in Montana and Wyoming; utility services businesses based in California, Colorado, Montana and Ohio; a natural gas distribution business serving southeastern North Dakota and western Minnesota; and an energy services company based in Texas. The total purchase consideration for these businesses, consisting of the company's common stock, cash and the conversion of a note receivable to purchase consideration, was $286.0 million.

On April 1, 2000, Fidelity Exploration & Production Company (Fidelity), an indirect wholly owned subsidiary of the company, purchased substantially all of the assets of Preston Reynolds & Co., Inc. (Preston), a coalbed natural gas development operation, as previously discussed. Pursuant to the asset purchase and sale agreement, Preston may, but is not obligated to purchase, acquire and own an undivided 25 percent working interest (Seller's Option Interest) in certain oil and gas leases or properties acquired and/or generated by Fidelity. The Seller's Option Interest commences April 1, 2002 and terminates six months thereafter and requires Preston to pay Fidelity 25 percent of its capital investment, during the two year period subsequent to April 1, 2000, in the oil and gas leases or properties. Fidelity has the right, but not the obligation, to purchase Seller's Option Interest from Preston for an amount as specified in the agreement.

In 1999, the company acquired a number of businesses, none of which was individually material, including construction materials and mining companies with operations in California, Montana, Oregon and Wyoming; and utility services companies based in Montana and Oregon. The total purchase consideration for these businesses, consisting of the company's common stock and cash, was $81.9 million.

The above acquisitions were accounted for under the purchase method of accounting and accordingly, the acquired assets and liabilities assumed have been preliminarily recorded at their respective fair values as of the date of acquisition. Final fair market values are pending the completion of the review of the relevant assets, liabilities and issues identified as of the acquisition date on certain of the above acquisitions made in 2001. The results of operations of the acquired businesses are included in the financial statements since the date of each acquisition. Pro forma financial amounts reflecting the effects of the above acquisitions are not presented as such acquisitions were not material to the company's financial position or results of operations.

NOTE 12
Employee Benefit Plans
The company has noncontributory defined benefit pension plans and other postretirement benefit plans. Changes in benefit obligation and plan assets for the years ended December 31 are as follows:

Funded status	20,621	60,984	(21,844)	(22,421)
Unrecognized actuarial gain	(26,170)	(76,417)	(10,799)	(15,228)
Unrecognized prior service cost	10,278	16,271	---	---
Unrecognized net transition obligation (asset)	(2,195)	(3,387)	23,665	28,532
Prepaid (accrued) benefit cost	$ 2,534	$ (2,549)	$ (8,978)	$ (9,117)

* See Note 10 for more information on the sale of the company's coal operations.

Weighted average assumptions for the company's pension and other postretirement benefit plans as of December 31 are as follows:

	Pension Benefits		Other Postretirement Benefits	
	2001	2000	2001	2000
Discount rate	7.25%	7.50%	7.25%	7.50%
Expected return on plan assets	8.50%	8.50%	7.50%	7.50%
Rate of compensation increase	5.00%	5.00%	5.00%	5.00%

Health care rate assumptions for the company's other postretirement benefit plans as of December 31 are as follows:

	2001	2000
Health care trend rate	6.00%-7.00%	6.00%-7.50%
Health care cost trend rate - ultimate	5.00%-6.00%	5.00%-6.00%
Year in which ultimate trend rate achieved	1999-2004	1999-2004

Components of net periodic benefit cost for the company's pension and other postretirement benefit plans are as follows:

	Pension Benefits			Other Postretirement Benefits		
Years ended December 31,	2001	2000	1999	2001	2000	1999
			(In thousands)			
Components of net periodic						

Name of Respondent	This Report is:	Date of Report	Year of Report
MDU Resources Group, Inc.	(1) X An Original (2) __ A Resubmission	(Mo, Da, Yr) 12/31/2001	Dec 31, 2001

NOTES TO FINANCIAL STATEMENTS (Continued)

benefit cost:						
Service cost	$ 4,716	$ 4,561	$ 4,894	$ 1,376	$ 1,307	$ 1,451
Interest cost	14,498	14,174	12,573	4,691	4,946	4,720
Expected return on assets	(20,672)	(19,927)	(17,489)	(3,619)	(3,267)	(2,807)
Amortization of prior service cost	1,247	1,047	842	---	---	---
Recognized net actuarial gain	(2,687)	(2,907)	(995)	(930)	(799)	(200)
Settlement (gain) loss	(884)	(700)	---	15	---	---
Amortization of net transition obligation (asset)	(965)	(997)	(997)	2,227	2,378	2,377
Net periodic benefit cost (income)	(4,747)	(4,749)	(1,172)	3,760	4,565	5,541
Less amount capitalized	(391)	(397)	(87)	329	369	463
Net periodic benefit expense (income)	$ (4,356)	$ (4,352)	$(1,085)	$ 3,431	$ 4,196	$ 5,078

The company's other postretirement benefit plans include health care and life insurance benefits. The plans underlying these benefits may require contributions by the employee depending on such employee's age and years of service at retirement or the date of retirement. The accounting for the health care plans anticipates future cost-sharing changes that are consistent with the company's expressed intent to generally increase retiree contributions each year by the excess of the expected health care cost trend rate over 6 percent.

Assumed health care cost trend rates may have a significant effect on the amounts reported for the health care plans. A one percentage point change in the assumed health care cost trend rates would have the following effects at December 31, 2001:

	1 Percentage Point Increase	1 Percentage Point Decrease
	(In thousands)	
Effect on total of service and interest cost components	$ 260	$ (229)
Effect on postretirement benefit obligation	$ 3,326	$ (2,906)

In addition to company-sponsored plans, certain employees are covered under multi-employer defined benefit plans administered by a union. Amounts contributed to the multi-employer plans were $19.9 million, $10.6 million and $6.8 million in 2001, 2000 and 1999, respectively.

The company has an unfunded, nonqualified benefit plan for executive officers and certain key management employees that provides for defined benefit payments upon the employee's retirement or to their beneficiaries upon death for a 15-year period. Investments consist of life insurance carried on plan participants, which is payable to the company upon the employee's death. The cost of these benefits was $4.3 million, $3.5 million and $3.3 million in 2001, 2000 and 1999, respectively.

The company sponsors various defined contribution plans for eligible employees. Costs incurred by the company under these plans were $7.2 million in 2001, $6.1 million in 2000 and $4.4 million in 1999. The costs incurred in each year reflect additional participants as a result of business acquisitions.

NOTE 13
Jointly Owned Facilities

Name of Respondent	This Report is:	Date of Report	Year of Report
MDU Resources Group, Inc.	(1) X An Original (2) __ A Resubmission	(Mo, Da, Yr) 12/31/2001	Dec 31, 2001

NOTES TO FINANCIAL STATEMENTS (Continued)

The consolidated financial statements include the company's 22.7 percent and 25.0 percent ownership interests in the assets, liabilities and expenses of the Big Stone Station and the Coyote Station, respectively. Each owner of the Big Stone and Coyote stations is responsible for financing its investment in the jointly owned facilities.

The company's share of the Big Stone Station and Coyote Station operating expenses is reflected in the appropriate categories of operating expenses in the Consolidated Statements of Income.

At December 31, the company's share of the cost of utility plant in service and related accumulated depreciation for the stations was as follows:

	2001	2000
	(In thousands)	
Big Stone Station:		
Utility plant in service	$ 50,053	$ 50,029
Less accumulated depreciation	32,956	31,381
	$ 17,097	$ 18,648
Coyote Station:		
Utility plant in service	$ 122,436	$ 122,111
Less accumulated depreciation	67,414	63,741
	$ 55,022	$ 58,370

NOTE 14
Regulatory Matters and Revenues Subject To Refund
In December 1999, Williston Basin Interstate Pipeline Company (Williston Basin), an indirect wholly owned subsidiary of the company, filed a general natural gas rate change application with the FERC. Williston Basin began collecting such rates effective June 1, 2000, subject to refund. On May 9, 2001, the Administrative Law Judge issued an Initial Decision on Williston Basin's natural gas rate change application, which matter is currently pending before and subject to revision by the FERC.

Reserves have been provided for a portion of the revenues that have been collected subject to refund with respect to the pending regulatory proceeding. Williston Basin, in the fourth quarter of 2000, determined that reserves it had previously established for certain regulatory proceedings, prior to the proceeding filed in 1999, exceeded its expected refund obligation and, accordingly, reversed reserves and recognized in income $6.7 million after-tax. Williston Basin, in the second quarter of 1999, determined that reserves it had previously established in relation to a 1992 general natural gas rate change application and the 1995 general rate increase application exceeded its expected refund obligation and, accordingly, reversed reserves and recognized in income $4.4 million after-tax. Williston Basin believes that its remaining reserves are adequate based on its assessment of the ultimate outcome of the application filed in December 1999.

NOTE 15
Commitments and Contingencies
Litigation
In March 1997, 11 natural gas producers filed suit in North Dakota Southwest Judicial District Court (North Dakota District Court) against Williston Basin and the company. The natural gas producers had processing agreements with Koch Hydrocarbon Company (Koch). Williston Basin and the company had natural gas purchase contracts with Koch. The natural gas producers alleged they were entitled to damages for the breach of Williston Basin's and the company's contracts with Koch although no specific damages were stated. A similar suit was filed by Apache Corporation (Apache) and Snyder Oil Corporation (Snyder) in North Dakota Northwest Judicial District Court in December 1993. The North Dakota Supreme Court in December 1999 affirmed the North Dakota Northwest Judicial District Court decision dismissing Apache's and Snyder's claims against Williston Basin and the company. Based in part upon the decision of the North Dakota Supreme Court affirming the dismissal of the

Name of Respondent	This Report is:	Date of Report (Mo, Da, Yr)	Year of Report
MDU Resources Group, Inc.	(1) X An Original (2) _ A Resubmission	12/31/2001	Dec 31, 2001

NOTES TO FINANCIAL STATEMENTS (Continued)

claims brought by Apache and Snyder, Williston Basin and the company filed motions for summary judgment to dismiss the claims of the 11 natural gas producers. The motions for summary judgment were granted by the North Dakota District Court in July 2000. On March 5, 2001, the North Dakota District Court entered a final judgment on the July 2000 order granting the motions for summary judgment. On May 4, 2001, the 11 natural gas producers appealed the North Dakota District Court's decision by filing a Notice of Appeal with the North Dakota Supreme Court. Oral argument was held before the North Dakota Supreme Court on December 12, 2001. Williston Basin and the company are awaiting a decision from the North Dakota Supreme Court.

In July 1996, Jack J. Grynberg (Grynberg) filed suit in United States District Court for the District of Columbia (U.S. District Court) against Williston Basin and over 70 other natural gas pipeline companies. Grynberg, acting on behalf of the United States under the Federal False Claims Act, alleged improper measurement of the heating content or volume of natural gas purchased by the defendants resulting in the underpayment of royalties to the United States. In March 1997, the U.S. District Court dismissed the suit without prejudice and the dismissal was affirmed by the United States Court of Appeals for the D.C. Circuit in October 1998. In June 1997, Grynberg filed a similar Federal False Claims Act suit against Williston Basin and Montana-Dakota Utilities Co. (Montana-Dakota) and filed over 70 other separate similar suits against natural gas transmission companies and producers, gatherers, and processors of natural gas. In April 1999, the United States Department of Justice decided not to intervene in these cases. In response to a motion filed by Grynberg, the Judicial Panel on Multidistrict Litigation consolidated all of these cases in the Federal District Court of Wyoming (Federal District Court). Oral argument on motions to dismiss was held before the Federal District Court in March 2000. On May 18, 2001, the Federal District Court denied Williston Basin's and Montana-Dakota's motion to dismiss. The matter is currently pending.

The Quinque Operating Company (Quinque), on behalf of itself and subclasses of gas producers, royalty owners and state taxing authorities, instituted a legal proceeding in State District Court for Stevens County, Kansas, (State District Court) against over 200 natural gas transmission companies and producers, gatherers, and processors of natural gas, including Williston Basin and Montana-Dakota. The complaint, which was served on Williston Basin and Montana-Dakota in September 1999, contains allegations of improper measurement of the heating content and volume of all natural gas measured by the defendants other than natural gas produced from federal lands. In response to a motion filed by the defendants in this suit, the Judicial Panel on Multidistrict Litigation transferred the suit to the Federal District Court for inclusion in the pretrial proceedings of the Grynberg suit. Upon motion of plaintiffs, the case has been remanded to State District Court. On September 12, 2001, the defendants in this suit filed a motion to dismiss with the State District Court. The matter is currently pending.

Williston Basin and Montana-Dakota believe the claims of Grynberg and Quinque are without merit and intend to vigorously contest these suits.

The company is also involved in other legal actions in the ordinary course of its business. Although the outcomes of any such legal actions cannot be predicted, management believes that there is no pending legal proceeding against or involving the company, except those discussed above, for which the outcome is likely to have a material adverse effect upon the company's financial position or results of operations.

Environmental matters
In December 2000, Morse Bros., Inc. (MBI), an indirect wholly owned subsidiary of the company, was named by the United States Environmental Protection Agency (EPA) as a Potentially Responsible Party in connection with the cleanup of a commercial property site, now owned by MBI, and part of the Portland, Oregon, Harbor Superfund Site. Sixty-eight other parties were also named in this administrative action. The EPA wants

NOTES TO FINANCIAL STATEMENTS (Continued)

responsible parties to share in the cleanup of sediment contamination in the Willamette River. Based upon a review of the Portland Harbor sediment contamination evaluation by the Oregon State Department of Environmental Quality and other information available, MBI does not believe it is a Responsible Party. In addition, MBI intends to seek indemnity for any and all liabilities incurred in relation to the above matters from Georgia-Pacific West, Inc., the seller of the commercial property site to MBI, pursuant to the terms of their sale agreement.

Operating leases
The company leases certain equipment, facilities and land under operating lease agreements. The amounts of annual minimum lease payments due under these leases as of December 31, 2001, are $17.4 million in 2002, $14.3 million in 2003, $11.0 million in 2004, $8.3 million in 2005, $6.3 million in 2006 and $25.1 million thereafter. Rent expense related to operating leases was approximately $31.5 million, $23.7 million and $15.4 million for the years ended December 31, 2001, 2000 and 1999, respectively.

Purchase commitments
The company has entered into various commitments, largely purchased-power, coal and natural gas supply, and natural gas transportation contracts. These commitments range from one to 17 years. The commitments under these contracts as of December 31, 2001, are $108.8 million in 2002, $53.1 million in 2003, $46.9 million in 2004, $39.2 million in 2005, $33.2 million in 2006 and $126.5 million thereafter. These commitments are not reflected in the company's consolidated financial statements.

Guarantees
The company has certain financial guarantees largely consisting of guarantees on obligations and loans on the natural gas-fired power plant project in the Brazilian state of Ceara. For more information on the natural gas-fired power plant project see Note 10. These guarantees, as of December 31, 2001, are approximately $20.6 million for 2002. These guarantees are not reflected in the consolidated financial statements.

NOTE 16
Quarterly Data (Unaudited)
The following unaudited information shows selected items by quarter for the years 2001 and 2000:

	First Quarter	Second Quarter	Third Quarter	Fourth Quarter
	(In thousands, except per share amounts)			
2001				
Operating revenues	$ 641,248	$ 546,418	$ 551,680	$ 484,286
Operating expenses	577,727	476,071	458,441	438,125

Certain company operations are highly seasonal and revenues from and certain expenses for such operations may fluctuate significantly among quarterly periods. Accordingly, quarterly financial information may not be indicative of results for a full year.

NOTE 17
Natural Gas and Oil Activities (Unaudited)
Fidelity is involved in the acquisition, exploration, development and production of natural gas and oil resources. Fidelity's activities include the acquisition of producing properties with potential development opportunities, exploratory drilling and the operation and development of natural gas production properties. Fidelity shares revenues and expenses from the development of specified properties located primarily in the Rocky Mountain region of the United States and in the Gulf of Mexico in proportion to its interests.

Fidelity owns in fee or holds natural gas leases for the properties it operates in Colorado, Montana, North Dakota and Wyoming. These rights are in the Bonny Field located in eastern Colorado, the Cedar Creek Anticline in southeastern Montana and southwestern North Dakota, the Bowdoin area located in north-central Montana and in the Powder River Basin of Wyoming and Montana.

The information that follows includes the company's proportionate share of all its natural gas and oil interests held by Fidelity.

The following table sets forth capitalized costs and accumulated depreciation, depletion and amortization related to natural gas and oil producing activities at December 31:

	2001	2000	1999
		(In thousands)	
Subject to amortization	$ 506,155	$ 416,881	$ 319,448
Not subject to amortization	122,354	94,856	23,464
Total capitalized costs	628,509	511,737	342,912
Less accumulated depreciation, depletion and amortization	195,469	155,198	129,211
Net capitalized costs	$ 433,040	$ 356,539	$ 213,701

Capital expenditures, including those not subject to amortization, related to natural gas and oil producing activities are as follows:

Years ended December 31,	2001	2000	1999
		(In thousands)	
Acquisitions	$ 1,695	$ 68,858	$ 30,842
Exploration	13,938	34,839	11,010
Development	102,670	69,051	21,822
Total capital expenditures	$ 118,303	$ 172,748	$ 63,674

The following summary reflects income resulting from the company's operations of natural gas and oil producing activities, excluding corporate overhead and financing costs:

Years ended December 31,	2001	2000	1999
		(In thousands)	

Name of Respondent	This Report is: (1) X An Original (2) __ A Resubmission	Date of Report (Mo, Da, Yr)	Year of Report
MDU Resources Group, Inc.		12/31/2001	Dec 31, 2001

NOTES TO FINANCIAL STATEMENTS (Continued)

Revenues	$ 203,727	$ 128,217	$ 75,327
Production costs	47,045	33,919	25,402
Depreciation, depletion and amortization	41,223	26,739	19,136
Pretax income	115,459	67,559	30,789
Income tax expense	45,245	25,835	11,815
Results of operations for producing activities	$ 70,214	$ 41,724	$ 18,974

The following table summarizes the company's estimated quantities of proved natural gas and oil reserves at December 31, 2001, 2000 and 1999, and reconciles the changes between these dates. Estimates of economically recoverable natural gas and oil reserves and future net revenues therefrom are based upon a number of variable factors and assumptions. For these reasons, estimates of economically recoverable reserves and future net revenues may vary from actual results.

	2001		2000		1999	
	Natural Gas	Oil	Natural Gas	Oil	Natural Gas	Oil
	(In thousands of Mcf/barrels)					
Proved developed and undeveloped reserves:						
Balance at beginning of year	309,800	15,100	268,900	14,700	243,600	11,500
Production	(40,600)	(2,000)	(29,200)	(1,900)	(24,700)	(1,800)
Extensions and discoveries	66,400	2,000	51,300	1,600	21,800	800
Purchases of proved reserves	1,000	100	23,200	100	38,200	700
Sales of reserves in place	---	---	---	(100)	(9,300)	(400)
Revisions to previous estimates due to improved secondary recovery techniques and/or changed economic conditions	(12,500)	2,300	(4,400)	700	(700)	3,900
Balance at end of year	324,100	17,500	309,800	15,100	268,900	14,700
Proved developed reserves:						
January 1, 1999	193,000	10,700				
December 31, 1999	213,400	13,300				
December 31, 2000	263,400	14,200				
December 31, 2001	291,300	17,100				

All of the company's interests in natural gas and oil reserves are located in the United States and in the Gulf of Mexico.

The standardized measure of the company's estimated discounted future net cash flows of total proved reserves associated with its various natural gas and oil interests at December 31 is as follows:

	2001	2000	1999
	(In thousands)		
Future net cash flows before income taxes	$ 548,000	$ 2,349,500	$ 492,000
Future income tax expense	112,000	827,000	131,500
Future net cash flows	436,000	1,522,500	360,500

Name of Respondent	This Report is:	Date of Report	Year of Report
MDU Resources Group, Inc.	(1) X An Original (2) __ A Resubmission	(Mo, Da, Yr) 12/31/2001	Dec 31, 2001

NOTES TO FINANCIAL STATEMENTS (Continued)

10% annual discount for estimated timing of cash flows	174,000	601,200	131,400
Discounted future net cash flows relating to proved natural gas and oil reserves	$ 262,000	$ 921,300	$ 229,100

The following are the sources of change in the standardized measure of discounted future net cash flows by year:

	2001	2000	1999
		(In thousands)	
Beginning of year	$ 921,300	$ 229,100	$ 125,100
Net revenues from production	(153,500)	(94,300)	(49,900)
Change in net realization	(1,119,700)	861,700	123,100
Extensions, discoveries and improved recovery, net of future production-related costs	64,200	288,700	33,500
Purchases of proved reserves	2,600	93,200	57,700
Sales of reserves in place	---	(1,500)	(14,700)
Changes in estimated future development costs, net of those incurred during the year	(3,300)	3,400	(9,800)
Accretion of discount	126,900	31,200	16,700
Net change in income taxes	436,500	(412,300)	(59,800)
Revisions of previous quantity estimates	(11,700)	(79,200)	7,400
Other	(1,300)	1,300	(200)
Net change	(659,300)	692,200	104,000
End of year	$ 262,000	$ 921,300	$ 229,100

The estimated discounted future cash inflows from estimated future production of proved reserves were computed using year-end natural gas prices and oil prices. Future development and production costs attributable to proved reserves were computed by applying year-end costs to be incurred in producing and further developing the proved reserves. Future income tax expenses were computed by applying statutory tax rates (adjusted for permanent differences and tax credits) to estimated net future pretax cash flows.

The standardized measure of discounted future net cash flows does not purport to represent the fair market value of natural gas and oil properties. There are significant uncertainties inherent in estimating quantities of proved reserves and in projecting rates of production and the timing and amount of future costs. In addition, future realization of natural gas and oil prices over the remaining reserve lives may vary significantly from current prices.

NOTE 18
Subsequent Event
In January 2002, Fidelity Oil Co. (FOC), one of the company's natural gas and oil production subsidiaries, entered into a compromise agreement with the former operator of certain of FOC's oil production properties in southeastern Montana. The compromise agreement resolved litigation involving the interpretation and application of contractual provisions regarding net proceeds interests paid by the former operator to FOC for a number of years prior to 1998. The terms of the compromise agreement are confidential. As a result of the compromise agreement, the natural gas and oil production segment will reflect a nonrecurring gain in its financial results for the first quarter of 2002 of approximately $16.6 million after-tax. As part of the settlement, FOC gave the former operator a full and complete release, and FOC is not asserting any such claim against the former operator for periods after 1997.

NOTES TO FINANCIAL STATEMENTS (Continued)

NOTE 19
Investment in Subsidiaries
The Respondent owns two wholly owned subsidiaries, Centennial Energy Holdings, Inc. and MDU Resources International, Inc. Centennial Energy Holdings, Inc. owns WBI Holdings, Inc., Knife River Corporation and Utility Services, Inc.

As required by the Federal Energy Regulatory Commission for Form 1 report purposes, MDU Resources Group, Inc. reports its subsidiary investment using the equity method rather than consolidating the assets, liabilities, revenues and expenses of the subsidiary, as required by generally accepted accounting principles. If generally accepted accounting principles were followed, utility plant, other property and investments would increase by $501,669,316 and $517,845,533; current and accrued assets would increase by $376,353,971 and $347,911,277; deferred debits would increase by $276,502,929 and $161,152,427; preferred stock would decrease by $100,000 and $100,000; long-term debt would increase by $625,404,164 and $554,322,288; other noncurrent liabilities and current and accrued liabilities would increase by $157,590,276 and $173,105,095; deferred credits would increase by $373,039,122 and $303,207,667 as of December 31, 2001 and 2000, respectively. Furthermore, operating revenues would increase by $1,799,405,574 and $1,478,998,298; and operating expenses, excluding income taxes, would increase by $1,568,444,117 and $1,310,284,540 for the year ended December 31, 2001 and 2000, respectively. In addition, net cash provided by operating activities would increase by $275,732,000; net cash used in investing activities would increase by $225,841,000; net cash provided by financing activities would decrease by $42,558,000; and the net change in cash and cash equivalents would be an increase of $7,333,000 for the year ended December 31, 2001. Reporting its subsidiary investment using the equity method rather than generally accepted accounting principles has no effect on net income or retained earnings.

Exhibit # 3-9

04/12/2002 CC: Comm Legal Illona, Pat, Jerry Mike

MONTANA-DAKOTA UTILITIES CO.
A Division of MDU Resources Group, Inc.

Before the Public Service Commission of North Dakota

Case No. PU-399-02-___

Direct Testimony
of
C. Wayne Fox

Q. Would you please state your name and business address?

A. Yes, my name is C. Wayne Fox. My business address is 400 North Fourth Street, Bismarck, North Dakota 58501.

Q. What is your position with Montana-Dakota Utilities Co.?

A. I am the President of Montana-Dakota Utilities Co. (Montana-Dakota), a Division of MDU Resources Group, Inc.

Q. What are your duties and responsibilities with Montana-Dakota?

A. I have executive responsibility for the development, coordination and implementation of Company strategies and policies relative to all areas of operations.

Q. Would you please outline your educational and professional background?

A. In 1964, I received a Bachelor of Science degree in Electrical Engineering from Chicago Technical College, Chicago, Illinois. I received a Master of Arts degree in Business Administration from the University of Illinois, Springfield, Illinois, in 1975. Upon graduating from college in 1964, I joined the Illinois Commerce Commission, the state body regulating public utilities in Illinois, as an electrical engineer. Upon termination of my employment with the Illinois Commerce Commission in

June 1980, I was serving as Manager of the Public Utilities Division. In that capacity, my duties included testifying in formal cases before the Commission, formulating and coordinating Commission policies on technical and administrative matters, processing formal and informal cases, and advising the Commission on matters related to the regulation of public utilities operating in the state of Illinois.

In June 1980, I joined Montana-Dakota as Assistant Treasurer - Regulatory Affairs, retaining that position until May 1982 when I was elected Assistant Vice President - Regulatory Affairs. In May 1985, I was promoted to Vice President - Regulatory Affairs. In May 1987, my duties were broadened to include the Company's purchasing and general services activities. At that time, my title was changed to Vice President - Regulatory Affairs and General Services. I assumed my present position in August 2000.

I also have been involved with the activities of the Electric Power Research Institute, the Edison Electric Institute and the American Gas Association.

Q. Have you testified before this Commission and other state regulatory bodies?

A. Yes. I have previously sponsored testimony before this Commission, the Montana Public Service Commission, the Wyoming Public Service Commission, the Minnesota Public Utilities Commission and the South Dakota Public Utilities Commission.

In addition, during my tenure with the Illinois Commerce Commission, I testified in a number of cases before that Commission.

Q. What is the purpose of your testimony?

A. The purpose of my testimony is to provide an overview of our North Dakota natural gas operations, explain our request for a gas rate increase and discuss the policies and reasons underlying the major aspects of the request. I will also identify the Company witnesses in this proceeding.

Q. Would you provide a summary of Montana-Dakota's gas operations in North Dakota?

A. The North Dakota natural gas distribution system serves approximately 83,500 customers in 76 communities. The customer mix is about 86.5% residential, 13.3% firm commercial, with the small interruptible and large interruptible customers making up about 0.2% of customers. In addition, gas is provided to the U.S. Air Force base at Minot and at a location in northeastern North Dakota. The residential, firm commercial and small interruptible customers use natural gas primarily for space and water heating. As such, Montana-Dakota's system has a low load factor with peak gas requirements occurring during the winter with summer loads being small by comparison. The total annual gas used by our North Dakota customers is 18.3 Mmdk as projected for 2003 in this case. Consumption by customer class is as follows: 43% residential, 31% firm commercial, 8% small interruptible, 12% large interruptible and 6% U.S. Air Force. Montana-Dakota's North Dakota gas service area is

divided into two operating regions with regional offices located in Bismarck and Dickinson. In addition, there are a number of district offices located in communities throughout the state. As of December 31, 2001, the Company had 587 full and part time employees who live and work throughout our North Dakota electric and gas service area.

Q. Mr. Fox, did you authorize the filing of the rate application in this proceeding?

A. Yes, I did.

Q. Why has Montana-Dakota filed this application for a gas rate increase?

A. Montana-Dakota is requesting an increase in its general gas rates at this time because the current cost of providing natural gas service to our North Dakota customers is not adequately reflected in the currently authorized rates. It should be noted that this application does not include any cost changes related to the cost of gas which is handled through the Commission authorized Purchased Gas Cost Adjustment tariff.

Q. Would you please explain the basic elements that make up the total costs of providing gas service and which of those elements is subject to regulation by this Commission?

A. Yes. The costs of providing natural gas service can be best broken down into two major categories; first, the cost of gas delivered to the town border station, where it leaves the interstate or intrastate pipeline and enters our distribution system, and second, the cost of delivering the gas from the town border station through our distribution system to the

individual customers. We call this portion distribution costs or non-gas costs.

Natural gas purchased from a producer or supplier is a commodity like wheat or corn and prices are not regulated. The charges for moving the gas to our distribution system on the pipeline system are regulated by the Federal Energy Regulatory Commission or other regulatory agencies. These two elements, which we call "gas costs", are passed on to our customers on a dollar-for-dollar basis as specified in the Purchased Gas Cost Adjustment tariff, and there is no profit made by Montana-Dakota. This portion currently comprises about 66% of a typical residential bill for gas service.

The distribution cost portion of our rates is regulated by this Commission and is the subject of this proceeding. This portion includes operation and maintenance expenses, depreciation, taxes, and a component for the opportunity to earn a return on the investment we have in facilities to provide natural gas service. The distribution costs are currently about 34% of a typical residential bill. The last time this portion of the rates increased was in 1994.

Q. What is the amount of the increase requested?

A. As will be fully explained by other Company witnesses, the Company is requesting an increase of $2,844,132 based on a projected 2003 test year.

Q. How will the requested increase affect the various classes of customers?

A. The proposed percentage change in rates by customer class is as follows:

Class	Change
Residential	4.6%
Firm General Service	4.6%
Air Force	----
Small Interruptible	-4.1%
Large Interruptible	----
Total	4.1%

Q. What are the primary reasons that Montana-Dakota needs an increase at this time?

A. The primary reasons are increased operating expenses (operation and maintenance costs, depreciation and taxes other than income) and a higher required return on equity.

Q. When was the last gas general rate increase for Montana-Dakota?

A. Montana-Dakota's gas rates were last increased in November 1994. The increase was $565,000 annually and was authorized in Case No. PU-399-94-297.

Q. Have the gas general rates changed since that time?

A. Yes. In Case No. PU-399-96-325, the gas general rates were decreased by $800,000, or about 1.2%, as a result of a settlement accepted by the Commission with the lower rates becoming effective January 15, 1999.

Q. Would you please explain how Montana-Dakota has been able to hold its gas rates down since 1994?

A. From 1994 through 2001 the consumer price index has risen almost 20%. In spite of this increase, we have been able to hold the line on our gas rates by finding ways of operating our business more efficiently and taking advantage of new technologies where it makes economic sense to do so. For example, we have created a customer service center in Bismarck representing a one-stop-shop for our customers and we have installed computers in our servicemen's trucks allowing them to receive orders electronically resulting in savings of at least one hour per day. We continue to look for opportunities to reduce costs and increase efficiencies, however, we now find ourselves in a position where, despite our efforts, we must seek rate relief.

Q. What policy changes are proposed by the Company in this filing?

A. We are proposing a change in policy regarding service lines. Montana-Dakota is proposing to own all service lines on a prospective basis. Currently, Montana-Dakota owns the service lines in the communities designated as Rate Zone 2 in its tariff. The customers currently own the service lines in the communities designated as Rate Zone 1. We are proposing that Montana-Dakota will own, and pay for, subject to appropriate extension policy conditions, all new and replacement service lines on a prospective basis. This change will remove the distinction between Rate Zones 1 and 2 and will serve to form

a uniform policy on a state-wide basis for all of our service areas. It will also align the ownership of the service line with the responsibility for ongoing testing and maintenance of the lines, which rests with Montana-Dakota and will avoid customer confusion and frustration in those instances when a replacement is necessary.

Q. Is Montana-Dakota proposing changes in its rate structure in this proceeding?

A. Yes. The proposed changes in the rate structure, which will be fully described by other witnesses, accomplish the objectives of providing a measure of stability for our customers during periods of abnormal weather, being easily understandable for customers, being simple to administer and providing for enhanced fixed cost recovery. I should note that our witnesses also present an alternative proposal in the event that the Commission finds the primary proposal unacceptable. The alternative proposal is fully described in the testimony of other witnesses. I would urge the Commission to accept the primary proposal as it provides the best fit with the objectives noted above.

Q. Will you please identify the other witnesses who will testify on behalf of Montana-Dakota in this proceeding?

A. Yes. In addition to myself, Mr. J. Stephen Gaske, President of Zinder Companies, Inc., will testify regarding the appropriate cost of common equity and overall cost of capital for Montana-Dakota's electric operations. Mr. Craig A. Keller, Vice President, Controller and Chief

Accounting Officer for Montana-Dakota will testify regarding the capital structure and overall debt and preferred equity costs. Ms. Rita A. Mulkern, Regulatory Analysis Manager for Montana-Dakota, will testify regarding the total revenue requirements necessary for Montana-Dakota's North Dakota gas operations. Mr. Richard A. Espeland, Vice President – Human Resources for MDU Resources Group, Inc., will testify regarding the Supplemental Income Security Plan. Mr. Russell A. Feingold, Managing Director of Navigant Consulting, Inc., will testify regarding certain rate design policy matters and Ms. Tamie A. Aberle, Pricing and Tariff Manager for Montana-Dakota, will testify on the specific rate design proposals.

Q. Mr. Fox, are the rates requested in this proceeding just and reasonable?

A. Yes. In my opinion, the proposed rates are just and reasonable because they are reflective of the total costs being incurred by Montana-Dakota in providing gas service to its customers. The proposed rates will allow Montana-Dakota the opportunity to earn a just and reasonable return on its North Dakota gas operations.

Q. Does this complete your direct testimony?

A. Yes, it does.

Exhibit No.___(JSG-1)

MONTANA-DAKOTA UTILITIES CO.
A Division of MDU Resources Group, Inc.

BEFORE THE NORTH DAKOTA PUBLIC SERVICE COMMISSION

CASE NO. PU-_____

PREPARED DIRECT TESTIMONY OF

J. STEPHEN GASKE

Q1. Please state your name, position and business address.

A. My name is J. Stephen Gaske and I am President of Zinder Companies, Inc., 7720 Wisconsin Avenue, Suite B-102 Bethesda, MD 20814.

Q2. Would you please describe your educational and professional background?

A. I hold a B.A. degree from the University of Virginia and an M.B.A. degree with a major in finance and investments from George Washington University. I also received a Ph.D. degree from Indiana University where my major field of study was public utilities and my supporting fields were in finance and economics.

From 1977 to 1980, I worked for H. Zinder & Associates as a research assistant and later as supervisor of regulatory research. In 1980 and 1981, I was employed by Olson and Company where my primary duties were to assist in the preparation of cost of capital studies for presentation in regulatory proceedings.

From 1982 to 1986 I undertook graduate studies in economics and finance at Indiana University where I also taught courses in public utilities, transportation, and physical distribution. During this time I also was employed as an independent consultant on a number of projects involving public utility regulation, rate design, and cost of capital. From 1983-1986 I was coordinator for the Edison Electric Institute Electric Rate Fundamentals course. In 1986 I accepted an appointment as

assistant professor at Trinity University in San Antonio, Texas, where I taught courses in financial management, investments, corporate finance, and corporate financial theory.

In 1988 I returned to H. Zinder & Associates as a consultant. I have testified or filed testimony or affidavits before the Federal Energy Regulatory Commission on more than twenty occasions. Topics covered in these submissions have included rate of return, capital structure, cost allocation, rate design, and market power. I also have filed testimony on the cost of capital and capital structure issues for electric, gas distribution and oil pipeline operations before six state regulatory bodies including North Dakota. In addition, I have testified on rate design and pricing issues before the Maine Public Utilities Commission, the Iowa Utilities Board and the Postal Rate Commission, and on issues related to generating plant economics before the Wisconsin Public Service Commission. I have conducted many studies on issues related to regulated industries and have served as an advisor to numerous clients on economic, competitive and financial matters. I also have spoken and lectured before many professional groups including the American Gas Association and the Edison Electric Institute Rate Fundamentals courses. Finally, I am a member of the American Economic Association and its Transportation and Public Utilities Group, the Financial Management Association, and the AGA Rate Committee.

I. INTRODUCTION

Scope and Overview

Q3. What is the scope of your testimony in this proceeding?

A. I have been asked by Montana-Dakota Utilities Co. ("Montana-Dakota") to evaluate the required overall rate of return for the company's natural gas distribution operations in the state of North Dakota and to estimate the cost of common equity capital for those operations. In this testimony, I calculate the cost of common equity capital for Montana-Dakota's natural gas distribution operations based on a Discounted Cash Flow ("DCF") analysis of a group of proxy companies that have risks similar to those of Montana-Dakota's North Dakota natural gas distribution operations. The results of this DCF study are supported by various benchmark criteria that I have used to test the reasonableness of the DCF study results.

Q4. What rate of return is Montana-Dakota requesting in this proceeding?

A. Based on its test period capital structure, Montana-Dakota is requesting the following rate of return:

Source	Amount (000s)	Percent	Cost	Overall Rate of Return
Long-Term Debt	$132,600.0	43.039%	9.180%	3.951%
Preferred Stock	$16,250.0	5.274%	4.622%	0.244%
Common Equity	$159,245.8	51.687%	13.250%	6.849%
TOTAL	$308,095.8	100.00%		11.044%

As my testimony discusses, an overall allowed rate of return of 11.044 percent, with a 13.25 percent return on common equity, represents the cost of capital for Montana-Dakota.

Company Background

Q5. Would you please describe Montana-Dakota's operations and those of its parent company, MDU Resources Group, Inc.?

A. Montana-Dakota is a wholly-owned division of MDU Resources Group, Inc. ("MDU Resources") that is engaged in the generation, transmission and distribution of electricity, and the distribution of natural gas, in the states of North Dakota, Montana, South Dakota and Wyoming. Through other divisions and subsidiaries, MDU Resources is engaged in natural gas exploration, production and transmission and also produces and markets aggregates and other construction materials. MDU Resources also has subsidiaries engaged in utility infrastructure construction and a recently acquired division, Great Plains Natural Gas Company ("Great Plains"), distributes natural gas in southeastern North Dakota and western Minnesota.

In 2001, Montana-Dakota and the much smaller Great Plains served a total of 236,000 residential, commercial and industrial gas distribution customers. As shown on Exhibit No. ___ (JSG-2), Schedule 2, page 1, Montana-Dakota's natural gas distribution assets comprised 7.0 percent of MDU Resources' total assets. In addition, the natural gas distribution utility revenues and operating income accounted for 11.5 percent and 1.5 percent of MDU Resources' total, respectively. North Dakota accounted for 39 percent of the natural gas distribution utility operating revenues, while Montana (25 percent), South Dakota (19 percent), Wyoming (6 percent) and Minnesota (11 percent) accounted for the other 61 percent of natural gas distribution utility revenues. Nearly all of

Montana-Dakota's gas supply is transported by Williston Basin Interstate Pipeline Company.

II. FINANCIAL MARKET STUDIES

Criteria for a Fair Rate of Return

Q6. Please describe the criteria which should be applied in determining a fair rate of return for a regulated company?

A. The United States Supreme Court has provided general guidance regarding the level of allowed rate of return that will meet constitutional requirements. In *Bluefield Water Works & Improvement Company v. Public Service Commission of West Virginia* (262 U.S. 679, 693 (1923)), the Court indicated that:

> "The return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties. A rate of return may be reasonable at one time and become too high or too low by changes affecting opportunities for investment, the money market and business conditions generally."

The Court has further elaborated on this requirement in its decision in *Federal Power Commission v. Hope Natural Gas Company (320 U.S. 591, 603 (1944)).* There the Court described the relevant criteria as follows:

> "From the investor or company point of view it is important that there be enough revenue not only for operating expenses but also for the capital costs of the business. These include service on the debt and dividends on the stock.... By that standard the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks. That

> return, moreover, should be sufficient to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and to attract capital."

Thus, the standards established by the Court in *Hope* and *Bluefield* consist of three requirements. These are that the allowed rate of return should be:

1. commensurate with returns on enterprises with corresponding risks;

2. sufficient to maintain the financial integrity of the regulated company; and,

3. adequate to allow the company to attract capital on reasonable terms.

These legal criteria will be satisfied best by employing the economic concept of the "cost of capital" or "opportunity cost" in establishing the allowed rate of return on common equity. For every investment alternative, investors consider the risks attached to the investment and attempt to evaluate whether the return they expect to earn is adequate for the risks undertaken. Investors also consider whether there might be other investment opportunities that would provide a better return relative to the risk involved. This weighing of alternatives and the highly competitive nature of capital markets causes the prices of stocks and bonds to adjust in such a way that investors can expect to earn a return that is just adequate for the risks involved. Thus, for any given level of risk there is a return that investors must expect in order to induce them to voluntarily undertake that risk and not invest their money elsewhere. That return is referred to as the "opportunity cost" of capital or "investor required" return.

Q7. How should a fair rate of return be evaluated from the standpoint of consumers and the public?

A. The same standards should apply. When a regulated entity faces competition, consumers will implicitly determine the fair rate of return by their consumption decisions. When regulation is appropriate, consumers and the public have a long-term interest in seeing that the regulated company has an opportunity to earn returns that are not so high as to be excessive, but that also are sufficient to encourage continued replacement and maintenance, as well as needed expansions, extensions, and new services. Thus, the consumer and public interest also lies in establishing a return that will readily attract capital without being excessive.

Q8. How are the costs of preferred stock and long-term debt determined?

A. For purposes of setting regulated rates, the current, embedded costs of preferred stock and long-term debt are used in order to ensure that the company receives a return that is sufficient to pay the fixed dividend and interest obligations that are attached to these sources of capital.

Q9. How is the cost of common equity determined?

A. The practice in setting a fair rate of return on common equity is to use the current market cost of common equity in order to ensure that the return is adequate to attract capital and is commensurate with returns available on other investments with similar levels of risk. However, determining the market cost of common equity is a relatively complicated task that requires analysis of many factors and some degree of judgment by an analyst. The current market cost of capital for securities that pay a fixed level of interest or dividends is relatively easy to determine. For

example, the current market cost of debt for publicly-traded bonds can be calculated as the yield-to-maturity, adjusted for flotation costs, based on the current market price at which the bonds are selling. In contrast, because common stockholders receive only the residual earnings of the company, there are no fixed contractual payments which can be observed. This high degree of uncertainty associated with the dividends that eventually will be paid greatly complicates the task of estimating the cost of common equity capital. For purposes of this testimony, I have relied on several analytical approaches for estimating the cost of common equity. My primary approach relies on several DCF analyses. In addition, I have conducted Risk Premium and Alternative Equity Investment analyses in order to establish benchmarks for a reasonable rate of return. Each of these approaches are described later in this testimony.

Cost of Debt

Q10. What debt cost rates have you used for Montana-Dakota?

A. Calculation of the overall cost of long-term debt and the effective cost of each of the long-term debt issues is shown in the Prepared Direct Testimony of Craig Keller, the Controller for Montana-Dakota.

Q11. What cost of preferred stock did you use?

A. Montana-Dakota's annual cost of preferred stock is 4.622 percent, as shown also in the Prepared Direct Testimony of Craig Keller.

Interest Rates and the Economy

Q12. What are the general economic factors that affect the cost of capital?

A. Investors are often influenced by their perceptions of the economy and both short- and long-term trends. Page 1 of Schedule 1 of Exhibit No.___(JSG-2) shows various general economic statistics. The economy has had a record of persistent growth during the past thirty years, with only temporary recessionary periods. Real growth in the Gross Domestic Product ("GDP") has averaged 3.2 percent annually during the past 30 years, 3.1 percent for the past 20 years and 3.1 percent for the past ten years. However, the economy recently has been shrinking and in a recession. Although there are signs that the recession may be ending, recent reports indicate that manufacturing jobs continue to decline. In addition, utility stock prices in general are lower now than they were prior to September 11. The decline in utility stock market prices was partially the result of an increase in the perceived risk of utility equity investments.

Investors also are influenced by the level of inflation, which has been persistent in the past. During the past decade, the Consumer Price Index has increased at an average annual rate of 2.8 percent and the GDP Implicit Price Deflator, a measure of price changes for all goods produced in the United States, has increased at an average rate of 2.1 percent.

Companies attempting to attract common equity must compete with a variety of alternative investments. Prevailing interest rates provide a standard measure of returns currently available on less risky securities. As Page 2 of Schedule 1 of Exhibit No. ___(JSG-2) shows, long-term interest rates have remained

relatively stable during the past two years. The recent yields on A-rated public utility bonds have been approximately 7.6 percent and the yields on Baa-rated public utility bonds have been approximately 8.0 percent.

Discounted Cash Flow ("DCF") Method

Q13. Please describe the DCF method of estimating the cost of common equity capital.

A. The DCF method reflects the assumption that the market price of a share of stock represents the discounted present value of the stream of all future dividends that investors expect the firm to pay. The DCF method suggests that investors in common stocks expect to realize returns from two sources: a current dividend yield, plus expected growth in the value of their shares as a result of future dividend increases. Estimating the cost of capital with the DCF method therefore is a matter of calculating the current dividend yield and estimating the long-term future growth rate in dividends that investors reasonably expect from a company.

The dividend yield portion of the DCF method utilizes readily-available information regarding stock prices and dividends. The market price of a firm's stock reflects investors' assessments of risks and potential earnings as well as their assessments of alternative opportunities in the competitive financial markets. By using the market price to calculate the dividend yield, the DCF method implicitly recognizes investors' market assessments and alternatives. However, the other component of the DCF formula, investors' expectations regarding the future long-run

growth rate of dividends, is not readily apparent from stock market data and must be estimated using informed judgment.

Q14. What is the appropriate DCF formula to use in this proceeding?

A. There can be many different versions of the basic DCF formula, depending on the assumptions that are most reasonable regarding the timing of future dividend payments. In my opinion, it is most appropriate to use a model that is based on the assumptions that dividends are paid quarterly and that the next annual dividend increase is a half year away. One version of this quarterly model assumes that the next dividend payment will be received in three months, or one quarter. This model multiplies the dividend yield by (1 + .75 g). Another version assumes that the next dividend payment will be received today. This model multiplies the dividend yield by (1 + .5 g). Since, on average, the next dividend payment is a half quarter away, the average of the results of these two models is a reasonable approximation of the average timing of dividends and dividend increases that investors can expect from companies that pay dividends quarterly. The average of these two quarterly dividend models is:

$$K = \frac{D\,(1 + .625g)}{P} + g \qquad (1)$$

where:
- K = the cost of capital, or total return that investors expect to receive;
- P = the current market price of the stock;
- D = the current annual dividend rate; and
- g = the future annual growth rate that investors expect.

In my opinion, this is the DCF model that is most appropriate for estimating the cost of common equity capital for companies that pay dividends quarterly, such as those used in my analysis.

Flotation Cost Adjustment

Q15. Does the investor return requirement that is estimated by a DCF analysis need to be adjusted for flotation costs in order to estimate the cost of capital?

A. Yes. There are significant costs associated with issuing new common equity capital and these costs must be considered in determining the cost of capital. Schedule 3 of Exhibit No. ___(JSG-2) shows a representative sample of flotation costs incurred with 34 new common stock issues by natural gas transmission and distribution companies between 1992 and 2001. Flotation costs associated with these new issues averaged 4.85 percent. This indicates that in order to be able to issue new common stock on reasonable terms, without diluting the value of the existing stockholders' investment, Montana-Dakota must have an expected return that places a value on its equity that is approximately 4.75 percent above book value. The cost of common equity capital is therefore the investor return requirement multiplied by 1.0475.

One purpose of a flotation cost adjustment is to compensate common equity investors for past flotation costs by recognizing that their real investment in the company exceeds the equity portion of the rate base by the amount of past flotation costs. For example, the proxy companies generally have incurred flotation costs in the past and, thus, the cost of capital invested in these companies is the investor return requirement plus an adjustment for flotation costs. A more important

purpose of a flotation cost adjustment is to establish a return that is sufficient to enable a company to attract capital on reasonable terms. This fundamental requirement of a fair rate of return is analogous to the well-understood basic principle that a firm, or an individual, should maintain a good credit rating even when they do not expect to be borrowing money in the near future. Regardless of whether a company can confidently predict its need to issue new common stock several years in advance, it should be in a position to do so on reasonable terms at all times without dilution of the book value of the existing investors' common equity. This requires that the flotation cost adjustment be applied to the entire common equity investment and not just a portion of it.

DCF Study of Natural Gas Distribution Companies

Q16. Would you please describe the overall approach used in your DCF analysis of Montana-Dakota's cost of common equity?

A. Because Montana-Dakota must compete for capital with many other potential projects and investments, it is essential that it have an allowed return that matches returns potentially available from other similarly risky investments. The DCF method provides a good measure of the returns required by investors in the financial markets. However, the DCF method requires a market price of common stock to compute the dividend yield component of the DCF analysis. Since Montana-Dakota is a division of MDU Resources and does not have publicly-traded common stock, a direct, market-based DCF analysis of Montana-Dakota's natural gas distribution operation as a stand-alone company is not possible. To get around this problem, I have used the Moody's Natural Gas Distribution Companies as a

proxy group for purposes of estimating the cost of common equity for Montana-Dakota's North Dakota natural gas distribution operations.

Q17. How did you calculate the dividend yields for the companies in your comparison group?

A. These calculations are shown on page 3 of Schedule 2 of Exhibit No. __(JSG-2). For the price component of the calculation I used the average of the high and low stock prices experienced by each company during the six month period from August 2001 to January 2002. The dividend yields were calculated for each company by dividing the indicated annual dividend by the average of the stock prices for each company. These dividend yields can be multiplied by the quarterly DCF model factor (1 + .625 g) to arrive at the dividend yield component of the DCF model.

Q18. Please describe the method you used in estimating the future growth rate that investors expect from this group of companies?

A. I developed three different DCF analyses of the proxy companies based on three different growth rate estimation methods. There are many methods that reasonably can be employed in formulating a growth rate estimate, but an analyst must attempt to ensure that the end result is an estimate that fairly reflects the forward-looking growth rate that investors expect.

In the first approach I calculated a DCF rate of return using a combination of securities analysts' growth projections and the Value Line retention growth forecasts to produce a Second-Stage Retention Growth analysis. As a second approach, I conducted a Basic DCF analysis that relied solely on the analysts'

forecasts for the growth rate component of the model. Finally, my Primary DCF uses a variety of sources and analyses to develop an estimate of the composite growth rate that investors would expect from the sample group of proxy companies.

Second-Stage Retention Growth Analysis

Q19. How did you use your Second-Stage Retention Growth analysis to estimate investors' long-term growth rate expectations for the proxy companies?

A. The Second-Stage Retention Growth rate approach combines: (i) estimates of long-term growth for each company that are published by various investment analysts and (ii) Value Line retention growth forecasts.

Q20. How did you estimate the first stage of expected future growth?

A. Among the best sources of information regarding investors' growth rate expectations are the long-term earnings growth rate forecasts of investment analysts. Zack's is a service that collects estimates by professional investment analysts and publishes a summary of the consensus forecasts. I have used the Zack's consensus forecasts as the source for analysts' forecasts in my calculations. As shown on Exhibit No. ___ (JSG-2), Schedule 2, page 5, the average of the analysts' long-term growth rate estimates for the natural gas distribution proxy companies is 7.6 percent.

Q21. Would you please describe the second stage, retention growth rate component of your analysis?

A. In addition to analysts' growth rate forecasts, I have relied upon Value Line projections of the retention growth rates that the proxy companies are

expected to begin maintaining three to five years in the future. Although companies may experience extended periods of growth for other reasons, in the long-run, growth in earnings and dividends per share depends in part on the amount of earnings that are being retained and reinvested in a company. Thus, the primary determinants of growth for the proxy companies will be (i) their ability to find and develop profitable opportunities; (ii) their ability to generate profits that can be reinvested in order to sustain growth; and, (iii) their willingness and inclination to reinvest available profits. Expected future retention rates provide a general measure of these determinants of expected growth, particularly items (ii) and (iii).

Q22. How can a company's earnings retention rate affect its future growth?

A. Retention of earnings causes an increase in the book value per share and, other factors being equal, increases the amount of earnings that are generated per share of common stock. The retention growth rate can be estimated by multiplying the expected retention rate (b) times the rate of return on common equity (r) that a company is expected to earn in the future. For example, a company that is expected to earn a return of 15 percent and retain 80 percent of its earnings might be expected to have a growth rate of 12 percent, computed as follows:

$$.80 \times 15\% = 12\%$$

On the other hand, another company that is also expected to earn 15 percent but only retains 20 percent of its earnings might be expected to have a growth rate of 3 percent, computed as follows:

$$.20 \times 15\% = 3\%$$

Thus, the rate of growth in a firm's book value per share is primarily determined by the level of earnings and the proportion of earnings retained in the company.

Q23. How did you calculate the expected future retention rates of the proxy companies?

A. For most companies, Value Line publishes forecasts of data that can be used to estimate the retention rates that its analysts expect individual companies to have 3-5 years in the future. Since these retention rates are projected for several years in the future they should be indicative of a normal expectation for a primary underlying determinant of growth that would be sustainable indefinitely beyond the period covered by analysts' forecasts. While companies may have either accelerating or decelerating growth rates for extended periods of time, the retention growth rates expected to be in effect 3-5 years in the future generally represent a minimum "cruising speed" that companies can be expected to maintain indefinitely. The derivation of Value Line's retention growth rate forecasts for each of the proxy companies is shown on page 4 of Schedule 2 of Exhibit No.___(JSG-2). The projected earnings per share and projected dividends per share can be used to calculate the percentage of earnings per share that are being retained and reinvested in the company. This earnings retention rate is multiplied times the projected return on common equity to arrive at the projected retention growth rate. The average retention growth rate for the proxy companies is 5.5 percent.

Q24. How did you utilize the projected earnings retention rates in estimating expected growth for the proxy companies?

A. As shown on page 5 of Schedule 2 of Exhibit No.___(JSG -2), I calculated a weighted average of the analysts' projected growth rates and the projected retention growth rates to derive long-term growth rate estimates for each of the proxy companies. In these calculations, I gave a two-thirds weighting to the analysts' growth rate projections to reflect the fact that analysts are attempting to evaluate all sources of growth and not just growth that is expected to result from retained earnings. This weighting also reflects the fact that the analysts' long-term growth forecasts can be expected to prevail for a relatively long period of time in the future. This two-thirds weighting for analysts' forecasts is the same weighting that the FERC used in Opinion No. 414-A for setting the allowed return on equity for natural gas pipeline companies. *Transcontinental Gas Pipeline Co.*, 80 FERC ¶ 61,084 (1998). The average of the weighted average growth rates for the proxy companies is 6.9 percent and the median is 6.7 percent.

Q25. How did you utilize these Second-Stage Retention Growth rate estimates in estimating the return on common equity capital that investors require from the proxy companies?

A. The dividend yield for each company shown on page 3 of Schedule 2 of Exhibit No.___(JSG-2) is multiplied times the quarterly dividend adjustment factor (1 + .625g) and this product is added to the growth rate estimate to arrive at the investor-required return. Finally, the investor return requirement is multiplied times the flotation cost adjustment factor, 1.0475 to arrive at the cost of common equity

capital for the proxy companies. These calculations are shown on page 6 of Schedule 2 of Exhibit No.___(JSG-2). This Second-Stage Retention Growth DCF analysis indicates that the cost of common equity capital for the natural gas distribution proxy companies is in a range between 9.7 percent and 16.1 percent. The median for the group is 12.5 percent and the average for the group is 12.8 percent.

Basic DCF Analysis

Q26. What approach did you use in conducting a Basic DCF analysis?

A. This analysis is conducted in substantially the same manner as the Second-Stage Retention Growth Rate analysis. However, the growth rate component of the analysis is based solely on the analysts' forecasts for each company and the retention growth rate component is omitted from the analysis. This Basic DCF analysis recognizes that the consensus of analysts' forecasts reflects the most important component of investors' growth rate expectations and it assumes that the analysts' forecasts incorporate all information required to estimate a long-term expected growth rate for a company.

Q27. How did you calculate the cost of capital using the Basic DCF analysis?

A. These calculations are shown on page 7 of Schedule 2 of Exhibit No.___(JSG-2). Again, the annual dividend yield is multiplied times the quarterly dividend adjustment factor (1 + .625g) and this product is added to the growth rate estimate to arrive at the investor-required return. Then, the investor return requirement is multiplied times the flotation cost adjustment factor, 1.0475 to arrive

at the Basic DCF estimate of the cost of common equity capital for the proxy companies. The Basic DCF analysis indicates a median cost of common equity for the proxy companies of 13.2 percent and an average cost of 13.6 percent.

Primary DCF Analysis

Q28. Would you please describe your Primary DCF analysis?

A. My primary DCF approach refines the growth rate estimates to reflect my analysis of the appropriate range of growth rate expectations that are implicit in the stock prices and dividend yields of this group. As the following analysis indicates, my primary analysis indicates a DCF required rate of return that is quite close to the level that is indicated by both the Second-Stage Retention Growth DCF analysis and the Basic DCF analysis.

Q29. In your opinion, what are the factors that will affect growth rates for the proxy companies in the future?

A. One important factor will be growth in the overall economy. Page 1 of Schedule 1 of Exhibit No.___(JSG-2) shows that the United States Gross Domestic Product has grown at an average annual rate of 7.6 percent during the past 30 years. During the past decade U.S. GDP growth has averaged 5.5 percent. It is reasonable to expect that long-term future growth in the economy generally will be comparable to past growth rates. For example, DRI-WEFA forecasts that the U.S. GDP will grow at a rate of approximately 5.9 percent over the long-term.

Another factor will be demand for natural gas. Natural gas usage has been increasing in recent years and many analysts are expecting demand to increase

steadily during the next decade and beyond. For example, the Energy Information Administration of the U.S. Department of Energy forecasts that gas consumption in the United States will grow from its current level of approximately 23 Tcf per year to approximately 34 Tcf per year in 2020. Steady increases in demand for gas distribution services of the proxy companies should be fueled by the availability of domestic and imported supplies and the superior environmental characteristics of natural gas that should allow it to achieve a greater market share relative to other fuels. While the real gas distribution capacity of the proxy companies is expected to increase, additional growth will occur because the amount of investment required will increase in nominal dollars. In other words, the effects of inflation needs to be added to the real growth rate in the industry to get a measure of likely growth in investment and earnings.

In my opinion, investors reasonably expect the six companies in this comparison group to grow at a rate that is somewhere in the range of 6.75 percent to 7.75 percent. Based on the average growth rate of approximately 7.6 percent currently projected by investment analysts, as well as the 5.9 percent growth rate in the economy, increasing demands for natural gas, and my review of these companies, I consider this growth rate range to be a reasonable estimate of the future growth expectations that are implicit in current dividend yields. This growth rate range is also consistent with the retention growth rates projected for these companies and their ability to grow by means other than retained earnings.

Q30. What does your primary DCF analysis indicate with regard to investors' current market rate of return requirements?

A. Page 8 of Schedule 2 of Exhibit No. ___(JSG-2) shows the calculation of the cost of capital based on my primary DCF growth rate estimates. The dividend yield used in this analysis is the average dividend yield for the natural gas distribution proxy companies that is developed on page 3 of Schedule 2. This market-based primary DCF analysis indicates that the cost of capital for the proxy companies is approximately in the range of **12.7 percent** to **13.8 percent**.

Risk Premium Analyses

Q31. Have you conducted additional analyses in determining the cost of capital to Montana-Dakota?

A. Yes. The risk premium approach provides a general guideline for determining the level of returns that investors expect from an investment in common stocks. Investments in the common stocks of companies carry considerably greater risk than investments in bonds of those companies since common stockholders receive only the residual income that is left after the bondholders have been paid. In addition, in the event of bankruptcy or liquidation of the company, the stockholders' claims on the assets of a company are subordinated to the claims of bondholders. This superior standing provides bondholders with greater assurances that they will receive the return on investment that they expect and that they will receive a return of their investment when the bonds mature. Accompanying the greater risk associated with common stocks is a requirement by investors that they can expect to earn, on average, a return that is greater than the return they could earn by investing

in less risky bonds. Thus, the risk premium approach estimates the return investors require from common stocks by utilizing current market information that is readily available in bond yields and adding to those yields a premium for the added risk of investing in common stocks.

Investors' expectations for the future are influenced to a large extent by their knowledge of past experience. Ibbotson Associates annually publishes extensive data regarding the returns that have been earned on stocks, bonds and U.S. Treasury bills since 1926. Historically, the annual returns on large company common stocks have exceeded the yields on Long-Term U.S. Government Bonds by an average of 780 basis points (7.8 percent). However, the returns on relatively small company stocks in the size range of Montana-Dakota's natural gas distribution operations have been 1,520 basis points (15.2 percent) above the yields on long-term government bonds. As shown on page 1 of Schedule 2 of Exhibit No. ___ (JSG-2), Montana-Dakota is a fraction of the size of any of the proxy companies. In recent months, the yield on long-term U.S. Government bonds has been approximately 5.5 percent. Adding a 7.8 percent premium to a yield of 5.5 percent indicates that investors in large company common stocks require a return of at least 13.3 percent. Adding the 15.2 percent premium for companies in Montana-Dakota's size range suggests a required return of 20.2 percent.

Another risk premium approach is to examine the long-term premium of large company common stock returns as compared with returns on corporate bonds. This premium has averaged 740 basis points (7.4 percent) annually over a long period of time in the past. When this premium is added to the 7.4 percent yield on

Moody's corporate bonds that has prevailed in recent months, the result is an investor return requirement for large company stocks of 14.8 percent. However, over the long-term companies in Montana-Dakota's size range have had a premium of 1,480 basis points (14.8 percent) over the average returns on long-term corporate bonds. When added to the recent average corporate bond yields, this size-related premium suggests an expected return of 22.2 percent.

Alternative Equity Investment Analysis

Q32. Have you analyzed the returns available on common equity investments in other industries?

A. Yes. When investors consider whether to invest their funds in a particular company or line of business, they evaluate the returns potentially available from other companies. This process whereby projects and companies compete for scarce equity capital ensures that capital resources are deployed efficiently. As a result, regulated natural gas distribution operations must bid against other companies and other possible projects within the same company for equity capital by offering potential returns that investors find attractive relative to the risks involved.

Q33. What level of returns are potentially available to unregulated companies?

A. The potential returns are often considerably above 20 percent and the average returns for broad-based, diversified portfolios have averaged 20.0 percent or more in recent years. For example, page 3 of Schedule 1 of Exhibit No. ___(JSG-2) shows the average return on equity book value earned by companies in the S&P 500 each year from 1977 to 2000. It can be seen, in fact, that average returns for the

S&P 500 companies have been 21.47 percent for the past five years. For purposes of comparison with allowed returns for regulated natural gas distribution operations, a better indicator of earnings on alternative equity investments is provided by data on 746 industrial, retail and transportation companies published by *The Value Line Investment Survey*. Excluding extraordinary and non-recurring items, the average returns on the original cost book value of common equity for these companies in recent years has been:

1996	27.57%
1997	29.35
1998	28.28
1999	30.08
2000	31.75
5-year Average	**29.41%**

Q34. Is it appropriate to set the allowed rate of return for a natural gas distribution company equal to the average return available to industrial companies?

A. The average return for industrials serves as a useful indicator of the cost of capital because natural gas distribution companies must offer potential returns that are competitive with other investments in order to attract capital. It is important to remember that an industrial company has an opportunity to earn returns far in excess of 20 percent. In fact, the average company has earned normal returns on the book value of equity well in excess of 20 percent in recent years. This average reflects many companies that experienced enormous losses as well as those with large returns.

Similarly, when a regulator sets an allowed return it is providing only an *opportunity* to earn that return. In exceptionally good times a regulated company might earn slightly more than this amount, but it might earn substantially less than the allowed return and, in fact, often does earn less than that amount. Natural gas distribution companies generally have risks that are less than those of the average large industrial company. Consequently, it would be appropriate to view average returns earned by a broad cross-section of industry as being only a general indicator for reasonable allowed returns.

As a benchmark, allowed returns for natural gas distribution companies can be compared to returns on book value for large companies. Normal returns have averaged 29.4 percent during the past five years. Similarly, the average level of return experienced by the S&P 500 companies has been approximately 21.47 percent. As this comparison indicates, an allowed return of 13.25 percent for Montana-Dakota would be quite low in comparison with the returns earned by other large companies. Consequently, a return of this magnitude could potentially be too low for Montana-Dakota's natural gas distribution operations to successfully compete for capital.

Relative Risk Analysis

Q35. Have you compared the risks faced by Montana-Dakota's North Dakota natural gas distribution operations with the risks faced by the proxy group of companies?

A. Yes. There are four broad categories of risk that concern investors. These include:

i. Business Risk;
ii. Regulatory Risk;
iii. Financial Risk; and,
iv. Market Risk.

Q36. Would you please describe the business risks inherent in the natural gas distribution industry?

A. Business risk refers to the ability of the firm to generate revenues that exceed its cost of operations. Business risk exists because forecasts of both demand and costs are inherently uncertain. Markets change and the level of demand for the firm's output may be sufficient to cover its costs at one time and later become insufficient. Sunk investments in long-lived natural gas distribution assets, for which cost recovery occurs over a period of thirty years or more, are subject to enormous uncertainties and risks that demand, costs, supply and competition may change in ways that adversely affect the value of the investment.

Q37. What are some of the business risks faced by Montana-Dakota's North Dakota natural gas distribution operations?

A. These operations face many of the same risks that are associated with other natural gas distribution companies. However, Montana-Dakota's gas distribution operation faces some risks that distinguish it from many other distribution companies.

As shown on Exhibit No. ___ (JSG-2), Schedule 2, page 1, Montana-Dakota's natural gas distribution operations are considerably smaller than the operations of any of the proxy companies and a small fraction of the size of the typical proxy company. For example, Montana-Dakota's natural gas distribution assets are equal to only 7.2 percent of the assets of the median proxy company.

Similarly, Montana-Dakota's gas distribution operating revenues and operating income are only 17.1 percent and 2.2 percent of the level for the median proxy company. Thus, depending upon the measure of size, the typical proxy company is somewhere between approximately six and 46 times the size of Montana-Dakota's natural gas distribution operations. With its small revenue base, Montana-Dakota is subject to slightly greater risk that a major employer or industry, such as a mining operation or refinery, might experience a downturn that would significantly affect overall employment and income in the areas served.

Ibbotson Associates has documented the significantly higher returns that generally have been associated with small companies. On a practical level, Montana-Dakota's relatively small natural gas distribution operations are heavily dependent upon a relatively undiversified local economy. Factors that negatively influence the local economy can reduce demand for Montana-Dakota's gas distribution services and adversely impact investments in facilities used to provide those services. Considering only its smaller size, Montana-Dakota might require a return that is more than 100 basis points higher than the return required for the typical proxy company.

In addition, Montana-Dakota faces direct competition from propane and heating oil for new and existing load in its North Dakota service territory. Another risk faced by Montana-Dakota is the fact that it recovers a substantial portion of its fixed costs in the volumetric component of its rates and it does not have a weather normalization adjustment mechanism. In contrast, several of the proxy companies have rate designs that better reflect the fixed cost nature of their

operations. These companies have slightly less rate design risk as a result. Montana-Dakota is requesting in this filing a rate design that better reflects costs, but until such rate design is approved, Montana-Dakota's North Dakota gas distribution operations face somewhat greater overall business risk than the typical company in the natural gas distribution proxy group.

Q38. What are the regulatory risks faced by Montana-Dakota's North Dakota utility operations?

A. Regulatory risk is closely related to business risk and might be considered just another aspect of business risk. To the extent that the market demand for a natural gas distribution company's services is sufficiently strong that the company could conceivably recover all of its costs, regulators may nevertheless set the rates at a level that will not allow full cost recovery. In effect, the binding constraint on utilities is often posed by regulation rather than by the working of market forces. One purpose of regulation is to provide a substitute for competition where markets are not workably competitive. As such, regulation often attempts to replicate the type of cost discipline and risks that might typically be found in highly competitive industries. Moreover, there is the perceived risk that regulators may set allowed returns so low as to effectively undermine investor confidence and jeopardize the ability of gas distribution utilities to finance their operations. Thus, in some instances regulation may substitute for competition and in other instances it may limit the potential returns available to successful competitors. In either case, regulatory risk is an important

consideration for investors and has a significant effect on the cost of capital for all firms in the natural gas distribution industry.

Value Line rates the regulatory climate in North Dakota as being "average," thus, Montana-Dakota should be considered to have average regulatory risk relative to the proxy companies.

Q39. Would you please describe Montana-Dakota's relative financial risks?

A. Financial risk exists to the extent a company incurs fixed obligations in financing its operations. These fixed obligations increase the level of income which must be generated before common stockholders receive any return and serve to magnify the effects of business and regulatory risks. Fixed financial obligations also increase the probability of bankruptcy by reducing the company's financial flexibility and ability to respond to adverse circumstances. One possible indicator of investors' perceptions of relative financial risk in this case might be obtained from bond ratings. Because Montana-Dakota does not have its own bonds outstanding, it is difficult to make direct comparisons between the ratings of Montana-Dakota and the proxy group. However, page 2 of Schedule 2 of Exhibit No. ___ (JSG-2) shows the bond ratings assigned by Moody's and Standard & Poor's to each of the companies in the comparison group and MDU Resources bonds that are secured by the assets of Montana-Dakota Utilities. The median bond ratings for companies in the proxy group are AA-/A+ for Standard & Poor's and A1 for Moody's. In comparison, MDU Resources bonds carry an A+ rating with Standard & Poor's and an A2 rating with Moody's. This suggests that the perceived risk of MDU Resources' bonds is slightly greater than that of

the typical company in the comparison group. Examination of the capital structure data shown on page 9 of Exhibit No. ___ (JSG-2), Schedule 2 shows that Montana-Dakota's filed common equity ratio, 51.7 percent, is very close to the median for the proxy companies. This common equity ratio, combined with its bond rating, suggests average financial risk for Montana-Dakota's North Dakota natural gas distribution operations.

Q40. Would you please describe Montana-Dakota's market risks?

A. Market risk is associated with the changing value of all investments because of business cycles, inflation and fluctuations in the general cost of capital throughout the economy. Different companies are subject to different degrees of market risk largely as a result of differences in their business and financial risks. Because of the substantial similarity in their operations, Montana-Dakota's degree of market risk is not significantly different from that of the companies in the natural gas distribution comparison group.

Q41. How do the overall risks of the proxy companies compare with the risks faced by Montana-Dakota's natural gas distribution operations?

A. Montana-Dakota faces overall risks that are above average relative to those of the proxy companies. Montana-Dakota has above-average business risks due primarily to its exceptionally small size relative to the proxy companies and its exposure to a relatively undiversified economy. Montana-Dakota also has slightly greater rate design risk than the typical company in the proxy group. On the other hand, it has average financial risks. These factors and the perception of an average regulatory climate in North Dakota lead me to conclude that the overall risks of

Montana-Dakota's natural gas distribution operations are somewhat above average relative to the risks of the proxy companies.

III. SUMMARY AND CONCLUSIONS

Q42. Would you please summarize the results of your cost of capital study?

A. Yes. I conducted several DCF analyses on a group of natural gas distribution companies that have a range of risks that includes risks roughly comparable to those of Montana-Dakota. The results of my various analyses can be summarized as follows:

	Investor Requirement Median/Average	Cost of Capital Median/Average
DCF Analyses		
Natural gas distribution Proxies:		
- Second-Stage Retention Growth	11.94%	12.51%
- Basic DCF	12.61%	13.21%
- Primary DCF	12.63%	13.22%
Benchmark Analyses		
Risk Premium Return Based On:		
- U.S. Treasury Bonds		
v. Large Companies	13.3	
v. Small Companies	20.2	
- Corporate Bonds		
v. Large Companies	14.8	
v. Small Companies	22.2	
Alternative Investments		
- S&P 500	21.5	
- Value Line Industrials	29.4	

My second-stage retention growth analysis indicates a median cost of common equity capital of 12.5 percent. Because projected retention growth is sustainable indefinitely and it is directly related to the growth rate expectations for an individual company, it is a good indicator of the minimum growth rate that a company can maintain in the very long run. However, companies can achieve growth through means in addition to retained earnings. Consequently, analysts' forecasts provide the best measure of expected growth for the foreseeable future. Combining these two measures provides a good estimate of the long-term growth that investors can reasonably expect from these proxy companies.

The Basic DCF analysis, which relies solely on the analysts' forecasts, also provides a good estimate of investors' growth rate expectations and required return for the proxy companies. This DCF analysis indicates a median required rate of return of 13.2 percent.

My primary approach has been to analyze a variety of sources of information, including investment analysts' forecasts, in order to estimate a weighted average annual growth rate that investors reasonably can expect the natural gas distribution comparison companies to achieve during a long period of time in the future. This primary DCF analysis indicates that the cost of capital for natural gas distribution companies with risks comparable to those of Montana-Dakota is in a range between 12.7 percent and 13.8 percent. The mid-point of this range is approximately 13.2 percent.

My risk premium analyses indicate that my DCF estimates produce a premium over corporate bond yields that is below the average long-run risk

premium available from common stocks. The DCF return estimates provide a premium over the return on corporate bonds that is considerably below the average premium experienced by companies in Montana-Dakota's relative size range. In addition, my examination of returns available on alternative equity investments suggests that my DCF estimates generally are significantly below the 21.5 percent average return earned by the S&P 500 companies during the past five years. Moreover, the DCF returns are far below the 29.4 percent average normal returns earned by the Value Line Industrials in recent years.

Q43. What rate of return on common equity do you recommend for Montana-Dakota in this proceeding?

A. My analyses indicate that an appropriate rate of return on common equity for Montana-Dakota's North Dakota natural gas distribution operations at this time would be **13.25 percent**. This recommended return reflects my assessment that Montana-Dakota's overall risks are slightly above-average relative to the proxy group. A return of 13.25 percent is very near the middle of the range for my Primary DCF analysis and also is very close to the median for my Basic DCF analysis. It also is above the median return calculated using a Second-Stage Retention Growth analysis and, thus, appropriately reflects the above-average risks faced by Montana-Dakota.

Q44. Does this conclude your Prepared Direct Testimony?

A. Yes.

Montana-Dakota Utilities Co.

MONTANA-DAKOTA UTILITIES CO.
A Division of MDU Resources Group, Inc.

Before the Public Service Commission of North Dakota

Case No. PU-399-02-___

Direct Testimony
of
Craig A. Keller, CPA

Q. Would you please state your name, business address and position?

A. Yes. My name is Craig A. Keller and my business address is 400 North Fourth Street, Bismarck, North Dakota 58501. I am the Vice President, Controller and Chief Accounting Officer (CAO) for Montana-Dakota Utilities Co. (Montana-Dakota), a Division of MDU Resources Group, Inc.

Q. Would you please describe your duties?

A. As Vice President, Controller and Chief Accounting Officer, I am responsible for providing overall direction and management of the accounting, information systems and the financial forecasting/planning functions, including the analysis and reporting of all financial transactions for Montana-Dakota.

Q. Would you please outline your educational and professional background?

A. I graduated from the University of Mary with a Bachelor of Science degree in Accounting and obtained a Masters degree in Business Administration from the University of Montana. I am a certified public accountant and a member of the AICPA and the North Dakota Society of Certified Public Accountants. I was employed with Montana-Dakota in 1986 as an Internal Auditor and during my career with the company have held positions of Income Tax Supervisor, Corporate Financial Planning

Manager, and General Accounting Manager.

Q. Are you familiar with the territory served by Montana-Dakota and the facilities of the Company utilized in providing gas service?

A. Yes, I am.

Q. What is the purpose of your testimony in this proceeding?

A. I am responsible for presenting Statement A, Statement B, and Statement F.

Q. Would you describe Statement A, Statement B and Statement F?

A. Statement A, pages 1 and 2 show Montana-Dakota's balance sheet as of December 31, 2000 and December 31, 2001. Statement B consists of Montana-Dakota's income statement for the twelve months ended December 31, 2001. These statements have been prepared from the Company's books and records that are maintained in accordance with the Federal Energy Regulatory Commission (FERC) Uniform System of Accounts.

Statement F shows the gas utility capital structure of Montana-Dakota for the twelve months ended December 31, 2001 and the projected average capital structure for 2002 and 2003. Statement F includes the associated costs of debt, preferred stock and common equity. This capital structure and the associated costs serve as the basis for the overall rate of return requested by Montana-Dakota in this rate filing of 11.044%. The basis for the requested 13.25% return on common equity contained within the overall requested rate of return is supported by the testimony of Dr. J. Stephen Gaske.

Q. Were these statements and the data contained therein prepared by you or under your supervision?

A. Yes, they were.

Q. Are they true to the best of your knowledge and belief?

A. Yes, they are.

Q. Would you please explain Statement F?

A. Pages 1 through 3 of Statement F summarize the actual average gas utility capital structure at December 31, 2001 and the projected average capital structure and the related utility costs of capital for 2002 and 2003. As shown on page 3, the components of the 2003 projected overall annual rate of return, which are used by Ms. Mulkern to calculate the revenue requirement, are:

	Weighted Cost of Capital
Long Term Debt	3.951%
Preferred Stock	0.244%
Common Equity	6.849%
Required Rate of Return	11.044%

The debt costs reflected on Statement F, pages 1 through 3 represent the actual weighted embedded costs of the long-term debt at December 31, 2001 and that projected to be outstanding at December 31, 2002 and December 31, 2003 and are supported by Statement F, Schedule F-1. In calculating the debt costs the "Yield-to-Maturity" method (also referred to as the Internal Rate of Return ("IRR") method) is used to determine the total cost for each respective debt issue as presented on Schedule F-1, page 4 of 7. The yield-to-maturity calculation of each debt issue outstanding gives consideration to the stated rates of interest being paid on such debt, the timing of the interest payments, related issuance expenses, underwriters' commissions and indenture revision costs, the discount or premium realized upon issuance and the

amortization of losses on bond redemption transactions.

Statement F, Schedule F-2, supports the cost of Montana-Dakota's preferred stock capital, representing the weighted cost of the issues at December 31, 2001 and projected to be outstanding at December 31, 2002 and December 31, 2003.

Statement F, Schedule F-3, supports the Company's average utility common equity balance at December 31, 2001, and the projected average balances for 2002 and 2003.

Q. What does Statement F, Schedule F-1 show?

A. Page 1 is a summary showing the Company's long-term debt at December 31, 2001 and average cost of debt. Page 2 shows the projected average long-term debt and costs for 2002 and page 3 shows the same information for projected 2003. Page 4 shows the cost and the debt balance by issue at December 31, 2001.

Q. How did you derive the projected cost of debt as for 2002 and 2003?

A. The projected cost of debt for 2002 and 2003 is based upon the yield to maturity of each debt issue outstanding.

Q. Would you please describe Statement F, Schedule F-1, pages 5 through 7 and explain the amortization method utilized?

A. Pages 5 through 7 reflect the detail by issue of the annual amortization of net discounts (losses) on advance purchases of debt that are necessary to meet sinking fund requirements. For this proceeding, the amortization has been computed on a straight-line basis over the remaining life of the issues, the same calculation as is used by the Company for accounting purposes.

Q. What does Statement F, Schedule F-2 show?

A. Pages 1 through 3 present the preferred stock balances at December 31, 2001 and the projected average balances for 2002 and 2003. The anticipated weighted average cost of preferred stock is also shown. Page 4 sets forth the various preferred stock issues outstanding at December 31, 2001.

Q. What does Statement F, Schedule F-3 show?

A. Pages 1 through 3 present the common equity balances at December 31, 2001 and the projected average balances for 2002 and 2003 including the projected changes in the balances each year.

Q. What does Statement F, Schedule F-4 show?

A. Page 1 indicates that, during the five-year period preceding December 31, 2001, MDU Resources Group, Inc. issued 17.2 million additional shares of common stock in connection with a three-for-two stock split. Also during that period, the number of authorized shares of common stock was increased from 75 million at a par value of $3.33 to 150 million with a par value of $1.00.

Q. Would you please describe Statement F, Schedule F-5?

A. This schedule presents various financial and market data relative to the Company's common stock for the years 1997 through 2001, and for each month of the twelve month period ended December 31, 2001.

Q. Would you please describe Statement F, Schedule F-6?

A. This schedule shows that there was no reacquisition activity for bonds and a summary of scheduled retirements of preferred stock for the 18 months ended December 31, 2001.

Q. Does this conclude your direct testimony?

A. Yes, it does.

MONTANA-DAKOTA UTILITIES CO.
A Division of MDU Resources Group, Inc.

Before the Public Service Commission of North Dakota

Case No. PU-399-02-

Direct Testimony
of
Rita A. Mulkern

Q. Would you please state your name and business address?

A. Yes. My name is Rita A. Mulkern and my business address is 400 North Fourth Street, Bismarck, North Dakota 58501.

Q. What is your position with Montana-Dakota Utilities Co.?

A. I am the Regulatory Analysis Manager of Montana-Dakota Utilities Co. (Montana-Dakota), a Division of MDU Resources Group, Inc.

A. Would you please describe your duties as Regulatory Analysis Manager?

A. I am responsible for the preparation of cost of service studies, fuel cost adjustments, purchased gas cost adjustments and gas tracking adjustments in each of the jurisdictions in which Montana-Dakota operates.

Q. Would you please describe your education and professional background?

A. I graduated from North Dakota State University in 1981 with a Bachelor of Arts degree with majors in Economics and Business Administration and a minor in Statistics. I joined Montana-Dakota in July 1981 as a Regulatory Statistician, became Cost of Service Supervisor in 1986 and assumed my current position in 1999.

Q. Have you testified in other proceedings before regulatory bodies?

A. Yes, I have presented testimony before the Public Service Commissions of Montana, North Dakota, and Wyoming and the South Dakota Public Utilities Commission.

Q. Are you familiar with the territory served by Montana-Dakota and the facilities of the Company utilized in providing gas service?

A. Yes, I am.

Q. Are you familiar with the books and records of Montana-Dakota and the manner in which they are kept?

A. Yes. Montana-Dakota's books and records are kept in accordance with the Federal Energy Regulatory Commission (FERC) Uniform System of Accounts.

Q. What is the purpose of your testimony in this proceeding?

A. The purpose of my testimony is to present the per books cost of service for the twelve months ended December 31, 2001, the projected cost of service for 2002 and 2003 and the calculation of the revenue deficiency.

Q. What statements, schedules and exhibits are you sponsoring?

A. I am sponsoring Statements C through E, Statements G through L, Statements N and O and Exhibit No.___(RAM-1)

Q. Were these statements and exhibits prepared by you or under your direct supervision?

A. Yes, they were.

Q. What were the results of North Dakota gas operations for 2001?

A. Statement L, pages 1 and 2 show the per books income statement and rate base for total Company and North Dakota gas operations. The details for each line item, i.e. sales revenue, other revenue, plant in service, etc., are included in the applicable Statement listed.

Q. How was the per books cost of service allocated to North Dakota?

A. The Company utilizes a jurisdictional accounting system that directly assigns and/or allocates every item of revenue, expense and rate base to the jurisdictions as part of the regular accounting process on a monthly basis, resulting in jurisdictional results on an ongoing basis. The allocation methods and procedures are the same as have previously been adopted by this Commission and are based on the principle of assigning and/or allocating costs to the cost causer. The total Company and North Dakota information included in the Statements is from the books and records of the Company.

Q. What test period are you using to determine the revenue requirement?

A. The revenue requirement is based on a projected average 2003 test year. Since the rates will become effective in late 2002, an average 2003 cost of service will best match the cost and customer levels at the time that the rates will go into effect. The rates from this proceeding will be in effect for 2003 and the closer that revenues, expenses and rate base reflect levels to be experienced in 2003, the better the match will be and the better opportunity Montana-Dakota will have to earn its authorized return. Montana-Dakota is using a future test year in accordance with North Dakota Century Code §49-05-04.1.

Q. Would you describe the development of the projected cost of service for 2002 and 2003?

A. The projected 2002 and 2003 cost of service is presented in Statement N, which contains all of the schedules supporting the income statement on page 1, and Statement O, which contains all of the schedules supporting the rate base on page 1. The revenues and expenses reflect the annual level that will be experienced when the new rates become effective. Likewise, the rate base reflects average 2002 and 2003 plant and related balances.

Q. Would you describe the development of the projected revenues and expenses contained in Statement N?

A. Sales and transportation revenues are shown on page 2 and reflect projected sales and transportation volumes for all classes. The projected residential and firm general service sales volumes for 2002 and 2003 were based on actual historical data and forecasted for 2002 and 2003 using the Company's gas supply/forecasting model SENDOUT™. This model forecasts consumption based on the number of customers and the non-heating and weather normalized heating use per customer. The projections incorporate customer growth, ongoing conservation and normal weather. The number of firm customers is projected to grow at approximately 0.9 percent per year and the projected volumes reflect continuing conservation of 1.0% per year. The projected firm revenues were calculated based on the projected volumes and number of customers using the currently effective rates inclusive of the PGA effective

March 1, 2002, exclusive of the surcharge adjustment and margin sharing adjustment.

The sales and transportation volumes for the U.S. Air Force, small interruptible and large interruptible classes were projected on a customer-by-customer basis and the revenues were calculated using current rates.

Miscellaneous revenues, shown on page 3, are projected to remain at the 2001 level.

Q. Would you describe the development of the operation and maintenance expenses?

A. Yes. Pages 4 and 5 of Statement N summarize the projected 2002 and 2003 operation and maintenance (O&M) expenses, with the details provided on pages 6 through 14. The cost of gas, shown on page 6, uses the projected sales volumes, adjusted for losses, and current gas costs effective March 1, 2002. The loss factor of 0.45% was calculated by comparing the gas volumes delivered into the town border stations in North Dakota to the gas volumes sold and dk transported to customers on a billing cycle basis for a twelve-month period ending June 2001. The difference between deliveries at the town border station and deliveries to customers (sales) is the lost and unaccounted for gas, which is then expressed as a percentage of total deliveries.

Labor expense is shown on page 7, with actual labor expense for the twelve months ended December 31, 2001 as the starting point. The labor expense for 2002 and 2003 was developed by applying the projected percentage increase in total Company labor costs to the 2001

per books North Dakota labor expense. The projected labor costs were based on the labor amounts budgeted for 2002, adjusted to reflect a three year average amount for the bonuses and commissions and amounts to a 3.15 percent increase for 2002. A labor increase of 3% was applied to the 2002 labor expense to arrive at the 2003 labor expense.

Benefits expense consists of medical/dental insurance, pension expense, the Supplemental Income Security Plan (SISP), 401K, post-retirement, workers compensation and other benefits. Each of these items, excluding the other benefits, was projected individually for 2002 using the 2002 budgeted amounts and applying the projected increase to each type of benefit. Benefits expense for 2003 reflects a projected increase by type of benefit. Mr. Espeland discusses the inclusion of the SISP expense in his testimony.

Insurance expense, as shown on page 9, reflects the current insurance level for 2002, which is a 40 percent increase over the 2001 level and a projected 2.75% increase for 2003.

Rate case expense is shown on page 10. The projected 2002 and 2003 level incorporates the projected rate case expenses from this case amortized over a three-year period.

Page 11 shows the projected level of advertising expense for 2002 and 2003. Informational advertising is increased to reflect the reclassification of informational advertising recorded in the incorrect account. Promotional advertising has been eliminated, pursuant to North Dakota Administrative Code (NDAC) §69-09-01-29.

Q. Is the Company requesting the inclusion of institutional advertising in this case?

A. Montana-Dakota is seeking to include institutional advertising that falls within NDAC Section 69-09-01-29 1.e.(7). Section 69-09-01-29 of the NDAC relates to advertising by gas utilities. The rule defines various types of advertising as well as stating which types of advertising are allowable in the cost of service. Part 2 of the rule states that "Any expenditure by the utility for institutional, promotional, or political advertising shall be excluded from operating expenses in the cost of service determination for ratemaking purposes." However, the rules exclude from institutional advertising; at 1.e.(7) "Advertising determined by the Commission to benefit customers and serve the public interest." As a corporate citizen, Montana-Dakota needs to be active in the communities that it serves. Our communities expect nothing less and advertising in the local newspapers, school yearbooks, programs, etc., is a necessary part of being active in the community. This advertising benefits the community and the customers in that community, thus serving the public interest. Another example of this type of advertising is the Community Matters publication, which is included as a supplement in various local newspapers in the state. This supplement contains articles on topics such as gas prices, Montana-Dakota's community involvement and safety related articles. The Community Matters supplement serves to inform customers about what is important to them and to confirm that Montana-

Dakota is a part of the community, which benefits both the customers and their communities.

Q. What other O&M expenses are included in Statement N?

Page 12 reflects the inclusion of contributions to Energy Share of North Dakota (Energy Share). Energy Share fulfills a critical role by assisting customers who do not qualify for other forms of assistance in paying their energy bills. This has a positive effect on arrears and ultimately helps reduce the uncollectible accounts for Montana-Dakota. It also provides a needed service for those who are experiencing difficulty in paying their bills. Energy Share also performs weatherization and repair services, which help energy conservation and assure that customers have safe equipment.

Pages 13 and 14 show the O&M expenses not specifically identifiable or calculated as described above, adjusted for the effects of inflation. A 2.81% inflation factor based on the increase in the consumer price index for 1999-2001 was applied to the expenses not specifically identifiable.

Q. Would you describe the calculation of depreciation expense?

A. Yes. Depreciation expense for projected 2002 and 2003 is shown on page 15 and was calculated using projected plant in service and the depreciation rates obtained from a study by Stone & Webster Management Consultants, Inc., as shown in Statement I. Internal studies for computer equipment, work equipment and transportation equipment

were used. The composite depreciation rates and calculation are shown on Statement O, pages 5 and 6.

Q. Would you describe the calculation of taxes other than income?

A. Yes. Taxes other than income are shown on pages 16 through 19. Ad valorem taxes were calculated using the projected 2002 and 2003 plant in service and applying the effective tax rates based on the 2001 ratio of ad valorem taxes to plant.

Payroll taxes projected for 2002 and 2003 follow labor expense. The ratio of payroll taxes to labor expense for 2001 was calculated and applied to the projected 2002 and 2003 labor expense to determine the projected levels. All other taxes other than income were projected to remain at the 2001 level.

Q. Would you describe the calculation of federal and state income taxes?

A. The current income tax calculation is shown on pages 20 through 22. Interest expense is calculated on the projected rate base using the weighted cost of long term debt from Statement F. The tax deductions on page 22 were individually projected. The tax rate of 39.61% reflects the composite state and federal rate. Deferred income taxes are shown on page 23 and include the full normalization of federal and state deferred income taxes.

Q. Would you please describe the development of the projected rate base for 2002 and 2003?

A. Yes. The rate base was developed as shown in Statement O. Page 1 shows the 2001 actual and projected 2002 and 2003 average rate

base for North Dakota gas operations. Pages 2 and 3 show the projected plant in service for 2002 and 2003. The projected plant was developed by adding the capital budget items for 2002 to the 2001 plant in service balances. Retirements, based on a three-year average of retirements by function, were deducted and the average 2002 balance calculated. The process was repeated for 2003. In addition to the capital budget items for 2003, plant additions also include the cost of new and replacement service lines. As discussed by Mr. Fox, Montana-Dakota is proposing to own the customer service line on all new and replacement lines, which is a change from past practice. It is estimated that there will be approximately 880 new and replacement service lines each year. The acquisition adjustment relates to the Hettinger propane system. Montana-Dakota purchased the system in 1993, and in 1999 rolled the distribution rates for Hettinger together with the natural gas rates. Upon purchase of the system, Montana-Dakota recorded an acquisition adjustment on the books. In this case, Montana-Dakota is proposing to recover the acquisition adjustment over a 34.5 year period.

The accumulated reserve for depreciation was calculated using the reserve balances at December 31, 2001, adding the calculated depreciation expense and deducting retirements based on a three-year average of retirements. The average 2002 balances were then calculated and are shown on pages 4 through 6. The process was repeated to arrive at the average 2003 reserve balances. The accumulated reserve on the acquisition adjustment relates to the propane distribution system in

Hettinger. Montana-Dakota recorded an acquisition adjustment on the books in 1993, but did not begin to amortize the acquisition adjustment at that time. In this case, Montana-Dakota is proposing to recover the acquisition adjustment and has reflected the reserve as if Montana-Dakota had begun to amortize it upon purchase.

Q. How were the working capital items derived?

A. The projected working capital items are shown on pages 7 through 12. Materials and supplies were restated to a thirteen month average balance on page 8 and the propane fuel stocks are restated to a thirteen month balance on page 9.

Prepayments, made up of prepaid insurance and the prepaid tax-free option plan, as shown on page 10, are also restated to a thirteen-month average balance. Projected 2002 starts with the actual balances for January 2002 and projected levels for the remaining months, based on the projected insurance expense for 2002 and 2003.

The unamortized portion of the gas IRP and gas supply analysis costs arising from the ten year amortization of the costs are restated to reflect the current amortization and a thirteen month average and are shown on page 11.

Customer Advances for construction are restated to a thirteen month balance as of December 2001.

The accumulated deferred income tax balances on page 13 were derived by adding the deferred income taxes related to property for 2002

and 2003 to the 2001 balance from Statement N, page 31 and calculating average balances.

The accumulated investment tax credit balances were derived by subtracting the projected amortization for 2002 and 2003 from the 2001 balance and calculating average balances.

Q. What does Exhibit No.____(RAM-1) show?

A. Exhibit No.____(RAM-1), page 1, which is identical to Statement L, page 4, shows the calculation of the revenue deficiency of $2,840,000 based on the projected 2003 operating income and rate base and using the overall rate of return of 11.044% from Statement F, page 1. Page 2 shows the per books and projected average rate base for 2002 and 2003 and is identical to Statement O, page 1.

Q. Does that complete your testimony?

A. Yes, it does.

MONTANA-DAKOTA UTILITIES CO.
A Division of MDU Resources Group, Inc.

Before the Public Service Commission of North Dakota

Case No. PU-399-02-___

Direct Testimony
of
Richard A. Espeland

Q. Would you please state your name and business address?

A. Yes, my name is Richard A. Espeland. My business address is 918 East Divide Avenue, Bismarck, North Dakota 58506.

Q. What is your position?

A. I am Vice President—Human Resources for MDU Resources Group, Inc. (MDU Resources).

Q. What are your duties and responsibilities with MDU Resources?

A. I have overall responsibility for the Human Resource functions throughout the corporation. The primary areas include employment, total compensation (general and executive compensation and benefits), training and development, employee relations and employee communications.

Q. Would you please outline your educational and professional background?

A. In 1966, I received a Bachelor of Arts degree from the University of North Dakota in Business Administration with a major in Personnel Management. In 1981, I received a Masters degree from the University of North Dakota in Public Administration.

Upon graduating from college, I spent four years in the U.S. Army. Prior to my employment with MDU Resources I was employed by the City of Grand Forks, the State of North Dakota and North American Coal Corporation, all in the human resources area.

In December 1989, I joined MDU Resources as Human Resource Manager, retaining that position until August 2000 when I was elected Vice President—Human Resources.

I am a member of the Society for Human Resource Management and the Central Dakota Human Resource Association. I have spoken on retirement and employee benefit issues on many occasions at national conferences in Boston, Orlando, Chicago and San Francisco.

Q. What is the purpose of your testimony?

A. The purpose of my testimony is to address the Supplemental Income Security Plan (SISP), the cost of which has been included by Company witness Mulkern in the cost of service in this proceeding.

Q. What are your duties and responsibilities relative to the SISP?

A. I am the Plan Administrator assigned the responsibility by the Board of Directors for the management of the plan, plan design, eligibility, interpretation, communication and benefits administration.

Q. Would you briefly describe what the SISP is and what it is designed to do?

A. The SISP is a plan that provides a supplemental pension benefit to key employees. It was designed to provide equitable retirement benefits for key employees and to attract and retain key employees in a number of positions within the Company.

Q. Who are the "key employees" you refer to who are participants in SISP?

A. "Key employees" are officers, directors and senior managers of MDU Resources and Montana-Dakota who have the vision to adequately plan for the future, implement appropriate strategies for the Company and to see how to reduce costs, streamline the organization, and implement new technologies to maintain and increase the efficiencies of the Company with fewer employees while keeping the rates stable and competitive in the industry.

Q. When was the SISP implemented?

A. The SISP was implemented in 1982.

Q. Montana-Dakota, other than in a recent electric proceeding in North Dakota, has not previously sought rate recovery of the SISP. Would you please explain why?

A. Yes. When the SISP was implemented in 1982, it was a visionary plan that was new to the utility industry. It was not common at that time anywhere within the industry. In the intervening years since then, and particularly in the last few years, Supplemental Employee Retirement Plans (SERPs) like Montana-Dakota's SISP have become common practice in utilities and related companies. These types of plans have become necessary due to various changes in federal regulations, social security benefits, and employment practices. Those changes have adversely affected Montana-Dakota's key employees as to potential retirement benefits. Because of those changes, SERPs such as Montana-

Dakota's SISP have become necessary in order to attract, retain, and provide equitable benefits for key employees.

Q. Please describe the various changes in federal regulations that have adversely affected retirement plans for key employees.

A. In the early 1980s, defined benefit pension plans could provide benefits in consideration of up to $225,000 in salary. That limit was reduced in the mid 1980s to $150,000 maximum covered compensation, therefore, reducing the benefit eligibility and pension benefits provided by one-third. This compensation limit has slowly increased to the current $200,000 level, but certainly not at a pace equal to general wage inflation. In addition, the 401(k) Plan regulations limit the employee contribution to $11,000. (The effect is the employee with $50,000 in annual income can contribute 22% of salary while senior executives are generally limited to 10% or less of salary).

Q. What changes in social security benefits have adversely affected key employees?

A. The social security covered wage base, while increasing over the years, has not kept pace with general wage inflation and benefits provided to higher income levels are significantly less than at lower income levels.

Q. How do the overall retirement benefits for employees included in the SISP compare with the retirement benefits for those employees not included in the SISP?

A. When compensation and benefit programs are designed and implemented, they must be looked at in the context of total benefits. To

put the retirement programs in perspective, I have prepared Exhibit No. ___(RAE-1) which reflects the retirement programs available to employees, including SISP. As you will note from the graph, at the lower income levels, the replacement income through retirement programs is about 80 percent. This includes Social Security, the Defined Benefit Pension Plan, and the Company match to employee contributions under the 401(k) Plan. As you move up the income scale, the percentage of income replaced by retirement plans significantly decreases based on retirement plan design requirements and government limitations on retirement plans. The SISP, as a supplemental plan, has been designed to replace some—but not all—of the income that is not replaced by Social Security, the Defined Benefit Pension Plan, and the 401(k) Plan. At the higher income levels only about 50 percent of the annual income is replaced, compared to 80 percent at the lower income levels.

Q. Does the SISP benefit last as long as the other retirement benefits you've noted?

A. No, it does not. The retirement benefits under SISP are payable over 15 years beginning at age 65 and not the remaining lifetime of the individual (which currently is about 20 years after retirement). Social Security, the Defined Benefit Pension, and the 401(k) Plan income projections meanwhile cover a retired employee's lifetime.

Q. Should the costs of Montana-Dakota's SISP be included in rates?

A. Yes, they should be. The SISP is a common type of benefit provided in today's business environment. The combined replacement

income from all retirement plans when taken together is equitable, reasonable and justifiable. The SISP recognizes the contributions of key employees whose abilities and vision have enabled Montana-Dakota to streamline operations, reduce costs and employee numbers, implement new technologies and, most importantly to the ratepayer, to keep Montana-Dakota's rates competitive.

Q. Does this complete your direct testimony?

A. Yes, it does.

APPENDIX A – Qualifications of Russell A. Feingold.....A1

DIRECT TESTIMONY OF RUSSELL A. FEINGOLD

Background And Qualifications

Q. Please state your name and business address.

A. My name is Russell A. Feingold and my business address is 200 Wheeler Road, Suite 400, Burlington, Massachusetts 01803. I am employed by Navigant Consulting, Inc. ("NCI") as a Managing Director and lead its Regulation & Litigation Support Practice. I have been employed by NCI since January 1997.

Q. Please describe in more detail the business activities of NCI.

A. NCI has served the electric and natural gas industries since 1983. We offer a wide range of consulting services related to information technology, process/operations management, business strategy development, and marketing and sales designed to assist our clients in a business environment of changing regulation, increased competition and evolving technology. From an industry-wide perspective, NCI has extensive experience in all aspects of the North American natural gas industry, including utility costing and pricing, gas supply and transportation planning, competitive market analysis and regulatory practices and policies gained through management and operating responsibilities at gas distribution, pipeline and other energy-related companies, and through a wide

variety of client assignments. NCI has assisted numerous gas distribution companies located in the U.S. and Canada.

Q. What has been the nature of your work in the utility consulting field?

A. I have over 27 years of experience in the utility industry, the last 24 years of which have been in the field of utility management and economic consulting. Specializing in the gas industry, I have advised and assisted utility management, industry trade and research organizations and large energy users in matters pertaining to costing and pricing, competitive market analysis, regulatory planning and policy development, gas supply planning issues, strategic business planning, merger and acquisition analysis, corporate restructuring, new product and service development, load research studies and market planning. I have prepared and presented expert testimony before the Federal Energy Regulatory Commission ("FERC") and several state and provincial regulatory commissions and have spoken widely on issues and activities dealing with the pricing and marketing of gas and electric utility services.

Further background information summarizing my education, presentation of expert testimony and other industry-related activities is included in Appendix A to my testimony.

Q. Have you previously testified on behalf of Montana-Dakota Utilities Co. ("Montana-Dakota" or the "Company"), a Division of MDU Resources Group, Inc.?

A. Yes, I have. I previously testified on behalf of Montana-Dakota before the Montana Public Service Commission in Docket Nos. 87.12.77 and 88.11.53 on the subjects of gas rate design and gas marginal cost analyses.

Purpose

Q. For what purpose has Montana-Dakota retained NCI?

A. NCI has been retained by Montana-Dakota as a consultant in the area of utility rate design and related regulatory matters for its gas operations.

Q. What is the purpose of your direct testimony in this proceeding?

A. The purpose of my direct testimony is to address certain gas rate design concepts that the Company has evaluated in formulating its rate proposal in this proceeding. Specifically, I will discuss the conceptual underpinnings and industry-wide trends associated with the Company's proposal to enhance the recovery of its gas distribution margin through rate design. In addition, I will provide an overview and analysis of an alternative ratemaking mechanism that

Montana-Dakota could apply to its heat sensitive classes of service.

Q. What exhibits are you sponsoring in this proceeding?

A. I am sponsoring the following exhibits:

- Exhibit No. __ (RAF-1), Survey of Monthly Customer Charges of North American Gas Distribution Utilities
- Exhibit No. __ (RAF-2), Distribution Delivery Stabilization Mechanism

Enhanced Margin Recovery Through Rate Design

Q. Why has Montana-Dakota chosen to propose certain rate design changes that will enhance the recovery of its authorized level of distribution margin?

A. The Company has chosen to address this issue because it has been unable historically to recover its Commission authorized level of distribution margin due to the significant portions of fixed costs included in the volumetric portions of its gas rate structure. As I will discuss later in my testimony, this condition is not unique to Montana-Dakota and is, in fact, quite commonplace in the gas distribution segment of the energy industry.

Q. Do the Cost of Service Study ("COSS") results presented by the Company's witness, Ms. Tamie Aberle, provide guidance in establishing the appropriate rate structure within each rate class?

A. Yes. The classified costs, as allocated to each class of service within the Company's COSS, provide useful cost information in determining the level of customer, demand and commodity charges.

Q. Please explain how the classified costs from the Cost of Service Study presented by Ms. Aberle can be used for rate design purposes.

A. If the classified costs presented by Ms. Aberle in Statement M were used to set three-part rates (Customer, Demand and Commodity), the Company's operating expenses and return on investment in its non-gas revenue requirement would be fully recovered from its customers. The use of three part rates is becoming more widely accepted as the unbundling of utility services continues to evolve and the sale of the gas commodity in an increasingly competitive market is distinguishable from utility delivery service. The unit costs from the Company's COSS provide useful information for the design of portions of its tariff services, in particular for establishing cost-based fixed charges for customer related costs. The unit costs also can be used to design demand charges where either demand metering is available or algorithm-based billing demands for its customers can be determined. Demand based rates provide for a unit charge based upon the maximum demand

imposed by a customer on the utility's gas system within a specified time period, which establishes both the utility's responsibility to serve and the customer's obligation to pay for that level of service.

Q. Please describe other considerations or criteria that should be used in the design of utility rates.

A. Utility rate design should recognize that rates must be just and reasonable and not cause undue discrimination. Thus, customer impact considerations must be factored into the rate design process. Market conditions within the utility service territory with respect to the general economic environment and competitive fuel prices, where appropriate, should be reviewed. Another important consideration is the financial stability of the utility. Toward this goal, it is generally an unsound ratemaking practice to recover a substantial portion of fixed costs, such as customer related costs which bear no relationship to customer consumption patterns, in the volumetric portion of the rate structure. Recovery of fixed costs via volumetric rates adversely impacts earnings stability because the revenues generated from customers' volumetric use of gas can be extremely sensitive to the vagaries of weather patterns and changing consumption characteristics. Moreover, recovery of utility fixed costs in volumetric rates sends uneconomic price signals to consumers that impede their ability to make well reasoned energy consumption decisions. Ultimately, Montana-Dakota must establish a reasonable balance between the various cost guidelines and the other

aforementioned criteria in the process of designing rates.

Q. Do the Company's proposed rate schedules reflect increases to its existing monthly service charges?

A. Yes. The Company's schedule of proposed rates includes an increase to the level of the existing residential monthly basic service charge from $6.50 to $11.70. In addition, the firm general service classes include an increase in their monthly basic service charges from $8.50 to $24.00 for small meters (less than 500 cu. ft. per hour) and from $17.00 to $51.00 for large meters. As discussed by Ms. Aberle, the proposed charges are stated on a daily basis.

Q. Do increased fixed charges such as those proposed by the Company provide any benefits to customers?

A. Yes. An increase in the fixed charge component of the rate structure has the effect of reducing the impact of weather variances on customers' bills. By increasing the basic service charge, the usage or volumetric charge is reduced, resulting in lower customer bills during periods of colder than normal weather and generally adding a measure of stability to the monthly bills of customers throughout the year.

Higher monthly basic service charges help equalize the contribution of each

customer within a class towards recovery of the customer-related costs attributable to that class. The increase in the basic service charge will thus help reduce intra-class subsidies. When the basic service charge does not recover the fixed costs of serving a customer, the higher use customers subsidize the lower use customers.

Furthermore, the pricing practices associated with consumer services have evolved in recent years to be more oriented towards fixed charges, which have been widely embraced by the public. Today's consumer is much more accustomed to paying higher up-front fixed charges in exchange for low, or non-existent, usage charges. For example, basic cable television service carries a flat monthly charge and many internet service providers have restructured their pricing in the form of fixed monthly fees with no additional usage charges. Cellular phone companies offer a multitude of rate plans with an escalating scale of fixed monthly charges in exchange for additional "free" talk time. In addition, rental car companies typically charge a flat daily fee that permits the customer to drive, in some cases, an unlimited number of miles without incurring additional usage charges. Finally, at the federal level, the FERC moved to a straight fixed-variable rate design for interstate pipelines with the issuance of Order No. 636.

Q. Why is the Company proposing to increase these service charge levels?

A. As mentioned earlier in my testimony, the Company utilized the unit costs from

its cost of service study to identify costs related to providing monthly service to customers. The level of customer-related costs for its residential class of customers, as presented in Statement M, is $12.77 per month. The corresponding level of customer costs for the firm general class of customers, as presented in this Statement, averages $37.98 per month over all meter sizes.

Establishing higher monthly basic service charges helps to reduce the intra-class subsidies that exist within a particular rate class. This method of customer cost recovery is preferable to including such costs in the commodity block charges, which has the effect of causing higher use customers to subsidize the lower use customers relative to the customer-related costs they impose on the Company.

The basic service charges provide for recovery of a portion of the Company's fixed customer costs that are incurred solely because of the existence of customers connected to its gas distribution system. These costs, associated with facilities in place to serve customers, regardless of use and expenses such as reading meters and billing, occur regardless of whether gas is consumed and are not related to demands placed on the system. The proposed basic service charge increases will also ensure recovery by the Company of a greater portion of its fixed costs of providing service. Since customer costs are not related to gas usage, they should be recovered to the extent possible through a tariff component that does not depend upon volumetric billing.

Q. In view of the level of customer costs indicated by the Company's cost study, would you please explain the choice of the basic service charge levels that have been proposed?

A. Given the relatively high level of customer costs shown in Statement M as compared to its current level of customer related charges, the Company has chosen to move much closer to full cost of service in setting new customer related charges (basic service charge). In the case of the residential class, the level of customer costs identified in Montana-Dakota's cost of service study is more than twice the current level of its customer-related fixed charge. The proposed basic service charge for the Company's Residential Gas Service (Rate 60) of $11.70 per month ($0.39/day) will address the current gap between this class' customer-related costs and its corresponding unit charge. The Company's proposed levels of basic service charges for the Firm General Gas Service (Rate 70) will also bring this class essentially to its full cost of service.

Q. At these proposed rate levels, would the Company's monthly basic service charges result in substantial recovery of the fixed costs for these classes?

A. Yes. However, there still exists approximately $1.5 million of remaining customer-related costs and $3.3 million of fixed demand-related costs in the residential and firm general service classes, representing approximately 25% of the total fixed costs of the Company, to be recovered through the volumetric

rates for the residential and firm general classes.

Q. Are Montana-Dakota's efforts to improve its distribution margin recovery through increased fixed cost recovery in its fixed monthly charges consistent with the recent actions of other gas distribution companies?

A. Yes. In my opinion, there has been a noticeable recent trend in the gas distribution utility industry to increase monthly fixed charges. The monthly fixed charges are often labeled as customer charges, base charges, or basic service charges. Over the last few years, many gas distribution companies have requested increases to their monthly customer charges, where feasible, based on the results of cost of service studies that indicate gaps between the currently approved customer charges and the corresponding levels of allocated customer costs. As a result, customer charges have been increasing over time, and in some cases, increasing on a disproportionate basis.

The results of a recent informal survey conducted by NCI of North American gas distribution companies confirm these conclusions. Forty-one (41) of the gas distribution companies surveyed had implemented increases to their monthly service charges since 1999. Of the sixty-four (64) companies surveyed, encompassing eighty-one (81) different state or provincial service territories, forty-three (43) respondents had residential monthly service charges greater than or equal to $9.00, with the average monthly service charge for this group equal to

$10.67. The results of the NCI survey are presented in Exhibit No. ___ (RAF-1), Survey of Monthly Customer Charges of North American Gas Distribution Utilities.

Q. **Are there any other factors that should be taken into consideration by this Commission in the establishment of the Company's basic service charges?**

A. Yes, there are. Historically, regulatory commissions have approved residential basic service charges well below the level indicated by cost of service studies. The main reasons for this treatment have appeared to be concerns related to the impact of high basic service charges on low use customers and the desire to encourage conservation through the recovery of more costs in a usage charge. While some may view these reasons as valid rate design considerations, they do not properly take into consideration the Company's substantial investment in fixed costs (e.g., mains, services and meters) necessary to serve a customer, regardless of the customer's gas usage level. Setting the basic service charges below cost results in an improper price signal to customers by recovering these fixed distribution costs in a usage or volumetric charge.

Alternative Distribution Delivery Stabilization Mechanism

Q. **Is the Company proposing a Distribution Delivery Stabilization Mechanism ("DDSM") to adjust rates to its heat sensitive classes of service to reflect**

the actual weather conditions it experiences on an annual basis in comparison to the normal weather it uses to establish base rates?

A. No, not at this time. As presented earlier in my testimony, the Company's preference is to address variability in margin recovery through increased collection of fixed costs through fixed charges. However, an acceptable alternative rate design technique would be to increase monthly fixed charges by some level and implement a DDSM to correct for the over and under collection of distribution delivery revenues, due to weather fluctuations, on an annual basis. The DDSM would apply to the Company's weather sensitive rate classes of residential and firm general service.

Q. Has the Company previously submitted to this Commission a similar adjustment mechanism for the purpose of adjusting rates to its heat sensitive classes of service?

A. Yes, it has. In a July 1992 filing before the North Dakota Public Service Commission ("Commission") in Case No. PU-399-92-616, the Company proposed a Weather Normalization Adjustment Rate 89 ("WNA"). That particular WNA had been designed to adjust each customer's monthly bill on a current or *real-time* basis to reflect what would have been billed had normal weather occurred. The Commission's subsequent denial of the WNA proposal was attributed primarily to the complexity of the WNA, the multiple assumptions

necessary to compute the adjustment, and the confusion it could cause Montana-Dakota's customers in attempting to rationalize the fluctuations in their monthly bills caused by the *real-time* adjustments from the WNA. *[Ref. Commission Order in Case No. PU-399-92-616, dated October 20, 1992]*

However, because of the widely recognized beneficial aspect of an adjustment mechanism in addressing the continued impact of weather variability on the Company's margin recovery, Montana-Dakota management believes that a DDSM based on a more simplified approach is appropriate to discuss as an alternative at this time.

Q. Please discuss the reasons for recommending a DDSM.

A. Because of Montana-Dakota's largely volumetric rate design, as discussed earlier in my testimony, the Company will only recover its Commission authorized level of non-gas fixed costs of providing distribution service if the underlying sales volumes are achieved. Deviations from normal weather, the basis for those underlying sales volumes, result in either over or under recovery of Montana-Dakota's fixed costs. Erratic financial results from the constant over and under recovery of distribution margin can adversely impact Montana-Dakota's outlook in the financial community and, ultimately could increase the Company's financing costs. A DDSM addresses the foregoing adverse conditions. It is based on the premise that normal weather represents the best

estimate of an uncontrollable variable and is a logical method for Montana-Dakota to adjust rates to account for the unpredictability of weather. A deferral type of DDSM would address wide swings in Montana-Dakota's total margin recovery through modest year-to-year adjustments in customers' bills in subsequent periods.

Q. How does a deferral type of DDSM in this case differ from the WNA previously proposed by Montana-Dakota?

A. As mentioned earlier, the WNA was a *real-time* approach to adjusting customer billings on a current month basis for the variations from normal weather conditions. Monthly bills for the Company's heat sensitive classes of service rendered from November 1st through April 30th of each year were subject to adjustment for the WNA. A separate WNA adjustment was determined each month for each service period within a billing cycle and applied to all billings within that service period.

A deferral type of adjustment mechanism is a simplified application that corrects for the over/under collection of revenues due to weather fluctuations throughout the winter heating season. Once a year, following the end of the winter heating season, a true-up calculation would be performed to compare actual weather conditions, as represented by the actual level of annual Heating Degree Days (HDDs), with the level of HDDs under normalized weather conditions. The

Company would utilize the normal level of HDDs established in the instant general rate case. The HDD excess or deficiency for the winter period would be applied to the class-by-class use per customer per HDD, also from the general rate case, and the respective class-by-class delivery service margins. The resulting revenue excess or deficiency would be divided by the projected annual sales volumes for the identified rate classes to determine a surcharge or refund component to be applied as an adjustment to the distribution charge.

Q. Please provide a formulaic representation of the DDSM that you just described.

A. A formulaic representation of the DDSM is as follows:

$$DDSM_i = \frac{R_i\,(DDF_i\,(NDD - ADD)) + (PDDSM_i - ADDSM_i)}{ANU_i}$$

Where:

$DDSM_i$ = Weather normalization dollar amount per dk

i = Applicable rate class subject to the DDSM

R_i = Applicable delivery service rate per dk

DDF_i = Weather sensitive use per customer per degree day

NDD = Normal degree days for the winter service period

ADD = Actual degree days for the winter service period

ANU_i = Average normal use per customer for the prospective twelve month period

$PDDSM_i$ = Projected DDSM revenue from the preceding twelve month period

ADDSMi = Actual DDSM revenue recovered during the preceding twelve month period

The result of the calculation, the DDSM factor, is multiplied by the customer's monthly gas consumption and added to or subtracted from the customer's bills during the twelve-month recovery/refund period, depending on the arithmetic sign of the DDSM.

Q. Can this type of DDSM accommodate any variation in the actual margin revenues collected through the DDSM in a particular year compared to the expected level of margin revenues upon which the previous DDSM factor was derived?

A. Yes, it can. The illustrated DDSM has a true-up feature that will adjust the DDSM factor in any subsequent year to reflect any over-collections or under-collections in the prior year caused by variations in the margin revenues derived through application of the then current DDSM factor to the Company's actual gas volumes.

Q. Have you tested the performance of a deferral type of DDSM on Montana-Dakota's recent experience with weather variability in its North Dakota service territory?

A. Yes. Exhibit No.___(RAF-2), DDSM Analysis, provides an illustration of the operation of the annual adjustment mechanism and the determination of the DDSM. Revenue adjustments were computed that would have occurred had this type of DDSM been in effect during each of the last four complete heating seasons, from 1997 – 1998 to 2000 – 2001.

Q. Why was this time period selected to demonstrate the operation of the DDSM?

A. This time period was chosen because it contained weather extremes, both above and below normal conditions assumed by the Company.

Q. Please describe the results of your analysis.

A. The results of the analysis are shown on Exhibit No.___(RAF-2). This schedule shows the year-to-year impact on the Company's revenues due to the variations in temperature. A negative adjustment of ($293,648) would have occurred at the end of the 2000 – 2001 heating season, due to the 4.8% colder than normal temperatures. By contrast, a positive adjustment of $1,284,142 would have occurred at the conclusion of the 1999 – 2000 heating season resulting from 19.6% warmer than normal temperature conditions. Smaller adjustments would have occurred in the earlier years where there was less deviation from normal temperature conditions.

Q. Have you analyzed how this DDSM would have impacted individual customer bills?

A. Yes. The average annual impact on individual residential customer bills corresponding to the 2000 – 2001 colder than normal heating season would have been a negative adjustment of ($2.42). Likewise, a positive total adjustment to an average residential customer bill of $10.12 would have resulted from the 1999

– 2000 warmer than normal heating season. The annual customer DDSM adjustments are shown in the analysis for the heat sensitive classes. In view of the temperature variations that occurred during the heating seasons examined, the analysis presented in Exhibit No. __ (RAF – 2) confirms what one would expect to result from the operation of the DDSM, had it been in effect during those years.

Q. Mr. Feingold, does that complete your direct testimony?

A. Yes, it does.

RUSSELL A. FEINGOLD

EDUCATION

- Bachelor of Science degree in Electrical Engineering from Washington University, St. Louis.
- Master of Science degree in Financial Management from Polytechnic Institute of New York

PROFESSIONAL EMPLOYMENT

1997 – Present	**Navigant Consulting, Inc.** Managing Director, Regulation & Litigation Support Practice

Page 1 of 1

MONTANA-DAKOTA UTILITIES CO.
A Division of MDU Resources Group, Inc.

Before the Public Service Commission of North Dakota

Case No. PU-399-02-_____

Direct Testimony
of
Tamie A. Aberle

Q. Would you please state your name and business address?

A. Yes. My name is Tamie A. Aberle, and my business address is 400 North Fourth Street, Bismarck, North Dakota 58501.

Q. What is your position with Montana-Dakota Utilities Co.?

A. I am the Pricing & Tariff Manager in the Regulatory Affairs Department of Montana-Dakota Utilities Co. (Montana-Dakota), a Division of MDU Resources Group, Inc.

Q. What are your responsibilities as the Pricing & Tariff Manager?

A. My responsibilities include the preparation of rate design and miscellaneous tariff revision filings to ensure that the applicable revenue requirements are properly recovered from various customer classes via applicable rate forms. I also administer utility tariffs and rules and regulations effective in each of the jurisdictions in which Montana-Dakota provides utility service.

Q. Would you please outline your educational and professional background?

A. I graduated from Moorhead State University, Moorhead, Minnesota in 1982 with a Bachelor of Science degree in Accounting. I began my career with Montana-Dakota in 1983 in the Regulatory Affairs Department, I was promoted to Rate Administration Supervisor in 1990 and achieved

my present position in May 1999.

Q. Have you testified in other proceedings before regulatory bodies?

A. Yes. I have previously presented testimony before this Commission and the Montana Public Service Commission and I have filed testimony with the South Dakota Public Utilities Commission and the Wyoming Public Service Commission.

Q. What is the purpose of your testimony in this proceeding?

A. The purpose of my testimony is to present the results of the class cost of service study and to address the effect of the proposed revenue requirement, as identified by Ms. Mulkern in her direct testimony, on each of the Company's gas rates, including how the distribution of the revenue requirement was made among the various classes of customers served. In addition, my testimony will discuss the extent to which Montana-Dakota is proposing changes in rate design and/or tariff conditions.

Q. What statements and exhibits are you sponsoring in this proceeding?

A. I am sponsoring Statement M and Exhibit No. ____ (TAA-1) through Exhibit No. ____ (TAA-3).

Q. Were they prepared by you or under your supervision and direction?

A. Yes, they were.

Q. Are they true and correct to the best of your knowledge and belief?

A. Yes, they are.

Q. Do you also sponsor the proposed rate schedules appended to the Application in this proceeding?

A. Yes, I do.

Q. What is the total revenue effect of the proposed gas rate changes?

A. The proposed rates will produce additional revenues of $2,844,132

or 4.1% annually based on projected throughput. Exhibit No. ____ (TAA-1) represents summaries by rate classification of the proposed revenue increase for the projected 2003 test year and is identical to Statement M, Page 1. The exhibit shows the rate number and a description along with the revenues calculated under the present and proposed rates for the projected 2003 test year. The amount and percentage increase is also shown for the proposed revenue increase.

Q. Would you please explain the embedded class cost of service study contained in Statement M?

A. Yes. Turning to Part A, the first report appearing therein is entitled "Cost of Service by Component." This report shows the total dollars and unit cost required under each rate if the overall requested 11.04% rate of return was to be earned for the demand, energy and customer cost components of each rate schedule.

The next report appearing in Statement M is entitled "Summary." This report shows the results of all of the succeeding reports in summary form. Following this summary report is a detailed report showing the development of each line on the Summary Report.

Part B of Statement M, entitled "Allocation Assignment Report," is a report that shows how the various allocation factors and items directly assigned were applied in producing the various reports shown in Part A.

Part C of Statement M, entitled "Allocation Factor Report," is simply a list of the allocation factors used to produce the various reports shown in Part A. By using the Allocation Assignment Report and the Allocation Factor Report, it can be readily determined how the various components of revenue, expense, and plant were allocated or assigned among the

classes of service.

The class cost of service study is based on the results for North Dakota gas operations as recorded for the 12 months ended December 31, 2001. The study was adjusted to reflect volumes based on normal weather and the resulting revenues and the cost of gas based on current rates effective March 1, 2002.

Q. What were the results of the cost of service study?

A. The results are summarized on Statement M, Part A, page 5. The results are based on the actual results for the 12 months ending December 31, 2001 adjusted to reflect normal weather and current (March 2002) gas costs. These results were used to extrapolate the projected 2003 cost of service on a class basis. The overall North Dakota gas rate of return based on the projected 2003 overall cost of service is 2.33%. The returns by customer class are as shown below:

Residential Service	1.1%
Firm General Service	1.4%
Air Force	18.2%
Small Interruptible	45.5%
Large Interruptible	28.5%

Q. For what purpose has the class cost of service study been used?

A. The study results have been used as a guide in the distribution of total revenue requirements among customers and for the purpose of pricing the various components comprising the total rate applicable to each customer class.

Q. What methodology did you use to apportion the proposed rate increase among the customer classes?

A. In designing the proposed rates to reflect the additional revenue requirements, we have attempted to group the class rates of return more closely about the overall system return.

Given the disparity between the firm and interruptible class contributions to the overall return, the proposed increase was allocated by first increasing the Firm General Service class by an amount that brings the class to the overall rate of return of 11.04% and secondly decreasing the Small Interruptible revenues by 4.1% in order to bring the Small Interruptible class return closer to the return produced by the other interruptible services (Air Force and Large Interruptible). The remaining increase was assigned to the Residential class. No change was proposed for the Air Force and Large Interruptible classes.

Q. What is the percentage of the proposed final increase by class of customer?

A. As shown on Exhibit No. ____ (TAA-1), the proposed increase to each of the classes is as follows:

Class	% Increase
Residential	4.6%
Firm General Service	4.6%
Air Force	---
Small Interruptible	-4.1%
Large Interruptible	---
Overall	**4.1%**

Q. Why did you not propose a decrease for the Air Force or Large Interruptible customer classes?

A. There are basically two reasons. While both the Air Force and Large Interruptible classes are above the overall rate of return, the Small Interruptible class was higher yet and warranted a decrease in order to position all interruptible classes at similar return levels. We also have flexibility in setting the distribution charge applicable to the individual interruptible classes and finally, we did not want to further raise the amount of increase required from the residential and firm general service classes of customers.

Q. What is the effect of the proposed revenue increase on the class returns?

A. The revenue allocation explained above results in an increase in the residential class return from 1.1% to 10.2% and an increase in the firm general service class return from 1.4% to 11.1%. The proposed decrease allocated to the Small Interruptible class results in a reduction in that class return from 45.5% to 30.0%. The class returns for the Air Force and Large Interruptible classes remain unchanged from the projected 2003 level because no change in revenues is proposed for those classes.

Q. What changes are you proposing to the rate form applicable to the firm service customers?

A. In order to accomplish the rate structure objectives which include providing a measure of stability for our customers during periods of abnormal weather, having easily understandable rates for customers, having a rate form that is simple to administer and enhancing fixed cost recovery, the Company is proposing several changes to the firm service rate form. Before I discuss those changes I need to explain a change we

are proposing in the way the components of the gas bill applicable to all customers are to be presented in the future. Our goal is to provide customers with price stability, better price signals and better information that will allow them to understand the nature of their gas bill. We propose to accomplish this by redefining the components of the gas bill applicable to all customers into 3 parts:

1. Basic Service Charge
2. Distribution Delivery Charge and
3. Cost of Gas

I will explain each component more fully below, including the changes that will accomplish the objectives noted above.

1. The Basic Service Charge applicable to each customer class has been set at or nearly at the customer cost level identified in the Class Cost of Service Study for each of the customer classes. This component is currently identified as the "base rate" on the current tariffs and consumer bill. Setting the Basic Service Charge at or nearly at the customer cost level from the class cost of service study will serve to stabilize the portion of the bill currently recovered on a volumetric basis. The Basic Service Charges applicable to the Residential and Firm General Service classes have been stated on a daily basis. Charging this fixed cost on a daily basis better matches the way customers are billed i.e., the days between billing periods vary due to meter reading cycles and customer cut-ins and cut-outs occurring outside their normal billing cycle. Bills for service outside a normal period are currently normalized but the

customer cannot readily determine how the bill was determined. A daily Basic Service Charge will allow the customer to simply multiply the number of days in service during the current billing period (now shown on the bill) times the applicable Basic Service Charge.

2. The Distribution Delivery Charge is proposed to be recovered through a flat commodity charge and the declining block rate currently applicable to Residential and Firm General Service customers under Rates 60, 70 and 72 will be eliminated. The declining block commodity rate is no longer required because the fixed customer related costs that are now recovered through the rate differential assigned to the 1st block of energy (1st 5 dk for residential customers and 1st 15 dk for firm general service customers) will now be properly recovered through the Basic Service Charge. The Distribution Delivery Charge primarily reflects the distribution demand related (fixed) costs discussed by Mr. Feingold plus any customer related costs not recovered through the Basic Service Charge due to the rate design process.

3. The Cost of Gas component is comprised of the items currently recovered through the Purchased Gas Cost Adjustment Rate 88. Under the current rate form, the base cost of gas authorized in the last rate case is buried in the commodity charge component and the changes in gas cost related items are identified separately in a Purchased Gas Cost Adjustment. Under the proposed rate form customers will readily know what

portion of their bill is associated with gas related costs that change upward and downward with the market price of natural gas changes and are subject to the Purchased Gas Cost Adjustment mechanism and not determined in a rate case proceeding such as this.

Q. What are you proposing as Basic Service Charges for the Residential and Firm General Service classes?

A. The Basic Service Charge proposed for customers taking service under Residential Rate 60 has been set at $0.39 per day which reflects an average monthly charge of $11.70. The differential between meters rated less than 500 cubic feet per hour and those rated over 500 cubic feet per hour has been eliminated for the Residential class due to the small number of meters falling into the latter category. The differential has been retained for the Firm General Service Rate 70 rate schedule due to the diversity of customers served under this rate. The Basic Service Charge applicable to Firm General Service customers with meters rated less than 500 cubic feet per hour has been set at $0.80 per day and $1.70 per day for customers requiring the larger meters capable of measuring gas flows of 500 cubic feet per hour or greater. The resulting average monthly charge will be $24.00 and $51.00 respectively.

Q. Would you please explain Exhibit No. ____(TAA-2)?

A. Yes. Exhibit No. ____ (TAA-2) depicts bill comparisons based on typical monthly consumption levels for an annual period for residential and firm general service customers. As shown by the comparisons, the proposed rate structure will result in an average increase of approximately $2.00 per month for the typical Residential customer using 110 dk on an

annual basis. The proposed rate form will also provide customers with price stability during those months where their gas usage may vary significantly due to the weather. For example, a residential customer typically uses 20 dk during the month of January. Under the current rate structure the customer's monthly bill will be $78.38 (based on gas costs as of March 2002). Under the proposed rate structure the customer's bill will be $78.48 – essentially the same amount. However, to the extent the weather is colder than normal and assuming this same customer uses approximately 28 dk the customer would pay $1.03 less under the proposed rate structure. Properly recognizing the fixed costs in a fixed charge minimizes the over-collection of customer related costs by the Company in periods of colder than normal weather as well as minimizing the under-collection during periods of warmer than normal weather.

Q. What changes are you proposing to make to the optional seasonal rates for residential and firm general service customers?

A. The Company is proposing to eliminate the seasonal rate applicable to Residential customers. Since the rate's inception, use by residential customers has been minimal and at the present time there are not any customers taking service under the Residential Service Rate 62 rate schedule. The Optional Seasonal Rate 72 is appropriate for customers such as irrigation loads and municipal swimming pools and has been revised to reflect the proposed Basic Service Charge and Distribution Delivery Charge for Firm General Service Rate 70. The differential between the summer and winter periods continues to be based on the demand component of the cost of gas.

Q. What changes are you proposing to make to the Air Force Rate 64?

A. The Air Force Rate 64 has been revised to reflect an increase in the Basic Service Charge from $750.00 per month to $1,000.00 per month for the Minot Air Force Base and from $35.00 per month to $135.00 per month for the Perimeter Acquisition Radar Site. The commodity charges have been calculated to produce the remaining class revenue requirement. As noted earlier, no overall increase or decrease is proposed for the Air Force. The Air Force Rate 64 tariff sheet has also been revised to exclude the offering of transportation service as the Air Force facilities are now purchasing gas supplies from the Company.

Q. Would you please describe the changes proposed to the Small Interruptible Service Rate 71 and Large Interruptible Service Rate 85 sales rates?

A. Yes. A Basic Service Charge of $100.00 per month has been proposed for the small interruptible class (interruptible customers using less than 100,000 dk annually) and a Basic Service Charge of $675.00 per month is proposed for the large interruptible customer group (customers using 100,000 dk or more annually). The proposed Basic Service Charges reflect the customer costs determined in the embedded class cost of service study while the interruptible commodity charges were calculated as a residual to achieve each class' revenue requirement.

Q. Ms. Aberle, are you proposing any changes to the current interruptible transportation service rates?

A. The only change to the interruptible transportation rates is an increase in the Basic Service Charges to the level identified in the class cost of service study. The current fee of $50.00 per month presently identified as a nomination charge has been included with the Basic

Service Charge applicable to transportation service customers.

Q. Have you prepared a Distribution Delivery Stabilization Mechanism tariff as an alternative as described by Mr. Fox and Mr. Feingold?

A. Yes. A Distribution Delivery Stabilization Mechanism (DDSM) tariff, as discussed by Mr. Feingold, is depicted in Exhibit No. ____(TAA-3). This mechanism, coupled with some level of increase in fixed monthly charges, could be used as an alternative to the implementation of a Basic Service Charge at the customer related cost level identified in the class cost of service study which is the Company's primary proposal. As described in the tariff, the DDSM would be applied to the firm service classes as a per dekatherm adjustment reflecting the amortization of a balancing account representing the over/under recoveries of the Distribution Delivery Charge due to weather related volume fluctuations.

Q. Would you please briefly describe other changes made to the Company's gas tariff?

A. Yes, following is a description of other changes the Company is proposing to make to its gas tariff:

- A Rate Summary Sheet has been added to allow readers to see, at a glance, all charges associated with a particular rate. Page 2 of the Rate Summary Sheet provides a summary of other miscellaneous charges that are discussed throughout the entire gas tariff.
- The penalty for failure to curtail or interrupt, applicable under each of the interruptible sales and transportation service schedules has been increased from $10.00 per dk to $50.00 per dk in order to sensitize the critical nature of a call for

interruption and to provide sufficient incentive for a customer to interrupt or curtail their use of gas when called upon to do so.

- Firm Gas Transportation Service Rate 84, currently available for the firm requirements of interruptible customers, has been eliminated due to lack of customer interest in this rate option.
- The fee charged when a check is returned for non-payment back to the Company has been increased to $20.00 to reflect the current going rate charged by banks and other businesses.
- The reconnection fees for seasonal customers will now be tied to the Basic Service Charge that would have been applied during the period the customer was out of service with a minimum set at the actual cost associated with reconnecting the service. The reconnection charge for a customer disconnected for nonpayment of bills has been increased to $30.00, the actual cost of reconnecting service.
- Firm Gas Service Extension Policy Rate 120 and Rate 124 related to service line installations have been revised to reflect the Company's proposal to own all prospective service line installations as discussed by Mr. Fox and Ms. Mulkern in their testimony. The Company is proposing to install service lines that are cost justified by the expected connected load at no cost to the customer. A customer contribution will be required for the portion of the installation not supported by the expected connected load in accordance with the Maximum Allowable Investment formula currently used under Firm Gas Service Extension Policy Rate 120. The change in service line policy

has allowed the elimination of the Rate Zone 1 and Rate Zone 2 designations that were used to differentiate between those communities where the customer owned the service lines (Zone 1) and the communities where the company owned the service lines (Zone 2).

- Minor changes which are self explanatory have been made to the majority of the rate schedules. These changes are clearly denoted on the tariff sheets reflecting the legislative format.

Q. Does this conclude your direct testimony?

A. Yes, it does.

Gas Rate Schedule

NDPSC Volume 7
Original Sheet No. 37

DISTRIBUTION DELIVERY STABILIZATION MECHANISM Rate 95

APPLICABILITY:

This rate schedule represents a Distribution Delivery Stabilization Mechanism (DDSM) and specifies the procedure to be utilized to correct for the over/under collection of distribution delivery charge revenues due to weather fluctuations during the heating season defined as October 1 through April 30. Service provided under the Company's Residential Rate 60 and Firm General Service Rate 70 shall be subject to decreases or increases under the DDSM.

EFFECTIVE DATE:

Adjustments under this DDSM will commence in May 2003 and continue through April 2004. The DDSM will be recalculated on an annual basis and a new DDSM will be filed to be effective May 1 each year thereafter.

DISTRIBUTION DELIVERY STABILIZATION MECHANISM:

A DDSM will be determined for each rate schedule subject to the DDSM and shall be expressed as rate per dk. Monthly bills beginning with the first billing cycle following May 1, 2003 and each May 1st thereafter, will be adjusted (decreased or increased) by the application of a DDSM rate computed in accordance with the procedures based on temperature conditions for the winter heating season beginning November 1, 2002 ending March 31, 2003, and each heating season thereafter, compared to normal temperature levels established in the most recent general rate case. The DDSM rate will be stated as a surcharge or credit on all rate schedules to which the DDSM is applicable. A DDSM rate will be computed for each applicable rate schedule to be effective for a period of one year. Following the initial one-year term, and annually thereafter, the DDSM rate calculation shall include any over or under collection of DDSM revenue from the preceding twelve-month recovery period.

Bismarck, ND 58501

State of North Dakota
Gas Rate Schedule

NDPSC Volume 7
Original Sheet No.37.1

Distribution Delivery Stabilization Mechanism Rate 95

DDSM RATE CALCULATION:

A DDSM shall be determined for each rate schedule subject to the DDSM and shall be expressed as a rate per dk. In order to calculate the respective DDSM rates, the winter season HDD variation from the normal HDDs will be determined and multiplied by the temperature sensitive consumption per customer per HDD, as determined in the most recent general rate case. The resulting product shall be multiplied by the applicable Distribution Delivery Charge rate and then divided by the average annual use per customer to determine a dollar amount per dk.

$$DDSM_i = \frac{R_i\,(DDF_i\,(NDD - ADD)) + (PDDSM_i - ADDSM_i)}{ANU_i}$$

Where:

$DDSM_i$ = Distribution Delivery Stabilization dollar amount per dk

i = Applicable rate class subject to the DDSM

R_i = Applicable Distribution Delivery Charge per dk

DDF_i = Temperature sensitive use per customer per degree day

NDD = Normal degree days for the winter service period

ADD = Actual degree days for the winter service period

ANU_i = Average normal use per customer for the prospective twelve month period

$PDDSM_i$= Projected DDSM revenue from the preceding twelve month period

$ADDSM_i$= Actual DDSM revenue recovered from the preceding twelve month period

Application

Case No. PU-399-02-183

ORDER GRANTING TRADE SECRET PROTECTION

August 28, 2002

On August 9, 2002, Montana-Dakota Utilities Co. (MDU) filed an application for a protective order limiting the disclosure of trade secret information included in responses to the certain information sought by the Commission Staff (Staff) as part of its First Data Requests. On August 22, 2002, MDU filed an application for a protective order limiting the disclosure of trade secret information included in responses to the certain information sought by the Staff as part of its Second Follow-Up Data Requests. MDU provides the general description of the nature of the information sought to be protected, as follows:

RESPONSES TO NORTH DAKOTA PUBLIC SERVICE COMMISSION STAFF'S FIRST DATA REQUESTS

Request No. 2 -- The response is a page from an actuarial report by Towers Perrin on the performance of the health and welfare benefit plans for both bargaining unit and non-bargaining unit employees.

Request No. 3 -- The response is information concerning the amount of short-term borrowings by MDU and MDU Resources at the end of each month in 2000 and 2001 along with the weighted average cost of MDU's short-term borrowings.

RESPONSES TO NORTH DAKOTA PUBLIC SERVICE COMMISSION STAFF'S SECOND FOLLOW-UP DATA REQUESTS

Request No. 2 -- The response is documentation relating to senior notes, commercial paper, revolving line of credit and term agreements.

Request No. 3 -- The response is the breakdown of year-end 2001, 2002, and 2003 "Subsidiary Portion of Balance" by specific subsidiary.

Request No. 4 -- The response is the data, workpapers, and allocation ratios by which policies and procedures outlined in Response No. 39, Attachment A are implemented.

MDU requests trade secret protection for MDU Resources subsidiary information. MDU states that such information is not publicly available and is treated as confidential business information. MDU believes that disclosure of the MDU Resources information would be of independent economic value to competitors and would create a competitive

would be of independent economic value to competitors and would create a competitive disadvantage for MDU Resources if publicly disclosed to others because of the competitive nature of the businesses conducted by the various subsidiaries.

N.D.C.C. Section 47-25.1-01(4) defines "trade secret" as:

"Trade secret" means information, including a formula, pattern, compilation, program, device, method, technique, or process, that:

a. Derives independent economic value, actual or potential, from not being generally known to, and not being readily ascertainable by other persons who can obtain economic value from its disclosure or use; and

b. Is the subject of efforts that are reasonable under the circumstances to maintain its secrecy.

On August 14, 2002 Staff filed its response to MDU's request for trade secret protection on responses to Staff's First Data Requests. On August 23, 2002, Staff filed its response to MDU's request for trade secret protection on responses to Staff's Second Follow-Up Data Requests. Staff noted that the information qualifies as trade secret and that MDU's application satisfies the requirements of the law that allows the Commission to grant trade secret protection and recommended granting the application. Staff noted that the Commission's process provides a means for interested parties to review trade secret documents upon signing a nondisclosure agreement.

Order

The Commission Orders:

1. MDU's application for trade secret protection filed August 9, 2002 is GRANTED.

2. MDU's application for trade secret protection filed August 22, 2002 is GRANTED.

3. The Commission, under N.D.A.C. § 69-02-02-11, suspends the requirements of N.D.A.C. § 69-02-09-07, to the limited extent necessary so that the materials which are hereby granted trade secret status may be supplied by Montana-Dakota Utilities Co. to Mr. Charles King outside the Commission office, for his inspection and review for purposes related to his engagement by the Commission as a consultant in this matter, after which he will return said materials to the Company.

STAFF RESPONSE TO MONTANA-DAKOTA'S APPLICATION REQUESTING TRADE SECRET PROTECTION FOR RESPONSES TO DATA REQUESTS

On August 22, 2002, Montana-Dakota Utilities Co., a Division of MDU Resources Group, Inc. (Montana-Dakota) filed an application for a protective order limiting the disclosure of trade secret information included in responses to the Commission Staff's second follow-up data requests that are served on the Commission staff in this proceeding. Montana-Dakota provides the general description of the nature of the information sought to be protected, as follows:

General Description of the Nature of the Information Sought to be Protected.

1. **REQUEST NO. 2.** The request is a follow-up request to Request No. 18 and requests documentation to support the statement that the senior notes, commercial paper, revolving line of credit and term agreements are related to the subsidiaries only, not to Montana-Dakota along with identifying the specific subsidiary to which the issue of senior notes, commercial paper, revolving line of credit or term credit is related.

2. **REQUEST NO. 3.** The request is a follow-up to Request No. 19 and requests a breakdown of the year 2001, 2002 and 2003 "Subsidiary Portion of Balance" by specific subsidiary.

3. **REQUEST NO. 4.** The request is a follow-up to Request No. 39 and requests data, workpapers, and allocation ratios by which the policies and procedures outlined in Response No. 39, Attachment A are implemented.

Montana-Dakota requests trade secret protection for MDU Resources subsidiary information. Montana-Dakota states that such information is not publicly available, and

is not only treated as confidential business information, but information which cannot be selectively disclosed without violating the public reporting requirements of the Securities and Exchange Commission. Montana-Dakota believes that disclosure of the MDU Resources information would be of independent economic value to competitors and would create a competitive disadvantage for MDU Resources if publicly disclosed to others because of the competitive nature of the businesses conducted by the various subsidiaries.

Staff has reviewed the information for which Montana Dakota requests trade secret protection. Staff believes that the information qualifies as trade secret and that Montana-Dakota's application satisfies the requirements of the law, which allows the Commission to grant trade secret protection in this proceeding. The Commission's process provides a means for interested parties to review trade secret documents upon signing a nondisclosure agreement.

For reasons set forth above, staff recommends that the Commission grant Montana-Dakota's Application For Trade Secret Protection in this case.

Dated August 23, 2002.

BEFORE THE PUBLIC SERVICE COMMISSION

OF THE STATE OF NORTH DAKOTA

In the Matter of the Application of MONTANA-DAKOTA UTILITIES CO., a Division of MDU Resources Group, Inc., For Authority to Establish Increased Rates for Natural Gas Service	Case No. PU-399-02-183

APPLICATION FOR TRADE SECRET PROTECTION

COMES NOW, Montana-Dakota Utilities Co., a Division of MDU Resources Group, Inc. (Montana-Dakota) and respectfully moves the Commission for entry of a trade secret protective order under §69-02-09-01 of the North Dakota Administrative Code. The purpose of the requested protective order is to protect against public disclosure of trade secret information as defined by NDCC §47-25.1-(4).

The specific information which needs protection at this time is certain information requested by the Commission Staff in its Second Follow-Up Data Requests as follows:

1. Request No. 2. The request is a follow-up to Request No. 18 and requests documentation to support the statement that (t)he senior notes, commercial paper, revolving line of credit and term agreements are related to the subsidiaries only, not to Montana-Dakota along with identifying the specific subsidiary to which the issue of senior notes, commercial paper, revolving line of credit or term credit is related. Montana-Dakota requests that trade secret protection be given to the MDU Resources subsidiary information. Such information is not publicly available, and is not only treated as confidential

business information, but information which cannot be selectively disclosed without violating the public reporting requirements of the Securities and Exchange Commission. Montana-Dakota believes that disclosure of the MDU Resources information would be of independent economic value to competitors and would create a competitive disadvantage for MDU Resources if publicly disclosed to others because of the competitive nature of the businesses conducted by the various subsidiaries.

2. Request No. 3. The request is a follow-up to Request No. 19 and requests a breakdown of the year-end 2001, 2002 and 2003 "Subsidiary Portion of Balance" by specific subsidiary. Montana-Dakota requests that trade secret protection be given to the MDU Resources subsidiary information. Such information is not publicly available, and is not only treated as confidential business information, but information which cannot be selectively disclosed without violating the public reporting requirements of the Securities and Exchange Commission. Montana-Dakota believes that disclosure of the MDU Resources information would be of independent economic value to competitors and would create a competitive disadvantage for MDU Resources if publicly disclosed to others because of the competitive nature of the businesses conducted by the various subsidiaries.
3. Request No. 4. The request is a follow-up to Request No. 39 and requests data, workpapers, and allocation ratios by which the policies and procedures outlined in Response No. 39, Attachment A are implemented. Montana-Dakota requests that trade secret protection be given to the MDU Resources

subsidiary information. Such information is not publicly available, and is not only treated as confidential business information, but information which cannot be selectively disclosed without violating the public reporting requirements of the Securities and Exchange Commission. Montana-Dakota believes that disclosure of the MDU Resources information would be of independent economic value to competitors and would create a competitive disadvantage for MDU Resources if publicly disclosed to others because of the competitive nature of the businesses conducted by the various subsidiaries.

In accordance with §69-02-09-02 of the North Dakota Administrative Code, one copy of the trade secret material is provided in the enclosed sealed envelope which is labeled; TRADE SECRET – PRIVATE.

Respectfully submitted this 22nd day of August, 2002.

STAFF RESPONSE TO MONTANA-DAKOTA'S APPLICATION REQUESTING TRADE SECRET PROTECTION FOR RESPONSES TO DATA REQUESTS

On October 2, 2000, Montana-Dakota Utilities Co., a Division of MDU Resources Group, Inc. (Montana-Dakota) filed an application for a protective order limiting the disclosure of trade secret information included in responses to the Commission Staff's first set of data requests that are served on the Commission staff in this proceeding. Montana-Dakota provides the general description of the nature of the information sought to be protected, as follows:

General Description of the Nature of the Information Sought to be Protected.

1. **REQUEST NO. 2.** The request refers to statements A-F, G-L, N-O and requests in hard copy and electronic format all workpapers underlying the company's filing. Page 67 if the workpapers supporting the statements is a page from an actuarial report by Towers Perrin on the performance of the health and welfare benefit plans for both bargaining unit and non-bargaining unit employees. The report is prepared by Towers Perrin for a number of MDU Resources Group, Inc. (MDU Resources) companies and not just Montana-Dakota.

2. **REQUEST NO. 3.** The request refers to statements A-F, G-L, N-O and specifically Statement A, asking for the amount of short-term borrowings by Montana-Dakota and MDU Resources respectively at the end of each month in 2000 and 2001 along with the weighted average cost of Montana-Dakota's short-term borrowings.

Montana-Dakota requests trade secret protection for MDU Resources information including the Towers Perrin report insofar as it relates to MDU Resources

subsidiaries. Montana-Dakota states that such information is not publicly available, and is not only treated as confidential business information, but information which cannot be selectively disclosed without violating the public reporting requirements of the Securities and Exchange Commission. Montana-Dakota believes that disclosure of the MDU Resources information would be of independent economic value to competitors and would create a competitive disadvantage for MDU Resources if publicly disclosed to others because of the competitive nature of the businesses conducted by the various subsidiaries.

Staff has reviewed the information for which Montana Dakota requests trade secret protection. Staff believes that the information qualifies as trade secret and that Montana-Dakota's application satisfies the requirements of the law, which allows the Commission to grant trade secret protection in this proceeding. The Commission's process provides a means for interested parties to review trade secret documents upon signing a nondisclosure agreement.

For reasons set forth above, staff recommends that the Commission grant Montana-Dakota's Application For Trade Secret Protection in this case.

BEFORE THE PUBLIC SERVICE COMMISSION

OF THE STATE OF NORTH DAKOTA

In the Matter of the Application of MONTANA-DAKOTA UTILITIES CO., a Division of MDU Resources Group, Inc., For Authority to Establish Increased Rates for Natural Gas Service	Case No. PU-399-02-183

APPLICATION FOR TRADE SECRET PROTECTION

COMES NOW, Montana-Dakota Utilities Co., a Division of MDU Resources Group, Inc. (Montana-Dakota) and respectfully moves the Commission for entry of a trade secret protective order under §69-02-09-01 of the North Dakota Administrative Code. The purpose of the requested protective order is to protect against public disclosure of trade secret information as defined by NDCC §47-25.1-(4).

The specific information which needs protection at this time is certain information requested by the Commission Staff in its First Data Requests as follows:

1. Request No. 2. The request refers to Statements A-F, G-L, N-O and requests in hard copy and electronic format all workpapers underlying the company's filing. Page 67 of the workpapers supporting the statements is a page from an actuarial report by Towers Perrin on the performance of the health and welfare benefit plans for both bargaining unit and non-bargaining unit employees. The report is prepared by Towers Perrin for a number of MDU Resources Group, Inc. (MDU Resources) companies and not just Montana-Dakota. Neither MDU Resources nor Montana-Dakota publicly report or disclose this information and it is considered and treated as confidential

business information. Montana-Dakota requests trade secret protection for the Towers Perrin report insofar as it relates to MDU Resources subsidiaries. Montana-Dakota believes that disclosure of the MDU Resources subsidiary information would be of independent economic value to competitors and would create a competitive disadvantage for MDU Resources if publicly disclosed to others because of the competitive nature of the businesses conducted by the various subsidiaries. Access to such information by competitors would provide them with a portion of the costs of doing business and thus a competitive advantage.

2. Request No. 3. The request refers to Statements A-F, G-L, N-O and specifically Statement A, asking for the amount of short-term borrowings by Montana-Dakota and MDU Resources respectively at the end of each month in 2000 and 2001 along with the weighted average cost of Montana-Dakota's short-term borrowings. Montana-Dakota requests that trade secret protection be given to the MDU Resources information. Such information is not publicly available, and is not only treated as confidential business information, but information which cannot be selectively disclosed without violating the public reporting requirements of the Securities and Exchange Commission. Montana-Dakota believes that disclosure of the MDU Resources information would be of independent economic value to competitors and would create a competitive disadvantage for MDU Resources if publicly disclosed to others because of the competitive nature of the businesses conducted by the various subsidiaries.

In accordance with §69-02-09-02 of the North Dakota Administrative Code, one copy of the trade secret material is provided in the enclosed sealed envelope which is labeled; TRADE SECRET – PRIVATE.

Signed Contract No. PU-445-02
by Snavely King Majoros O'Connor & Lee, Inc.
07/19/2002 CC: Comm Legal PUD (3) Mike ALJ

GENERAL PROVISIONS

CONTRACTUAL FEATURES

Legal Authority

The Contractor assures that it possesses legal authority to participate in this contract.

Assignment/Subcontracting

The Contractor may not assign this contract or any part thereof, or assign any of the monies to be paid hereunder, nor shall any part of the work done or material furnished under this contract be sublet.

The Contractor may not enter into subcontracts for any of the work contemplated under this contract unless included in the specific provisions of this contract.

Termination

The Commission, by ten days written notice listing causes and reasons, may terminate this contract in whole or in part when it is determined that the Contractor has failed to meet the conditions of the contract. The Commission will be liable only for payment provisions of this contract for services satisfactorily rendered prior to the effective date of termination.

Significant deviation from performance standards in this contract may result in reduced or terminated financial participation of the Contractor, subsequent to negotiations with the Commission.

The Contractor or the Commission may terminate this contract in whole or in part upon settlement or when both parties agree that the continuation of the contract would not produce results commensurate with further expenditures of funds. The two parties shall agree upon the termination conditions including effective date and in the case of partial terminations, that portion to be terminated.

In the event state or federal funds are reduced or terminated, the financial participation of the Commission may be reduced or terminated.

Disputes

The Contractor agrees to attempt to resolve disputes arising from this contract by administrative process and negotiations in lieu of litigation. Continued performance by the Contractor during disputes is assured.

Any dispute concerning a question of fact arising under this contract which is not settled by the informal means shall be decided by the authorized representative of the Commission who shall reduce the decision to writing and mail or otherwise furnish a copy thereof to the Contractor.

The Contractor shall be afforded an opportunity to be heard and to offer evidence in support of an appeal. Pending final decision of a dispute, the Contractor shall proceed diligently with the performance of the contract and in accordance with the decision of the Commission.

FISCAL RESPONSIBILITIES

Records

The Contractor agrees to maintain program records required by the Commission and to produce program narrative and statistical data at times prescribed by the Commission.

The Contractor agrees to maintain and retain all books, records, and other documents required by the Commission relevant to this agreement for four years after final payment. Records shall be retained beyond four years if audit findings have not been resolved.

No Claim for Additional Work

No claim for additional services not specifically herein provided, done, or furnished by the Contractor will be allowed, nor shall the Contractor do any work or furnish any material not covered by the contract, unless such work is ordered in writing by the Commission.

Time Keeping Procedures

The Contractor shall require employees and subcontractors, if applicable, whose positions are funded under this contract or included as match, to maintain adequate documentation for services provided. For positions that are funded from more than one source, an analysis of duties performed by program shall also be prepared.

Monitoring, Evaluation and Audit

The Contractor agrees to cooperate with any monitoring, evaluating and/or audit conducted by the Commission, or their designees who shall have full access to and the right to examine all books, records and other relevant documents.

The Contractor agrees to take immediate corrective action on deficiencies disclosed through program monitoring of costs disallowed in the course of an audit, review, or monitoring.

PROGRAM REQUIREMENTS

Equal Opportunity

No individual shall be excluded from participation in, denied the benefits of, subjected to discrimination under, or denied employment in the administration of or in connection with this contract because of race, color, disability, or political affiliation or belief.

The Contractor will take affirmative action to ensure that applicants are employed and that employees are treated during employment without regard to their race, color, religion, national origin, disability, age, sex, political affiliation or belief or citizenship.

Nondiscrimination

This contract and any subcontract hereunder is subject to the Age Discrimination Act of 1975, Section 504 of the Rehabilitation Act, Title VI of the Civil Rights of 1964 and the Americans with Disabilities Act of 1990.

Copyrights and Rights in Data

The contractor agrees that any plans, drawings, designs, specifications, computer programs (which are substantially paid for with federal grant or state funds), technical reports, operation manuals and other work submitted with a proposal or grant application or which are specified to be delivered under this contract or which are developed or produced and paid for under this contract (referred to in this clause as "subject data") are subject to the rights of the Commission to use, duplicate and disclose the subject data in whole or in part, in any manner for any purpose whatsoever, and have others do so. If the material is copyrightable, the contractor may copyright the material, subject to the rights in the government, but the Commission reserves a royalty-free, non-exclusive and irrevocable license to reproduce, publish and use the material, in whole or in part, and to authorize others to do so. The contractor shall include provisions appropriate to effectuate the purposes of this condition in all subcontracts expected to produce copyrightable "subject data."

SPECIFIC PROVISIONS
July 3, 2002

Purpose

Montana-Dakota Utilities Co. has filed an application to increase its North Dakota natural gas rates. To fully pursue and represent its case, staff requires assistance to analyze MDU's filing and to provide written and oral testimony. The contractor will determine the appropriate cost of service and rate design. The work will include sufficient detail as is necessary to successfully testify under cross-examination.

All work under this contract must be completed prior to the commission's fiscal year ending June 30, 2003. More importantly, the work needs to be sufficiently complete so as to provide written testimony by August 30, 2002 and oral testimony at the technical hearing to be held October 7-8, 2002.

The specific purpose is to investigate, analyze and provide testimony proposing the proper rate base, cost of capital, revenues and expenses, depreciation rates and rate design necessary to yield the opportunity for MDU to earn a fair and reasonable return on its natural gas investment in North Dakota including:

1. Professional analysis and review of filing.
2. Prepare and conduct discovery.
3. Periodic progress reports of discovery, conclusions and recommendations to keep staff updated.
4. Prepare written testimony and provide an advanced copy to staff for review prior to submitting as a formal document.
5. Prepare written and oral testimony in rebuttal to testimony of other parties in the proceeding.
6. Testify at the hearing.
7. Assist staff legal counsel in preparation of cross-examination of the witnesses of other parties to the proceedings.
8. After the hearing, assist staff legal counsel in preparation of findings of fact for a proposed commission decision.

Compensation

The Contractor will be compensated based on periodic submittal of progress reports. Final payment will be made upon satisfactory completion of the described project work, as determined by the commission.

In the event the case is settled or this agreement is otherwise terminated prior to completion of project work, then compensation will be awarded for work satisfactorily completed.

No part of this contract may be assigned, sublet or subcontracted.

This contract is entered into between the above two parties. This contract consists of this sheet, general provisions and specific provisions.

GENERAL PROVISIONS

CONTRACTUAL FEATURES

Legal Authority

The Contractor assures that it possesses legal authority to participate in this contract.

Assignment/Subcontracting

The Contractor may not assign this contract or any part thereof, or assign any of the monies to be paid hereunder, nor shall any part of the work done or material furnished under this contract be sublet.

The Contractor may not enter into subcontracts for any of the work contemplated under this contract unless included in the specific provisions of this contract.

Termination

The Commission, by ten days written notice listing causes and reasons, may terminate this contract in whole or in part when it is determined that the Contractor has failed to meet the conditions of the contract. The Commission will be liable only for payment provisions of this contract for services satisfactorily rendered prior to the effective date of termination.

Significant deviation from performance standards in this contract may result in reduced or terminated financial participation of the Contractor, subsequent to negotiations with the Commission.

The Contractor or the Commission may terminate this contract in whole or in part upon settlement or when both parties agree that the continuation of the contract would not produce results commensurate with further expenditures of funds. The two parties shall agree upon the termination conditions including effective date and in the case of partial terminations, that portion to be terminated.

In the event state or federal funds are reduced or terminated, the financial participation of the Commission may be reduced or terminated.

Disputes

The Contractor agrees to attempt to resolve disputes arising from this contract by administrative process and negotiations in lieu of litigation. Continued performance by the Contractor during disputes is assured.

Any dispute concerning a question of fact arising under this contract which is not settled by the informal means shall be decided by the authorized representative of the Commission who shall reduce the decision to writing and mail or otherwise furnish a copy thereof to the Contractor.

The Contractor shall be afforded an opportunity to be heard and to offer evidence in support of an appeal. Pending final decision of a dispute, the Contractor shall proceed diligently with the performance of the contract and in accordance with the decision of the Commission.

FISCAL RESPONSIBILITIES

Records

The Contractor agrees to maintain program records required by the Commission and to produce program narrative and statistical data at times prescribed by the Commission.

The Contractor agrees to maintain and retain all books, records, and other documents required by the Commission relevant to this agreement for four years after final payment. Records shall be retained beyond four years if audit findings have not been resolved.

No Claim for Additional Work

No claim for additional services not specifically herein provided, done, or furnished by the Contractor will be allowed, nor shall the Contractor do any work or furnish any material not covered by the contract, unless such work is ordered in writing by the Commission.

Time Keeping Procedures

The Contractor shall require employees and subcontractors, if applicable, whose positions are funded under this contract or included as match, to maintain adequate documentation for services provided. For positions that are funded from more than one source, an analysis of duties performed by program shall also be prepared.

Monitoring, Evaluation and Audit

The Contractor agrees to cooperate with any monitoring, evaluating and/or audit conducted by the Commission, or their designees who shall have full access to and the right to examine all books, records and other relevant documents.

The Contractor agrees to take immediate corrective action on deficiencies disclosed through program monitoring of costs disallowed in the course of an audit, review, or monitoring.

PROGRAM REQUIREMENTS

Equal Opportunity

No individual shall be excluded from participation in, denied the benefits of, subjected to discrimination under, or denied employment in the administration of or in connection with this contract because of race, color, disability, or political affiliation or belief.

The Contractor will take affirmative action to ensure that applicants are employed and that employees are treated during employment without regard to their race, color, religion, national origin, disability, age, sex, political affiliation or belief or citizenship.

Nondiscrimination

This contract and any subcontract hereunder is subject to the Age Discrimination Act of 1975, Section 504 of the Rehabilitation Act, Title VI of the Civil Rights of 1964 and the Americans with Disabilities Act of 1990.

Copyrights and Rights in Data

The contractor agrees that any plans, drawings, designs, specifications, computer programs (which are substantially paid for with federal grant or state funds), technical reports, operation manuals and other work submitted with a proposal or grant application or which are specified to be delivered under this contract or which are developed or produced and paid for under this contract (referred to in this clause as "subject data") are subject to the rights of the Commission to use, duplicate and disclose the subject data in whole or in part, in any manner for any purpose whatsoever, and have others do so. If the material is copyrightable, the contractor may copyright the material, subject to the rights in the government, but the Commission reserves a royalty-free, non-exclusive and irrevocable license to reproduce, publish and use the material, in whole or in part, and to authorize others to do so. The contractor shall include provisions appropriate to effectuate the purposes of this condition in all subcontracts expected to produce copyrightable "subject data."

SPECIFIC PROVISIONS
July 3, 2002

Purpose

Montana-Dakota Utilities Co. has filed an application to increase its North Dakota natural gas rates. To fully pursue and represent its case, staff requires assistance to analyze MDU's filing and to provide written and oral testimony. The contractor will determine the appropriate cost of service and rate design. The work will include sufficient detail as is necessary to successfully testify under cross-examination.

All work under this contract must be completed prior to the commission's fiscal year ending June 30, 2003. More importantly, the work needs to be sufficiently complete so as to provide written testimony by August 30, 2002 and oral testimony at the technical hearing to be held October 7-8, 2002.

The specific purpose is to investigate, analyze and provide testimony proposing the proper rate base, cost of capital, revenues and expenses, depreciation rates and rate design necessary to yield the opportunity for MDU to earn a fair and reasonable return on its natural gas investment in North Dakota including:

1. Professional analysis and review of filing.
2. Prepare and conduct discovery.
3. Periodic progress reports of discovery, conclusions and recommendations to keep staff updated.
4. Prepare written testimony and provide an advanced copy to staff for review prior to submitting as a formal document.
5. Prepare written and oral testimony in rebuttal to testimony of other parties in the proceeding.
6. Testify at the hearing.
7. Assist staff legal counsel in preparation of cross-examination of the witnesses of other parties to the proceedings.
8. After the hearing, assist staff legal counsel in preparation of findings of fact for a proposed commission decision.

Compensation

The Contractor will be compensated based on periodic submittal of progress reports. Final payment will be made upon satisfactory completion of the described project work, as determined by the commission.

In the event the case is settled or this agreement is otherwise terminated prior to completion of project work, then compensation will be awarded for work satisfactorily completed.

No part of this contract may be assigned, sublet or subcontracted.

June 27, 2002

Dear Public Service Director:

Enclosed is an announcement of a Public Input Session that the Public Service Commission will conduct via interactive television on July 15, 2002, over the noon hour Central Daylight Time, at locations in the natural gas service area of Montana-Dakota Utilities Co. (MDU). The Commission requests this item be broadcast as a public service announcement during the period beginning July 1 through noon July 15, 2002. A copy of the Commission's official notice is enclosed.

The purpose of public input sessions is to solicit public comments and questions regarding MDU's application to increase rates for natural gas service, and provide an opportunity for customers to find out more about the case.

The Commission appreciates your assistance in this matter. If you have any questions, please contact me at 701-328-4076. Thank You.

Sincerely,

Sharon Helbling
Public Utilities Division

Subject: Update - Public Service Announcements for MDU gas rate case

Commissioner Reinbold has an appointment with KFYR to produce 6 audio recordings on Thursday morning at a cost of $25 each. The recordings will be the same except for location information. We will need duplicates of each recording at $3 each.

Location	# of stations
Bismarck	8
Devils Lake	2
Dickinson	2
Jamestown	2
Minot	3
Williston	2
Total	20 dubs

We will need to mail the duplicates ourselves to each station. The cover letter should request the recordings be run as a public service announcement. The stations at each location are:

Your Public Service Commission will be holding public input meetings relating to MDU's filing requesting an increase in natural gas rates.

Everyone is invited.

Meetings are open to the public.

Come and speak your piece.

Meetings are scheduled at 11:00 A.M. on July 15th, at the North Campus, Room 104, at Dickinson State College.

That's 11:00 A.M. on July 15th.

The North Dakota Public Service Commission has scheduled an informal public input session via interactive television on Monday, July 15, 2002 from 12:00 p.m. to 2:00 p.m. CDT throughout North Dakota to allow customers of Montana-Dakota Utilities Co. the opportunity to present their input regarding Montana-Dakota's application to increase their natural gas rates.

Montana-Dakota has asked for an overall increase of 4.1 percent which would produce approximately $2.8 million in additional annual revenues if approved by the commission.

The primary reason for the rate filing is increased operation and maintenance costs, depreciation costs and taxes, in spite of the Company's efforts to control and maintain these costs levels.

If the increase is granted in full, the average residential customer using 110 decatherms (dk) annually would see an increase of approximately $24 each year. A firm general service customer using 300 dk annually would pay approximately $55 more per year. Proposed rate schedules and a comparison of the present and proposed rates are on file and can be examined at the Montana-Dakota office noted on your bill.

You are invited to participate in the public input session on

JULY 15, 2002 @ 12:00 CDT

Dear Mr. Binek:

Thank you for your June 11, 2002, request of the designation of an administrative law judge from the Office of Administrative Hearings to conduct a hearing in the matter of Montana-Dakota Utilities Co. (PU-399-02-183). I hereby designate myself to be assigned as a administrative law judge to conduct the hearing in regard to this matter. Because the administrative law judge will not be making recommended findings of fact and conclusions of law, or issuing a recommended order, the person or persons who will actually be making the final administrative decision in regard to this matter (i.e., commission) must actually be in attendance at the hearing.

Please send all additional relevant documents in regard to this matter (correspondence, and other pleadings and documents) to the designated administrative law judge in care of the Office of Administrative Hearings, 1707 North 9th Street, Bismarck, North Dakota 58501-1882. The hearing is scheduled for October 7 – 8, 2002, beginning at 9:00 a.m., in the Commission Hearing Room, State Capitol, 600 E. Boulevard Avenue, Bismarck, North Dakota.

Sincerely,

Allen C. Hoberg

Re: Bid Proposals for MDU's Gas Case (PU-399-02-183)
Administrative Agenda Item for June 19, 2002

At the direction of the commission, staff requested bid proposals to handle the staff advocacy portion of MDU's electric rate increase application. Specifically, staff requested price quotes for developing revenue requirements, cost of capital, depreciation and rate design.

Staff received bids from six consulting firms ranging in price from $48,534 to $170,750. Because price is an important factor in staff's analysis of the bid proposals, all but Snavely King and Larkin & Associates were effectively eliminated from consideration.

Both remaining candidates bid within $966 of each other and has provided good service to the commission in the past. Staff believes that both firms would be effective in representing advocacy staff.

All things being equal, Snavely King out bid Larkin & Associates. In addition, staff believes there may be some carry-over value in Snavely King's recent involvement in staff's rate complaint case against MDU's electric operations.

Staff recommends that the commission enter into a contract with Snavely King to provide the commission with a full rate case investigation and testimony. The valuation fund currently has a balance of about $94,000 for these types of cases.

Following is a summary of the individual component bids:

	Snavely	Larkin
Revenue Requirements	$15,292	$22,996
Cost of Capital	9,014	6,626
Rate Design	6,136	7,016
Depreciation Expense	18,092	12,862
Total Bid	$48,534	$49.500

Re: Request for Court Reporter
Montana-Dakota Utilities Co.
Natural Gas Rate Increase
Application
Case No. PU-399-02-183

Dear Mr. Ball:

The hearing in the above case has been scheduled for October 7, 2002, beginning at 9:00 a.m., in the Commission Hearing Room. The Commission will tape record the hearing. If MDU would like a court reporter present at the hearing please notify the Commission in writing within ten days of receipt of this letter and our office will make the necessary arrangements.

The Commission has a contract with the following court-reporting service:

Emineth & Associates
P. O. Box 2655
Bismarck, ND 58502-2655
Telephone: 701-255-3513
Fax: 701-255-6079

Montana-Dakota Utilities would pay costs associated with the court-reporting service (i.e. appearance fee, transcript of hearing), and Emineth & Associates will bill for its services as directed.

If you have any questions, please contact us.

Sincerely,

William W. Binek
Hearing Administrator

Re: Case No. PU-399-02-183
Montana-Dakota Utilities Co.
Natural Gas Rate Increase
Application

Dear Mr. Hoberg:

Enclosed is a request for an administrative law judge in the above case. The Commission has scheduled a hearing for October 7, 2002, beginning at 9 a.m. (CST) in the Commission's Hearing Room, 12th Floor, State Capitol, Bismarck. The administrative law judge will serve as a procedural law judge, a court reporter may be present, and the hearing will be tape recorded. A copy of the case is enclosed.

Please provide the Commission with a copy of any filings issued by your office in this matter.

If you have any questions, please contact me. Thank you.

Sincerely,

William W. Binek
Hearing Administrator

REQUEST FOR ADMINISTRATIVE LAW JUDGE--APPEAL, APPLICATION, OR PETITION

NORTH DAKOTA OFFICE OF ADMINISTRATIVE HEARINGS

SFN 17819 (Rev. 03-2001)

Name of Agency, Board, or Commission
Public Service Commission

The above named agency, board, or commission requests designation of an administrative law judge from the Office of Administrative Hearings for the Montana-Dakota Utilities Co., Natural Gas Rate Increase Application, Case No. PU-399-02-183.

Hearing is set for October 7 & 8, 2002, beginning at 9 a.m., Commission Hearing Room, 12th floor, State Capitol.

(e.g., application of [name], appeal of [name], petition of [name]). Authority for the administrative action is found in Title 49 (North Dakota Century Code and/or North Dakota Administrative Code).

Please attach related documents and correspondence.

The administrative action is more fully described as follows:

It requests designation of an administrative law judge (please check one):

- ☐ **To conduct the hearing and issue recommended findings of fact, conclusions of law, and order.**
- ☑ **To serve as a procedural administrative law judge only (no recommended decision). The agency head will be present at the hearing as required by NDCC 54-57-04(6).**
- ☐ **To conduct the hearing, issue findings of fact, conclusions of law, and a final order.**

PLEASE MAKE A REQUEST FOR AN ADMINISTRATIVE LAW JUDGE AT LEAST ONE MONTH BEFORE THE HEARING.

Please list parties, including the agency if it is a Party, and Representation [attorney (or other)] if known, or Agency Contact: (Attach separate list if necessary.)

AGENCY Public Service Commission	Address 600 E Blvd. Ave., Dept. 408, Bismarck	Telephone Number 328-2400
Representation William W. Binek, Chief Counsel	Address Same as above	Telephone Number 328-4088
PARTY Montana-Dakota Utilities Co.	Address 400 N 4th Street, Bismarck, ND 58501	Telephone Number 222-7900
Representation Contact Person: Don Ball	Address Same as above	Telephone Number
PARTY	Address	Telephone Number
Representation	Address	Telephone Number

Additional Comments
Hearing will be tape recorded. Court reporter may be present.

(For agencies required to use OAH, notice of hearing will be issued by the administrative law judge, unless a procedural administrative law judge is requested. Other requesting agencies and agencies requesting a procedural administrative law judge should first contact OAH about scheduling a hearing. If notice has already been issued, attach a copy of the notice.)

STATE OF NORTH DAKOTA

PUBLIC SERVICE COMMISSION

Montana-Dakota Utilities Co.
Natural Gas Rate Increase
Application

Case No. PU-399-02-183

NOTICE OF HEARING, NOTICE OF PUBLIC INPUT SESSIONS, AND NOTICE OF INTERVENTION DEADLINE

June 5, 2002

On April 12, 2002, Montana Dakota Utilities Co. (MDU) filed an application to increase its rates for natural gas service by an amount sufficient to provide increased total annual revenue of $2,844,132. MDU proposes to increase rates for residential and firm general service by 4.6% while decreasing small interruptible service by 4.1%. MDU proposes no increase in rates for service to large interruptible customers or the Minot air force base. MDU estimates the proposed increase for a residential customer would average about $24 per year.

MDU further proposes to redefine billing components to better align costs with rates for service. MDU alleges these changes would provide stability during periods of abnormal weather while making its bills more understandable. The proposed rate changes do not affect the cost of purchased gas, which is separately recovered through the purchased gas adjustment billing provision.

A **public hearing** on this matter will be held beginning **October 7, 2002 at 9 a.m. (CST)** in the Commission hearing room, State Capitol, 12th Floor, Bismarck, North Dakota 58505. Anyone wishing to become a party to this proceeding must file a Petition to Intervene by September 9, 2002. Issues to be considered in this matter include:

1. What is the value of MDU's property, used and useful, for the service and convenience of the public in North Dakota?

2. What is MDU's rate of return on its property, used and useful, for the service and convenience of the public in North Dakota?

3. What is a just and reasonable rate of return on MDU's property, used and useful, for the service and convenience of the public in North Dakota?

4. What rates and charges are necessary to provide a just and reasonable rate of return on MDU's property, used and useful, for the service and convenience of the public in North Dakota?

5. Are MDU's rate schedules designed in such a manner that they result in a basis of charge to its customers that is just and reasonable without discrimination?

6. Other relevant information or proposals concerning the proceeding.

Public input sessions will be held via interactive television on **July 15, 2002 at 12 Noon (CDT)** at locations set forth below. Members of the public are invited to appear and participate in the informal discussions. The meetings are not considered part of the technical hearing and the discussion at the meetings will not become part of the evidence reviewed by the Commission in making its decision. The discussion will, however, aid the Commission and its staff in identifying areas of concern to the members of the public.

REQUEST FOR PROPOSAL

To: Potential Bidders

From: Mike Diller
Director of Accounting

Date: May 10, 2002

Re: Request for Proposal, Case No. PU-399-02-183

The North Dakota Public Service Commission is requesting written proposals from selected firms to assist commission staff in its investigation of Montana-Dakota Utilities Co.'s (MDU's) gas rate increase request, including cost of capital, cost of service and rate design. The completion date for the investigation and written testimony is August 30, 2002. The technical hearing will be held on October 7 & 8, 2002.

The specific purpose is to investigate, analyze and provide testimony regarding the fairness and reasonableness of MDU's proposed gas rates. To accomplish this, the commission is requesting proposals for investigation, analysis and testimony to include the following areas:

1. The appropriate level of investment.
2. The appropriate cost of capital.
3. The appropriate cost of service.
4. The appropriate rate design.
5. Depreciation study.

See Attachment for additional discussion and direction on each of these issues.

Consulting duties include:

1. Professional analysis and review of the filing.

2. Prepare and conduct discovery as necessary.

3. Monthly progress reports of discovery, conclusions and recommendations.

4. Prepare and file written testimony.

5. Provide oral testimony.

6. Assist staff in preparing cross-examination of the witnesses of other parties to the proceeding.

7. Assist staff in the preparation of proposed findings of fact.

The staff will select firms to be interviewed. Selection will be based on an evaluation using the following criteria:

1. Quality of written proposal (5 points).

2. Capability, including personnel qualifications, specialized experience, training, education, and performance record (20 points).

3. Understanding of the project (20 points).

4. Proposed work approach (10 points).

5. Price (45 points):
   a. Lowest to 120% of lowest bid = 45 points
   b. 121% to 130% of lowest bid = 44 points
   c. 131% to 140% of lowest bid = 42 points
   d. 141% to 150% of lowest bid = 38 points
   e. 151% to 160% of lowest bid = 32 points
   f. 161% to 170% of lowest bid = 24 points
   g. 171% to 180% of lowest bid = 14 points
   h. 181% to 190% of lowest bid = 2 points
   i. 191% and over of lowest bid = 0 points

The written proposal should include a fixed price. The **proposal may include separate bids for each desired issue or a combined price for two or more issues.** Resumes of those professionals directly providing services should be included along with examples of any past work similar to that required in this project. In addition, those who have not previously contracted should provide at least three client references.

After the interview process, staff will make recommendations to the commission. The commission may consider hiring a consultant to perform any one of the identified tasks or portions of the identified tasks. The commission has the right to enter into competitive negotiations with qualified bidders for the purpose of selecting a consultant to perform all or a portion of the identified work. The commission retains the right to reject any and all proposals.

The successful contractor will be required to comply with all applicable Equal Employment Opportunity laws and regulations. All proposals shall include certification that they comply with applicable provisions of the Americans with Disabilities Act of 1991. A signed "Conflict of Interest Disclaimer" must accompany all proposals and will be made part of the final contract.

Written proposals from qualified consultants will be accepted until the close of business May 30, 2002.

Submit an original and five copies of proposals to:

Mike Diller, Director of Accounting
North Dakota Public Service Commission
State Capitol, 12th Floor
Bismarck, North Dakota 58505-0480
Telephone No. (701) 328-4079

Sincerely,

Mike Diller

Mike Diller

Attachment

1. The appropriate level of investment in North Dakota.

The rate base determination is not nearly as critical in terms of rate impact as is establishing the appropriate cost of service. Therefore, work in this area should be limited in scope and should primarily rely on a review of the last rate case and historical comparisons. Annual reports are filed with the commission and include all rate base components. MDU does not seek a return on cash working capital in this case. Staff calculated cash working capital in MDU's last rate decrease case and the resulting impact to rates was minimal. Therefore, rate base will not require a cash working capital calculation.

2. The appropriate cost of capital.

MDU's cost of capital includes long-term debt, preferred equity and common equity. Because MDU's cost of debt is high, the capital structure is not that critical to rates. On April 24, 2002, the commission issued a rate reduction order for MDU's electric operations and extensive testimony and information is readily available from that case. In the electric reduction case, staff argued for a lower cost of debt using an accounting approach rather than a yield-to-maturity calculation. The commission ordered in favor of MDU and staff does not anticipate making another argument in this case for a lower cost of long-term debt. As is often the case, the critical element of cost of capital is the return on equity component. MDU's witness filed testimony supporting a return on equity of 13.25% using DCF analyses.

3. The appropriate cost of service.

In 2001, 80% of MDU's revenues were spent on the cost of gas. Therefore, a critical element of cost of service is the appropriate level of weather-normalized sales. The cost of service portion will also require a strong review of other operating and maintenance expenses.

4. The appropriate rate design.

In its application to increase rates, MDU argues for increasing the residential monthly basic service charge from $6.50 to $11.70. In the event the commission does not accept the basic service charge increase, MDU argues for the inclusion of a weather normalization adjustment.

5. Depreciation study.

MDU's last depreciation study was conduced in the early 90's and the commission may be interested in having a depreciation study completed for this proceeding.

Re: General Natural Gas Rate Application
Case No. PU-399-02-____

Montana-Dakota Utilities Co. (Montana-Dakota), a Division of MDU Resources Group, Inc., herewith submits its application for approval to increase its rates for natural gas service. Montana-Dakota encloses herein an Application with Appendices A and B, Testimony and Exhibits and supporting Statements that document the need for this request to increase rates for natural gas service. This filing is made in accordance with Title 49 of the North Dakota Century Code and the rules and regulations promulgated by the North Dakota Public Service Commission.

The Company's need for additional revenues results from increases in expenses such as: operating and maintenance expenses, depreciation, and taxes other than income taxes. The increase will also provide Montana-Dakota with a higher return on equity.

In spite of cost control efforts, cost-of-service increases have caused current rates to be inadequate in compensating the company for operating its North Dakota natural gas distribution system. Montana-Dakota's last general rate increase in North Dakota was in 1994. Since then, the Consumer Price Index has increased by about 20 percentage points.

Montana-Dakota proposes a total annual increase of $2,844,132, or 4.1%, based on a 2003 projected test year. The proposed change in rates will affect customer classes follows: Residential, 4.6%; Firm General Service, 4.6%; Air Force, 0%; Small Interruptible, (4.1%); and, Large Interruptible, 0%. The proposed increase for a residential customer will average about $2.00 per month or about $24.00 per year.

As reflected in the application, Montana-Dakota proposes to redefine the components of the gas bill and thereby better align its cost of service with its rates. The changes to the rate form will provide a measure of stability for

customers during periods of abnormal weather and provide customers with an understandable rate and bill, while providing Montana-Dakota with enhanced fixed cost recovery.

The proposed rate changes do not affect the recovery of the cost of purchased gas, which is separately reflected in retail rates (and recovered monthly) through the Purchased Gas Cost Adjustment. Montana-Dakota proposes to reflect all gas costs separately using the proposed rate form change referenced above. The company feels this change will allow customers to readily identify the total portion of their bill related to the cost of gas as well as the portion related to Montana-Dakota's distribution service.

With this filing, Montana-Dakota also proposes to own all service lines on a prospective basis. This change will apply to all new and replacement service lines subject to appropriate extension policy provisions. It will eliminate the need for zone rates and will provide for a uniform rate and service line policy on a statewide basis.

Please refer all inquiries regarding this filing to:

Mr. Donald R. Ball
Director of Regulatory Affairs
Montana-Dakota Utilities Co.
400 North Fourth Street
Bismarck, ND 58501

Also, please send copies of all written inquiries, correspondence and pleading to:

Mr. Douglas W. Schulz
Senior Attorney
MDU Resources Group, Inc.
P. O. Box 5650
Bismarck, ND 58506-5650

Mr. William P. Pearce
Attorney at Law
Pearce & Durick
314 E. Thayer Avenue
P.O. Box 400
Bismarck, ND 58502

The original and seven (7) copies of this Letter of Transmittal, Application and Appendices, Testimony and Exhibits, and Statements are hereby filed with the North Dakota Public Service Commission.

A report of tariff change reflecting Commission data requirements regarding filings is attached hereto.

Montana-Dakota also herewith submits a check for $50.00 pursuant to the requirements of Section 49-05-05 of the North Dakota Century Code.

Montana-Dakota respectfully requests that this filing be accepted as being in full compliance with the filing requirements of this Commission.

Please acknowledge receipt by stamping or initialing the duplicate copy of this letter attached hereto and returning the same in the enclosed self-addressed, stamped envelope.

Sincerely,

Donald R. Ball
Director of Regulatory Affairs

Original Sheet No. 62	Firm Gas Service Extension Policy Rate 120
Original Sheet No. 63-65	Reserved
Original Sheet No. 66	New Installation, Replacement, Relocation and Repair of Gas Service Lines Rate 124

VI.

That the existing rates of Applicant are unjust, unreasonable and not compensatory, and that said rates should be increased so that Applicant will have an opportunity to earn a just and reasonable rate of return on its natural gas property devoted to providing service to its North Dakota natural gas customers.

VII.

That in submitting this Application and in proposing the implementation of the increased rates contained herein, Applicant is seeking additional revenues before income taxes of $2,844,132 based on a 2003 future test year, for natural gas service rendered to customers in the State of North Dakota.

VIII.

That Applicant will prove by competent evidence that existing rates are unjust, unreasonable, and not compensatory, and that said rate schedules should be increased as requested herein. Filed concurrently with this Application and its Appendices are supporting Statements and direct testimony and exhibits of Applicant's witnesses. Said Statements, Testimony and Exhibits are by this reference incorporated as if fully set forth herein.

IX.

That this Application is submitted in accordance with the provisions of Title 49 of the North Dakota Century Code and the rules and regulations promulgated by the Public Service Commission of the State of North Dakota.

X.

That, in accordance with Section 49-05-04.1 of the North Dakota Century Code, Applicant hereby affirms that its future test year forecast is reasonable, reliable, and made in good faith. All basic assumptions used in making or supporting the forecast are reasonable, evaluated, identified, and justified to allow the Commission to test the appropriateness of the forecast. The accounting treatment that has been applied to anticipated events and transactions in the forecast is the same as the accounting treatment to be applied in recording the events once they have occurred.

WHEREFORE, Applicant respectfully requests that the Public Service Commission of the State of North Dakota:

1. Approve and adopt the proposed rate changes as set forth in Appendix B of this Application to be effective upon final disposition of this case;

2. Expedite any hearing which the Commission deems necessary to determine the propriety of Applicant's proposed rate schedules set forth herein, and issue its final order establishing the rates set forth herein; and

3. Grant such other and additional relief as the Commission shall deem just and proper.

Dated this 12th day of April, 2002.

GAS RATE SCHEDULE

NDPSC Volume 6
1st Revised Sheet No. 14
Cancelling Original Sheet No. 14

SMALL INTERRUPTIBLE GENERAL GAS SERVICE Rate 71

AVAILABILITY:

In all communities served for all interruptible general gas service customers whose interruptible natural gas load will exceed an input rate of 2,500,000 Btu per hour, metered at a single delivery point and whose use of natural gas will not exceed 100,000 dk annually. The rates herein are applicable only to customer's interruptible load. Customer's firm natural gas requirements must be separately metered or specified in a firm service agreement. Customer's firm load shall be billed at Firm General Gas Service Rate 70. For interruption purposes, the maximum daily firm requirement shall be set forth in the firm service agreement.

RATE:

Base Rate (Zones 1 and 2): $35.00 per month

Commodity Charge:	Maximum Rate	Minimum Rate
Zone 1	$3.500 per dk	$3.056 per dk
Zone 2		
First 15 dk per month	$3.670 per dk	$3.670 per dk
Over 15 dk per month	$3.500 per dk	$3.056 per dk

The commodity charge shall be set forth in the service agreement required as provided in the General Terms and Conditions for service. Such rate, as adjusted to reflect changes in the cost of Purchased Gas Adjustment, shall apply for the term of the agreement regardless of a change in the rates set forth above.

MINIMUM BILL:

Base Rate.

PAYMENT:

Billed amounts will be considered past due if not paid by the due date shown on the bill. Past due bills are subject to a late payment charge in accordance with the provisions of Rate 100, §V.11, or any amendments or alterations thereto.

COST OF PURCHASED GAS ADJUSTMENT:

Bills are subject to an adjustment for cost of purchased gas as provided in Rate 88 or any amendments or alterations thereto.

Date Filed: November 11, 1998 Effective Date: December 2, 1998

Issued By: C. Wayne Fox, Vice President - Regulatory Affairs & General Services

Case No.: PU-399-98-548

SMALL INTERRUPTIBLE GENERAL GAS SERVICE Rate 71

GENERAL TERMS AND CONDITIONS:

1. PRIORITY OF SERVICE - Deliveries of gas under this schedule shall be subject at all times to the prior demands of customers served on the Company's firm general gas service rates, and the Company shall have the right to interrupt deliveries to customers under this schedule without being required to give previous notice of intention to so interrupt whenever, in Company's sole judgment, it may be necessary to do so to protect the interest of its customers whose capacity requirements are otherwise and hereby given preference. The priority of service and allocation of capacity shall be accomplished in accordance with the provisions of Rate 100, §V.10.

2. PENALTY FOR FAILURE TO CURTAIL OR INTERRUPT - If customer fails to curtail or interrupt their use of gas hereunder when requested to do so by the Company, any gas taken shall be billed at the tail block of the applicable General Gas Service Rate 70 commodity charge rate, plus either an amount equal to any penalty payments or overrun charges the Company is required to make to its interconnecting pipeline(s) under the terms of its contract(s) as a result of such failure to curtail or interrupt, or $10.00 per dk of gas used in excess of the volume of gas to which customer was requested to curtail or interrupt, whichever amount is greater. The Company, in its discretion, may shut off customer's supply of gas in the event of customer's failure to curtail or interrupt use of gas when requested to do so by the Company.

3. AGREEMENT - Customer will be required to enter into an agreement for service hereunder for a minimum term of 12 months. Written notice of termination by either Company or customer must be given at least 60 days prior to the end of the initial term. Absent such termination notice, the agreement shall continue for additional terms of equal length until written notice is given, as provided herein, prior to the end of any subsequent term. Upon expiration of service, the customer may apply for and receive, at the sole discretion of the Company, gas service under this rate or another appropriate rate schedule for the customer's operations.

SMALL INTERRUPTIBLE GENERAL GAS SERVICE Rate 71

GENERAL TERMS AND CONDITIONS: (Cont.)

4. OBLIGATION TO NOTIFY COMPANY OF CHANGE IN DAILY OPERATIONS - Customer will be required as specified in the service agreement to notify Company of an anticipated change in daily operations. Failure to comply with requirements specified in the service agreement may result in the assessment of penalties to the customer equal to the penalty amounts Company must pay to the interconnecting pipeline caused by customer's action.

5. METERING REQUIREMENTS - Electronic measurement equipment required for daily measurement will be installed by the Company, at its sole discretion, prior to the initiation of service hereunder.

   The customer shall be required to provide and maintain, at no cost to Company, a 120 volt, 15 ampere, AC power supply, or other power source acceptable to the Company, and a telephone tie to customer's telephone system accessible at customer's meter location(s). Customer agrees to provide and maintain, at no cost to the Company, any necessary telephone enhancements to assure Company of a quality telephone signal necessary to properly transmit data. The customer shall pay all charges for continuous electric and telephone service associated with the Company's connection of the electronic measurement equipment, and any interruption in such services must be promptly remedied or service under this tariff will be suspended until satisfactory corrections have been made.

6. RULES - The foregoing schedule is subject to Rates 100 through 124 and any amendments or alterations thereto or additional rules and regulations promulgated by the Company under the laws of the state.

2. RULES - The foregoing schedule is subject to Rates 100 through 124 and any amendments or alterations thereto or additional rules and regulations promulgated by the Company under the laws of the state.

Date Filed: November 10, 1994
Effective Date: Service Rendered on and After November 15, 1994

Issued By: C. Wayne Fox, Vice President - Regulatory Affairs & General Services

Case No.: PU-399-94-297

TRANSPORTATION SERVICE
(Rates 81, 82, 84)

AVAILABILITY:

This service is applicable for transportation of natural gas to customer's premise (metered at a single delivery point) through Company's distribution facilities. In order to obtain transportation service, customer must qualify under an applicable gas transportation service rate; meet the general terms and conditions of service provided hereunder; and enter into a gas transportation agreement upon request by the Company.

The transportation services are as follows:

Small Interruptible General Gas Transportation Service Rate 81:
Transportation service is available for all general gas service customers whose interruptible natural gas load will exceed an input rate of 2,500,000 Btu per hour, metered at a single delivery point, whose average use of natural gas will not exceed 100,000 dk annually, and who, absent the request for transportation service, are eligible for natural gas service, on an interruptible basis, pursuant to Company's effective Small Interruptible General Gas Service Rate 71. Customer's firm natural gas requirements must be separately metered or specified in a firm service agreement. Customer's firm load shall be treated and billed in accordance with the provisions of Firm General Gas Service Rate 70 or Firm Gas Transportation Service Rate 84, whichever is applicable.

Large Interruptible General Gas Transportation Service Rate 82:
Transportation service is available for all general gas service customers whose interruptible natural gas load will exceed an input rate of 2,500,000 Btu per hour, metered at a single delivery point, whose average use of natural gas will exceed 100,000 dk annually, and who, absent the request for transportation service, are eligible for natural gas service, on an interruptible basis, pursuant to Company's effective Large Interruptible General Gas Service Rate 85. Customer's firm natural gas requirements must be separately metered or specified in a firm service agreement. Customer's firm load shall be treated and billed in accordance with the provisions of Firm General Gas Service Rate 70 or Firm Gas Transportation Service Rate 84, whichever is applicable.

Firm Gas Transportation Service Rate 84:
Firm transportation service is available for the firm requirements of those customers who, absent the request for transportation service, are eligible for natural gas service, on an interruptible basis, pursuant to

TRANSPORTATION SERVICE
(Rates 81, 82, 84)

AVAILABILITY: (Cont.)

Firm Gas Transportation Service Rate 84: (Cont.)

Company's effective Small Interruptible General Gas Service Rate 71 or Large Interruptible General Gas Service Rate 85. Such firm requirements, subject to approval by the Company, must be set forth in a firm service agreement.

RATE:

Under Rate 81 or Rate 82, customer shall pay the applicable Base Rate and Nomination Charge plus a negotiated rate not more than the maximum rate or less than the minimum rate specified below. In the event customer also takes service under Rate 71, Rate 84 or Rate 85, the base rate applicable under Rate 81 or Rate 82 shall be waived.

Base Rate:

Rate 81 - $ 35.00 per month
Rate 82 - $450.00 per month
Rate 84 - $ 35.00 per month for customers qualifying under Rate 81
$450.00 per month for customers qualifying under Rate 82

	Rate 81	Rate 82	Rate 84
Maximum Rate per dk	$0.509	$0.321	$0.983
Minimum Rate per dk	$0.102	$0.061	$0.983
Balancing Charge per dk	$0.342	$0.342	$0.342
Nomination Charge per Month	$50.00	$50.00	$50.00

Fuel Charge:

Applicable to all dk transported to customers located within the distribution system. Charge does not apply to transmission level customers. See supplemental sheet for currently effective charge.

GENERAL TERMS AND CONDITIONS:

1. CRITERIA FOR SERVICE - In order to receive the service, customer must qualify under one of the Company's applicable natural gas transportation service rates and comply with the general terms and conditions of the service provided herein. The customer is responsible for making all arrangements for transporting the gas from its source to the Company's interconnection with the delivering pipeline(s).

TRANSPORTATION SERVICE
(Rates 81, 82, 84)

GENERAL TERMS AND CONDITIONS: (Cont.)

2. REQUEST FOR GAS TRANSPORTATION SERVICE:
   a. To qualify for gas transportation service a customer must request the service pursuant to the provisions set forth herein. The service shall be provided only to the extent that the Company's existing operating capacity permits.

   b. If the Company determines that firm capacity exists, requests for firm gas transportation service shall be processed on a first come first serve basis. Requests for interruptible transportation service shall be considered in accordance with the provisions of Rate 100, §V.10.

3. MULTIPLE SERVICES THROUGH ONE METER:
   a. In the event customer desires firm sales service in addition to gas transportation service, customer shall request such firm volume requirements, and upon approval by Company, such firm volume requirements shall be set forth in a firm service agreement. For billing purposes, the level of volumes so specified or the actual volume used, whichever is lower, shall be billed at Rate 70 or Rate 84, whichever is applicable. Volumes delivered in excess of such firm volumes shall be billed at the applicable gas transportation rate. Customer has the option to install, at their expense, piping necessary for separate measurement of sales and transportation volumes.

   b. The customer shall pay, in addition to charges specified in the applicable gas transportation rate schedule, charges under all other applicable rate schedules for any service in addition to that provided herein (irrespective of whether the customer receives only gas transportation service in any billing period).

4. PRIORITY OF SERVICE - Company shall have the right to curtail or interrupt deliveries without being required to give previous notice of intention to curtail or interrupt, whenever, in its judgment, it may be necessary to do so to protect the interest of its customers whose capacity requirements are otherwise and hereby given preference. The priority of service and allocation of capacity shall be accomplished in accordance with the provisions of Rate 100, §V.10.

TRANSPORTATION SERVICE
(Rates 81, 82, 84)

GENERAL TERMS AND CONDITIONS: (Cont.)

5. PENALTY FOR FAILURE TO CURTAIL OR INTERRUPT - If customer fails to curtail or interrupt their use of gas hereunder when requested to do so by the Company, any gas taken above that received on customer's behalf, shall be billed at the tail block of the applicable Firm General Gas Service Rate 70 commodity charge rate, plus either an amount equal to any penalty payments or overrun charges the Company is required to make to its interconnecting pipeline(s) under the terms of its contract(s) as a result of such failure to curtail or interrupt, or $10.00 per dk of gas used in excess of the volume of gas to which customer was requested to curtail or interrupt, whichever amount is greater. The Company, in its discretion, may shut off customer's supply of gas in the event of customer's failure to curtail or interrupt use of gas when requested to do so by the Company.

6. NON-DELIVERED VOLUMES/PENALTY:

a. In the event customer uses more gas than is being delivered to the Company's interconnection with the delivering pipeline(s) (receipt point), customer shall pay an amount equal to any penalty payments or overrun charges the Company is required to make to its interconnecting pipeline(s) under the terms of its contract(s) resulting from such action by customer. In the event that more than one customer is obtaining gas from the same shipper at the same receipt point, any payment or overrun penalties the Company is required to make shall be allocated on a pro rata basis among such customers on the basis of each customer's use of gas in excess of available volumes.

b. In the event the customer's gas is not being delivered to the receipt point due to shipper or pipeline constraints and the customer continues to take gas, the rate charged to the customer shall be the tail block of the Firm General Gas Service Rate 70 commodity charge rate, plus any applicable penalties or charges set forth in Paragraph 6.a. The Company is under no obligation to notify customer of non-delivered volumes.

c. In the event customer's transportation volumes are not available for any reason, customer may take interruptible sales service if such service is available. The availability of interruptible sales service shall be determined at the sole discretion of the Company.

TRANSPORTATION SERVICE
(Rates 81, 82, 84)

GENERAL TERMS AND CONDITIONS: (Cont.)

7. ELECTION OF SERVICE - Prior to the initiation of service hereunder, the customer shall make an election of its requirements under each applicable rate schedule for the entire term of service. If mutually agreed to by Company and customer, the term of service may be amended. Upon expiration of service, the customer may apply for and receive, at the sole discretion of the Company, gas service under the appropriate sales rate schedule for the customer's operations.

   Transportation customers who cease service and then resume service within the succeeding 12 months shall be subject to a reconnection charge as specified in Rate 100, §V.17.

8. BALANCING:

   a. To the extent practicable, customer and Company agree to the daily balancing of volumes of gas received and delivered on a thermal basis. Such balancing is subject to the customer's request and the Company's discretion to vary scheduled receipts and deliveries within existing Company operating limitations.

      If, at the end of a billing month, the accumulated difference between actual gas deliveries to the customer and nominated (scheduled) receipts on behalf of such customer exceeds 4% of that month's scheduled receipts, resulting in a negative imbalance (i.e., deliveries exceed scheduled receipts), the customer will be assessed a balancing charge, set forth herein, on the imbalance exceeding 4%. If such imbalance is not eliminated by the end of the next monthly billing period, the customer shall then be billed, in addition to the applicable transportation rate, a penalty for the under nominated volume exceeding 4% at the tail block of the Firm General Gas Service Rate 70 commodity charge rate. The accumulated difference between the actual gas deliveries to the customer and nominated (scheduled) receipts on behalf of such customer will be adjusted for the volume on which a penalty was imposed.

      If, at the end of a billing month, the accumulated difference between nominated (scheduled) receipts on behalf of such customer and actual gas deliveries to the customer exceeds 4% of that month's scheduled receipts resulting in a positive imbalance (i.e., scheduled receipts exceed deliveries), the customer will be assessed a balancing charge, set forth herein,

TRANSPORTATION SERVICE
(Rates 81, 82, 84)

GENERAL TERMS AND CONDITIONS: (Cont.)

8. BALANCING: (Cont.)

a. on the imbalance exceeding 4%. If such imbalance is not eliminated by the end of the next monthly billing period, (1) the Company may adjust the volume of gas received on behalf of the customer so as to eliminate the prior period over nomination exceeding 4% up to 10% and (2) the Company shall retain the over nomination of gas exceeding 10% free and clear of any adverse claims relating thereto when such accumulated difference exceeds 50 dk. The accumulated difference between the actual gas deliveries to the customer and nominated (scheduled) receipts on behalf of such customer will be adjusted for the volume retained.

b. In the event customer's imbalance causes the Company to incur a balancing penalty from its interconnecting pipeline(s), customer shall pay any penalty payments or overrun charges the Company is required to make under the terms of its contract(s) with interconnecting pipeline(s) resulting from such action by customer. In the event that more than one customer is obtaining gas from the same shipper at the same interconnection with a delivering pipeline, any payment or overrun penalties the Company is required to make shall be apportioned among such customers on the basis of each customer's contribution toward the imbalance.

c. Customer's nominations made to clear imbalances will be subject to the priority of service and allocation of capacity provisions set forth in Rate 100, §V.10 and the penalties for failure to curtail or interrupt use of gas set forth in Paragraph 5 of this rate schedule.

d. Termination of the gas transportation service shall not relieve Company and customer of the obligation to correct any quantity imbalances hereunder or customer of the obligation to pay money due hereunder to Company.

e. The Company may waive any penalty associated with Company adjustments to end-use customer nominations in those instances where the Company, due to operating limitations, is required to adjust end-use transportation customer nominations and such Company adjustments create a penalty situation, or preclude a customer from correcting an imbalance which results in a penalty.

TRANSPORTATION SERVICE
(Rates 81, 82, 84)

GENERAL TERMS AND CONDITIONS: (Cont.)

9. NOMINATION VARIANCE CHARGE - The customer shall pay any payments the Company must make to its interconnecting pipeline(s), as a result of nomination variance penalties caused by customer's nomination variances. Such penalties will be allocated on the basis of each customer's contribution toward the nomination variance.

10. METERING REQUIREMENTS:

a. Electronic measurement equipment required by the Company for daily measurement will be purchased and installed by the Company prior to the initiation of service hereunder. The cost of the equipment and its installation shall be paid for by the customer. Such contribution in aid, as adjusted for federal and state income taxes, must be paid prior to the installation of such equipment unless otherwise agreed to by the Company. Such equipment will be maintained by the Company and will remain the sole property of the Company. Company may remove such equipment when service hereunder is terminated.

b. The customer shall provide and maintain, at no cost to Company, a 120 volt, 15 ampere, AC power supply or other power source acceptable to the Company and a telephone tie to customer's telephone system accessible at customer's meter location(s). Customer agrees to provide and maintain, at no cost to the Company, any necessary telephone enhancements to assure Company of a quality telephone signal necessary to properly transmit data. The customer shall pay all charges for continuous electric and telephone service associated with the Company's connection of the electronic measurement equipment, and any interruption in such services must be promptly remedied or service under this tariff will be suspended until satisfactory corrections have been made.

11. DAILY NOMINATION REQUIREMENTS:

a. Customer or customer's agent shall advise Company's gas nominations center, by 11:30 a.m. Central Clock Time, of the dk requirements customer has requested to be delivered at each delivery point the following day. Customer's daily nomination shall be its best estimate of the expected utilization for the gas day. Unless other arrangements are made, customer will be required to nominate for the non-business days involved prior to weekends and holidays.

TRANSPORTATION SERVICE
(Rates 81, 82, 84)

GENERAL TERMS AND CONDITIONS: (Cont.)

11. DAILY NOMINATION REQUIREMENTS: (Cont.)

b. All nominations should include shipper defined begin and end dates. Shippers may nominate for periods longer than 1 day, provided the nomination begin and end dates are within the term of the service agreement.

c. The Company has the sole right to refuse receipt of any volumes which exceed the maximum daily contract quantity and at no time shall the Company be required to accept quantities of gas for a customer in excess of the quantities of gas to be delivered to customer. If total nominated receipts exceed total deliveries at receipt points where more than one customer is receiving service, nominations will be allocated on a pro rata basis.

d. At no time shall Company have the responsibility to deliver gas in excess of customer's nomination.

e. In the event that more than one customer is receiving gas from the same shipper at the same receipt point, any reduction in nominated volumes will be allocated on a pro rata basis, unless Company and shipper(s) have agreed to a predetermined allocation procedure.

12. WARRANTY - The customer, customer's agent, or customer's shipper warrants that it will have title to all gas it tenders or causes to be tendered to the Company, and such gas shall be free and clear of all liens and adverse claims and the customer, customer's agent, or customer's shipper shall indemnify the Company against all damages, costs, and expenses of any nature whatsoever arising from every claim against said gas.

13. FACILITY EXTENSIONS - If facilities are required in order to furnish gas transportation service, and those facilities are in addition to the facilities required to furnish firm gas service, the customer shall pay for those additional facilities and their installation in accordance with the Company's applicable natural gas extension policy. Company may remove such facilities when service hereunder is terminated.

TRANSPORTATION SERVICE
(Rates 81, 82, 84)

GENERAL TERMS AND CONDITIONS: (Cont.)

14. PAYMENT - Billed amounts will be considered past due if not paid by the due date shown on the bill. Past due bills are subject to a late payment charge in accordance with the provisions of Rate 100, §V.11, or any amendments or alterations thereto.

15. BILLING ERROR - In the event an error is discovered in any bill that the Company renders to customer, such error shall be adjusted within a period not to exceed 6 months from the date the billing error is first discovered.

16. AGREEMENT - Upon request of the Company, customer may be required to enter into an agreement for service hereunder.

17. RULES - The foregoing schedule is subject to Rates 100 through 124 and any amendments or alterations thereto or additional rules and regulations promulgated by the Company under the laws of the state.

GAS RATE SCHEDULE

NDPSC Volume 6
1st Revised Sheet No. 27
Cancelling Original Sheet No. 27

LARGE INTERRUPTIBLE GENERAL GAS SERVICE Rate 85

AVAILABILITY:

In all communities served for all interruptible general gas service customers whose interruptible natural gas load will exceed an input rate of 2,500,000 Btu per hour, metered at a single delivery point and whose use of natural gas will exceed 100,000 dk annually. The rates herein are applicable only to customer's interruptible load. Customer's firm natural gas requirements must be separately metered or specified in a firm service agreement. Customer's firm load shall be billed at Firm General Gas Service Rate 70. For interruption purposes, the maximum daily firm requirement shall be set forth in the firm service agreement.

This rate schedule shall not apply for service to U.S. Government installations which are covered by separate special contracts.

The Company reserves the right to refuse the initiation of service under this rate schedule based on the availability of gas supply.

RATE: (Zones 1 and 2)

Base Rate: $450.00 per month

Commodity Charge:

Maximum Rate	$3.290 per dk
Minimum Rate	$2.869 per dk

The commodity charge shall be set forth in the service agreement required as provided in the General Terms and Conditions for service. Such rate, as adjusted to reflect changes in the cost of Purchased Gas Adjustment, shall apply for the term of the agreement regardless of a change in the rates set forth above.

MINIMUM BILL:

Base Rate.

PAYMENT:

Billed amounts will be considered past due if not paid by the due date shown on the bill. Past due bills are subject to a late payment charge in accordance with the provisions of Rate 100, §V.11, or any amendments or alterations thereto.

COST OF PURCHASED GAS ADJUSTMENT:

Bills are subject to an adjustment for cost of purchased gas as provided in Rate 88 or any amendments or alterations thereto.

Date Filed: November 11, 1998 Effective Date: December 2, 1998

Issued By: C. Wayne Fox, Vice President - Regulatory Affairs & General Services

Case No.: PU-399-98-548

LARGE INTERRUPTIBLE GENERAL GAS SERVICE Rate 85

GENERAL TERMS AND CONDITIONS:

1. PRIORITY OF SERVICE - Deliveries of gas under this schedule shall be subject at all times to the prior demands of customers served on the Company's firm general gas service rates, and the Company shall have the right to interrupt deliveries to customers under this schedule without being required to give previous notice of intention to so interrupt whenever, in Company's sole judgment, it may be necessary to do so to protect the interest of its customers whose capacity requirements are otherwise and hereby given preference. The priority of service and allocation of capacity shall be accomplished in accordance with the provisions of Rate 100, §V.10.

2. PENALTY FOR FAILURE TO CURTAIL OR INTERRUPT - If customer fails to curtail or interrupt their use of gas hereunder when requested to do so by the Company, any gas taken shall be billed at the tail block of the applicable General Gas Service Rate 70 commodity charge rate, plus either an amount equal to any penalty payments or overrun charges the Company is required to make to its interconnecting pipeline(s) under the terms of its contract(s) as a result of such failure to curtail or interrupt, or $10.00 per dk of gas used in excess of the volume of gas to which customer was requested to curtail or interrupt, whichever amount is greater. The Company, in its discretion, may shut off customer's supply of gas in the event of customer's failure to curtail or interrupt use of gas when requested to do so by the Company.

3. AGREEMENT - Customer will be required to enter into an agreement for service hereunder for a minimum term of 12 months. Written notice of termination by either Company or customer must be given at least 90 days prior to the end of the initial term. Absent execution of such termination notice, the agreement shall continue for additional terms of equal length until written notice is given as provided herein, prior to the end of any subsequent term. Upon expiration of service, the customer may apply for and receive, at the sole discretion of the Company, gas service under this rate or another appropriate rate schedule for the customer's operations.

LARGE INTERRUPTIBLE GENERAL GAS SERVICE Rate 85

GENERAL TERMS AND CONDITIONS: (Cont.)

4. OBLIGATION TO NOTIFY COMPANY OF CHANGE IN DAILY OPERATIONS - Customer will be required as specified in the service agreement to notify Company of an anticipated change in daily operations. Failure to comply with requirements specified in the service agreement may result in the assessment of penalties to the customer equal to the penalty amounts Company must pay to the interconnecting pipeline caused by customer's action.

5. METERING REQUIREMENTS - Electronic measurement equipment required for daily measurement will be installed by the Company, at its sole discretion, prior to the initiation of service hereunder.

   The customer shall be required to provide and maintain, at no cost to Company, a 120 volt, 15 ampere, AC power supply, or other power source acceptable to the Company, and a telephone tie to customer's telephone system accessible at customer's meter location(s). Customer agrees to provide and maintain, at no cost to the Company, any necessary telephone enhancements to assure Company of a quality telephone signal necessary to properly transmit data. The customer shall pay all charges for continuous electric and telephone service associated with the Company's connection of the electronic measurement equipment, and any interruption in such services must be promptly remedied or service under this tariff will be suspended until satisfactory corrections have been made.

6. RULES - The foregoing schedule is subject to Rates 100 through 124 and any amendments or alterations thereto or additional rules and regulations promulgated by the Company under the laws of the state.

STATE OF NORTH DAKOTA
GAS RATE SCHEDULE

NDPSC Volume 6
4th Revised Sheet No. 30
Cancelling 3rd Revised Sheet No. 30

PURCHASED GAS COST ADJUSTMENT Rate 88

1. APPLICABILITY:
This rate schedule constitutes a purchased gas cost adjustment (PGA) provision and specifies the procedure to be utilized to adjust the rates for gas sold under Montana-Dakota's rate schedules in order to reflect: (a) changes in Montana-Dakota's average cost of gas supply, (b) amortization of the Unrecovered Purchased Gas Cost Account and (c) market based pricing differential.

2. EFFECTIVE DATE AND LIMITATION ON ADJUSTMENTS:
(a) The effective dates of the PGA shall be bills rendered on and after the first day of each month, unless the Commission shall otherwise order.

(b) Montana-Dakota shall file an adjustment to reflect changes in its average cost of gas supply only when the amount of such adjustment is at least 10 (ten) cents per dk. The adjustment to be effective May 1 shall be filed each year, regardless of the amount of the change.

3. PURCHASED GAS COST ADJUSTMENT:
(a) The monthly PGA shall reflect changes in Montana-Dakota's cost of gas supply as compared to the cost of gas supply approved in its most recent general rate case. The cost of gas supply shall be the sum of all costs incurred in obtaining gas for general system supply. General system supply is defined as gas available for use by all customers served under retail sales rate schedules. The cost of gas supply shall include, but not be limited to, all demand, commodity, storage, gathering, and transportation charges incurred by Montana-Dakota for such gas supply, the overall rate of return on prepaid demand and commodity charges and gas storage balances required to maintain the system gas supply and hedging program gains, losses and transaction costs related to system gas supply. Authority for inclusion of hedging program gains, losses and transaction costs expires on March 1, 1999 unless otherwise ordered by the Commission. Montana-Dakota shall submit, with each filing under this tariff, a complete report of hedging program activity.

Date Filed: December 11, 1998 Effective Date: January 27, 1999

Issued By: C. Wayne Fox, Vice President - Regulatory Affairs & General Services

Case No.: PU-399-98-53

PURCHASED GAS COST ADJUSTMENT Rate 88

3. PURCHASED GAS COST ADJUSTMENT: (Cont.)

(b) The PGA shall be computed as follows:

(1) Demand costs shall include all annual gathering, transportation and storage demand charges at current rates.

(2) Commodity costs shall include all annual gathering, transportation and storage charges at current rates.

(3) The gas commodity cost shall reflect all commodity related gas costs estimated to be in effect for the month the PGA will be in effect and annual dk requirements.

(4) The return on prepaid demand and commodity balances and storage balances shall be computed on an annual basis at the overall rate of return on rate base.

The cost per dk for the month is the sum of the above divided by annual, weather normalized dk deliveries adjusted to reflect losses.

(c) Monthly gas costs shall be calculated as follows:

(1) Demand costs for firm customers shall be apportioned to all state jurisdictions served by Montana-Dakota on the basis of the overall ratio of each state's Maximum Daily Delivery Quantity (MDDQ).

(2) Demand costs for interruptible sales customers shall be stated on a 100% load factor basis.

(3) All commodity costs and other costs associated with the acquisition of gas for general system supply shall be apportioned to each state on the basis of total dks sold in each state, regardless of the actual points of delivery of such gas.

APPROVED NORTH DAKOTA
PUBLIC SERVICE COMMISSION
APR - 2 1997
CASE NO. PU-399-97-76

Date Filed: February 25, 1997 Effective Date:

Issued By: C. Wayne Fox, Vice President - Regulatory Affairs & General Services

Case No.:

PURCHASED GAS COST ADJUSTMENT Rate 88

3. PURCHASED GAS COST ADJUSTMENT: (Cont.)

(c) (4) The return requirement related to prepaid demand and commodity charges and gas storage balances shall be included on a per dk basis. The prepaid demand and storage balances shall be apportioned to all states on the basis of each state's MDDQ. The prepaid commodity charges shall be apportioned to all states on the basis of annual dks sold in each state. The unit cost shall be calculated using a thirteen month average balance and the currently authorized return on rate base.

(5) All costs related to specific end-use transactions shall not be included in the cost of gas supply determination but shall be directly billed to the customer(s) contracting for such service.

(d) The PGA shall be applied to each of Montana-Dakota's rate schedules recognizing differences among customer classes consistent with the cost of gas supply included in the applicable class sales rate.

4. SURCHARGE ADJUSTMENT:

(a) All sales rate schedules shall be subject to a Surcharge Adjustment to be effective on May 1 of each year. The Surcharge Adjustment per dk sold shall reflect amortization of the applicable balance in the Unrecovered Purchased Gas Cost Account calculated by dividing the applicable balance by the estimated dk sales for the twelve months following the effective date of the adjustment.

5. UNRECOVERED PURCHASED GAS COST ACCOUNT:

(a) Items to be included in the Unrecovered Purchased Gas Cost Account, as calculated in accordance with Subsection 5(b) are:

(1) Charges for gas supply which Montana-Dakota is unable to reflect in a Purchased Gas Cost Adjustment by reason of the one-tenth of one cent minimum limitation set forth in Subsection 2(b).

(2) Amounts of increased/decreased charges for gas supplies which were paid during any period after the effective date of the most recent general rate case, but not yet included in sales rates.

PURCHASED GAS COST ADJUSTMENT Rate 88

5. UNRECOVERED PURCHASED GAS COST ACCOUNT: (Cont.)

(a) (3) Refunds received from supplier(s) with respect to gas supply. Such refunds received shall be credited to the Unrecovered Purchased Gas Cost Account.

(4) Carrying charges or credits at a rate equal to the three-month Treasury Bill rate as published monthly by the Federal Reserve Board.

(5) Demand costs recovered from the interruptible sales customers will be credited to the residential and firm general service customers.

(b) (1) The amount to be included in the Unrecovered Purchased Gas Cost Account in order to reflect the items specified in Subsections 5(a)(1), (2), and (3) shall be calculated as follows:

(i) Montana-Dakota shall first determine each month the unit cost for that month's natural gas supply as adjusted to levelize demand charges.

Such adjustment to levelize supplier(s) demand charges shall be calculated as follows:

The suppliers' annual (calendar or fiscal) demand charges, which are payable in equal monthly payments, shall be accumulated in a prepaid account (FERC Account 165). Each month a portion of such accumulated prepaid amount shall be amortized to cost of natural gas purchased (FERC Account 804). Such monthly amortization shall be based on a rate calculated by dividing the annual supplier(s) demand charges by projected annual natural gas sales units (calendar or fiscal, as appropriate). The resulting product shall then be multiplied by the projected natural gas unit sales for the current month. Such amount shall constitute the monthly amortization of prepaid supplier(s) demand charges to cost of natural gas supply.

PURCHASED GAS COST ADJUSTMENT Rate 88

5. UNRECOVERED PURCHASED GAS COST ACCOUNT: (Cont.)

(b) (1) (ii) Montana-Dakota shall then subtract from each month's unit cost, the unit cost for gas supply which is reflected in the currently effective PGA (the cost of gas supply approved in the most recent rate case plus the Purchased Gas Cost Adjustment as calculated in Subsection 3(a)).

(iii) The resulting difference (which may be positive or negative) shall be multiplied by the dks sold during that month under each rate schedule. The resulting amounts shall be reflected in an Unrecovered Purchased Gas Cost Account for each rate schedule.

(2) Montana-Dakota will calculate carrying charges on the amounts in the Unrecovered Purchased Gas Cost Account, Account 191, at a rate equal to the three-month Treasury Bill rate as published monthly by the Federal Reserve Board. The amount to be included in Account 191 for carrying charges shall be determined as follows:

Each month, Account 191 shall be debited (if the balance in said account is a debit balance) and shall be credited (if the balance in said account is a credit balance) for a carrying charge, which shall be the product of (i) and (ii) below:

(i) The balance in Account 191 as of the end of the immediately preceding month, exclusive of carrying charges accrued pursuant to this Subsection (b)(2) and net of the related deferred tax amounts in Accounts 283 or 190, as appropriate.

(ii) One-twelfth of the annual interest rate as set forth in this Subsection (b)(2). The carrying charges shall be accrued in a supplementary Unrecovered Purchased Gas Cost Account for each rate schedule, and carrying charges shall not be computed on the amounts in such supplementary account.

PURCHASED GAS COST ADJUSTMENT Rate 88

5. UNRECOVERED PURCHASED GAS COST ACCOUNT: (Cont.)

(c) Reduction of Amounts in the Unrecovered Purchased Gas Cost Account:

(1) The amounts in the Unrecovered Purchased Gas Cost Account shall be decreased each month by an amount determined by multiplying the currently effective surcharge adjustment included in rates for that month (as calculated in Section 4) by the dks sold during that month under each rate schedule. The account shall be increased in the event the adjustment is a negative amount.

(2) The amount amortized each month shall be applied pro rata between the amounts in the Unrecovered Purchased Gas Cost Account specified in Subsections 5(a)(1), (2), (3) and (5) and the amounts in the supplementary Unrecovered Purchased Gas Cost Account specified in Subsection 5(a)(4).

6. MARKET-BASED PRICING DIFFERENTIAL:

(a) At the time of each surcharge adjustment, the Company will compute a credit to residential and firm general service rates based on 50% of all non-gas commodity revenues received from small interruptible sales and large interruptible sales customers in excess of the authorized non-gas commodity rate approved in the most recent general rate case.

(b) The unit adjustment shall be determined by dividing the balance resulting under Subsection 6(a) by the residential and firm general service sales volumes estimated to be sold during the 12 months following the effective date of each adjustment.

7. TIME AND MANNER OF FILING:

(a) Montana-Dakota shall file each adjustment at least 20 days prior to the proposed effective date. Each filing by Montana-Dakota shall be made by means of revised PGA sheets identifying the amounts of the adjustments and the resulting currently effective PGA rates.

(b) Each filing shall be accompanied by detailed computations which clearly show the derivation of the relevant amounts, a concise statement of the reasons for any change and copies of any relevant pipeline tariff sheets supporting costs claimed.

RESIDENTIAL PROPANE SERVICE Rate 90

AVAILABILITY:
For the community of Hettinger for all domestic purposes. See Rate 100, §V.3, for definition on class of service.

RATE:
Base Rate Per Month:

For customers with meters rated under 500 cubic feet per hour	$ 6.50
For customers with meters rated over 500 cubic feet per hour	$13.00

Commodity Charge:

First 5 dk per month	$5.569
Next 10 dk per month	$5.118
Over 15 dk per month	$4.948

MINIMUM BILL:
Base Rate.

PAYMENT:
Billed amounts will be considered past due if not paid by the due date shown on the bill. Past due bills are subject to a late payment charge in accordance with the provisions of Rate 100, §V.11, or any amendments or alterations thereto.

PURCHASED PROPANE COST ADJUSTMENT:
Bills are subject to an adjustment for cost of purchased propane as provided in Rate 99 or any amendments or alterations thereto.

GENERAL TERMS AND CONDITIONS:
1. The Company may at its discretion and upon thirty days notice, disconnect service to a customer utilizing a second source of propane. Any customer so disconnected shall not be eligible for service hereunder for one year from the date of disconnection and shall be subject to reconnection charges to restore service after the one year period.

2. The foregoing schedule is subject to Rates 100 through 124 and any amendments or alterations thereto or additional rules and regulations promulgated by the Company under the laws of the state

FIRM GENERAL PROPANE SERVICE Rate 92

AVAILABILITY:
For the community of Hettinger for all purposes except for resale. See Rate 100, §V.3, for definition on class of service.

RATE:
Base Rate Per Month:

For customers with meters rated under 500 cubic feet per hour	$ 8.50
For customers with meters rated over 500 cubic feet per hour	$17.00

Commodity Charge:

First 15 dk per month	$5.636
Over 15 dk per month	$4.966

MINIMUM BILL:
Base Rate.

PAYMENT:
Billed amounts will be considered past due if not paid by the due date shown on the bill. Past due bills are subject to a late payment charge in accordance with the provisions of Rate 100, §V.11, or any amendments or alterations thereto.

PURCHASED PROPANE COST ADJUSTMENT:
Bills are subject to an adjustment for cost of purchased propane as provided in Rate 99 or any amendments or alterations thereto.

GENERAL TERMS AND CONDITIONS:

1. The Company may at its discretion and upon thirty days notice, disconnect service to a customer utilizing a second source of propane. Any customer so disconnected shall not be eligible for service hereunder for one year from the date of disconnection and shall be subject to reconnection charges to restore service after the one year period.

2. The foregoing schedule is subject to Rates 100 through 124 and any amendments or alterations thereto or additional rules and regulations promulgated by the Company under the laws of the state.

MONTANA-DAKOTA UTILITIES CO.
A Division of MDU Resources Group, Inc
400 North Fourth Street
Bismarck, ND 58501

STATE OF NORTH DAKO GAS RATE SCHEDULE

NDPSC Volume 6
50th Revised Sheet No. 41
Canceling 49th Revised Sheet No. 41

PURCHASED PROPANE COST ADJUSTMENT Rate 99

1. AVAILABILITY:

This rate schedule constitutes a purchased propane cost adjustment (PCA) provision and specifies the procedure to be utilized to adjust the rates for propane gas sold under Montana-Dakota's rate schedules in order to reflect: (a) changes in Montana-Dakota's average cost of propane supply and (b) amortization of the Unrecovered Purchased Propane Cost Account.

2. EFFECTIVE DATE AND LIMITATION ON ADJUSTMENTS:

(a) The effective dates of the PCA shall be bills rendered on and after the first day of each month, unless the Commission shall otherwise order.

(b) Montana-Dakota shall file an adjustment to reflect changes in its average cost of propane supply only when the amount of such adjustment is at least 10 (ten) cents per dk. The adjustment to be effective May 1 shall be filed each year, regardless of the amount of the change.

3. PURCHASED PROPANE COST ADJUSTMENT:

(a) The monthly PCA shall reflect changes in Montana-Dakota's cost of propane supply as compared to the cost of propane supply approved in its most recent retail sales rates. The cost of propane supply shall include, but not be limited to, all commodity and transportation charges incurred by Montana-Dakota for such propane supply.

(b) The propane commodity cost shall reflect all commodity related propane costs estimated to be incurred for the month the PCA will be in effect and estimated dk purchases.

The unit cost per dk for the month shall be the commodity costs divided by estimated dk purchases for the month.

4. SURCHARGE ADJUSTMENT:

All propane sales schedules shall be subject to a Surcharge Adjustment to be effective on May 1 of each year. The Surcharge Adjustment per dk sold shall reflect amorization of the applicable balance in the Unrecovered Purchased Propane Cost Account calculated by dividing the applicable balance by the estimated dk sales for the twelve months following the effective date of the adjustment.

Date Filed: November 4, 1999 Effective Date: Bills rendered on or after December 15, 1999

Issued By: C. Wayne Fox, Vice President - Regulatory Affairs & General Services

Case No.: PU-399-99-601

PURCHASED PROPANE COST ADJUSTMENT Rate 99

5. UNRECOVERED PURCHASED PROPANE COST ACCOUNT:

(a) Items to be included in the Unrecovered Purchased Propane Cost Account, as calculated in accordance with Subsection 5(b) are:

(1) Charges for propane supply which Montana-Dakota is unable to reflect in a Purchased Propane Cost Adjustment by reason of the ten cent minimum limitation set forth in Subsection 2(b).

(2) Amounts of increased/decreased charges for propane supplies that were paid during any period after the effective date of the most recent approved rates, but not yet included in propane sales rates.

(3) Carrying charges or credits.

(b) (1) The amount to be included in the Unrecovered Purchased Propane Cost Account in order to reflect the items specified in Subsections 5(a)(1) and (2) shall be calculated as follows:

(i) Montana-Dakota shall first determine each month the unit cost for that month's propane supply.

(ii) Montana-Dakota shall then subtract from each month's unit cost, the unit cost for propane supply which is reflected in the currently effective PCA.

(iii) The resulting difference (which may be positive or negative) shall be multiplied by the dks sold during that month under each propane rate schedule. The resulting amounts shall be reflected in an Unrecovered Purchased Propane Cost Account for each rate schedule.

(2) Montana-Dakota will calculate carrying charges on the amounts in the Unrecovered Purchased Propane Cost Account, Account 191, as follows:

Each month, Account 191 shall be debited (on a debit balance) or credited (on a credit balance) for a carrying charge, which shall be the product of (i) and (ii) below:

PURCHASED PROPANE COST ADJUSTMENT Rate 99

(i) The balance on Account 191 as of the end of the immediately preceding month, exclusive of carrying charges accrued pursuant to this Subsection (b)(2) and net of the related deferred tax amounts in Accounts 283 or 190, as appropriate.

(ii) One-twelfth of the three-month Treasury Bill rate as published monthly by the Federal Reserve Board. The carrying charges shall be accrued in a supplementary Unrecovered Purchased Propane Cost Account for each rate schedule, and carrying charges shall not be computed on the amounts in such supplementary account.

c) Reduction of Amounts in the Unrecovered Purchased Propane Cost Account:

(1) The amounts in the Unrecovered Purchased Propane Cost Account shall be decreased each month by an amount determined by multiplying the currently effective surcharge adjustment included in rates for that month (as calculated in Section 4) by the dks sold during that month under each rate schedule. The account shall be increased in the event the adjustment is a negative amount.

(2) The amount amortized each month shall be applied pro rata between the amounts in the Unrecovered Purchased Propane Cost Account specified in Subsections 5(a)(1) and (2) and the amounts in the supplementary Unrecovered Purchased Propane Cost Account specified in Subsection 5(b)(2)(ii).

6. TIME AND MANNER OF FILING:

(a) Montana-Dakota shall file each adjustment at least 10 days prior to the proposed effective date. Each filing by Montana-Dakota shall be made by means of revised PCA sheets identifying the amounts of the adjustments and the resulting currently effective PCA rates.

(b) Each filing shall be accompanied by detailed computations which clearly show the derivation of the relevant amounts, a concise statement of the reasons for any change and copies of any relevant material supporting costs claimed.

GENERAL PROVISIONS Rate 100

I. PURPOSE:

These rules are intended to define good practice which can normally be expected, but are not intended to exclude other accepted standards and practices not covered herein. They are intended to ensure adequate service to the public and protect the Company from unreasonable demands.

The Company undertakes to furnish service subject to the rules and regulations of the Public Service Commission of North Dakota and as supplemented by these general provisions, as now in effect or as may hereafter be lawfully established, and in accepting service from the Company, each customer agrees to comply with and be bound by said rules and regulations and the applicable rate schedules.

II. DEFINITIONS:

The following terms used in this tariff shall have the following meanings, unless otherwise indicated:

APPLICANT - A customer requesting Company to provide service.

COMMISSION - Public Service Commission of the State of North Dakota.

COMPANY - Montana-Dakota Utilities Co.

COMPANY'S OPERATING CONVENIENCE - The utilization, under certain circumstances, of facilities or practices not ordinarily employed which contribute to the overall efficiency of Company's operations. This does not refer to the customer's convenience nor to the use of facilities or adoption of practices required to comply with applicable laws, ordinances, rules or regulations, or similar requirements of public authorities.

CURTAILMENT - A reduction of transportation or retail natural gas service deemed necessary by the Company. Also includes any reduction of transportation natural gas service deemed necessary by the pipeline.

CUSTOMER - Any individual, partnership, corporation, firm, other organization or government agency supplied with service by Company at one location and at one point of delivery unless otherwise expressly provided in these rules or in a rate schedule.

GENERAL PROVISIONS Rate 100

II. DEFINITIONS: (Cont.)

DELIVERY POINT - The point at which customer assumes custody of the gas being transported. This point will normally be at the outlet of Company's meter(s) located on customer's premises.

GAS DAY - Means a period of twenty-four consecutive hours, beginning and ending at 9:00 a.m. Central Clock Time.

INTERRUPTION - A cessation of transportation or retail natural gas service deemed necessary by Company.

NOMINATION - The daily dk volume of natural gas requested by customer for transportation and delivery to customer at the delivery point during a gas day.

PIPELINE - The transmission company(s) delivering natural gas into company's system.

RATE - Shall mean and include every compensation, charge, fare, toll, rental and classification, or any of them, demanded, observed, charged or collected by the Company for any service, product, or commodity, offered by the Company to the public, and any rules, regulations, practices or contracts affecting any such compensation, charge, fare, toll, rental or classification.

RECEIPT POINT - The intertie between Company and the interconnecting pipeline(s) at which point Company assumes custody of the gas being transported.

SHIPPER - The party with whom the Pipeline has entered into a service agreement for transportation services.

III. CUSTOMER OBLIGATIONS:

1. APPLICATION FOR SERVICE - A customer desiring gas service must make application to the Company before commencing the use of the Company's service. The Company reserves the right to require a signed application or written contract for service to be furnished. All applications and contracts for service must be made in the legal name of the customer desiring the service. The Company may refuse a customer or terminate service to a customer who fails or refuses to furnish reasonable information requested by the Company for the establishment of a service

GENERAL PROVISIONS Rate 100

III. CUSTOMER OBLIGATIONS: (Cont.)

1. APPLICATION FOR SERVICE - (Cont.)
account. Any customer who uses gas service in the absence of application or contract shall be subject to the Company's rates, rules, and regulations and shall be responsible for payment of all service used.

Subject to rates, rules, and regulations, the Company will continue to supply gas service until notified by customer to discontinue the service. The customer will be responsible for payment of all service furnished through the date of discontinuance.

Any customer may be required to make a deposit as required.

2. INPUT RATING - All new customers whose consumption of gas for any purpose will exceed an input of 2,500,000 Btu per hour, metered at a single delivery point, shall consult with the Company and furnish details of estimated hourly input rates for all gas utilization equipment. Where system design capacity permits, such customers may be served on a firm basis. Where system design capacity is limited, and at Company's sole discretion, Company will serve all such new customers on an interruptible basis only. Architects, contractors, heating engineers and installers, and all others should consult with the Company before proceeding to design, erect or redesign such installations for the use of natural gas. This will ensure that such equipment will conform to the Company's ability to adequately serve such installations with gas.

3. ACCESS TO CUSTOMER'S PREMISES - Company representatives, when properly identified, shall have access to customer's premises at all reasonable times for the purpose of reading meters, making repairs, making inspections, removing the Company's property, or for any other purpose incidental to the service.

4. COMPANY PROPERTY - The customers shall exercise reasonable diligence in protecting the Company's property on their premises, and shall be liable to the Company in case of loss or damage caused by their negligence or that of their employees.

GENERAL PROVISIONS Rate 100

III. CUSTOMER OBLIGATIONS: (Cont.)

5. INTERFERENCE WITH COMPANY PROPERTY - The customer shall not disconnect, change connections, make connections or otherwise interfere with Company's meters or other property or permit same to be done by other than the Company's authorized employees.

6. NOTIFICATION OF LEAKS - The customer shall immediately notify the Company at its office of any escape of gas in or about the customer's premises.

7. TERMINATION OF SERVICE - All customers are required to notify the Company, to prevent their liability for service used by succeeding tenants, when vacating their premises. Upon receipt of such notice, the Company will read the meter and further liability for service used on the part of the vacating customer will cease.

8. REPORTING REQUIREMENTS - Customer shall furnish Company all information as may be required or appropriate to comply with reporting requirements of duly constituted authorities having jurisdiction over the matter herein.

IV. LIABILITY:

1. CONTINUITY OF SERVICE - The Company will use all reasonable care to provide continuous service but does not assume responsibility for a regular and uninterrupted supply of gas service and will not be liable for any loss, injury, death, or damage resulting from the use of service, or arising from or caused by the interruption or curtailment of the same.

2. CUSTOMER'S EQUIPMENT - Neither by inspection or non-rejection, nor in any other way does the Company give any warranty, express or implied, as to the adequacy, safety or other characteristics of any structures, equipment, lines, appliances or devices owned, installed or maintained by the customer or leased by the customer from third parties.

3. COMPANY EQUIPMENT AND USE OF SERVICE - The Company will not be liable for any loss, injury, death or damage resulting in any way from the supply or use of gas or from the presence or operation of the Company's structures, equipment, lines, appliances or devices on the customer's premises, except loss, injuries, death, or damages resulting from the negligence of the Company.

GENERAL PROVISIONS Rate 100

IV. LIABILITY: (Cont.)

4. INDEMNIFICATION - Customer agrees to indemnify and hold Company harmless from any and all injury, death, loss or damage resulting from customer's negligent or wrongful acts under and during the term of service. Company agrees to indemnify and hold customer harmless from any and all injury, death, loss or damage resulting from Company's negligent or wrongful acts under and during the term of service.

5. FORCE MAJEURE - In the event of either party being rendered wholly or in part by force majeure unable to carry out its obligations, then the obligations of the parties hereto, so far as they are affected by such force majeure, shall be suspended during the continuance of any inability so caused. Such causes or contingencies affecting the performance by either party, however, shall not relieve it of liability in the event of its concurring negligence or in the event of its failure to use due diligence to remedy the situation and remove the cause in an adequate manner and with all reasonable dispatch, nor shall such causes or contingencies affecting the performance relieve either party from its obligations to make payments of amounts then due hereunder, nor shall such causes or contingencies relieve either party of liability unless such party shall give notice and full particulars of the same in writing or by telephone to the other party as soon as possible after the occurrence relied on. If volumes of customer's gas are destroyed while in Company's possession by an event of force majeure, the obligations of the parties shall terminate with respect to the volumes lost.

The term "force majeure" as employed herein shall include, but shall not be limited to, acts of God, strikes, lockouts or other industrial disturbances, failure to perform by any third party, which performance is necessary to the performance by either customer or Company, acts of the public enemy or terrorists, wars, blockades, insurrections, riots, epidemics, landslides, lightning, earthquakes, fires, storms, floods, washouts, arrest and restraint of rulers and peoples, civil disturbances, explosions, breakage or accident to machinery or lines of pipe, line freeze-ups, sudden partial or sudden entire failure of gas supply, failure to obtain materials and supplies due to governmental regulations, and causes of like or similar kind, whether herein enumerated or not, and not within the control of the party claiming suspension, and which by the exercise of due diligence such party is unable to overcome; provided that the exercise of due diligence shall not require settlement of labor disputes against the better judgment of the party having the dispute.

GENERAL PROVISIONS Rate 100

IV. LIABILITY: (Cont.)

5. FORCE MAJEURE - (Cont.)
The term "force majeure" as employed herein shall also include, but shall not be limited to, inability to obtain or acquire, at reasonable cost, grants, servitudes, rights-of-way, permits, licenses, or any other authorizations from third parties or agencies (private or governmental) or inability to obtain or acquire at reasonable cost necessary materials or supplies to construct, maintain, and operate any facilities required for the performance of any obligations under this agreement, when any such inability directly or indirectly contributes to or results in either party's inability to perform its obligations.

V. GENERAL TERMS AND CONDITIONS:

1. AGREEMENT - Upon request of the Company, customer may be required to enter into an agreement for any service.

2. RATE OPTIONS - Where more than one rate schedule is available for the same class of service, the Company will assist the customer in selecting the applicable rate schedule(s). The Company is not required to change a customer from one rate schedule to another more often than once in twelve months unless there is a material change in the customer's load which alters the availability and/or applicability of such rate(s), or unless a change becomes necessary as a result of an order issued by the Commission or a court having jurisdiction. The Company will not be required to make any change in a fixed term contract except as provided therein.

3. RULES FOR APPLICATION OF GAS SERVICE:
   a. Residential gas service is available to any residential customer for domestic purposes only. Residential gas service is defined as service for general domestic household purposes in space occupied as living quarters, designed for occupancy by one family. Typical service would include the following: separately metered units, such as single private residences, single apartments, mobile homes and sorority and fraternity houses (this is not an all-inclusive list). In addition, auxiliary buildings on the same premise as the living quarters, used for residential purposes, may be served on the residential rate.

GENERAL PROVISIONS Rate 100

V. GENERAL TERMS AND CONDITIONS: (Cont.)

3. RULES FOR APPLICATION OF GAS SERVICE: (Cont.)

b. Nonresidential service is defined as service provided to a business enterprise in space occupied and operated for nonresidential purposes. Typical service would include stores, offices, shops, restaurants, boarding houses, hotels, service garages, wholesale houses, filling stations, barber shops, beauty parlors, master metered apartment houses, common areas of shopping malls or apartments (such as halls or basements), churches, elevators, schools and facilities located away from the home site (this is not an all-inclusive list).

c. The definitions above are based upon the supply of service to an entire premise through a single delivery and metering point. Separate supply for the same customer at other points of consumption may be separately metered and billed.

d. If separate metering is not practical for a single unit (one premise) that is using gas for both domestic purposes and for conducting business (or for nonresidential purposes as defined herein), the customer will be billed under the predominate use policy. Under this policy, the customer's combined service is billed under the rate (Residential or Nonresidential) applicable to the type of service which constitutes 50% or more of the customer's total connected load.

e. Other classes of service furnished by the Company shall be defined in applicable rate schedules or in rules and regulations pertaining thereto. Service to customers for which no specific rate schedule is applicable shall be billed on the Nonresidential rates.

4. DISPATCHING - Transportation customers will adhere to gas dispatching policies and procedures established by Company to facilitate transportation service. Company will inform customer of any changes in dispatching policies that may affect transportation services as they occur.

GENERAL PROVISIONS Rate 100

V. GENERAL TERMS AND CONDITIONS: (Cont.)

5. RULES COVERING GAS SERVICE TO MANUFACTURED HOMES - The rules and regulation for providing gas service to manufactured homes are in accordance with the Code of Federal Regulations (24CFR Part 3280 - Manufactured Home Construction and Safety Standards) Subpart G and H which pertain to gas piping and appliance installation. In addition to the above rules, the Company also follows the regulations set forth in the NFPA 501A, Fire Safety Criteria for Manufactured Home Installations, Sites, and Communities. Contact your local Montana-Dakota Utilities Co. office for this information.

6. CONSUMER DEPOSITS - The Company will determine whether or not a deposit shall be required of an applicant for gas service in accordance with Commission rules.

   a. The amount of such deposit shall not exceed one and one-half times the estimated amount of one month's average bill.

   b. The Company may accept in lieu of a cash deposit a contract signed by a guarantor, satisfactory to the Company, whereby the payment of a specified sum not to exceed the required cash deposit is guaranteed. The term of such contract shall be indeterminate, but it shall automatically terminate when the customer gives notice of service discontinuance to the Company or a change in location covered by the guarantee agreement of thirty days after written request for termination is made to the utility by the guarantor. However, no agreement shall be terminated without the customer having made satisfactory settlement for any balance which the customer owes the Company. Upon termination of a guarantee contract, a new contract or a cash deposit may be required by the Company.

A deposit shall earn interest at the rate paid by the Bank of North Dakota on a six month certificate of deposit as of the first business day of each year. Interest shall be credited to the customer's account annually during the month of December.

Deposits with interest shall be refunded to customers at termination of service provided all billings for service have been paid. Deposits with interest will be refunded to all active customers, after the deposit has been held for twelve months, provided a prompt payment record has been established.

GENERAL PROVISIONS Rate 100

V. GENERAL TERMS AND CONDITIONS: (Cont.)

7. METERING AND MEASUREMENT:

a. Company will meter the volume of natural gas delivered to customer at the delivery point. Such meter measurement will be conclusive upon both parties unless such meter is found to be inaccurate, in which case the quantity supplied to customer shall be determined by as correct an estimate as it is possible to make, taking into consideration the time of year, the schedule of customer's operations and other pertinent facts. Company will test meters in accordance with applicable state utility rules and regulations.

b. Transportation customers agree to provide the cost of the installation of electronic measurement equipment to Company before transportation service is implemented.

8. MEASUREMENT UNIT FOR BILLING PURPOSES - The measurement unit for billing purposes shall be one (1) decatherm (dk), unless otherwise specified. Billing will be calculated to the nearest one-tenth (1/10) dk. One dk equals 10 therms or 1,000,000 Btu's. Dk's shall be calculated by the application of a thermal factor to the volumes metered. This thermal factor consists of:

a. an altitude adjustment factor used to convert metered volumes at local sales base pressure to a standard pressure base of 14.73 psia, and

b. a Btu adjustment factor used to reflect the heating value of the gas delivered.

9. UNIT OF VOLUME FOR MEASUREMENT - The unit of volume for purpose of measurement shall be one (1) cubic foot of gas at either local sales base pressure or 14.73 psia, as appropriate, and at a temperature base of sixty degrees Fahrenheit (60°F). All measurement of natural gas by orifice meter shall be reduced to this standard by computation methods, in accordance with procedures contained in ANSI-API Standard 2530, First Edition, as amended. Where natural gas is measured with positive displacement or turbine meters, correction to local sales base pressure shall be made for actual pressure and temperature with factors calculated from Boyle's and Charles' Laws. Where gas is delivered

GENERAL PROVISIONS Rate 100

V. GENERAL TERMS AND CONDITIONS: (Cont.)

9. UNIT OF VOLUME FOR MEASUREMENT - (Cont.)
at 20 psig or more, the deviation of the natural gas from Boyle's Law shall be determined by application of Supercompressibility Factors for Natural Gas published by the American Gas Association, Inc., copyright 1955, as amended or superseded. For handbilled accounts, application of supercompressibility factors will be waived on monthly billed volumes of 250 dk or less.

10. PRIORITY OF SERVICE AND ALLOCATION OF CAPACITY - Priority of Service from Highest to Lowest:
   a. Priority 1 - Firm sales and firm transportation services.
   b. Priority 2 - Small interruptible sales and small interruptible transportation services at the maximum rate on a pro rata basis.
   c. Priority 3 - Large interruptible sales and large interruptible transportation services at the maximum rate on a pro rata basis.
   d. Priority 4 - Small interruptible transportation services at less than the maximum rate from the highest rate to the lowest rate and on a pro rata basis where equal rates are applicable among customers.
   e. Priority 5 - Large interruptible transportation services at less than the maximum rate from the highest rate to the lowest rate and on a pro rata basis where equal rates are applicable among customers.
   f. Priority 6 - Gas scheduled to clear imbalances.

   Montana-Dakota shall have the right, in its sole discretion, to deviate from the above schedule when necessary for system operational reasons and if following the above schedule would cause an interruption in service to a customer who is not contributing to an operational problem on Montana-Dakota's system.

   Montana-Dakota reserves the right to provide service to customers with a lower priority while service to higher priority customers is being curtailed due to restrictions at a given delivery or receipt point. When such restrictions are eliminated, Montana-Dakota will reinstate sales and/or transportation of gas according to each customer's original priority.

GENERAL PROVISIONS Rate 100

V. GENERAL TERMS AND CONDITIONS: (Cont.)

11. LATE PAYMENT - Amounts billed will be considered past due if not paid by the due date shown on the bill. An amount equal to 1% per month will be applied to any unpaid balance existing at the immediate subsequent billing date, provided however, that such amount shall not apply where a bill is in dispute or a formal complaint is being processed. All payments received will apply to the customer's account prior to calculating the late payment charge. Those payments applied shall satisfy the oldest portion of the bill first.

12. RETURNED CHECK CHARGE - A charge of $10.00 will be collected by the Company for each check charged back to the Company by a bank.

13. TAX CLAUSE - In addition to the charges provided for in the gas tariffs of the Company, there shall be charged pro rata amounts which, on an annual basis, shall be sufficient to yield to the Company the full amount of any sales, use or excise taxes, whether they be denominated as license taxes, occupation taxes, business taxes, privilege taxes, or otherwise, levied against or imposed upon the Company by any municipality, political subdivision, or other entity, for the privilege of conducting its utility operations therein.

    The charges to be added to the customers' service bills under this clause shall be limited to the customers within the corporate limits of the municipality, political subdivision or other entity imposing the tax.

14. UTILITY CUSTOMER SERVICES:

    a. The following services will be performed at no charge regardless of the time of performance:

        1. Fire and explosions calls.

        2. Investigate hazardous condition on customer premises, such as gas leaks, odor complaints, combustion gas fumes.

        3. Maintenance or repair of Company-owned facilities on the customer's premises.

    b. The following service calls will be performed at no charge during the Company's normal business hours:

GENERAL PROVISIONS Rate 100

V. GENERAL TERMS AND CONDITIONS: (Cont.)

14. UTILITY CUSTOMER SERVICES: (Cont.)

1. Cut-ins and cut-outs.

2. Disconnecting of gas appliances permanently removed from service or in connection with cut-outs.

3. Lighting pilots, inspecting, and adjusting gas equipment in connection with establishing service when working cut-in orders.

4. Initial burner adjustment on residential gas burning appliances.

5. High bills or inadequate service complaints.

6. Location of underground Company facilities and customer-owned gas service lines for contractors, builders, plumbers, etc.

7. Pilot relighting, testing thermocouple for proper operation and any pilot cleaning that can be done without removing pilot assembly.

8. Service calls for routine cut-ins, when the order is received prior to 3:30 p.m. on a regular work day, requiring service on the date the order is received, will be considered as non-chargeable regardless if work is performed outside of normal working hours.

15. UTILITY SERVICES PERFORMED AFTER NORMAL BUSINESS HOURS - For service requested by customers after the Company's normal business hours and on Saturday, Sunday, or legal holidays, a charge will be made for labor at standard overtime service rates and material at retail prices.

Customers requesting service after the Company's normal business hours will be informed of the after hour service rate and encouraged to have the service performed during normal business hours.

GENERAL PROVISIONS Rate 100

V. GENERAL TERMS AND CONDITIONS: (Cont.)

16. NOTICE TO DISCONTINUE GAS SERVICE - Customers desiring to have their gas service discontinued shall notify the Company during regular business hours, one business day before service is to be disconnected. Such notice shall be by letter, personal visit or telephone call to the Company's local business office, in communities in which an office is maintained. In other communities such notice shall be given to the Company's representative who services the community or to the nearest business office. Saturdays, Sundays and legal holidays are not considered business days.

17. RECONNECTION FEE FOR SEASONAL OR TEMPORARY CUSTOMER - A fee of $18.00 will be collected for reconnecting gas sales or transportation service, during normal business hours, to any customer who has discontinued the same service at the same location during the preceding 12 month period. Standard overtime rates will apply after normal business hours.

    Transportation customers who cease service and then resume service within the succeeding 12 months shall be subject to a reconnection charge of $160.00 whenever reinstallation of the required electronic measurement equipment is necessary.

18. DISCONNECTION OF SERVICE FOR NONPAYMENT OF BILLS - All amounts billed for service are due when rendered and will be considered delinquent if not paid by due date shown on the bill. If any customer shall become delinquent in the payment of amounts billed, such service may be discontinued by the Company under the applicable rules of the Commission. The Company may collect a fee of $12.00 before restoring gas service which has been disconnected for nonpayment of service bills during normal business hours. Standard overtime rates will apply for services performed after normal business hours.

19. DISCONNECTION OF SERVICE FOR CAUSES OTHER THAN NONPAYMENT OF BILLS - The Company reserves the right to discontinue service for any of the following reasons:

    a. In the event of customer use of equipment in such a manner as to adversely affect the company's equipment or service to others.

    b. In the event of tampering with the equipment furnished and owned by the Company.

GENERAL PROVISIONS Rate 100

V. GENERAL TERMS AND CONDITIONS: (Cont.)

19. DISCONNECTION OF SERVICE FOR CAUSES OTHER THAN NONPAYMENT OF BILLS - (Cont.)

c. For violation of or noncompliance with the Company's rules on file with the Commission.

d. For failure of the customer to fulfill the contractual obligations imposed as conditions of obtaining service.

e. For refusal of reasonable access to property to the agent or employee of the Company for the purpose of inspecting the facilities or for testing, reading, maintaining or removing meters.

The right to discontinue service for any of the above reasons may be exercised whenever and as often as such reasons may occur, and any delay on the part of the Company in exercising such rights, or omission of any action permissible hereunder, shall not be deemed a waiver of its rights to exercise same.

Nothing in these regulations shall be construed to prevent discontinuing service without advance notice for reasons of safety, health, cooperation with civil authorities, or fraudulent use, tampering with or destroying Company facilities.

The Company may collect a reconnect fee of $12.00 before restoring gas service which has been disconnected for the above causes.

20. UNAUTHORIZED USE OF SERVICE - Unauthorized use of service is defined as any deliberate interference such as tampering with a Company meter, pressure regulator, registration, connections, equipment, seals, procedures or records that result in a loss of revenue to the Company. Unauthorized service is also defined as reconnection of service, that has been terminated, without the Company's consent.

a. Examples of unauthorized use of service include the following, but are not limited to:

1) Bypass piping around meter.
2) Bypass piping installed in place of meter.

GENERAL PROVISIONS Rate 100

V. GENERAL TERMS AND CONDITIONS: (Cont.)

20. UNAUTHORIZED USE OF SERVICE - (Cont.)

3) Meter reversed.
4) Meter index disengaged or removed.
5) Service or equipment tampered with or piping connected ahead of meter.
6) Tampering with meter or pressure regulator that affects the accurate registration of gas usage.
7) Gas being used after service has been discontinued by the Company.
8) Gas being used after service has been discontinued by the Company as a result of a new customer turning gas on without the proper connect request.

b. In the event that there has been unauthorized use of service, customer shall be charged for:

1) Time, material and transportation costs used in investigation.
2) Estimated charge for non-metered gas.
3) On-premise time to correct situation.
4) Any damage to Company property.

c. Customer service so disconnected shall be reconnected after a customer has furnished satisfactory evidence of compliance with Company's rules and conditions of service, and paid all charges as hereinafter set forth in this procedure:

1) All delinquent bills, if any.
2) The amount of any Company revenue loss attributable to said tampering.
3) Expenses incurred by the Company in replacing or repairing the meter or other appliance, costs incurred in preparation of the bill, plus costs as outlined in number 20.b. above.
4) Reconnection fee applicable.
5) A cash deposit, the amount of which will not exceed the maximum amount determined in accordance with Commission Rules.

RATE FOR RESIDENTIAL GAS SERVICE FOR REGULAR EMPLOYEES
OF MONTANA-DAKOTA UTILITIES CO., MDU RESOURCES GROUP, INC.
AND WHOLLY-OWNED SUBSIDIARIES OF MDU RESOURCES GROUP, INC. Rate 102

The rate for residential gas service for regular employees of Montana-Dakota Utilities Co., MDU Resources Group, Inc., and all wholly-owned subsidiaries of MDU Resources Group, Inc., shall be computed at the applicable rate, and the amount reduced by 33 1/3%. This is available only for residential use, in a single family unit, served by the Company to a regular employee who has been continuously employed at least six months and is the principal support of the household in which employee resides, or is the spouse of the principal support.

Effective Date: Service Rendered on and After November 15, 1994

Issued By: C. Wayne Fox, Vice President - Regulatory Affairs & General Services

Case No.: PU-399-94-297

INTERRUPTIBLE GAS SERVICE EXTENSION POLICY Rate 119

The policy of Montana-Dakota Utilities Co. for gas extensions necessary to provide interruptible sales or interruptible transportation service to customers is as follows:

1. Contribution

a. Prior to construction, the customer shall contribute an amount equal to the total cost of construction including all gas main extensions, valves, service stub(s), service line(s) complete where applicable, regulators, meters (excluding electronic measurement equipment), any required payments made by the Company to the transmission pipeline to accommodate the extensions, and other costs as adjusted for federal and state income taxes.

b. The contribution shall be made by:

i. A one-time payment prior to construction or,

ii. The customer may post a bond, irrevocable letter of credit, or a written guarantee commitment in the amount of the total contribution required prior to construction. Such bond, issued by a bonding company authorized to do business in the state, letter of credit, or written guarantee commitment, shall be effective for a five-year period commencing at the plant in service date, and is subject to approval and acceptance by the Company. If at the end of the original five-year term, a contribution requirement exists for the subject project, the surety or guarantor shall pay the Company for such contribution requirement, or

iii. Customer, upon approval by Company, may finance the amount of the required contribution subject to the following conditions: 1) maximum contribution to be financed shall be determined by the Company at its sole discretion, 2) maximum term shall be five years, 3) interest will be charged at the Company's incremental weighted cost of capital.

c. Upon completion of construction, the contribution amount will be adjusted to reflect actual costs, and an additional charge may be levied or a refund may be made.

d. Electronic measurement equipment costs shall be subject to the terms and conditions specified in Transportation Service Rates 81, 82, 84.

INTERRUPTIBLE GAS SERVICE EXTENSION POLICY Rate 119

2. Refund

a. If within the five-year period from the extension(s) in service date, the total of the customer's contribution and actual margin paid to the Company equals or exceeds the total present value of the revenue requirement associated with the extension, Company shall refund the amount exceeding the revenue requirement on the following basis:

i. Annually, beginning at the 2nd anniversary of the extension(s) in service date, the Company will refund to the customer, the amount exceeding the total present value of the revenue requirement at a rate of 50% of the current year margin associated with the customer's actual throughput.

ii. Customers who have posted a bond, letter of credit, or a written guarantee commitment will be notified of any reduction in surety or guarantee requirements based on the above calculation.

iii. No refunds will be made for amounts less than $25.

b. Interest will be calculated annually by the Company on any refund amounts and shall be equal to the average commercial paper interest rate (A1/P1), not to exceed 12 percent per annum.

c. No refund shall be made by the Company after the five-year refund period has expired, and in no case shall the refund, excluding interest, exceed the amount of contribution made by the customer.

GAS RATE SCHEDULE

NDPSC Volume 6
1st Revised Sheet No. 62
Cancelling Original Sheet No. 62

FIRM GAS SERVICE EXTENSION POLICY Rate 120

The policy of Montana-Dakota Utilities Co. for gas extensions necessary to provide firm sales or firm transportation service to customers is as follows:

A. General Rules and Regulations Applicable to all Firm Service Extensions

1. An extension will be constructed without a contribution if the estimated capital expenditure is cost justified as defined in paragraph A.3.

2. The Company may require customer or developer cost participation if the estimated capital expenditure is not cost justified.

3. The extension will be considered cost justified if the calculated maximum allowable investment equals or exceeds the estimated capital expenditure using the following formula:

Maximum Allowable Investment=

$$\frac{\text{Annual Base Rate + (Project Estimated 3rd Year Annual Dk x Unit Margin)}}{\text{LARR + O\&M}}$$

where: LARR = Levelized Annual Revenue Requirement Factor of 16.084%
O&M = Operating and Maintenance Factor of 3.870%

4. Cost of the extension shall include the gas main extension(s), valves, service stub(s), or service line(s) complete where applicable, any required payments made by the Company to the transmission pipeline company to accommodate the extension(s), and other costs excluding the distribution meter and regulator.

The service stub is that portion of the gas service extending from the main to the private property line or easement boundary.

The service line complete is that portion of the gas service extending 150 feet from the main to the connection at the house regulator and/or meter for those customers served in the communities set forth in Rate Zone 2.

The service line is that portion of the gas service extending from the service stub to the connection at the house regulator and/or meter. Service lines are installed at customer's expense and are owned by and shall be maintained at customer's expense.

APPROVED NORTH DAKOTA PUBLIC SERVICE COMMISSION

Issued By: C. Wayne Fox, Vice President - Regulatory Affairs & General Services

Case No.: _____

FIRM GAS SERVICE EXTENSION POLICY Rate 120

A. General Rules & Regulations Applicable to all Firm Service Extensions (Cont.)

5. Where cost participation is required, such extension is subject to execution of the Company's standard agreement for extensions by the customer or the developer and Company.

6. A refund will be made only when there is a reduction in the amount of contribution required within a five-year period from the extension(s) in service date. Interest will be calculated annually by the Company on any refund amounts and shall be equal to the average commercial paper interest rate (A1/P1), not to exceed 12 percent per annum.

No refund shall be made by Company after the five-year refund period and in no case shall the refund excluding interest, exceed the amount of the contribution.

B. Customer Extensions

Cost participation for extensions where customers will be immediately available for service is as follows:

1. Contribution -

a. When a contribution is required, the customer(s) shall pay the Company the portion of the capital expenditure not cost justified as determined in accordance with paragraph A.3.

b. The contribution shall be made by:

i. A one-time payment prior to construction, or

ii. Payment of 25% of the contribution prior to construction and the balance in no more than twenty-four equal monthly installments. If customer discontinues service within the twenty-four month period, the balance will be due and payable upon discontinuance of service, or

iii. Customer may post a bond, irrevocable letter of credit, or a written guarantee commitment in the amount of the required contribution prior to construction. Such bond, issued by a bonding company authorized to do business in the state, letter of credit, or written guarantee commitment, shall be effective for the original five-year term and is subject to approval and acceptance by the Company. If at the end of the original five-year term, a contribution requirement

B. Customer Extensions (Cont.)

1. b. iii. exists in the subject project based on a recalculated maximum expenditure, the surety or guarantor shall reimburse the Company for such recalculated contribution requirement, or

iv. Customer, upon approval by Company, may finance the amount of the required contribution subject to the following conditions: 1) maximum contribution to be financed shall be determined by the Company at its sole discretion, 2) maximum term shall be five years, 3) interest will be charged at the Company's incremental weighted cost of capital.

c. Upon completion of construction, the contribution amount will be adjusted to reflect actual costs, and an additional charge may be levied or a refund may be made.

d. If within the five-year period from the extension(s) in service date, the number of active customers and related volumes exceeds the third-year projections, the Company shall recompute the contribution requirement by recalculating the maximum allowable investment.

e. The recalculated contribution requirement shall be collected from the new applicant(s).

2. Refund -

a. The Company will refund to the original contributor(s) the amount required to reduce their contribution to the recalculated contribution requirement. No refunds will be made for amounts less than $25. Customers who have posted a bond, letter of credit, or written guarantee commitment will be notified of any reduction in surety or guarantee requirements.

b. No refunds will be made until the new applicants begin taking service from the Company.

If the addition of new customers will increase the contribution required from existing customers(s), the extension will be considered a new extension and treated separately.

3. Incremental Expansion Surcharge -

a. The Company, in its sole discretion, may offer an Incremental Expansion Surcharge (Surcharge) to a project consisting of 10 or more customers requesting service when the total estimated cost would otherwise have been prohibitive under the Company's present rates and gas service extension policy. If the company and customers mutually agree that the project will be funded through a Surcharge, the project will be designated an expansion area and the Surcharge will be applicable to all connections within the expansion area. The contribution requirement to be collected under the Surcharge shall be the amount of the capital expenditure in excess of the Maximum Allowable Investment determined in accordance with ¶A.3.

i. A minimum up-front payment of $100.00 will be collected from each customer who signs an agreement to participate in the expansion.

ii. For projects that are expected to be recovered within a 5-year period, the Surcharge shall be set at a fixed monthly charge of $5.00 per month plus $1.50 per dk.

iii. For projects that are not expected to be recovered within a 5-year period, the Surcharge shall be set at a fixed monthly charge of $5.00 per month plus a commodity charge designed to provide recovery of the contribution requirement in a five year period.

FILED NORTH DAKOTA PUBLIC SERVICE COMMISSION
23
JUN - 1999
NO. PU-399-99-174

b. The Surcharge shall remain in effect until the net present value of the contribution requirement, calculated using a discount rate equal to the overall rate of return authorized in the last rate case, is collected.

c. The Surcharge shall apply to all customers connecting to natural gas service within the expansion area until the contribution requirement is satisfied.

d. The net present value of the Surcharge will be treated as a contribution-in-aid of construction for accounting purposes.

C. Developer Extensions

Cost participation may be required for extensions such as a subdivision or mobile home court, in which a developer is installing roads, utilities, etc., before housing is built.

1. Contribution -

2. c. If the addition of new customer(s) will increase the contribution required from the developer, the extension will be considered a new extension and treated separately.

APPROVED NORTH DAKOTA
PUBLIC SERVICE COMMISSION
23
JUN - 9 1999
CASE NO. PU-399-99-174

NEW INSTALLATION, REPLACEMENT, RELOCATION AND
REPAIR OF GAS SERVICE LINES Rate 124

A. NEW INSTALLATION OF COMPANY-OWNED SERVICE LINES - The Company will install, at its expense, a service line extending up to 150 feet from the main to the connection at the house regulator and/or meter for those customers served in the communities set forth in Rate Zone 2. A contribution may be required for that portion of the service line exceeding 150 feet in accordance with the Firm Gas Service Extension Policy Rate 120.

B. The following will apply to all new customer-owned gas service lines, and to the replacement, relocation and repair of all gas service lines on private property.

1. The customer shall be charged for a new service line on the basis of direct costs to the Company including material, labor, transportation, etc. Such costs shall include ordinary payroll and general overhead loadings. The Company may, at its option, calculate a statewide average cost per foot for such work based on its experience and may use such calculated amount for billing purposes. No minimum amount shall apply.

2. If the customer's service line is less than 25 years old, and is coated steel or plastic pipe, such line shall be pressure tested in accordance with the Company's rules for pressure testing. If the service line is found to be leaking due to faulty installation or due to a lack of cathodic protection, has damaged coating, surface pitting, etc., the line will be repaired or replaced at no cost to the customer. All other repairs shall be at customer's expense.

3. For coated steel or plastic pipe service lines more than 25 years old which need to be repaired and/or replaced and for bare pipe service lines of any age, the customer shall be charged in accordance with B.1. above.

   In accordance with Company Standards, service line replacements will be constructed with outside risers and meters. Such reconstruction will nearly always involve minor changes in inside piping. The inside piping changes may be incorporated into the total footage to be billed as provided in B.1. above.

NEW INSTALLATION, REPLACEMENT, RELOCATION AND
REPAIR OF GAS SERVICE LINES Rate 124

4. Where the customer's gas service line must be replaced because the mains are being relocated (alley to street or street to alley), such line change or relocation will be made at the Company's expense if the service line is coated steel or plastic pipe and is less than 25 years old. If the line is older and passes the required pressure test, the replacement will be made at the Company's expense. If such older line does not pass the required pressure test, the line shall be replaced at the customer's expense except that the customer shall be charged only for the lesser of: (a) the equivalent length of the old service line or (b) the actual length of the new service line if it is shorter than the older service line being replaced. The basis for billing the customer shall be as outlined in B.1. above.

5. The customer has the option of waiving the pressure test and receiving a credit equal to the cost of the pressure test against the installed cost of a new service line.

6. Where service line location changes are made due to building encroachments (a building is being constructed or is already located over a service line, etc.), or due to the necessity to increase the size and capacity of an existing service line because of increased demand, the customer shall be charged for on the basis of direct costs incurred by the Company, as outlined in B.1. above.

7. Whenever a service line is damaged by excavating and/or earth-moving equipment, etc., and is either repaired or replaced in whole or in substantial part, such work shall be charged for on a direct cost basis including ordinary payroll and general overhead loadings. If the damage was caused by independent contractors, not in the employ of the customer, the charges shall be billed directly to such contractor. Damages done by the customer or someone working directly for him shall be paid for by the customer. Such charges shall be made regardless of the age of the damaged service line.

AIR FORCE Rate 64

General Terms and Conditions:

1. PENALTY FOR FAILURE TO CURTAIL OR INTERRUPT – If the customer fails to curtail or interrupt their use of gas hereunder when requested to do so by the Company, any gas taken shall be billed at the Firm Service distribution delivery charge and cost of gas rates set forth above, plus either an amount equal to any penalty payments or overrun charges the Company is required to make to its interconnecting pipeline(s) under the terms of its contract(s) as a result of such failure to curtail or interrupt, or $50.00 per dk of gas used in excess of the volume of gas to which customer was requested to curtail or interrupt, whichever amount is greater. The Company, in its discretion, may shut off customer's supply of gas in the event of customer's failure to curtail or interrupt use of gas when requested to do so by the Company.

2. CONTRACT – Terms of service other than the rate shall be specified in contracts between Minot Air Force Base, and PAR and the Company.

3. The foregoing schedule is subject to Rates 100 through 124 and any amendments or alterations thereto or additional rules and regulations promulgated by the Company under the laws of the state.

Gas Rate Schedule

SMALL INTERRUPTIBLE GENERAL GAS SERVICE Rate 71

General Terms and Conditions:

1. PRIORITY OF SERVICE – Deliveries of gas under this schedule shall be subject at all times to the prior demands of customers served on the Company's firm general gas service rates, and the Company shall have the right to interrupt deliveries to customers under this schedule without being required to give previous notice of intention to so interrupt whenever, in Company's sole judgment, it may be necessary to do so to protect the interest of its customers whose capacity requirements are otherwise and hereby given preference. The priority of service and allocation of capacity shall be accomplished in accordance with the provisions of Rate 100, §V.10.

2. PENALTY FOR FAILURE TO CURTAIL OR INTERRUPT – If customer fails to curtail or interrupt their use of gas hereunder when requested to do so by the Company, any gas taken shall be billed at the Firm General Gas Service Rate 70 (distribution delivery charge and cost of gas), plus either an amount equal to any penalty payments or overrun charges the Company is required to make to its interconnecting pipeline(s) under the terms of its contract(s) as a result of such failure to curtail or interrupt, or $50.00 per dk of gas used in excess of the volume of gas to which customer was requested to curtail or interrupt, whichever amount is greater. The Company, in its discretion, may shut off customer's supply of gas in the event of customer's failure to curtail or interrupt use of gas when requested to do so by the Company.

3. AGREEMENT – Customer will be required to enter into an agreement for service hereunder for a minimum term of 12 months. Written notice of termination by either Company or customer must be given at least 60 days prior to the end of the initial term. Absent such termination notice, the agreement shall continue for additional terms of equal length until written notice is given, as provided herein, prior to the end of any subsequent term. Upon expiration of service, the customer may apply for and receive, at the sole discretion of the Company, gas service under this rate or another appropriate rate schedule for the customer's operations.

4. OBLIGATION TO NOTIFY COMPANY OF CHANGE IN DAILY OPERATIONS – Customer will be required as specified in the service agreement to notify Company of an anticipated change in daily operations. Failure to comply with requirements specified in the service agreement may result in the assessment of penalties to the customer equal to the penalty amounts Company must pay to the interconnecting pipeline caused by customer's action.

5. METERING REQUIREMENTS –Remote data acquisition equipment required for daily measurement will be installed by the Company, at its sole discretion, prior to the initiation of service hereunder.

   The customer shall be required to provide and maintain, at no cost to Company, a 120 volt, 15 ampere, AC power supply, or other power source acceptable to the Company, and acceptable telephone service available at customer's meter location(s). Customer agrees to provide and maintain, at no cost to the Company, any necessary telephone enhancements to assure Company of a quality telephone signal necessary to properly transmit data. The customer shall pay all charges for continuous electric and telephone service associated with the Company's connection of the electronic measurement equipment, and any interruption in such services must be promptly remedied or service under this tariff will be suspended until satisfactory corrections have been made.

   The Company reserves the right to charge for each service call to investigate, repair and/or reprogram the Company's remote data acquisition equipment when the service call is the result of a failure or change in communication or power source provided by customer or damage to Company's equipment.

6. The foregoing schedule is subject to Rates 100 through 124 and any amendments or alterations thereto or additional rules and regulations promulgated by the Company under the laws of the state.

TRANSPORTATION SERVICE Rates 81 and 82

Availability:

This service is applicable for transportation of natural gas to customer's premise (metered at a single delivery point) through Company's distribution facilities. In order to obtain transportation service, customer must qualify under an applicable gas transportation service rate; meet the general terms and conditions of service provided hereunder; and enter into a gas transportation agreement upon request by the Company.

The transportation services are as follows:

Small Interruptible General Gas Transportation Service Rate 81:
Transportation service is available for all general gas service customers whose interruptible natural gas load will exceed an input rate of 2,500,000 Btu per hour, metered at a single delivery point, whose average use of natural gas will not exceed 100,000 dk annually and who, absent the request for transportation service, are eligible for natural gas service, on an interruptible basis, pursuant to Company's effective Small Interruptible General Gas Service Rate 71. Customer's firm natural gas requirements must be separately metered or specified in a firm service agreement. Customer's firm load shall be treated and billed in accordance with the provisions of Firm General Gas Service Rate 70.

Large Interruptible General Gas Transportation Service Rate 82:
Transportation service is available for all general gas service customers whose interruptible natural gas load will exceed 100,000 dk annually metered at a single delivery point, and who, absent the request for transportation service, are eligible for natural gas service, on an interruptible basis, pursuant to Company's effective Large Interruptible General Gas Service Rate 85. Customer's firm natural gas requirements must be separately metered or specified in a firm service agreement. Customer's firm load shall be treated and billed in accordance with the provisions of Firm General Gas Service Rate 70.

Gas Rate Schedule

TRANSPORTATION SERVICE Rates 81 and 82

Rate:

Under Rate 81 or 82, customer shall pay the applicable Basic Service Charge plus a negotiated rate not more than the maximum rate or less than the minimum rate specified below. In the event customer also takes service under Rate 71 or Rate 85, the Basic Service Charge applicable under Rate 81 or Rate 82 shall be waived.

Basic Service Charge:
Rate 81 $150.00 per month
Rate 82 $725.00 per month

	Rate 81	Rate 82
Maximum Rate per dk	$0.366	$0.298
Minimum Rate per dk	$0.102	$0.061
Balancing Charge per dk	$0.300	$0.300

Fuel Charge:
Applicable to all dk transported to customers located within the distribution system. Charge does not apply to transmission level customers. See Rate Summary Sheet t for currently effective charge.

General Terms and Conditions:

1. CRITERIA FOR SERVICE: In order to receive the service, customer must qualify under one of the Company's applicable natural gas transportation service rates and comply with the general terms and conditions of the service provided herein. The customer is responsible for making all arrangements for transporting the gas from its source to the Company's interconnection with the delivering pipeline(s).

Montana-Dakota Utilities Co.
A Division of MDU Resources Group, Inc.
400 N 4th Street
Bismarck, ND 58501

State of North Dakota
Gas Rate Schedule

2. REQUEST FOR GAS TRANSPORTATION SERVICE:
   a. To qualify for gas transportation service a customer must request the service pursuant to the provisions set forth herein. The service shall be provided only to the extent that the Company's existing operating capacity permits.

   b. Requests for transportation service shall be considered in accordance with the provisions of Rate 100, §V.10.

3. MULTIPLE SERVICES THROUGH ONE METER:
   a. In the event customer desires firm sales service in addition to gas transportation service, customer shall request such firm volume requirements, and upon approval by Company, such firm volume requirements shall be set forth in a firm service agreement. For billing purposes, the level of volumes so specified or the actual volume used, whichever is lower shall be billed at Rate 70. Volumes delivered in excess of such firm volumes shall be billed at the applicable gas transportation rate. Customer has the option to install at their expense, piping necessary for separate measurement of sales and transportation volumes.

   b. The customer shall pay, in addition to charges specified in the applicable gas transportation rate schedule, charges under all other applicable rate schedules for any service in addition to that provided herein (irrespective of whether the customer receives only gas transportation service in any billing period).

4. PRIORITY OF SERVICE – Company shall have the right to curtail or interrupt deliveries without being required to give previous notice of intention to curtail or interrupt, whenever, in its judgment, it may be necessary to do so to protect the interest of its customers whose capacity requirements are otherwise and hereby given preference. The priority of service and allocation of capacity shall be accomplished in accordance with the provisions of Rate 100, §V.10.

5. PENALTY FOR FAILURE TO CURTAIL OR INTERRUPT – If customer fails to curtail or interrupt their use of gas hereunder when requested to do so by the Company, any gas taken above that received on customer's behalf, shall be billed at the Firm General Gas Service Rate 70 (distribution delivery charge and cost of gas), plus either an amount equal to any penalty payments or overrun charges the Company is required to make to its interconnecting pipeline(s) under the terms of its contract(s) as a result of such failure to curtail or interrupt, or $50.00 per dk of gas used in excess of the volume of gas to which customer was requested to curtail or interrupt, whichever amount is greater. The Company, in its discretion, may shut off customer's supply of gas in the event of customer's failure to curtail or interrupt use of gas when requested to do so by the Company.

6. NON-DELIVERED VOLUMES/PENALTY:
   a. In the event customer uses more gas than is being delivered to the Company's interconnection with the delivering pipeline(s) (receipt point), customer shall pay an amount equal to any penalty payments or overrun charges the Company is required to make to its interconnecting pipeline(s) under the terms of its contract(s) resulting from such action by customer. In the event that more than one customer is obtaining gas from the same shipper and/or agent at the same receipt point, any payment or overrun penalties the Company is required to make shall be allocated on a pro rata basis among such customers on the basis of each customer's use of gas in excess of available volumes.

   b. In the event the customer's gas is not being delivered to the receipt point for any reason and the customer continues to take gas, the customer shall be subject to any applicable penalties or charges set forth in Paragraph 6.a. Gas volumes supplied by Company will be charged at Firm General Gas Service Rate 70 (distribution delivery charge and cost of gas). The Company is under no obligation to notify customer of non-delivered volumes.

c. In the event customer's transportation volumes are not available for any reason, customer may take interruptible sales service if such service is available. The availability of interruptible sales service shall be determined at the sole discretion of the Company.

7. ELECTION OF SERVICE – Prior to the initiation of service hereunder, the customer shall make an election of its requirements under each applicable rate schedule for the entire term of service. If mutually agreed to by Company and customer, the term of service may be amended. Upon expiration of service, the customer may apply for and receive, at the sole discretion of the Company, gas service under the appropriate sales rate schedule for the customer's operations.

   Transportation customers who cease service and then resume service within the succeeding 12 months shall be subject to a reconnection charge as specified in Rate 100, §V.17.

8. BALANCING:
   a. To the extent practicable, customer and Company agree to the daily balancing of volumes of gas received and delivered on a thermal basis. Such balancing is subject to the customer's request and the Company's discretion to vary scheduled receipts and deliveries within existing Company operating limitations.

      If, at the end of a billing month, the accumulated difference between actual gas deliveries to the customer and nominated (scheduled) receipts on behalf of such customer exceeds 4% of that month's scheduled receipts, resulting in a negative imbalance (i.e., deliveries exceed scheduled receipts), the customer will be assessed a balancing charge, set forth herein, on the imbalance exceeding 4%. If such imbalance is not eliminated by the end of the next monthly billing period, the customer shall then be billed, in addition to the applicable transportation rate,

a penalty for the under nominated volume exceeding 4% at the Firm General Gas Service Rate 70 (distribution delivery charge and cost of gas). The accumulated difference between the actual gas deliveries to the customer and nominated (scheduled) receipts on behalf of such customer will be adjusted for the volume on which a penalty was imposed.

If, at the end of a billing month, the accumulated difference between nominated (scheduled) receipts on behalf of such customer and actual gas deliveries to the customer exceeds 4% of that month's scheduled receipts resulting in a positive imbalance (i.e., scheduled receipts exceed deliveries), the customer will be assessed a balancing charge, set forth herein, on the imbalance exceeding 4%. If such imbalance is not eliminated by the end of the next monthly billing period, (1) the Company may adjust the volume of gas received on behalf of the customer so as to eliminate the prior period over nomination exceeding 4% up to 10% and (2) the Company shall retain the over nomination of gas exceeding 10% free and clear of any adverse claims relating thereto when such accumulated difference exceeds 50 dk. The accumulated difference between the actual gas deliveries to the customer and nominated (scheduled) receipts on behalf of such customer will be adjusted for the volume retained.

b. In the event customer's imbalance causes the Company to incur a balancing penalty from its interconnecting pipeline(s), customer shall pay any penalty payments or overrun charges the Company is required to make under the terms of its contract(s) with interconnecting pipeline(s) resulting from such action by customer. In the event that more than one customer is obtaining gas from the same shipper and/or agent at the

same interconnection with a delivering pipeline, any payment or overrun penalties the Company is required to make shall be apportioned among such customers on the basis of each customer's contribution toward the imbalance.

c. Customer's nomination made to clear imbalances will be subject to the priority of service and allocation of capacity provisions set forth in Rate 100, §V.10 and the penalties for failure to curtail or interrupt use of gas set forth in Paragraph 5 of this rate schedule.

d. Termination of the gas transportation service shall not relieve Company and customer of the obligation to correct any quantity imbalances hereunder or customer of the obligation to pay money due hereunder to Company.

e. The Company may waive any penalty associated with Company adjustments to end-use customer nominations in those instances where the Company, due to operating limitations, is required to adjust end-use transportation customer nominations and such Company adjustments create a penalty situation, or preclude a customer from correcting an imbalance which results in a penalty.

9. NOMINATION VARIANCE CHARGE – The customer shall pay any payments the Company must make to its interconnecting pipeline(s), as a result of nomination variance penalties caused by customer's nomination variances. Such penalties will be allocated on the basis of each customer's contribution toward the nomination variance.

10. METERING REQUIREMENTS:
    a. Remote data acquisition equipment required by the Company for daily measurement will be purchased and installed by the Company prior to the initiation of service hereunder. The cost of the equipment and its installation shall be paid for by the customer. Such contribution in aid, as adjusted for federal and state income taxes, must be paid prior to the installation of such equipment unless otherwise agreed to by the Company. Such equipment will be maintained by the Company and will remain the sole property of the Company. Company may remove such equipment when service hereunder is terminated.

    b. The customer shall provide and maintain, at no cost to Company, a 120 volt, 15 ampere, AC power supply or other power source acceptable to the Company and acceptable telephone service available at customer's meter location(s). Customer agrees to provide and maintain, at no cost to the Company, any necessary telephone enhancements to assure Company of a quality telephone signal necessary to properly transmit data. The customer shall pay all charges for continuous electric and telephone service associated with the Company's connection of the electronic measurement equipment, and any interruption in such services must be promptly remedied or service under this tariff will be suspended until satisfactory corrections have been made.

    c. The Company reserves the right to charge for each service call to investigate, repair and/or reprogram the Company's remote data acquisition equipment when the service call is the result of a failure or change in communication or power source provided by customer or damage to Company's equipment.

11. DAILY NOMINATION REQUIREMENTS:
    a. Customer or customer's shipper or agent shall advise Company's gas nominations center, by 11:30 a.m. Central Clock Time, of the dk requirements customer has requested to be delivered at each delivery point the following day. Customer's daily nomination shall be its best estimate of the expected utilization for the gas day. Unless other arrangements are made, customer will be required to nominate for the non-business days involved prior to weekends and holidays.

    b. All nominations should include shipper and/or agent defined begin and end dates. Shippers and/or agents may nominate for periods longer than 1 day, provided the nomination begin and end dates are within the term of the service agreement.

    c. The Company has the sole right to refuse receipt of any volumes which exceed the maximum daily contract quantity and at no time shall the Company be required to accept quantities of gas for a customer in excess of the quantities of gas to be delivered to customer. If total nominated receipts exceed total deliveries at receipt points where more than one customer is receiving service, nominations will be allocated on a pro rata basis.

    d. At no time shall Company have the responsibility to deliver gas in excess of customer's nomination.

    e. In the event that more than one customer is receiving gas from the same shipper and/or agent at the same receipt point, any reduction in nominated volumes will be allocated on a pro rata basis, unless Company and shipper(s) and/or agent(s) have agreed to a predetermined allocation procedure.

12. WARRANTY – The customer, customer's agent, or customer's shipper warrants that it will have title to all gas it tenders or causes to be tendered to the Company, and such gas shall be free and clear of all liens and adverse claims and the customer, customer's agent, or customer's shipper shall indemnify the Company against all damages, costs, and expenses of any nature whatsoever arising from every claim against said gas.

13. FACILITY EXTENSIONS - If facilities are required in order to furnish gas transportation service, and those facilities are in addition to the facilities required to furnish firm gas service, the customer shall pay for those additional facilities and their installation in accordance with the Company's applicable natural gas extension policy. Company may remove such facilities when service hereunder is terminated.

14. PAYMENT – Billed amounts will be considered past due if not paid by the due date shown on the bill. Past due bills are subject to a late payment charge in accordance with the provisions of Rate 100, §V.11, or any amendments or alterations thereto.

15. BILLING ERROR – In the event an error is discovered in any bill that the Company renders to customer, such error shall be adjusted within a period not to exceed 6 months from the date the billing error is first discovered.

16. AGREEMENT – Upon request of the Company, customer may be required to enter into an agreement for service hereunder.

17. The foregoing schedule is subject to Rates 100 through 124 and any amendments or alterations thereto or additional rules and regulations promulgated by the Company under the laws of the state.

Gas Rate Schedule

LARGE INTERRUPTIBLE GENERAL GAS SERVICE Rate 85

General Terms and Conditions:

1. PRIORITY OF SERVICE – Deliveries of gas under this schedule shall be subject at all times to the prior demands of customers served on the Company's firm general gas service rates, and the Company shall have the right to interrupt deliveries to customers under this schedule without being required to give previous notice of intention to so interrupt whenever, in Company's sole judgment, it may be necessary to do so to protect the interest of its customers whose capacity requirements are otherwise and hereby given preference. The priority of service and allocation of capacity shall be accomplished in accordance with the provisions of Rate 100, §V.10.

2. PENALTY FOR FAILURE TO CURTAIL OR INTERRUPT – If customer fails to curtain or interrupt their use of gas hereunder when requested to do so by the Company, any gas taken shall be billed at the Firm General Gas Service Rate 70 (distribution delivery charge and cost of gas), plus either an amount equal to any penalty payments or overrun charges the Company is required to make to its interconnecting pipeline(s) under the terms of its contract(s) as a result of such failure to curtail or interrupt, or $50.00 per dk of gas used in excess of the volume of gas to which customer was requested to curtail or interrupt, whichever amount is greater. The Company, in its discretion, may shut off customer's supply of gas in the event of customer's failure to curtail or interrupt use of gas when requested to do so by the Company.

3. AGREEMENT – Customer will be required to enter into an agreement for service hereunder for a minimum term of 12 months. Written notice of termination by either Company or customer must be given at least 90 days prior to the end of the initial term. Absent execution of such termination notice, the agreement shall continue for additional terms of equal length until written notice is given as provided herein, prior to the end of any subsequent term. Upon expiration of service, the customer may apply for and receive, at the sole discretion of the Company, gas service under this rate or another appropriate rate schedule for the customer's operations.

Gas Rate Schedule

LARGE INTERRUPTIBLE GENERAL GAS SERVICE Rate 85

4. OBLIGATION TO NOTIFY COMPANY OF CHANGE IN DAILY OPERATIONS - Customer will be required as specified in the service agreement to notify Company of an anticipated change in daily operations. Failure to comply with requirements specified in the service agreement may result in the assessment of penalties to the customer equal to the penalty amounts Company must pay to the interconnecting pipeline caused by customer's action.

5. METERING REQUIREMENTS –Remote data acquisition equipment required for daily measurement will be installed by the Company, at its sole discretion, prior to the initiation of service hereunder.

   The customer shall be required to provide and maintain, at no cost to Company, a 120 volt, 15 ampere, AC power supply, or other power source acceptable to the Company, and acceptable telephone service available at customer's meter location(s). Customer agrees to provide and maintain, at no cost to the Company, any necessary telephone enhancements to assure Company of a quality telephone signal necessary to properly transmit data. The customer shall pay all charges for continuous electric and telephone service associated with the Company's connection of the electronic measurement equipment, and any interruption in such services must be promptly remedied or service under this tariff will be suspended until satisfactory corrections have been made.

   The Company reserves the right to charge for each service call to investigate, repair and/or reprogram the Company's remote data acquisition equipment when the service call is the result of a failure or change in communication or power source provided by customer or damage to Company's equipment.

6. The foregoing schedule is subject to Rates 100 through 124 and any amendments or alterations thereto or additional rules and regulations promulgated by the Company under the laws of the state.

Gas Rate Schedule

NDPSC Volume 7
Original Sheet No. 30

PURCHASED GAS COST ADJUSTMENT Rate 88

1. **Applicability:**
This rate schedule constitutes a purchased gas cost adjustment (PGA) provision and specifies the procedure to be utilized to adjust the rates for gas sold under Montana-Dakota's rate schedules in order to reflect: (a) changes in Montana-Dakota's average cost of gas supply, (b) amortization of the Unrecovered Purchased Gas Cost Account and (c) market based pricing differential.

2. **Effective Date and Limitation on Adjustments:**
(a) The effective dates of the PGA shall be bills rendered on and after the first date of each month, unless the Commission shall otherwise order.

(b) Montana-Dakota shall file a PGA to reflect changes in its average cost of gas supply only when the amount of change in such PGA is at least 10 (ten) cents per dk. The adjustment to be effective May 1 shall be filed each year, regardless of the amount of the change.

3. **Purchased Gas Cost:**
(a) The monthly PGA shall reflect changes in Montana-Dakota's cost of gas supply as compared to the cost of gas supply approved in its most recent PGA. The cost of gas supply shall be the sum of all costs incurred in obtaining gas for general system supply. General system supply is defined as gas available for use by all customers served under retail sales rate schedules. The cost of gas supply shall include, but not be limited to, all demand, commodity, storage, gathering, and transportation charges incurred by Montana-Dakota for such gas supply, the overall rate of return on prepaid demand and commodity charges and gas storage balances required to maintain the system gas supply and hedging program gains, losses and transaction costs related to system gas supply.

(b) The PGA shall be computed as follows:

(1) Demand costs shall include all annual gathering, transportation and storage demand charges at current rates.

(2) Commodity costs shall include all annual gathering, transportation and storage charges at current rates.

(3) The gas commodity cost shall reflect all commodity related gas costs estimated to be in effect for the month the PGA will be in effect and annual dk requirements.

(4) The return on prepaid demand and commodity balances and storage balances shall be computed on an annual basis at the overall rate of return on rate base.

The cost per dk for the month is the sum of the above divided by annual, weather normalized dk deliveries adjusted to reflect losses.

(c) Monthly gas costs shall be calculated as follows:

(1) Demand costs for firm customers shall be apportioned to all state jurisdictions served by Montana-Dakota on the basis of the overall ratio of each state's Maximum Daily Delivery Quantity (MDDQ).

(2) Demand costs for interruptible sales customers shall be stated on a 100% load factor basis.

(3) All commodity costs and other costs associated with the acquisition of gas for general system supply shall be apportioned to each state on the basis of total dks sold in each state, regardless of the actual points of delivery of such gas.

(4) The return requirement related to prepaid demand and commodity charges and gas storage balances shall be included on a per dk basis. The prepaid demand and storage balances shall be apportioned to all states on the basis of each state's MDDQ. The prepaid commodity charges shall be apportioned to all states on the basis of annual dks sold in each state. The unit cost shall be calculated using a thirteen-month average balance and the currently authorized return on rate base.

(5) All costs related to specific end-use transactions shall not be included in the cost of gas supply determination but shall be directly billed to the customer(s) contracting for such service.

(d) The PGA shall be applied to each of Montana-Dakota's rate schedules recognizing differences among customer classes consistent with the cost of gas supply included in the applicable class sales rate.

4. Surcharge Adjustment:

(a) All sales rate schedules shall be subject to a Surcharge Adjustment to be effective on May 1 of each year. The Surcharge Adjustment per dk sold shall reflect amortization of the applicable balance in the Unrecovered Purchased Gas Cost Account calculated by dividing the applicable balance by the estimated dk sales for the twelve months following the effective date of the adjustment.

5. Unrecovered Purchased Gas Account:

(a) Items to be included in the Unrecovered Purchased Gas Cost Account, as calculated in accordance with Subsection 5(b) are:

(1) Charges for gas supply which Montana-Dakota is unable to reflect in a Purchased Gas Cost Adjustment by reason of the ten cent minimum limitation set forth in Subsection 2(b).

(2) Amounts of increased/decreased charges for gas supplies, which were paid during any period after the effective date of the most recent general rate case, but not yet included in sales rates.

(3) Refunds received from supplier(s) with respect to gas supply. Such refunds received shall be credited to the Unrecovered Purchased Gas Cost Account.

(4) Carrying charges or credits at a rate equal to the three-month Treasury Bill rate as published monthly by the Federal Reserve Board.

(5) Demand costs recovered from the interruptible sales customers will be credited to the residential and firm general service customers.

(b)

(1) The amount to be included in the Unrecovered Purchased Gas Cost Account in order to reflect the items specified in Subsections 5(a)(1), (2), and (3) shall be calculated as follows:

Montana-Dakota Utilities Co.
A Division of MDU Resources Group, Inc.
400 N 4th Street
Bismarck, ND 58501

State of North Dakota
Gas Rate Schedule

PURCHASED GAS COST ADJUSTMENT Rate 88

(i) Montana-Dakota shall first determine each month the unit cost for that month's natural gas supply as adjusted to levelize demand charges.

Such adjustment to levelize supplier(s) demand charges shall be calculated as follows:

The supplier's annual (calendar or fiscal) demand charges, which are payable in equal monthly payments shall be accumulated in a prepaid account (FERC Account 165). Each month a portion of such accumulated prepaid amount shall be amortized to cost of natural gas purchased (FERC Account 804). Such monthly amortization shall be based on a rate calculated by dividing the annual supplier(s) demand charges by projected annual natural gas sales units (calendar or fiscal, as appropriate). The resulting product shall then be multiplied by the projected natural gas unit sales for the current month. Such amount shall constitute the monthly amortization of prepaid supplier(s) demand charges to cost of natural gas supply.

(1)

(ii) Montana-Dakota shall then subtract from each month's unit cost, the unit cost for gas supply which is reflected in the currently effective PGA.

(iii) The resulting difference (which may be positive or negative) shall be multiplied by the dks sold during that month under each rate schedule. The resulting amounts shall be reflected in an Unrecovered Purchased Gas Cost Account for each rate schedule.

(2) Montana-Dakota will calculate carrying charges on the amounts in the Unrecovered Purchased Gas Cost Account, Account 191, at a rate equal to the three-month Treasury Bill rate as published monthly by the Federal Reserve Board. The amount to be included in Account 191 for carrying charges shall be determined as follows:

Each month, Account 191 shall be debited (if the balance in said account is a debit balance) and shall be credited (if the balance in said account is a credit balance) for a carrying charge; which shall be the product of (i) and (ii) below:

(i) The balance in Account 191 as of the end of the immediately preceding month, exclusive of carrying charges accrued pursuant to this Subsection (b)(2) and net of the related deferred tax amounts in Accounts 283 or 190, as appropriate.

(ii) One-twelfth of the annual interest rate as set forth in this Subsection (b)(2). The carrying charges shall be accrued in a supplementary Unrecovered Purchased Gas Cost Account for each rate schedule, and carrying charges shall not be computed on the amounts in such supplementary account.

(b) Reduction of Amounts in the Unrecovered Purchased Gas Cost Account:

(1) The amounts in the Unrecovered Purchased Gas Cost Account shall be decreased each month by an amount determined by multiplying the currently effective surcharge adjustment included in rates for that month (as calculated in Section 4) by the dks sold during that month under each rate schedule. The account shall be increased in the event the adjustment is a negative amount.

(2) The amount amortized each month shall be applied pro rata between the amounts in the Unrecovered Purchased Gas Cost Account specified in Subsections 5(a)(1), (2), (3) and (5) and the amounts in the supplementary Unrecovered Purchased Gas Cost Account specified in Subsection 5(a)(4).

6. Market-Based Pricing Differential:

(a) At the time of each surcharge adjustment, the Company will compute a credit to residential and firm general service rates based on 50% of all distribution delivery charge revenues received from small interruptible sales and large interruptible sales customers in excess of the authorized minimum distribution delivery charge rate approved in the most recent general rate case.

Bismarck, ND 58501

State of North Dakota
Gas Rate Schedule

PURCHASED GAS COST ADJUSTMENT Rate 88

(b) The unit adjustment shall be determined by dividing the balance resulting under Subsection 6(a) by the residential and firm general service sales volumes estimated to be sold during the 12 months following the effective date of each adjustment.

7. Time and Manner of Filing:

(a) Montana-Dakota shall file each PGA at least 20 days prior to the proposed effective date. Each filing by Montana-Dakota shall be made by means of revised PGA sheets identifying the amounts of the adjustments and the resulting currently effective PGA rates.

(b) Each filing shall be accompanied by detailed computations, which clearly show the derivation of the relevant amounts, a concise statement of the reasons for any change and copies of any relevant pipeline tariff sheets supporting costs claimed.

RESIDENTIAL PROPANE SERVICE Rate 90

Availability:

For the community of Hettinger for all domestic purposes. See Rate 100, §V.3, for definition on class of service.

Rate:

Basic Service Charge:	$.39 per day
Distribution Delivery Charge:	$.432 per dk
Cost of Propane:	Determined Monthly- See Rate Summary Sheet for Current Rate

Minimum Bill:

Basic Service Charge.

Payment:

Billed amounts will be considered past due if not paid by the due date shown on the bill. Past due bills are subject to a late payment charge in accordance with the provisions of Rate 100, §V.11, or any amendments or alterations thereto.

Cost of Purchased Propane:

The cost of propane as defined in the Purchased Propane Cost Adjustment Rate 99 or any amendments or alterations thereto. The cost of propane component is subject to change on a monthly basis.

General Terms and Conditions:

1. The Company may at its discretion and upon thirty days notice, disconnect service to a customer utilizing a second source of propane. Any customer so disconnected shall not be eligible for service hereunder for one year from date of disconnection and shall be subject to reconnection charges to restore service after the one-year period.

2. The foregoing schedule is subject to Rates 100 through 124 and any amendments or alterations thereto or additional rules and regulations promulgated by the Company under the laws of the state.

PURCHASED PROPANE COST ADJUSTMENT Rate 99

1. **Availability:**
This rate schedule constitutes a purchased propane cost adjustment (PCA) provision and specifies the procedure to be utilized to adjust the rates for propane gas sold under Montana-Dakota's rate schedules in order to reflect: (a) changes in Montana-Dakota's average cost of propane supply and (b) amortization of the Unrecovered Purchased Propane Cost Account.

2. **Effective Date and Limitation on Adjustments:**
(a) The effective dates of the PCA shall be bills rendered on and after the first day of each month, unless the Commission shall otherwise order.

(b) Montana-Dakota shall file a PCA to reflect changes in its average cost of propane supply only when the amount of such change in PCA is at least 10 (ten) cents per dk. The adjustment to be effective May 1 shall be filed each year, regardless of the amount of the change.

3. **Purchased Propane Cost:**
(a) The monthly PCA shall reflect changes in Montana-Dakota's cost of propane supply as compared to the cost of propane supply approved in its most recent PCA . The cost of propane supply shall include, but not be limited to, all commodity and transportation charges incurred by Montana-Dakota for such propane supply.

(b) The propane commodity cost shall reflect all commodity related propane costs estimated to be incurred for the month the PCA will be in effect and estimated dk purchases.

The unit cost per dk for the month shall be the commodity costs divided by estimated dk purchases for the month.

4. **Surcharge Adjustment:**
All propane sales schedules shall be subject to a Surcharge Adjustment to be effective on May 1 each year. The Surcharge Adjustment per dk sold shall reflect amortization of the applicable balance in the Unrecovered Purchased Propane Cost Account calculated by dividing the applicable balance by the estimated dk sales for the twelve months following the effective date of the adjustment.

5. Unrecovered Purchased Propane Cost Account:

(a) Items to be included in the Unrecovered Purchased Propane Cost Account, as calculated in accordance with Subsection 5(b) are:

(1) Charges for propane supply which Montana-Dakota is unable to reflect in a Purchased Propane Cost Adjustment by reason of the ten cent minimum limitation set forth in Subsection 2(b).

(2) Amounts of increased/decreased charges for propane supplies that were paid during any period after the effective date of the most recent approved rates, but not yet included in propane sales rates.

(3) Carrying charges or credits.

(b)

(1) The amount to be included in the Unrecovered Purchased Propane Cost Account in order to reflect the items specified in Subsections 5(a)(1) and (2) shall be calculated as follows:

(i) Montana-Dakota shall first determine each month the unit cost for that month's propane supply.

(ii) Montana-Dakota shall then subtract from each month's unit cost, the unit cost for propane supply, which is reflected in the currently effective PCA.

(iii) The resulting difference (which may be positive or negative) shall be multiplied by the dks sold during that month under each propane rate schedule. The resulting amounts shall be reflected in an Unrecovered Purchased Propane Cost Account for each rate schedule.

(2) Montana-Dakota will calculate carrying charges on the amounts in the Unrecovered Purchased Propane Cost Account, Account 191, as follows:

Each month, Account 191 shall be debited (on a debit balance) or credited (on a credit balance) for a carrying charge, which shall be the product of (i) and (ii) below:

(i) The balance on Account 191 as of the end of the immediately preceding month, exclusive of carrying charges accrued pursuant to this Subsection (b)(2) and net of the related deferred tax amounts in Accounts 283 or 190, as appropriate.

(ii) One-twelfth of the three-month Treasury Bill rate as published monthly by the Federal Reserve Board. The carrying charges shall be accrued in a supplementary Unrecovered Purchased Propane Cost Account for each rate schedule, and carrying charges shall not be computed on the amounts in such supplementary account.

(c) Reduction of Amounts in the Unrecovered Purchased Propane Cost Account:

(1) The amounts in the Unrecovered Purchased Propane Cost Account shall be decreased each month by an amount determined by multiplying the currently effective surcharge adjustment included in rates for that month (as calculated in Section 4) by the dks sold during that month under each rate schedule. The account shall be increased in the event the adjustment is a negative amount.

(2) The amount amortized each month shall be applied pro rata between the amounts in the Unrecovered Purchased Propane Cost Account specified in Subsections 5(a)(1) and (2) and the amounts in the supplementary Unrecovered Purchased Propane Cost Account specified in Subsection 5(b)(2)(ii).

6. Time and Manner of Filing:

(a) Montana-Dakota shall file each PCA at least 10 days prior to the proposed effective date. Each filing by Montana-Dakota shall be made by means of revised PCA sheets identifying the amounts of the adjustments and the resulting currently effective PCA rates.

(b) Each filing shall be accompanied by detailed computations, which clearly show the derivation of the relevant amounts, a concise statement of the reasons for any change and copies of any relevant material supporting costs claimed.

Gas Rate Schedule

I. **PURPOSE:**

These rules are intended to define good practice which can normally be expected, but are not intended to exclude other accepted standards and practices not covered herein. They are intended to ensure adequate service to the public and protect the Company from unreasonable demands.

The Company undertakes to furnish service subject to the rules and regulations of the Public Service Commission of North Dakota and as supplemented by these general provisions, as now in effect or as may hereafter be lawfully established, and in accepting service from the Company, each customer agrees to comply with and be bound by said rules and regulations and the applicable rate schedules.

II. **DEFINITIONS:**

The following terms used in this tariff shall have the following meanings, unless otherwise indicated:

AGENT – The party authorized by the transportation service customer to act on that customer's behalf.

APPLICANT – A customer requesting Company to provide service.

COMMISSION – Public Service Commission of the State of North Dakota.

COMPANY – Montana-Dakota Utilities Co.

COMPANY'S OPERATING CONVENIENCE – The utilization, under certain circumstances, of facilities or practices not ordinarily employed which contribute to the overall efficiency of Company's operations. This does not refer to the customer's convenience nor to the use of facilities or adoption of practices required to comply with applicable laws, ordinances, rules or regulations, or similar requirements of public authorities.

CURTAILMENT – A reduction of transportation or retail natural gas service deemed necessary by the Company. Also includes any reduction of transportation natural gas service deemed necessary by the pipeline.

Montana-Dakota Utilities Co.
A Division of MDU Resources Group, Inc.
400 N 4th Street
Bismarck, ND 58501

State of North Dakota
Gas Rate Schedule

CUSTOMER – Any individual, partnership, corporation, firm, other organization or government agency supplied with service by Company at one location and at one point of delivery unless otherwise expressly in these rules or in a rate schedule.

DELIVERY POINT – The point at which customer assumes custody of the gas being transported. This point will normally be at the outlet of Company's meter(s) located on customer's premises.

GAS DAY – Means a period of twenty-four consecutive hours, beginning and ending at 9:00 a.m. Central Clock Time.

INTERRUPTION – A cessation of transportation or retail natural gas service deemed necessary by Company.

NOMINATION – The daily dk volume of natural gas requested by customer for transportation and delivery to customer at the delivery point during a gas day.

PIPELINE – The transmission company(s) delivering natural gas into company's system.

RATE – Shall mean and include every compensation, charge, fare, toll, rental and classification, or any of them, demanded, observed, charged or collected by the Company for any service, product, or commodity, offered by the Company to the public, and any rules, regulations, practices or contracts affecting any such compensation, charge, fare, toll, rental or classification.

RECEIPT POINT – The intertie between Company and the interconnecting pipeline(s) at which point Company assumes custody of the gas being transported.

SHIPPER – The party with whom the Pipeline has entered into a service agreement for transportation services.

Montana-Dakota Utilities Co.
A Division of MDU Resources Group, Inc.
400 N 4th Street
Bismarck, ND 58501

State of North Dakota
Gas Rate Schedule

III. **CUSTOMER OBLIGATION:**

1. APPLICATION FOR SERVICE – A customer desiring gas service must make application to the Company before commencing the use of the Company's service. The Company reserves the right to require a signed application or written contract for service to be furnished. All applications and contracts for service must be made in the legal name of the customer desiring the service. The Company may refuse a customer or terminate service to a customer who fails or refuses to furnish reasonable information requested by the Company for the establishment of a service account. Any customer who uses gas service in the absence of application or contract shall be subject to the Company's rates, rules, and regulations and shall be responsible for payment of all service used.

   Subject to rates, rules, and regulations, the Company will continue to supply gas service until notified by customer to discontinue the service. The customer will be responsible for payment of all service furnished through the date of discontinuance.

   Any customer may be required to make a deposit as required.

2. INPUT RATING – All new customers whose consumption of gas for any purpose will exceed an input of 2,500,000 Btu per hour, metered at a single delivery point, shall consult with the Company and furnish details of estimated hourly input rates for all gas utilization equipment. Where system design capacity permits, such customers may be served on a firm basis. Where system design capacity is limited, and at Company's sole discretion, Company will serve all such new customers on an interruptible basis only. Architects, contractors, heating engineers and installers, and all others should consult with the Company before proceeding to design, erect or redesign such installations for the use of natural gas. This will ensure that such equipment will conform to the Company's ability to adequately serve such installations with gas.

Montana-Dakota Utilities Co.
A Division of MDU Resources Group, Inc.
400 N 4th Street
Bismarck, ND 58501

State of North Dakota
Gas Rate Schedule

3. ACCESS TO CUSTOMER'S PREMISES – Company representatives, when properly identified, shall have access to customer's premises at all reasonable times for the purpose of reading meters, making repairs, making inspections, removing the Company's property, or for any other purpose incidental to the service.

4. COMPANY PROPERTY – The customers shall exercise reasonable diligence in protecting the Company's property on their premises, and shall be liable to the Company in case of loss or damage caused by their negligence or that of their employees.

5. INTERFERENCE WITH COMPANY PROPERTY – The customer shall not disconnect, change connections, make connections or otherwise interfere with Company's meters or other property or permit same to be done by other than the Company's authorized employees.

6. RELOCATED LINES - Where Company facilities are located on a public or private utility easement and there is a building encroachment(s), over gas facilities (Company-owned main, Company-owned service line or customer-owned service line) the customer shall be charged for line relocation on the basis of actual costs incurred by the Company including any required easements.

7. NOTIFICATION OF LEAKS – The customer shall immediately notify the Company at its office of any escape of gas in or about the customer's premises.

8. TERMINATION OF SERVICE – All customers are required to notify the Company, to prevent their liability for service used by succeeding tenants, when vacating their premises. Upon receipt of such notice, the Company will read the meter and further liability for service used on the part of the vacating customer will cease.

9. REPORTING REQUIREMENTS – Customer shall furnish Company all information as may be required or appropriate to comply with reporting requirements of duly constituted authorities having jurisdiction over the matter herein.

Montana-Dakota Utilities Co.
A Division of MDU Resources Group, Inc.
400 N 4th Street
Bismarck, ND 58501

State of North Dakota
Gas Rate Schedule

IV. **LIABILITY**

1. CONTINUITY OF SERVICE – The Company will use all reasonable care to provide continuous service but does not assume responsibility for a regular and uninterrupted supply of gas service and will not be liable for any loss, injury, death, or damage resulting from the use of service, or arising from or caused by the interruption or curtailment of the same.

2. CUSTOMER'S EQUIPMENT – Neither by inspection or non-rejection, nor in any other way does the Company give any warranty, express or implied, as to the adequacy, safety or other characteristics of any structures, equipment, lines, appliances or devices owned, installed or maintained by the customer or leased by the customer from third parties.

3. COMPANY EQUIPMENT AND USE OF SERVICE – The Company will not be liable for any loss, injury, death or damage resulting in any way from the supply or use of gas or from the presence or operation of the Company's structures, equipment, lines, appliances or devices on the customer's premises, except loss, injuries, death, or damages resulting from the negligence of the Company.

4. INDEMNIFICATION – Customer agrees to indemnify and hold Company harmless from any and all injury, death, loss or damage resulting from customer's negligent or wrongful acts under and during the term of service. Company agrees to indemnify and hold customer harmless from any and all injury, death, loss or damage resulting from Company's negligent or wrongful acts under and during the term of service.

5. FORCE MAJEURE – In the event of either party being rendered wholly or in part by force majeure unable to carry out its obligations, then the obligations of the parties hereto, so far as they are affected by such force majeure, shall be suspended during the continuance of any inability so caused. Such causes or contingencies affecting the performance by either party, however, shall not relieve it of liability in the event of its concurring negligence or in the event of its failure to use due diligence to remedy the situation and remove the cause in an adequate manner and with all reasonable dispatch, nor shall such causes or contingencies affecting the performance relieve either party from its obligations to make payments of amounts then due hereunder, nor

shall such causes or contingencies relieve either party of liability unless such party shall give notice and full particulars of the same in writing or by telephone to the other party as soon as possible after the occurrence relied on. If volumes of customer's gas are destroyed while in Company's possession by an event of force majeure, the obligations of the parties shall terminate with respect to the volumes lost.

The term "force majeure" as employed herein shall include, but shall not be limited to, acts of God, strikes, lockouts or other industrial disturbances, failure to perform by any third party, which performance is necessary to the performance by either customer or Company, acts of the public enemy or terrorists, wars, blockades, insurrections, riots, epidemics, landslides, lightning, earthquakes, fires, storms, floods, washouts, arrest and restraint of rulers and peoples, civil disturbances, explosions, breakage or accident to machinery or lines of pipe, line freeze-ups, sudden partial or sudden entire failure of gas supply, failure to obtain materials and supplies due to governmental regulations, and causes of like or similar kind, whether herein enumerated or not, and not within the control of the party claiming suspension, and which by the exercise of due diligence such party is unable to overcome; provided that the exercise of due diligence shall not require settlement of labor disputes against the better judgment of the party having the dispute.

The term "force majeure" as employed herein shall also include, but shall not be limited to, inability to obtain or acquire, at reasonable cost, grants, servitudes, rights-of-way, permits, licenses, or any other authorization from third parties or agencies (private or governmental) or inability to obtain or acquire at reasonable cost necessary materials or supplies to construct, maintain, and operate any facilities required for the performance of any obligations under this agreement, when any such inability directly or indirectly contributes to or results in either party's inability to perform its obligations.

V. **GENERAL TERMS AND CONDITIONS:**

1. AGREEMENT – Upon request of the Company, customer may be required to enter into an agreement for any service.

2. RATE OPTIONS – Where more than one rate schedule is available for the same class of service, the Company will assist the customer in selecting the applicable rate schedule(s). The Company is not required to change a customer from one rate schedule to another more often than once in twelve months unless there is a material change in the customer's load which alters the availability and/or applicability of such rate(s), or unless a change becomes necessary as a result of an order issued by the Commission or a court having jurisdiction. The Company will not be required to make any change in a fixed term contract except as provided therein.

2. RULES FOR APPLICATION OF GAS SERVICE:
   (a) Residential gas service is available to any residential customer for domestic purposes only. Residential gas service is defined as service for general domestic household purposes in space occupied as living quarters, designed for occupancy by one family. Typical service would include the following: separately metered units, such as single private residences, single apartments, mobile homes and sorority and fraternity houses (this is not an all-inclusive list). In addition, auxiliary buildings on the same premise as the living quarters, used for residential purposes, may be served on the residential rate.

   (b) Nonresidential service is defined as service provided to a business enterprise in space occupied and operated for nonresidential purposes. Typical service would include stores, offices, shops, restaurants, boarding houses, hotels, service garages, wholesale houses, filling stations, barber shops, beauty parlors, master metered apartment houses, common areas of shopping malls or apartments (such as halls or basements), churches, elevators, schools and facilities located away from the home site (this is not an all-inclusive list).

   (c) The definitions above are based upon the supply of service to an entire premise through a single delivery and metering point. Separate supply for the same customer at other points of consumption may be separately metered and billed.

   (d) If separate metering is not practical for a single unit (one premise) that is using gas for both domestic purposes and for conducting business (or for

(e) nonresidential purposes as defined herein), the customer will be billed under the predominate use policy. Under this policy, the customer's combined service is billed under the rate (Residential or Nonresidential) applicable to the type of service which constitutes 50% or more of the customer's total connected load.

e. Other classes of service furnished by the Company shall be defined in applicable rate schedules or in rules and regulations pertaining thereto. Service to customers for which no specific rate schedule is applicable shall be billed on the Nonresidential rates.

4. DISPATCHING – Transportation customers will adhere to gas dispatching policies and procedures established by Company to facilitate transportation service. Company will inform customer of any changes in dispatching policies that may affect transportation services as they occur.

5. RULES COVERING GAS SERVICE TO MANUFACTURED HOMES – The rules and regulation for providing gas service to manufactured homes are in accordance with the Code of Federal Regulations (24CFR Part 3280 – Manufactured Homes Construction and Safety Standards) Subpart G and H which pertain to gas piping and appliance installation. In addition to the above rules, the Company also follows the regulations set forth in the NFPA 501A, Fire Safety Criteria for Manufactured Home Installations, Sites, and Communities.

6. CONSUMER DEPOSITS – The Company will determine whether or not a deposit shall be required of an applicant for gas service in accordance with Commission rules.

   (a) The amount of such deposit shall not exceed one and one-half times the estimated amount of one month's average bill.

   (b) The Company may accept in lieu of a cash deposit a contract signed by a guarantor, satisfactory to the Company, whereby the payment of a specified sum not to exceed the required cash deposit is guaranteed. The term of such contract shall be indeterminate, but it shall automatically terminate when the customer gives notice of service discontinuance to

the Company or a change in location covered by the guarantee agreement of thirty days after written request for termination is made to the utility by the guarantor. However, no agreement shall be terminated without the customer having made satisfactory settlement for any balance, which the customer owes the Company. Upon termination of a guarantee contract, a new contract or a cash deposit may be required by the Company.

A deposit shall earn interest at the rate paid by the Bank of North Dakota on a six-month certificate of deposit as of the first business day of each year. Interest shall be credited to the customer's account annually during the month of December.

Deposits with interest shall be refunded to customers at termination of service provided all billings for service have been paid. Deposits with interest will be refunded to all active customers, after the deposit has been held for twelve months, provided prompt payment record has been established.

7. METERING AND MEASUREMENT:
   (a) Company will meter the volume of natural gas delivered to customer at the delivery point. Such meter measurement will be conclusive upon both parties unless such meter is found to be inaccurate, in which case the quantity supplied to customer shall be determined by as correct an estimate as it is possible to make, taking into consideration the time of year, the schedule of customer's operations and other pertinent facts. Company will test meters in accordance with applicable state utility rules and regulations.

   (b) Transportation customers agree to provide the cost of the installation of electronic measurement equipment to Company before transportation service is implemented.

8. MEASUREMENT UNIT FOR BILLING PURPOSES – The measurement unit for billing purposes shall be one (1) decatherm (dk), unless otherwise specified. Billing will be calculated to the nearest one-tenth (1/10) dk. One dk equals 10 therms or 1,000,000 Btu's. Dk's shall be calculated by the

application of a thermal factor to the volumes metered. This thermal factor consists of:

(a) An altitude adjustment factor used to convert metered volumes at local sales base pressure to a standard pressure base of 14.73 psia, and

(b) A Btu adjustment factor used to reflect the heating value of the gas delivered.

9. UNIT OF VOLUME FOR MEASUREMENT – The unit of volume for purpose of measurement shall be one (1) cubic foot of gas at either local sales base pressure or 14.73 psia, as appropriate, and at a temperature base of sixty degrees Fahrenheit (60°F). All measurement of natural gas by orifice meter shall be reduced to this standard by computation methods, in accordance with procedures contained in ANSI-API Standard 2530, First Edition, as amended. Where natural gas is measured with positive displacement or turbine meters, correction to local sales base pressure shall be made for actual pressure and temperature with factors calculated from Boyle's and Charles' Laws. Where gas is delivered at 20 psig or more, the deviation of the natural gas from Boyle's Law shall be determined by application of Supercompressibility Factors for Natural Gas published by the American Gas Association, Inc., copyright 1955, as amended or superseded. Where gas is measured with electronic correcting instruments at pressures greater than local sales base, supercompressibility will be calculated in the corrector using AAGA-3/NX-19, as amended, supercompressibility calculation. For handbilled accounts, application of supercompressibility factors will be waived on monthly-billed volumes of 250 dk or less.

10. PRIORITY OF SERVICE AND ALLOCATION OF CAPACITY – Priority of Service from Highest to Lowest:
    (a) Priority 1 – Firm sales services.
    (b) Priority 2 – Small interruptible sales and small interruptible transportation services at the maximum rate on a pro rata basis.
    (c) Priority 3 – Large interruptible sales and large interruptible transportation services at the maximum rate on a pro rata basis.

(d) Priority 4 – Small interruptible transportation services at less than the maximum rate from the highest rate to the lowest rate and on a pro rata basis where equal rates are applicable among customers.
(e) Priority 5 – Large interruptible transportation services at less than the maximum rate from the highest rate to the lowest rate and on a pro rata basis where equal rates are applicable among customers.
(f) Priority 6 – Gas scheduled to clear imbalances.

Montana-Dakota shall have the right, in its sole discretion, to deviate from the above schedule when necessary for system operational reasons and if following the above schedule would cause an interruption in service to a customer who is not contributing to an operational problem on Montana-Dakota's system.

Montana-Dakota reserves the right to provide service to customers with lower priority while service to higher priority customers is being curtailed due to restrictions at a given delivery or receipt point. When such restrictions are eliminated, Montana-Dakota will reinstate sales and/or transportation of gas according to each customer's original priority.

11. LATE PAYMENT – Amounts billed will be considered past due if not paid by the due date shown on the bill. An amount equal to 1% per month will be applied to any unpaid balance existing at the immediate subsequent billing date, provided however, that such amount shall not apply where a bill is in dispute or a formal complaint is being processed. All payments received will apply to the customer's account prior to calculating the late payment charge. Those payments applied shall satisfy the oldest portion of the bill first.

12. RETURNED CHECK CHARGE – A charge of $20.00will be collected by the Company for each check charged back to the Company by a bank.

13. TAX CLAUSE – In addition to the charges provided for in the gas tariffs of the Company, there shall be charged pro rata amounts which, on an annual basis, shall be sufficient to yield to the Company the full amount of any sales,

use or excise taxes, whether they be denominated as license taxes, occupation taxes, business taxes, privilege taxes, or otherwise, levied against or imposed upon the Company by any municipality, political subdivision, or other entity, for the privilege of conducting its utility operations therein.

The charges to be added to the customer's service bills under this clause shall be limited to the customers within the corporate limits of the municipality, political subdivision or other entity imposing the tax.

14. UTILITY CUSTOMER SERVICES:
    (a) The following services will be performed at no charge regardless of the time of performance:

        (1) Fire and explosions calls.

        (2) Investigate hazardous condition on customer premises, such as gas leaks, odor complaints, combustion gas fumes.

        (3) Maintenance or repair of Company-owned facilities on the customer's premises.

    (b) The following service calls will be performed at no charge during the Company's normal business hours:

        (1) Cut-ins and cut-outs.

        (2) Disconnecting of gas appliances permanently removed from service or in connection with cut-outs.

        (3) Lighting pilots, inspecting, and adjusting gas equipment in connection with establishing service when working cut-in orders.

        (4) Initial burner adjustment on residential gas burning appliances.

(5) High bills or inadequate service complaints.

(6) Location of underground Company facilities and customer-owned gas service lines for contractors, builders, plumbers, etc.

(7) Pilot relighting, testing thermocouple for proper operation and any pilot cleaning that can be done without removing pilot assembly.

(8) Service calls for routine cut-ins, when the order is received prior to 12:00 p.m. on a regular work day, requiring service on the date the order is received, will be considered as non-chargeable regardless if work is performed outside of normal working hours.

15. UTILITY SERVICES PERFORMED AFTER NORMAL BUSINESS HOURS – For service requested by customers after the Company's normal business hours and on Saturday, Sunday, or legal holidays, a charge will be made for labor at standard overtime service rates and materials at retail prices.

    Customers requesting service after the Company's normal business hours will be informed of the after hour service rate and encouraged to have the service performed during normal business hours.

16. NOTICE TO DISCONTINUE GAS SERVICE – Customers desiring to have their gas service disconnected shall notify the Company during regular business hours, one business day before service is to be disconnected. Such notice shall be by letter, personal visit or telephone call to the Company's local business office, in communities which an office is maintained. In other communities such notice shall be given to the Company's representative who services the community or to the nearest business office. Saturdays, Sundays and legal holidays are not considered business days.

A Division of MDU Resources Group, Inc.
400 N 4th Street
Bismarck, ND 58501

State of North Dakota
Gas Rate Schedule

17. RECONNECTION FEE FOR SEASONAL OR TEMPORARY CUSTOMER –A customer who requests reconnection of service, during normal working hours, at a location where same customer discontinued the same service during the preceding 12-month period will be charged the Basic Service Charge applicable during the period while service was not being used or a minimum of $30.00. The minimum will be based on standard overtime rates for reconnection of service after normal business hours.
Transportation customers who cease service and then resume service within the succeeding 12 months shall be subject to a reconnection charge of $160.00 whenever reinstallation of the required electronic measurement equipment is necessary.

18. DISCONNECTION OF SERVICE FOR NONPAYMENT OF BILLS – All amounts billed for service are due when rendered and will be considered delinquent if not paid by due date shown on the bill. If any customer shall become delinquent in the payment of amounts billed, such service may be discontinued by the Company under the applicable rules of the Commission. The Company may collect a fee of $30.00 before restoring gas service, which has been disconnected for nonpayment of service bills during normal business hours. Standard overtime rates will apply for services performed after normal business hours.

19. DISCONNECTION OF SERVICE FOR CAUSES OTHER THAN NONPAYMENT OF BILLS – The Company reserves the right to discontinue service for any of the following reasons:

    (a) In the event of customer use of equipment in such a manner as to adversely affect the Company's equipment or service to others.

    (b) In the event of tampering with the equipment furnished and owned by the Company.

    (c) For violation of or noncompliance with the Company's rules on file with the Commission.

(d) For failure of the customer to fulfill the contractual obligations imposed as conditions of obtaining service.

(e) For refusal of reasonable access to property to the agent or employee of the Company for the purpose of inspecting the facilities or for testing, reading, maintaining or removing meters.

The right to discontinue service for any of the above reasons may be exercised whenever and as often as such reasons may occur, and any delay on the part of the Company in exercising such rights, or omission of any action permissible hereunder, shall not be deemed a waiver of its rights to exercise same.

Nothing in these regulations shall be construed to prevent discontinuing service without advance notice for reasons of safety, health, cooperation with civil authorities, or fraudulent use, tampering with or destroying Company facilities.

The Company may collect a reconnect fee of $30.00 before restoring gas service, which has been disconnected for the above causes.

20. UNAUTHORIZED USE OF SERVICE – Unauthorized use of service is defined as any deliberate interference such as tampering with a Company meter, pressure regulator, registration, connections, equipment, seals, procedures or records that result in a loss of revenue to the Company. Unauthorized service is also defined as reconnection of service that has been terminated, without the Company's consent.

(a) Examples of unauthorized use of service include the following, but are not limited to:

(1) Bypass piping around meter.
(2) Bypass piping installed in place of meter.

(3) Meter reversed.
(4) Meter index disengaged or removed.
(5) Service or equipment tampered with or piping connected ahead of meter.
(6) Tampering with meter or pressure regulator that affects the accurate registration of gas usage.
(7) Gas being used after service has been discontinued by the Company.
(8) Gas being used after service has been discontinued by the Company as a result of a new customer turning gas on without the proper connect request.

(b) In the Event that there has been unauthorized use of service, customer shall be charged for:

(1) Time, material and transportation costs used in investigation.
(2) Estimated charge for non-metered gas.
(3) On-premise time to correct situation.
(4) Any damage to Company property.

(c) Customer service so disconnected shall be reconnected after a customer has furnished satisfactory evidence of compliance with Company's rules and conditions of service, and paid all charges as hereinafter set forth in this procedure.

(1) All delinquent bills, if any.
(2) The amount of any Company revenue loss attributable to said tampering.
(3) Expenses incurred by the Company in replacing or repairing the meter or other appliance costs incurred in preparation of the bill, plus costs as outlined in number 20.b above.
(4) Reconnection fee applicable.
(5) A cash deposit, the amount of which will not exceed the maximum amount determined in accordance with Commission Rules.

INTERRUPTIBLE GAS SERVICE EXTENSION POLICY
Rate 119

The policy of Montana-Dakota Utilities Co. for gas extensions necessary to provide interruptible sales or interruptible transportation service to customers is as follows:

1. Contribution

   (a) Prior to construction, the customer shall contribute an amount equal to the total cost of construction including all gas main extensions, valves, service line(s), regulators, meters (excluding electronic measurement equipment), any required payments made by the Company to the transmission pipeline to accommodate the extensions, and other costs as adjusted for federal and state income taxes.

   (b) The contribution shall be made by:

      i. A one-time payment prior to construction or,

      ii. The customer may post a bond, irrevocable letter of credit, or a written guarantee commitment in the amount of the total contribution required prior to construction. Such bond, issued by a bonding company authorized to do business in the state, letter of credit, or written guarantee commitment, shall be effective for a five-year period commencing at the plant in service date, and is subject to approval and acceptance by the Company. If at the end of the original five-year term, a contribution requirement exists for the subject project, the surety or guarantor shall pay the Company for such contribution requirement, or

      iii. Customer, upon approval by Company, may finance the amount of the required contribution subject to the following conditions: 1) maximum contribution to be financed shall be determined by the Company at its sole discretion, 2) maximum term shall be five years, 3) interest will be charged at the Company's incremental weighted cost of capital.

   (c) Upon Completion of construction, the contribution amount will be adjusted to reflect actual costs, and an additional charge may be levied or a refund may be made.

INTERRUPTIBLE GAS SERVICE EXTENSION POLICY
Rate 119

(d) Remote data acquisition equipment costs shall be subject to the terms and conditions specified in Transportation Service Rates 81 and 82.

2. Refund

(a) If within the five-year period from the extension(s) in service date, the total of the customer's contribution and actual margin paid to the Company equals or exceeds the total present value of the revenue requirement associated with the extension, Company shall refund the amount exceeding the revenue requirement on the following basis:

i. Annually, beginning at the 2nd anniversary of the extension(s) in service date, the Company will refund to the customer, the amount exceeding the total present value of the revenue requirement at a rate of 50% of the current year margin associated with the customer" actual throughput.

ii. Customers who have posted a bond, letter of credit, or a written guarantee commitment will be notified of any reduction in surety or guarantee requirements based on the above calculation.

iii. No refunds will be made for amounts less than $25.

(b) Interest will be calculated annually by the Company on any refund amounts and shall be equal to the average commercial paper interest rate (A1/P1), not to exceed 12 percent per annum.

(c) No refund shall be made by the Company after the five-year refund period has expired, and in no case shall the refund, excluding interest, exceed the amount of contribution made by the customer.

FIRM GAS SERVICE EXTENSION POLICY Rate 120

The policy of Montana-Dakota Utilities Co. for gas extensions necessary to provide firm sales service to customers is as follows:

(A) General Rules and Regulations Applicable to all Firm Service Extensions

1. An extension will be constructed without a contribution if the estimated capital expenditure is cost justified as defined in ¶A.3.

2. The Company may require customer or developer cost participation if the estimated capital expenditure is not cost justified.

3. The extension will be considered cost justified if the calculated maximum allowable investment equals or exceeds the estimated capital expenditure using the following formula:

   Maximum Allowable Investment =

Annual Basic Service Charge + (Project Estimated 3rd Year Annual Dk x Distribution Delivery Charge/LARR

where: LARR = Levelized Annual Revenue Requirement Factor of 19.954%

4. Cost of the extension shall include the gas main extension(s), valves, service line(s), any required payments made by the Company to the transmission pipeline company to accommodate the extension(s), and other costs excluding the distribution meter and regulator.

   The service line is that portion of the gas service extending from the gas main to the connection at the house regulator and/or meter.

5. Where cost participation is required, such extension is subject to execution of the Company's standard agreement for extensions by the customer or the developer and Company.

6. A refund will be made only when there is a reduction in the amount of contribution required within a five-year period from the extension(s) in service date. Interest will be calculated annually by the Company on any refund amounts and shall be equal to the average commercial paper interest rate (A1/P1), not to exceed 12 percent per annum.

   No refund shall be made by Company after the five-year refund period and in no case shall the refund excluding interest, exceed the amount of the contribution.

7. The Company reserves the right to charge customer the cost associated with providing service to customer if service is not initiated within 12 months of such installation.

(B) Customer Extensions

Cost participation for extensions where customers will be immediately available for service is as follows:

1. Contribution

   (a) When a contribution is required, the customer(s) shall pay the Company the portion of the capital expenditure not cost justified as determined in accordance with ¶ A.3.

   (b) The contribution shall be made by:

      i. A one-time payment prior to construction, or

      ii. Payment of 25% of the contribution prior to construction and the balance in no more than twenty-four equal monthly installments. If customer discontinues service within the twenty-four month period, the balance will be due and payable upon discontinuance of service, or

      iii. Customer may post a bond, irrevocable letter of credit, or a written guarantee commitment in the amount of the required contribution prior to construction. Such bond, issued by a bonding company authorized

iv. to do business in the state, letter of credit, or written guarantee commitment, shall be effective for the original five-year term and is subject to approval and acceptance by the Company. If at the end of the original five-year term, a contribution requirement exits in the subject project based on a recalculated maximum expenditure, the surety or guarantor shall reimburse the Company for such recalculated contribution requirement, or

v. Customer, upon approval by Company, may finance the amount of the required contribution subject to the following conditions: 1) maximum contribution to be financed shall be determined by the Company at its sole discretion, 2) maximum term shall be five years, 3) interest will be charged at the Company's incremental weighted cost of capital.

(c) Upon completion of construction, the contribution amount will be adjusted to reflect actual costs, and an additional charge may be levied or a refund may be made.

(d) If within the five-year period from the extension(s) in service date, the number of active customers and related volumes exceeds the third-year projections, the Company shall recompute the contribution requirement by recalculating the maximum allowable investment.

(e) The recalculated contribution requirement shall be collected from the new applicant(s).

2. Refund

(a) The Company will refund to the original contributor(s) the amount required to reduce their contribution to the recalculated contribution requirement. No refunds will be made for amounts less than $25. Customers who have posted a bond, letter of credit, or written guarantee commitment will be notified of any reduction in surety or guarantee requirements.

(b) No refunds will be made until the new applicants begin taking service from the Company.

(c) If the addition of new customers will increase the contribution required from existing customer(s), the extension will be considered a new extension and treated separately.

3. Incremental Expansion Surcharge

(a) The Company, in its sole discretion, may offer an Incremental Expansion Surcharge (Surcharge) to a project consisting of 10 or more customers requesting service when the total estimated cost would otherwise have been prohibitive under the Company's present rates and gas service extension policy. If the Company and customers mutually agree that the project will be funded through a Surcharge, the project will be designated an expansion area and the Surcharge will be applicable to all connections within the expansion area. The contribution requirement to be collected under the Surcharge shall be the amount of the capital expenditure in excess of the Maximum Allowable Investment determined in accordance with ¶A.3.

i. A minimum up-front payment of $100.00 will be collected from each customer who signs an agreement to participate in the expansion.

ii. For projects that are expected to be recovered within a 5-year period, the Surcharge shall be set at a fixed monthly charge of $5.00 per month plus $1.50 per dk.

iii. For projects that are not expected to be recovered within a 5-year period, the Surcharge shall be set at a fixed monthly charge of $5.00 per month plus a commodity charge designed to provide recovery of the contribution requirement in a five-year period.

(b) The Surcharge shall remain in effect until the net present value of the contribution requirement, calculated using a discount rate equal to the overall rate of return authorized in the last rate case, is collected.

(c) The Surcharge shall apply to all customers connecting to natural gas service within the expansion area until the contribution requirement is satisfied.

(d) The net present value of the Surcharge will be treated as a contribution-in-aid of construction for accounting purposes.

(C) Developer Extensions

Cost participation may be required for extensions such as a subdivision or a mobile home court, in which a developer is installing roads, utilizes, etc., before housing is built.

1. Contribution

(a) When a contribution is required, the developer shall pay the Company the portion of the capital expenditure not cost justified as determined in accordance with ¶A.3.

(b) The contribution shall be made by:

i. A one-time payment prior to construction, or

ii. Developer may post a bond, irrevocable letter of credit, or a written guarantee commitment in the amount of the required contribution prior to construction. Such bond, issued by a bonding company authorized to do business in the state, letter of credit, or a written guarantee commitment, shall be effective for the original five-year term and is subject to approval and acceptance by the Company. If at the end of the original five-year term, a contribution requirement exists in the subject project based on a recalculated maximum expenditure, the surety shall reimburse the Company for such recalculated contribution requirement, or

iii. Customer, upon approval by Company, may finance the amount of the required contribution subject to the following conditions: 1) maximum contribution to be financed shall be determined by the Company at its sole discretion, 2) maximum term shall be five years, 3) interest will be charged at the Company's incremental weighted cost of capital.

State of North Dakota
Gas Rate Schedule

FIRM GAS SERVICE EXTENSION POLICY Rate 120

(c) Upon completion of construction, the contribution amount will be adjusted to reflect actual costs, and an additional charge may be levied or a refund may be made.

2. Refund

(a) If within the five-year period from the extension(s) in service date, the number of active customers and related volumes exceeds the third-year projections, the Company shall recompute the contribution requirement by recalculating the maximum allowable investment. Such recalculation shall be done annually based upon the anniversary of the extension(s) in service date.

(b) The Company will refund to the developer the amount required to reduce their contribution to the recalculated contribution requirement. No refunds will be made for amounts less than $25. Developers who have posted a bond, letter of credit, or written guarantee commitment will be notified of any reduction in surety or guaranty requirements.

(c) If the addition of new customer(s) will increase the contribution required from the developer, the extension will be considered a new extension and treated separately.

NEW INSTALLATION, REPLACEMENT, RELOCATION AND REPAIR OF GAS SERVICE LINES Rate 124

A. The Company will install, at its expense, a service line extending from the main to the connection at the premise regulator and/or meter for all customers connected on and after (effective date of tariff) and all replacement service lines installed on and after (effective date of tariff). The service line installed by the Company will remain the Company's property.

B. A non-refundable contribution may be required for that portion of the service line cost not supported by the expected or actual connected load. The contribution requirement will be determined based on minimum footage allowances determined annually taking into account the maximum allowable investment defined in Rate 120 and the average installed per foot cost. The Company reserves the right to charge customer the total cost of the installed service line if service is not initiated within 12 months of such installation.

1. The portion of the service line not cost justified shall be charged to the customer on the basis of direct costs to the Company. The Company may, at its option, calculate a statewide average cost per foot for such work based on its experience and may use such calculated amount for billing purposes. No minimum amount shall apply.

2. Where service line location changes are made due to building encroachments (a building is being constructed or is already located over a service line, etc.), because the customer shall be charged for on the basis of direct costs incurred by the Company.

3. Whenever a service line is damaged by the customer or someone under the employ of the customer necessitating the service line to be either repaired or replaced in whole or in substantial part, such work shall be charged on a direct cost basis. If the damage was caused by independent contractors, not in the employ of the customer, the charges shall be billed directly to such contractor.

4. Service line changes necessary to increase the size and capacity of an existing service line because of increased demand shall be treated in accordance with ¶ B.2 above.

SMALL INTERRUPTIBLE GENERAL GAS SERVICE Rate 71

Minimum Bill:

Basic Service Charge.~~Base Rate~~ | T

Payment:

Billed amounts will be considered past due if not paid by the due date shown on the bill. Past due bills are subject to a late payment charge in accordance with the provisions of Rate 100, §V.11, or any amendments or alterations thereto.

Cost of Purchased Gas ~~Adjustment~~:

The cost of gas includes all applicable cost of gas items as defined in the Purchased Gas Cost Adjustment Rate 88 or any amendments or alterations thereto. The cost of gas component is subject to change on a monthly basis. | T

~~Bills are subject to an adjustment for cost of purchased gas as provided in Rate 88 or any amendments or alterations thereto.~~ | T

General Terms and Conditions:

1. PRIORITY OF SERVICE – Deliveries of gas under this schedule shall be subject at all times to the prior demands of customers served on the Company's firm general gas service rates, and the Company shall have the right to interrupt deliveries to customers under this schedule without being required to give previous notice of intention to so interrupt whenever, in Company's sole judgment, it may be necessary to do so to protect the interest of its customers whose capacity requirements are otherwise and hereby given preference. The priority of service and allocation of capacity shall be accomplished in accordance with the provisions of Rate 100, §V.10.

2. PENALTY FOR FAILURE TO CURTAIL OR INTERRUPT – If customer fails to curtail or interrupt their use of gas hereunder when requested to do so by the Company, any gas taken shall be billed at the ~~tail block of the applicable~~ Firm General Gas Service Rate 70 (distribution delivery charge and cost of gas) ~~commodity charge rate~~, plus either an amount equal to any penalty payments or overrun charges the Company is required to make to its interconnecting pipeline(s) under the terms of its contract(s) as a result of such failure to curtail or interrupt, or $50.00~~10.00~~ per dk of gas used in excess of the volume of gas to which customer was requested to curtail or interrupt, whichever amount is greater. The Company, in its discretion, may shut off customer's supply of gas in the event of customer's failure to curtail or interrupt use of gas when requested to do so by the Company. | T | C

SMALL INTERRUPTIBLE GENERAL GAS SERVICE Rate 71

3. AGREEMENT – Customer will be required to enter into an agreement for service hereunder for a minimum term of 12 months. Written notice of termination by either Company or customer must be given at least 60 days prior to the end of the initial term. Absent such termination notice, the agreement shall continue for additional terms of equal length until written notice is given, as provided herein, prior to the end of any subsequent term. Upon expiration of service, the customer may apply for and receive, at the sole discretion of the Company, gas service under this rate or another appropriate rate schedule for the customer's operations.

4. OBLIGATION TO NOTIFY COMPANY OF CHANGE IN DAILY OPERATIONS – Customer will be required as specified in the service agreement to notify Company of an anticipated change in daily operations. Failure to comply with requirements specified in the service agreement may result in the assessment of penalties to the customer equal to the penalty amounts Company must pay to the interconnecting pipeline caused by customer's action.

5. METERING REQUIREMENTS –Remote data acquisition ~~Electronic measurement~~ equipment required for daily measurement will be installed by the Company, at its sole discretion, prior to the initiation of service hereunder. T

   The customer shall be required to provide and maintain, at no cost to Company, a 120 volt, 15 ampere, AC power supply, or other power source acceptable to the Company, and ~~a~~ acceptable telephone service available ~~tie to customer's telephone system accessible~~ at customer's meter location(s). T Customer agrees to provide and maintain, at no cost to the Company, any necessary telephone enhancements to assure Company of a quality telephone signal necessary to properly transmit data. The customer shall pay all charges for continuous electric and telephone service associated with the Company's connection of the electronic measurement equipment, and any interruption in such services must be promptly remedied or service under this tariff will be suspended until satisfactory corrections have been made.

TRANSPORTATION SERVICE Rates 81 and 82

Availability:

This service is applicable for transportation of natural gas to customer's premise (metered at a single delivery point) through Company's distribution facilities. In order to obtain transportation service, customer must qualify under an applicable gas transportation service rate; meet the general terms and conditions of service provided hereunder; and enter into a gas transportation agreement upon request by the Company.

The transportation services are as follows:

Small Interruptible General Gas Transportation Service Rate 81:
Transportation service is available for all general gas service customers whose interruptible natural gas load will exceed an input rate of 2,500,000 Btu per hour, metered at a single delivery point, whose average use of natural gas will not exceed 100,000 dk annually and who, absent the request for transportation service, are eligible for natural gas service, on an interruptible basis, pursuant to Company's effective Small Interruptible General Gas Service Rate 71. Customer's firm natural gas requirements must be separately metered or specified in a firm service agreement. Customer's firm load shall be treated and billed in accordance with the provisions of Firm General Gas Service Rate 70. ~~or Firm Gas Transportation Service Rate 84, whichever is applicable.~~ D

Large Interruptible General Gas Transportation Service Rate 82:
Transportation service is available for all general gas service customers whose interruptible natural gas load will ~~exceed an input rate of 2,500,000 Btu per hour, metered at a single delivery point, whose average use of natural gas will~~ exceed 100,000 dk annually metered at a single delivery point, and who, absent the request for transportation service, are eligible for natural gas service, on an interruptible basis, pursuant to Company's effective Large Interruptible General Gas Service Rate 85. Customer's firm natural gas requirements must be separately metered or specified in a firm service agreement. Customer's firm load shall be treated and billed in accordance with the provisions of Firm General Gas Service Rate 70 ~~or Firm Gas Transportation Service Rate 84, whichever is applicable~~. T

~~Firm Gas Transportation Service Rate 84:~~

Montana-Dakota Utilities Co.
A Division of MDU Resources Group, Inc.
400 N 4th Street
Bismarck, ND 58501

State of North Dakota
Gas Rate Schedule

~~Firm transportation service is available for the firm requirements of those customers who, absent the request for transportation service, are eligible for natural gas service, on an interruptible basis, pursuant to Company's effective Small Interruptible General Gas Service Rate 71 or Large Interruptible General Gas Service Rate 85. Such firm requirements, subject to approval by the Company, must be set forth in a firm service agreement.~~ D

Rate:

Under Rate 81 or 82, customer shall pay the applicable Basic Service Charge ~~Base Rate and Nomination Charge~~ plus a negotiated rate not more than the maximum rate or less than the minimum rate specified below. In the event customer also takes service under Rate 71, ~~Rate 84~~ or Rate 85, the ~~base rate~~ Basic Service Charge applicable under Rate 81 or Rate 82 shall be waived. C

Basic Service Charge: ~~Base Rate:~~ C

Rate 81 $150.00 ~~35.00~~ per month
Rate 82 $725.00~~450.00~~ per month
~~Rate 84 $ 35.00 per month for customers qualifying under Rate 81~~
~~$450.00 per month for customers qualifying under Rate 82~~

	Rate 81	Rate 82	~~Rate 84~~
Maximum Rate per dk	$0.366~~509~~	$0.298~~321~~	~~$0.983~~

~~Nomination Charge per month~~	~~$50.00~~	~~$50.00~~	~~$50.00~~

C

Fuel Charge:

Applicable to all dk transported to customers located within the distribution system. Charge does not apply to transmission level customers. See Rate Summary Sheet ~~supplemental sheet~~ for currently effective charge. T

General Terms and Conditions:

1. CRITERIA FOR SERVICE: In order to receive the service, customer must qualify under one of the Company's applicable natural gas transportation service rates and comply with the general terms and conditions of the service

provided herein. The customer is responsible for making all arrangements for transporting the gas from its source to the Company's interconnection with the delivering pipeline(s).

2. REQUEST FOR GAS TRANSPORTATION SERVICE:
   a. To qualify for gas transportation service a customer must request the service pursuant to the provisions set forth herein. The service shall be provided only to the extent that the Company's existing operating capacity permits.

   b. ~~If the Company determines that firm capacity exists, requests for firm gas transportation service shall be processed on a first come first serve basis~~. | D

   b. Requests for ~~interruptible~~ transportation service shall be considered in accordance with the provisions of Rate 100, §V.10. |

3. MULTIPLE SERVICES THROUGH ONE METER:
   a. In the event customer desires firm sales service in addition to gas transportation service, customer shall request such firm volume requirements, and upon approval by Company, such firm volume requirements shall be set forth in a firm service agreement. For billing purposes, the level of volumes so specified or the actual volume used, whichever is lower shall be billed at Rate 70 ~~or Rate 84, whichever is applicable~~. Volumes delivered in excess of such firm volumes shall be billed at the applicable gas transportation rate. Customer has the option to install at their expense, piping necessary for separate measurement of sales and transportation volumes. | D

   b. The customer shall pay, in addition to charges specified in the applicable gas transportation rate schedule, charges under all other applicable rate schedules for any service in addition to that provided herein (irrespective of whether the customer receives only gas transportation service in any billing period).

4. PRIORITY OF SERVICE – Company shall have the right to curtail or interrupt deliveries without being required to give previous notice of intention to curtail or interrupt, whenever, in its judgment, it may be necessary to do so to

protect the interest of its customers whose capacity requirements are otherwise and hereby given preference. The priority of service and allocation of capacity shall be accomplished in accordance with the provisions of Rate 100, §V.10.

5. PENALTY FOR FAILURE TO CURTAIL OR INTERRUPT – If customer fails to curtail or interrupt their use of gas hereunder when requested to do so by the Company, any gas taken above that received on customer's behalf, shall be billed at the ~~tail block of the applicable~~ Firm General Gas Service Rate 70 (distribution delivery charge and cost of gas) ~~commodity charge rate~~, plus either an amount equal to any penalty payments or overrun charges the Company is required to make to its interconnecting pipeline(s) under the terms of its contract(s) as a result of such failure to curtail or interrupt, or $50.00 ~~10.00~~per dk of gas used in excess of the volume of gas to which customer was requested to curtail or interrupt, whichever amount is greater. The Company, in its discretion, may shut off customer's supply of gas in the event of customer's failure to curtail or interrupt use of gas when requested to do so by the Company. T C

6. NON-DELIVERED VOLUMES/PENALTY:
   a. In the event customer uses more gas than is being delivered to the Company's interconnection with the delivering pipeline(s) (receipt point), customer shall pay an amount equal to any penalty payments or overrun charges the Company is required to make to its interconnecting pipeline(s) under the terms of its contract(s) resulting from such action by customer. In the event that more than one customer is obtaining gas from the same shipper and/or agent at the same receipt point, any payment or overrun penalties the Company is required to make shall be allocated on a pro rata basis among such customers on the basis of each customer's use of gas in excess of available volumes. T

   b. In the event the customer's gas is not being delivered to the receipt point for any reason ~~due to shipper or pipeline constraints~~ and the customer continues to take gas, the customer shall be subject to ~~the rate charged to the customer shall be the tail block of the Firm General Gas Service Rate 70 commodity charge rate, plus~~ any applicable penalties or charges T

set forth in Paragraph 6.a. Gas volumes supplied by Company will be charged at Firm General Gas Service Rate 70 (distribution delivery charge and cost of gas). The Company is under no obligation to notify customer of non-delivered volumes. T

c. In the event customer's transportation volumes are not available for any reason, customer may take interruptible sales service if such service is available. The availability of interruptible sales service shall be determined at the sole discretion of the Company.

7. ELECTION OF SERVICE – Prior to the initiation of service hereunder, the customer shall make an election of its requirements under each applicable rate schedule for the entire term of service. If mutually agreed to by Company and customer, the term of service may be amended. Upon expiration of service, the customer may apply for and receive, at the sole discretion of the Company, gas service under the appropriate sales rate schedule for the customer's operations.

   Transportation customers who cease service and then resume service within the succeeding 12 months shall be subject to a reconnection charge as specified in Rate 100, §V.17.

8. BALANCING:
   a. To the extent practicable, customer and Company agree to the daily balancing of volumes of gas received and delivered on a thermal basis. Such balancing is subject to the customer's request and the Company's discretion to vary scheduled receipts and deliveries within existing Company operating limitations.

      If, at the end of a billing month, the accumulated difference between actual gas deliveries to the customer and nominated (scheduled) receipts on behalf of such customer exceeds 4% of that month's scheduled receipts, resulting in a negative imbalance (i.e., deliveries exceed scheduled receipts), the customer will be assessed a balancing charge, set forth herein, on the imbalance exceeding 4%. If such imbalance is not eliminated by the end of the next monthly billing period, the customer shall then be billed, in addition to the applicable transportation rate, a

penalty for the under nominated volume exceeding 4% at ~~the tail block of~~ the Firm General Gas Service Rate 70 (distribution delivery charge and cost of gas) ~~commodity charge rate~~. The accumulated difference between the actual gas deliveries to the customer and nominated (scheduled) receipts on behalf of such customer will be adjusted for the volume on which a penalty was imposed. T

If, at the end of a billing month, the accumulated difference between nominated (scheduled) receipts on behalf of such customer and actual gas deliveries to the customer exceeds 4% of that month's scheduled receipts resulting in a positive imbalance (i.e., scheduled receipts exceed deliveries), the customer will be assessed a balancing charge, set forth herein, on the imbalance exceeding 4%. If such imbalance is not eliminated by the end of the next monthly billing period, (1) the Company may adjust the volume of gas received on behalf of the customer so as to eliminate the prior period over nomination exceeding 4% up to 10% and (2) the Company shall retain the over nomination of gas exceeding 10% free and clear of any adverse claims relating thereto when such accumulated difference exceeds 50 dk. The accumulated difference between the actual gas deliveries to the customer and nominated (scheduled) receipts on behalf of such customer will be adjusted for the volume retained.

b. In the event customer's imbalance causes the Company to incur a balancing penalty from its interconnecting pipeline(s), customer shall pay any penalty payments or overrun charges the Company is required to make under the terms of its contract(s) with interconnecting pipeline(s) resulting from such action by customer. In the event that more than one customer is obtaining gas from the same shipper and/or agent at the same interconnection with a delivering pipeline, any payment or overrun penalties the Company is required to make shall be apportioned among such customers on the basis of each customer's contribution toward the imbalance.

c. Customer's nomination made to clear imbalances will be subject to the priority of service and allocation of capacity provisions set forth in Rate 100, §V.10 and the penalties for failure to curtail or interrupt use of gas

set forth in Paragraph 5 of this rate schedule.

d. Termination of the gas transportation service shall not relieve Company and customer of the obligation to correct any quantity imbalances hereunder or customer of the obligation to pay money due hereunder to Company.

e. The Company may waive any penalty associated with Company adjustments to end-use customer nominations in those instances where the Company, due to operating limitations, is required to adjust end-use transportation customer nominations and such Company adjustments create a penalty situation, or preclude a customer from correcting an imbalance which results in a penalty.

9. NOMINATION VARIANCE CHARGE – The customer shall pay any payments the Company must make to its interconnecting pipeline(s), as a result of nomination variance penalties caused by customer's nomination variances. Such penalties will be allocated on the basis of each customer's contribution toward the nomination variance.

10. METERING REQUIREMENTS:

a. Remote data acquisition ~~Electronic measurement~~ equipment required by the Company for daily measurement will be purchased and installed by the Company prior to the initiation of service hereunder. The cost of the equipment and its installation shall be paid for by the customer. Such contribution in aid, as adjusted for federal and state income taxes, must be paid prior to the installation of such equipment unless otherwise agreed to by the Company. Such equipment will be maintained by the Company and will remain the sole property of the Company. Company may remove such equipment when service hereunder is terminated. | T

b. The customer shall provide and maintain, at no cost to Company, a 120 volt, 15 ampere, AC power supply or other power source acceptable to the Company and acceptable ~~a~~ telephone service available ~~tie to customer's telephone system accessible~~ at customer's meter location(s). Customer agrees to provide and maintain, at no cost to the Company, any necessary telephone enhancements to assure Company of a quality | T

telephone signal necessary to properly transmit data. The customer shall pay all charges for continuous electric and telephone service associated with the Company's connection of the electronic measurement equipment, and any interruption in such services must be promptly remedied or service under this tariff will be suspended until satisfactory corrections have been made.

c. The Company reserves the right to charge for each service call to investigate, repair and/or reprogram the Company's remote data acquisition equipment when the service call is the result of a failure or change in communication or power source provided by customer or damage to Company's equipment. C C

11. DAILY NOMINATION REQUIREMENTS:
    a. Customer or customer's shipper or agent shall advise Company's gas nominations center, by 11:30 a.m. Central Clock Time, of the dk requirements customer has requested to be delivered at each delivery point the following day. Customer's daily nomination shall be its best estimate of the expected utilization for the gas day. Unless other arrangements are made, customer will be required to nominate for the non-business days involved prior to weekends and holidays.

    b. All nominations should include shipper and/or agent defined begin and end dates. Shippers and/or agents may nominate for periods longer than 1 day, provided the nomination begin and end dates are within the term of the service agreement.

    c. The Company has the sole right to refuse receipt of any volumes which exceed the maximum daily contract quantity and at no time shall the Company be required to accept quantities of gas for a customer in excess of the quantities of gas to be delivered to customer. If total nominated receipts exceed total deliveries at receipt points where more than one customer is receiving service, nominations will be allocated on a pro rata basis.

d. At no time shall Company have the responsibility to deliver gas in excess of customer's nomination.

e. In the event that more than one customer is receiving gas from the same shipper and/or agent at the same receipt point, any reduction in nominated volumes will be allocated on a pro rata basis, unless Company and shipper(s) and/or agent(s) have agreed to a predetermined allocation procedure. | T | T

12. WARRANTY – The customer, customer's agent, or customer's shipper warrants that it will have title to all gas it tenders or causes to be tendered to the Company, and such gas shall be free and clear of all liens and adverse claims and the customer, customer's agent, or customer's shipper shall indemnify the Company against all damages, costs, and expenses of any nature whatsoever arising from every claim against said gas.

13. FACILITY EXTENSIONS - If facilities are required in order to furnish gas transportation service, and those facilities are in addition to the facilities required to furnish firm gas service, the customer shall pay for those additional facilities and their installation in accordance with the Company's applicable natural gas extension policy. Company may remove such facilities when service hereunder is terminated.

14. PAYMENT – Billed amounts will be considered past due if not paid by the due date shown on the bill. Past due bills are subject to a late payment charge in accordance with the provisions of Rate 100, §V.11, or any amendments or alterations thereto.

15. BILLING ERROR – In the event an error is discovered in any bill that the Company renders to customer, such error shall be adjusted within a period not to exceed 6 months from the date the billing error is first discovered.

16. AGREEMENT – Upon request of the Company, customer may be required to enter into an agreement for service hereunder.

LARGE INTERRUPTIBLE GENERAL GAS SERVICE Rate 85

Availability:

In all communities served for all interruptible general gas service customers whose interruptible natural gas load will ~~exceed an input rate of 2,500,000 Btu per hour, metered at a single delivery point and whose use of natural gas will~~ exceed 100,000 dk annually as metered at a single delivery point. The rates herein are applicable only to customer's interruptible load. Customer's firm natural gas requirements must be separately metered or specified in a firm service agreement. Customer's firm load shall be billed at Firm General Gas Service Rate 70. For interruption purposes, the maximum daily firm requirement shall be set forth in the firm service agreement. T

This rate schedule shall not apply for service to U.S. Government installations, which are covered by separate special contracts.

The Company reserves the right to refuse the initiation of service under this rate schedule based on the availability of gas supply.

Rate: C

Basic Service Charge	$675.00 per month	
Distribution Delivery Charge	Maximum $1.003 per dk	Minimum $.298 per dk
Cost of Gas	Determined Monthly- See Rate Summary Sheet for Current Rate	

~~(Zones 1 and 2)~~

~~Base Rate: $450.00 per month~~

~~Commodity Charge:~~

~~Maximum Rate $3.290 per dk~~
~~Minimum Rate $2.869 per dk~~

~~The commodity charge shall be set forth in the service agreement required as provided in the General Terms and Conditions for service. Such rate, as adjusted to reflect changes in the cost of Purchased Gas Adjustment, shall apply for the term of the agreement regardless of a change in the rates set forth above.~~ C

Payment:

Billed amounts will be considered past due if not paid by the due date shown on the bill. Past due bills are subject to a late payment charge in accordance with the provisions of Rate 100, §V.11, or any amendments or alterations thereto.

Cost of Purchased Gas ~~Adjustment~~:

The cost of gas includes all applicable cost of gas items as defined in the Purchased Gas Cost Adjustment Rate 88 or any amendments or alterations thereto. The cost of gas component is subject to change on a monthly basis.~~Bills are subject to an adjustment for cost of purchased gas as provided in Rate 88 or any amendments or alterations thereto.~~ | T | T

General Terms and Conditions:

1. PRIORITY OF SERVICE – Deliveries of gas under this schedule shall be subject at all times to the prior demands of customers served on the Company's firm general gas service rates, and the Company shall have the right to interrupt deliveries to customers under this schedule without being required to give previous notice of intention to so interrupt whenever, in Company's sole judgment, it may be necessary to do so to protect the interest of its customers whose capacity requirements are otherwise and hereby given preference. The priority of service and allocation of capacity shall be accomplished in accordance with the provisions of Rate 100, §V.10.

2. PENALTY FOR FAILURE TO CURTAIL OR INTERRUPT – If customer fails to curtain or interrupt their use of gas hereunder when requested to do so by the Company, any gas taken shall be billed at the ~~tail block of the applicable~~ Firm General Gas Service Rate 70 (distribution delivery charge and cost of gas)~~ commodity charge rate~~, plus either an amount equal to any penalty payments or overrun charges the Company is required to make to its interconnecting pipeline(s) under the terms of its contract(s) as a result of such failure to curtail or interrupt, or $50.00~~10.00~~ per dk of gas used in excess of the volume of gas to which customer was requested to curtail or | T | C

interrupt, whichever amount is greater. The Company, in its discretion, may shut off customer's supply of gas in the event of customer's failure to curtail or interrupt use of gas when requested to do so by the Company.

3. AGREEMENT – Customer will be required to enter into an agreement for service hereunder for a minimum term of 12 months. Written notice of termination by either Company or customer must be given at least 90 days prior to the end of the initial term. Absent execution of such termination notice, the agreement shall continue for additional terms of equal length until written notice is given as provided herein, prior to the end of any subsequent term. Upon expiration of service, the customer may apply for and receive, at the sole discretion of the Company, gas service under this rate or another appropriate rate schedule for the customer's operations.

4. OBLIGATION TO NOTIFY COMPANY OF CHANGE IN DAILY OPERATIONS - Customer will be required as specified in the service agreement to notify Company of an anticipated change in daily operations. Failure to comply with requirements specified in the service agreement may result in the assessment of penalties to the customer equal to the penalty amounts Company must pay to the interconnecting pipeline caused by customer's action.

5. METERING REQUIREMENTS –Remote data acquisition ~~Electronic measurement~~ equipment required for daily measurement will be installed by the Company, at its sole discretion, prior to the initiation of service hereunder. T

   The customer shall be required to provide and maintain, at no cost to Company, a 120 volt, 15 ampere, AC power supply, or other power source acceptable to the Company, and acceptable~~a~~ telephone service available~~tie to customer's telephone system accessible~~ at customer's meter location(s). Gas Rate Schedule

NDPSC Volume 6
4th Revised Sheet No. 30

PURCHASED GAS COST ADJUSTMENT Rate 88

1. **Applicability:**
This rate schedule constitutes a purchased gas cost adjustment (PGA) provision and specifies the procedure to be utilized to adjust the rates for gas sold under Montana-Dakota's rate schedules in order to reflect: (a) changes in Montana-Dakota's average cost of gas supply, (b) amortization of the Unrecovered Purchased Gas Cost Account and (c) market based pricing differential.

2. **Effective Date and Limitation on Adjustments:**
(a) The effective dates of the PGA shall be bills rendered on and after the first date of each month, unless the Commission shall otherwise order.

(b) Montana-Dakota shall file a PGA~~an adjustment~~ to reflect changes in its average cost of gas supply only when the amount of change in such PGA~~adjustment~~ is at least 10 (ten) cents per dk. The adjustment to be effective May 1 shall be filed each year, regardless of the amount of the change. | T

3. **Purchased Gas Cost: ~~Adjustment:~~** | T
(a) The monthly PGA shall reflect changes in Montana-Dakota's cost of gas supply as compared to the cost of gas supply approved in its most recent PGA ~~general rate case~~. The cost of gas supply shall be the sum of all costs incurred in obtaining gas for general system supply. General system supply is defined as gas available for use by all customers served under retail sales rate schedules. The cost of gas supply shall include, but not be limited to, all demand, commodity, storage, gathering, and transportation charges incurred by Montana-Dakota for such gas supply, the overall rate of return on prepaid demand and commodity charges and gas storage balances required to maintain the system gas supply and hedging program gains, losses and transaction costs related to system gas supply. ~~Authority for inclusion of hedging program gains, losses and transaction costs expires on March 1, 1999 unless otherwise ordered by the Commission. Montana-Dakota shall submit, with each filing under this tariff, a complete report of hedging program activity.~~ | T | D | D

Gas Rate Schedule

PURCHASED GAS COST ADJUSTMENT Rate 88

3. Purchased Gas Cost Adjustment (Cont.):
   (b) The PGA shall be computed as follows:

   (1) Demand costs shall include all annual gathering, transportation and storage demand charges at current rates.

   (2) Commodity costs shall include all annual gathering, transportation and storage charges at current rates.

   (3) The gas commodity cost shall reflect all commodity related gas costs estimated to be in effect for the month the PGA will be in effect and annual dk requirements.

   (4) The return on prepaid demand and commodity balances and storage balances shall be computed on an annual basis at the overall rate of return on rate base.

   The cost per dk for the month is the sum of the above divided by annual, weather normalized dk deliveries adjusted to reflect losses.

   (c) Monthly gas costs shall be calculated as follows:

   (1) Demand costs for firm customers shall be apportioned to all state jurisdictions served by Montana-Dakota on the basis of the overall ratio of each state's Maximum Daily Delivery Quantity (MDDQ).

   (2) Demand costs for interruptible sales customers shall be stated on a 100% load factor basis.

   (3) All commodity costs and other costs associated with the acquisition of gas for general system supply shall be apportioned to each state on the basis of total dks sold in each state, regardless of the actual points of delivery of such gas.

Montana-Dakota Utilities Co.
A Division of MDU Resources Group, Inc.
400 N 4th Street
Bismarck, ND 58501

State of North Dakota
Gas Rate Schedule

PURCHASED GAS COST ADJUSTMENT Rate 88

3. Purchased Gas Cost Adjustment (Cont.)
   (4) The return requirement related to prepaid demand and commodity charges and gas storage balances shall be included on a per dk basis. The prepaid demand and storage balances shall be apportioned to all states on the basis of each state's MDDQ. The prepaid commodity charges shall be apportioned to all states on the basis of annual dks sold in each state. The unit cost shall be calculated using a thirteen-month average balance and the currently authorized return on rate base.

   (5) All costs related to specific end-use transactions shall not be included in the cost of gas supply determination but shall be directly billed to the customer(s) contracting for such service.

   (d) The PGA shall be applied to each of Montana-Dakota's rate schedules recognizing differences among customer classes consistent with the cost of gas supply included in the applicable class sales rate.

4. **Surcharge Adjustment:**
   (a) All sales rate schedules shall be subject to a Surcharge Adjustment to be effective on May 1 of each year. The Surcharge Adjustment per dk sold shall reflect amortization of the applicable balance in the Unrecovered Purchased Gas Cost Account calculated by dividing the applicable balance by the estimated dk sales for the twelve months following the effective date of the adjustment.

5. **Unrecovered Purchased Gas Account:**
   (a) Items to be included in the Unrecovered Purchased Gas Cost Account, as calculated in accordance with Subsection 5(b) are:

   (1) Charges for gas supply which Montana-Dakota is unable to reflect in a Purchased Gas Cost Adjustment by reason of the tenone ~~tenth of one~~-cent minimum limitation set forth in Subsection 2(b). | T

   (2) Amounts of increased/decreased charges for gas supplies, which were paid during any period after the effective date of the most recent general rate case, but not yet included in sales rates.

Montana-Dakota Utilities Co.
A Division of MDU Resources Group, Inc.
400 N 4th Street
Bismarck, ND 58501

State of North Dakota
Gas Rate Schedule

5. Unrecovered Purchased Gas Cost Account (Cont.):
   (3) Refunds received from supplier(s) with respect to gas supply. Such refunds received shall be credited to the Unrecovered Purchased Gas Cost Account.

   (4) Carrying charges or credits at a rate equal to the three-month Treasury Bill rate as published monthly by the Federal Reserve Board.

   (5) Demand costs recovered from the interruptible sales customers will be credited to the residential and firm general service customers.

   (b)

   (1) The amount to be included in the Unrecovered Purchased Gas Cost Account in order to reflect the items specified in Subsections 5(a)(1), (2), and (3) shall be calculated as follows:

      (i) Montana-Dakota shall first determine each month the unit cost for that month's natural gas supply as adjusted to levelize demand charges.

      Such adjustment to levelize supplier(s) demand charges shall be calculated as follows:

      The supplier's annual (calendar or fiscal) demand charges, which are payable in equal monthly payments shall be accumulated in a prepaid account (FERC Account 165). Each month a portion of such accumulated prepaid amount shall be amortized to cost of natural gas purchased (FERC Account 804). Such monthly amortization shall be based on a rate calculated by dividing the annual supplier(s) demand charges by projected annual natural gas sales units (calendar or fiscal, as appropriate). The resulting product shall then be multiplied by the projected natural gas unit sales for the current month. Such amount shall constitute the monthly amortization of prepaid supplier(s) demand charges to cost of natural gas supply.

Bismarck, ND 58501

State of North Dakota
Gas Rate Schedule

PURCHASED GAS COST ADJUSTMENT Rate 88

5. Unrecovered Purchased Gas Cost Account (Cont.):

(1)

(ii) Montana-Dakota shall then subtract from each month's unit cost, the unit cost for gas supply which is reflected in the currently effective PGA. ~~(the cost of gas supply approved in the most recent rate case plus the Purchased Gas Cost Adjustment as calculated in Subsection 3(a).~~ T

(iii) The resulting difference (which may be positive or negative) shall be multiplied by the dks sold during that month under each rate schedule. The resulting amounts shall be reflected in an Unrecovered Purchased Gas Cost Account for each rate schedule.

(2) Montana-Dakota will calculate carrying charges on the amounts in the Unrecovered Purchased Gas Cost Account, Account 191, at a rate equal to the three-month Treasury Bill rate as published monthly by the Federal Reserve Board. The amount to be included in Account 191 for carrying charges shall be determined as follows:

Each month, Account 191 shall be debited (if the balance in said account is a debit balance) and shall be credited (if the balance in said account is a credit balance) for a carrying charge; which shall be the product of (i) and (ii) below:

(i) The balance in Account 191 as of the end of the immediately preceding month, exclusive of carrying charges accrued pursuant to this Subsection (b)(2) and net of the related deferred tax amounts in Accounts 283 or 190, as appropriate.

(ii) One-twelfth of the annual interest rate as set forth in this Subsection (b)(2). The carrying charges shall be accrued in a supplementary Unrecovered Purchased Gas Cost Account for each rate schedule, and carrying charges shall not be computed on the amounts in such supplementary account.

Gas Rate Schedule

PURCHASED GAS COST ADJUSTMENT Rate 88

5. Unrecovered Purchased Gas Cost Account (Cont.):
   (b) Reduction of Amounts in the Unrecovered Purchased Gas Cost Account:

   (1) The amounts in the Unrecovered Purchased Gas Cost Account shall be decreased each month by an amount determined by multiplying the currently effective surcharge adjustment included in rates for that month (as calculated in Section 4) by the dks sold during that month under each rate schedule. The account shall be increased in the event the adjustment is a negative amount.

   (2) The amount amortized each month shall be applied pro rata between the amounts in the Unrecovered Purchased Gas Cost Account specified in Subsections 5(a)(1), (2), (3) and (5) and the amounts in the supplementary Unrecovered Purchased Gas Cost Account specified in Subsection 5(a)(4).

6. **Market-Based Pricing Differential:**
   (a) At the time of each surcharge adjustment, the Company will compute a credit to residential and firm general service rates based on 50% of all distribution delivery charge ~~non-gas commodity~~ revenues received from small interruptible sales and large interruptible sales customers in excess of the authorized minimum distribution delivery charge ~~non-gas commodity~~ rate approved in the most recent general rate case. | T | T

   (b) The unit adjustment shall be determined by dividing the balance resulting under Subsection 6(a) by the residential and firm general service sales volumes estimated to be sold during the 12 months following the effective date of each adjustment.

7. **Time and Manner of Filing:**
   (a) Montana-Dakota shall file each PGA~~adjustment~~ at least 20 days prior to the proposed effective date. Each filing by Montana-Dakota shall be made by means of revised PGA sheets identifying the amounts of the adjustments and the resulting currently effective PGA rates. | T

   (b) Each filing shall be accompanied by detailed computations, which clearly show the derivation of the relevant amounts, a concise statement of the reasons for any change and copies of any relevant pipeline tariff sheets supporting costs claimed.

Gas Rate Schedule

NDPSC Volume 6
50th Revised Sheet No. 41

PURCHASED PROPANE COST ADJUSTMENT Rate 99

1. **Availability:**
This rate schedule constitutes a purchased propane cost adjustment (PCA) provision and specifies the procedure to be utilized to adjust the rates for propane gas sold under Montana-Dakota's rate schedules in order to reflect: (a) changes in Montana-Dakota's average cost of propane supply and (b) amortization of the Unrecovered Purchased Propane Cost Account.

2. **Effective Date and Limitation on Adjustments:**
(a) The effective dates of the PCA shall be bills rendered on and after the first day of each month, unless the Commission shall otherwise order.

(b) Montana-Dakota shall file a PCA ~~an adjustment~~ to reflect changes in its average cost of propane supply only when the amount of such change in PCA~~adjustment~~ is at least 10 (ten) cents per dk. The adjustment to be effective May 1 shall be filed each year, regardless of the amount of the change. | T

3. **Purchased Propane Cost ~~Adjustment~~:** | T
(a) The monthly PCA shall reflect changes in Montana-Dakota's cost of propane supply as compared to the cost of propane supply approved in its most recent PCA ~~retail sales rates~~. The cost of propane supply shall include, but not be limited to, all commodity and transportation charges incurred by Montana-Dakota for such propane supply. | T

(b) The propane commodity cost shall reflect all commodity related propane costs estimated to be incurred for the month the PCA will be in effect and estimated dk purchases.

The unit cost per dk for the month shall be the commodity costs divided by estimated dk purchases for the month.

4. **Surcharge Adjustment:**
All propane sales schedules shall be subject to a Surcharge Adjustment to be effective on May 1 each year. The Surcharge Adjustment per dk sold shall reflect amortization of the applicable balance in the Unrecovered Purchased Propane Cost Account calculated by dividing the applicable balance by the estimated dk sales for the twelve months following the effective date of the adjustment.

Gas Rate Schedule

PURCHASED PROPANE COST ADJUSTMENT Rate 99

5. Unrecovered Purchased Propane Cost Account:

(a) Items to be included in the Unrecovered Purchased Propane Cost Account, as calculated in accordance with Subsection 5(b) are:

(1) Charges for propane supply which Montana-Dakota is unable to reflect in a Purchased Propane Cost Adjustment by reason of the ten cent minimum limitation set forth in Subsection 2(b).

(2) Amounts of increased/decreased charges for propane supplies that were paid during any period after the effective date of the most recent approved rates, but not yet included in propane sales rates.

(3) Carrying charges or credits.

(b)

(1) The amount to be included in the Unrecovered Purchased Propane Cost Account in order to reflect the items specified in Subsections 5(a)(1) and (2) shall be calculated as follows:

(i) Montana-Dakota shall first determine each month the unit cost for that month's propane supply.

(ii) Montana-Dakota shall then subtract from each month's unit cost, the unit cost for propane supply, which is reflected in the currently effective PCA.

(iii) The resulting difference (which may be positive or negative) shall be multiplied by the dks sold during that month under each propane rate schedule. The resulting amounts shall be reflected in an Unrecovered Purchased Propane Cost Account for each rate schedule.

(2) Montana-Dakota will calculate carrying charges on the amounts in the Unrecovered Purchased Propane Cost Account, Account 191, as follows:

Each month, Account 191 shall be debited (on a debit balance) or credited (on a credit balance) for a carrying charge, which shall be the product of (i) and (ii) below:

(i) The balance on Account 191 as of the end of the immediately preceding month, exclusive of carrying charges accrued pursuant to this Subsection (b)(2) and net of the related deferred tax amounts in Accounts 283 or 190, as appropriate.

(ii) One-twelfth of the three-month Treasury Bill rate as published monthly by the Federal Reserve Board. The carrying charges shall be accrued in a supplementary Unrecovered Purchased Propane Cost Account for each rate schedule, and carrying charges shall not be computed on the amounts in such supplementary account.

(c) Reduction of Amounts in the Unrecovered Purchased Propane Cost Account:

(1) The amounts in the Unrecovered Purchased Propane Cost Account shall be decreased each month by an amount determined by multiplying the currently effective surcharge adjustment included in rates for that month (as calculated in Section 4) by the dks sold during that month under each rate schedule. The account shall be increased in the event the adjustment is a negative amount.

(2) The amount amortized each month shall be applied pro rata between the amounts in the Unrecovered Purchased Propane Cost Account specified in Subsections 5(a)(1) and (2) and the amounts in the supplementary Unrecovered Purchased Propane Cost Account specified in Subsection 5(b)(2)(ii).

6. Time and Manner of Filing:

(a) Montana-Dakota shall file each PCA~~adjustment~~ at least 10 days prior to the proposed effective date. Each filing by Montana-Dakota shall be made by means of revised PCA sheets identifying the amounts of the adjustments and the resulting currently effective PCA rates. | T

(b) Each filing shall be accompanied by detailed computations, which clearly show the derivation of the relevant amounts, a concise statement of the reasons for any change and copies of any relevant material supporting costs claimed.

State of North Dakota
Gas Rate Schedule

I. **PURPOSE:**

These rules are intended to define good practice which can normally be expected, but are not intended to exclude other accepted standards and practices not covered herein. They are intended to ensure adequate service to the public and protect the Company from unreasonable demands.

The Company undertakes to furnish service subject to the rules and regulations of the Public Service Commission of North Dakota and as supplemented by these general provisions, as now in effect or as may hereafter be lawfully established, and in accepting service from the Company, each customer agrees to comply with and be bound by said rules and regulations and the applicable rate schedules.

II. **DEFINITIONS:**

The following terms used in this tariff shall have the following meanings, unless otherwise indicated:

AGENT – The party authorized by the transportation service customer to act on that customer's behalf. | T

APPLICANT – A customer requesting Company to provide service.

COMMISSION – Public Service Commission of the State of North Dakota.

COMPANY – Montana-Dakota Utilities Co.

COMPANY'S OPERATING CONVENIENCE – The utilization, under certain circumstances, of facilities or practices not ordinarily employed which contribute to the overall efficiency of Company's operations. This does not refer to the customer's convenience nor to the use of facilities or adoption of practices required to comply with applicable laws, ordinances, rules or regulations, or similar requirements of public authorities.

CURTAILMENT – A reduction of transportation or retail natural gas service deemed necessary by the Company. Also includes any reduction of transportation natural gas service deemed necessary by the pipeline.

Montana-Dakota Utilities Co.
A Division of MDU Resources Group, Inc.
400 N 4th Street
Bismarck, ND 58501

State of North Dakota
Gas Rate Schedule

CUSTOMER – Any individual, partnership, corporation, firm, other organization or government agency supplied with service by Company at one location and at one point of delivery unless otherwise expressly in these rules or in a rate schedule.

DELIVERY POINT – The point at which customer assumes custody of the gas being transported. This point will normally be at the outlet of Company's meter(s) located on customer's premises.

GAS DAY – Means a period of twenty-four consecutive hours, beginning and ending at 9:00 a.m. Central Clock Time.

INTERRUPTION – A cessation of transportation or retail natural gas service deemed necessary by Company.

NOMINATION – The daily dk volume of natural gas requested by customer for transportation and delivery to customer at the delivery point during a gas day.

PIPELINE – The transmission company(s) delivering natural gas into company's system.

RATE – Shall mean and include every compensation, charge, fare, toll, rental and classification, or any of them, demanded, observed, charged or collected by the Company for any service, product, or commodity, offered by the Company to the public, and any rules, regulations, practices or contracts affecting any such compensation, charge, fare, toll, rental or classification.

RECEIPT POINT – The intertie between Company and the interconnecting pipeline(s) at which point Company assumes custody of the gas being transported.

SHIPPER – The party with whom the Pipeline has entered into a service agreement for transportation services.

III. **CUSTOMER OBLIGATION:**

1. APPLICATION FOR SERVICE – A customer desiring gas service must make application to the Company before commencing the use of the Company's service. The Company reserves the right to require a signed application or written contract for service to be furnished. All applications and contracts for service must be made in the legal name of the customer desiring the service. The Company may refuse a customer or terminate service to a customer who fails or refuses to furnish reasonable information requested by the Company for the establishment of a service account. Any customer who uses gas service in the absence of application or contract shall be subject to the Company's rates, rules, and regulations and shall be responsible for payment of all service used.

   Subject to rates, rules, and regulations, the Company will continue to supply gas service until notified by customer to discontinue the service. The customer will be responsible for payment of all service furnished through the date of discontinuance.

   Any customer may be required to make a deposit as required.

2. INPUT RATING – All new customers whose consumption of gas for any purpose will exceed an input of 2,500,000 Btu per hour, metered at a single delivery point, shall consult with the Company and furnish details of estimated hourly input rates for all gas utilization equipment. Where system design capacity permits, such customers may be served on a firm basis. Where system design capacity is limited, and at Company's sole discretion, Company will serve all such new customers on an interruptible basis only. Architects, contractors, heating engineers and installers, and all others should consult with the Company before proceeding to design, erect or redesign such installations for the use of natural gas. This will ensure that such equipment will conform to the Company's ability to adequately serve such installations with gas.

3. ACCESS TO CUSTOMER'S PREMISES – Company representatives, when properly identified, shall have access to customer's premises at all

reasonable times for the purpose of reading meters, making repairs, making inspections, removing the Company's property, or for any other purpose incidental to the service.

4. COMPANY PROPERTY – The customers shall exercise reasonable diligence in protecting the Company's property on their premises, and shall be liable to the Company in case of loss or damage caused by their negligence or that of their employees.

5. INTERFERENCE WITH COMPANY PROPERTY – The customer shall not disconnect, change connections, make connections or otherwise interfere with Company's meters or other property or permit same to be done by other than the Company's authorized employees.

6. RELOCATED LINES - Where Company facilities are located on a public or private utility easement and there is a building encroachment(s), over gas facilities (Company-owned main, Company-owned service line or customer-owned service line) the customer shall be charged for line relocation on the basis of actual costs incurred by the Company including any required easements. N N

7. NOTIFICATION OF LEAKS – The customer shall immediately notify the Company at its office of any escape of gas in or about the customer's premises.

8. TERMINATION OF SERVICE – All customers are required to notify the Company, to prevent their liability for service used by succeeding tenants, when vacating their premises. Upon receipt of such notice, the Company will read the meter and further liability for service used on the part of the vacating customer will cease.

9. REPORTING REQUIREMENTS – Customer shall furnish Company all information as may be required or appropriate to comply with reporting requirements of duly constituted authorities having jurisdiction over the matter herein.

Montana-Dakota Utilities Co.
A Division of MDU Resources Group, Inc.
400 N 4th Street
Bismarck, ND 58501

State of North Dakota
Gas Rate Schedule

IV. **LIABILITY**

1. CONTINUITY OF SERVICE – The Company will use all reasonable care to provide continuous service but does not assume responsibility for a regular and uninterrupted supply of gas service and will not be liable for any loss, injury, death, or damage resulting from the use of service, or arising from or caused by the interruption or curtailment of the same.

2. CUSTOMER'S EQUIPMENT – Neither by inspection or non-rejection, nor in any other way does the Company give any warranty, express or implied, as to the adequacy, safety or other characteristics of any structures, equipment, lines, appliances or devices owned, installed or maintained by the customer or leased by the customer from third parties.

3. COMPANY EQUIPMENT AND USE OF SERVICE – The Company will not be liable for any loss, injury, death or damage resulting in any way from the supply or use of gas or from the presence or operation of the Company's structures, equipment, lines, appliances or devices on the customer's premises, except loss, injuries, death, or damages resulting from the negligence of the Company.

4. INDEMNIFICATION – Customer agrees to indemnify and hold Company harmless from any and all injury, death, loss or damage resulting from customer's negligent or wrongful acts under and during the term of service. Company agrees to indemnify and hold customer harmless from any and all injury, death, loss or damage resulting from Company's negligent or wrongful acts under and during the term of service.

5. FORCE MAJEURE – In the event of either party being rendered wholly or in part by force majeure unable to carry out its obligations, then the obligations of the parties hereto, so far as they are affected by such force majeure, shall be suspended during the continuance of any inability so caused. Such causes or contingencies affecting the performance by either party, however, shall not relieve it of liability in the event of its concurring negligence or in the event of its failure to use due diligence to remedy the situation and remove the cause in an adequate manner and with all reasonable dispatch, nor shall such causes or contingencies affecting the performance relieve either party from its obligations to make payments of amounts then due hereunder, nor

shall such causes or contingencies relieve either party of liability unless such party shall give notice and full particulars of the same in writing or by telephone to the other party as soon as possible after the occurrence relied on. If volumes of customer's gas are destroyed while in Company's possession by an event of force majeure, the obligations of the parties shall terminate with respect to the volumes lost.

The term "force majeure" as employed herein shall include, but shall not be limited to, acts of God, strikes, lockouts or other industrial disturbances, failure to perform by any third party, which performance is necessary to the performance by either customer or Company, acts of the public enemy or terrorists, wars, blockades, insurrections, riots, epidemics, landslides, lightning, earthquakes, fires, storms, floods, washouts, arrest and restraint of rulers and peoples, civil disturbances, explosions, breakage or accident to machinery or lines of pipe, line freeze-ups, sudden partial or sudden entire failure of gas supply, failure to obtain materials and supplies due to governmental regulations, and causes of like or similar kind, whether herein enumerated or not, and not within the control of the party claiming suspension, and which by the exercise of due diligence such party is unable to overcome; provided that the exercise of due diligence shall not require settlement of labor disputes against the better judgment of the party having the dispute.

The term "force majeure" as employed herein shall also include, but shall not be limited to, inability to obtain or acquire, at reasonable cost, grants, servitudes, rights-of-way, permits, licenses, or any other authorization from third parties or agencies (private or governmental) or inability to obtain or acquire at reasonable cost necessary materials or supplies to construct, maintain, and operate any facilities required for the performance of any obligations under this agreement, when any such inability directly or indirectly contributes to or results in either party's inability to perform its obligations.

V. **GENERAL TERMS AND CONDITIONS:**

1. AGREEMENT – Upon request of the Company, customer may be required to enter into an agreement for any service.

2. RATE OPTIONS – Where more than one rate schedule is available for the same class of service, the Company will assist the customer in selecting the

2. RATE OPTIONS: (Cont.)
applicable rate schedule(s). The Company is not required to change a customer from one rate schedule to another more often than once in twelve months unless there is a material change in the customer's load which alters the availability and/or applicability of such rate(s), or unless a change becomes necessary as a result of an order issued by the Commission or a court having jurisdiction. The Company will not be required to make any change in a fixed term contract except as provided therein.

3. RULES FOR APPLICATION OF GAS SERVICE:
(a) Residential gas service is available to any residential customer for domestic purposes only. Residential gas service is defined as service for general domestic household purposes in space occupied as living quarters, designed for occupancy by one family. Typical service would include the following: separately metered units, such as single private residences, single apartments, mobile homes and sorority and fraternity houses (this is not an all-inclusive list). In addition, auxiliary buildings on the same premise as the living quarters, used for residential purposes, may be served on the residential rate.

(b) Nonresidential service is defined as service provided to a business enterprise in space occupied and operated for nonresidential purposes. Typical service would include stores, offices, shops, restaurants, boarding houses, hotels, service garages, wholesale houses, filling stations, barber shops, beauty parlors, master metered apartment houses, common areas of shopping malls or apartments (such as halls or basements), churches, elevators, schools and facilities located away from the home site (this is not an all-inclusive list).

(c) The definitions above are based upon the supply of service to an entire premise through a single delivery and metering point. Separate supply for the same customer at other points of consumption may be separately metered and billed.

(d) If separate metering is not practical for a single unit (one premise) that is using gas for both domestic purposes and for conducting business (or for nonresidential purposes as defined herein), the customer will be billed

under the predominate use policy. Under this policy, the customer's combined service is billed under the rate (Residential or Nonresidential) applicable to the type of service which constitutes 50% or more of the customer's total connected load.

e. Other classes of service furnished by the Company shall be defined in applicable rate schedules or in rules and regulations pertaining thereto. Service to customers for which no specific rate schedule is applicable shall be billed on the Nonresidential rates.

4. DISPATCHING – Transportation customers will adhere to gas dispatching policies and procedures established by Company to facilitate transportation service. Company will inform customer of any changes in dispatching policies that may affect transportation services as they occur.

5. RULES COVERING GAS SERVICE TO MANUFACTURED HOMES – The rules and regulation for providing gas service to manufactured homes are in accordance with the Code of Federal Regulations (24CFR Part 3280 – Manufactured Homes Construction and Safety Standards) Subpart G and H which pertain to gas piping and appliance installation. In addition to the above rules, the Company also follows the regulations set forth in the NFPA 501A, Fire Safety Criteria for Manufactured Home Installations, Sites, and Communities. ~~Contact your local Montana-Dakota Utilities Co. office for this information.~~ D

6. CONSUMER DEPOSITS – The Company will determine whether or not a deposit shall be required of an applicant for gas service in accordance with Commission rules.

   (a) The amount of such deposit shall not exceed one and one-half times the estimated amount of one month's average bill.

   (b) The Company may accept in lieu of a cash deposit a contract signed by a guarantor, satisfactory to the Company, whereby the payment of a specified sum not to exceed the required cash deposit is guaranteed. The term of such contract shall be indeterminate, but it shall automatically terminate when the customer gives notice of service discontinuance to

the Company or a change in location covered by the guarantee agreement of thirty days after written request for termination is made to the utility by the guarantor. However, no agreement shall be terminated without the customer having made satisfactory settlement for any balance, which the customer owes the Company. Upon termination of a guarantee contract, a new contract or a cash deposit may be required by the Company.

A deposit shall earn interest at the rate paid by the Bank of North Dakota on a six-month certificate of deposit as of the first business day of each year. Interest shall be credited to the customer's account annually during the month of December.

Deposits with interest shall be refunded to customers at termination of service provided all billings for service have been paid. Deposits with interest will be refunded to all active customers, after the deposit has been held for twelve months, provided prompt payment record has been established.

7. METERING AND MEASUREMENT:
   (a) Company will meter the volume of natural gas delivered to customer at the delivery point. Such meter measurement will be conclusive upon both parties unless such meter is found to be inaccurate, in which case the quantity supplied to customer shall be determined by as correct an estimate as it is possible to make, taking into consideration the time of year, the schedule of customer's operations and other pertinent facts. Company will test meters in accordance with applicable state utility rules and regulations.

   (b) Transportation customers agree to provide the cost of the installation of electronic measurement equipment to Company before transportation service is implemented.

8. MEASUREMENT UNIT FOR BILLING PURPOSES – The measurement unit for billing purposes shall be one (1) decatherm (dk), unless otherwise specified. Billing will be calculated to the nearest one-tenth (1/10) dk. One dk equals 10 therms or 1,000,000 Btu's. Dk's shall be calculated by the

application of a thermal factor to the volumes metered. This thermal factor consists of:

(a) An altitude adjustment factor used to convert metered volumes at local sales base pressure to a standard pressure base of 14.73 psia, and

(b) A Btu adjustment factor used to reflect the heating value of the gas delivered.

9. UNIT OF VOLUME FOR MEASUREMENT – The unit of volume for purpose of measurement shall be one (1) cubic foot of gas at either local sales base pressure or 14.73 psia, as appropriate, and at a temperature base of sixty degrees Fahrenheit (60°F). All measurement of natural gas by orifice meter shall be reduced to this standard by computation methods, in accordance with procedures contained in ANSI-API Standard 2530, First Edition, as amended. Where natural gas is measured with positive displacement or turbine meters, correction to local sales base pressure shall be made for actual pressure and temperature with factors calculated from Boyle's and Charles' Laws. Where gas is delivered at 20 psig or more, the deviation of the natural gas from Boyle's Law shall be determined by application of Supercompressibility Factors for Natural Gas published by the American Gas Association, Inc., copyright 1955, as amended or superseded. Where gas is measured with electronic correcting instruments at pressures greater than local sales base, supercompressibility will be calculated in the corrector using AAGA-3/NX-19, as amended, supercompressibility calculation. For handbilled accounts, application of supercompressibility factors will be waived on monthly-billed volumes of 250 dk or less. | T | T

10. PRIORITY OF SERVICE AND ALLOCATION OF CAPACITY – Priority of Service from Highest to Lowest:
    (a) Priority 1 – Firm sales ~~and firm transportation~~ services. | D
    (b) Priority 2 – Small interruptible sales and small interruptible transportation services at the maximum rate on a pro rata basis.
    (c) Priority 3 – Large interruptible sales and large interruptible transportation services at the maximum rate on a pro rata basis.

(d) Priority 4 – Small interruptible transportation services at less than the maximum rate from the highest rate to the lowest rate and on a pro rata basis where equal rates are applicable among customers.
(e) Priority 5 – Large interruptible transportation services at less than the maximum rate from the highest rate to the lowest rate and on a pro rata basis where equal rates are applicable among customers.
(f) Priority 6 – Gas scheduled to clear imbalances.

Montana-Dakota shall have the right, in its sole discretion, to deviate from the above schedule when necessary for system operational reasons and if following the above schedule would cause an interruption in service to a customer who is not contributing to an operational problem on Montana-Dakota's system.

Montana-Dakota reserves the right to provide service to customers with lower priority while service to higher priority customers is being curtailed due to restrictions at a given delivery or receipt point. When such restrictions are eliminated, Montana-Dakota will reinstate sales and/or transportation of gas according to each customer's original priority.

11. LATE PAYMENT – Amounts billed will be considered past due if not paid by the due date shown on the bill. An amount equal to 1% per month will be applied to any unpaid balance existing at the immediate subsequent billing date, provided however, that such amount shall not apply where a bill is in dispute or a formal complaint is being processed. All payments received will apply to the customer's account prior to calculating the late payment charge. Those payments applied shall satisfy the oldest portion of the bill first.

12. RETURNED CHECK CHARGE – A charge of $20.00~~$10.00~~ will be collected by the Company for each check charged back to the Company by a bank. | C

13. TAX CLAUSE – In addition to the charges provided for in the gas tariffs of the Company, there shall be charged pro rata amounts which, on an annual basis, shall be sufficient to yield to the Company the full amount of any sales,

use or excise taxes, whether they be denominated as license taxes, occupation taxes, business taxes, privilege taxes, or otherwise, levied against or imposed upon the Company by any municipality, political subdivision, or other entity, for the privilege of conducting its utility operations therein.

The charges to be added to the customer's service bills under this clause shall be limited to the customers within the corporate limits of the municipality, political subdivision or other entity imposing the tax.

14. UTILITY CUSTOMER SERVICES:
    (a) The following services will be performed at no charge regardless of the time of performance:

        (1) Fire and explosions calls.

        (2) Investigate hazardous condition on customer premises, such as gas leaks, odor complaints, combustion gas fumes.

        (3) Maintenance or repair of Company-owned facilities on the customer's premises.

    (b) The following service calls will be performed at no charge during the Company's normal business hours:

        (1) Cut-ins and cut-outs.

        (2) Disconnecting of gas appliances permanently removed from service or in connection with cut-outs.

        (3) Lighting pilots, inspecting, and adjusting gas equipment in connection with establishing service when working cut-in orders.

        (4) Initial burner adjustment on residential gas burning appliances.

        (5) High bills or inadequate service complaints.

(6) Location of underground Company facilities and customer-owned gas service lines for contractors, builders, plumbers, etc.

(7) Pilot relighting, testing thermocouple for proper operation and any pilot cleaning that can be done without removing pilot assembly.

(8) Service calls for routine cut-ins, when the order is received prior to 12:00~~3:30~~ p.m. on a regular work day, requiring service on the date the order is received, will be considered as non-chargeable regardless if work is performed outside of normal working hours. | C

15. UTILITY SERVICES PERFORMED AFTER NORMAL BUSINESS HOURS – For service requested by customers after the Company's normal business hours and on Saturday, Sunday, or legal holidays, a charge will be made for labor at standard overtime service rates and materials at retail prices.

    Customers requesting service after the Company's normal business hours will be informed of the after hour service rate and encouraged to have the service performed during normal business hours.

16. NOTICE TO DISCONTINUE GAS SERVICE – Customers desiring to have their gas service disconnected shall notify the Company during regular business hours, one business day before service is to be disconnected. Such notice shall be by letter, personal visit or telephone call to the Company's local business office, in communities which an office is maintained. In other communities such notice shall be given to the Company's representative who services the community or to the nearest business office. Saturdays, Sundays and legal holidays are not considered business days.

17. RECONNECTION FEE FOR SEASONAL OR TEMPORARY CUSTOMER –A customer who requests reconnection of service, during normal working hours, at a location where same customer discontinued the same service during the preceding 12-month period will be charged the Basic Service Charge applicable during the period while service was not being used or a minimum | C

of $30.00. The minimum will be based on standard overtime rates for reconnection of service after normal business hours.~~fee of $18.00 will be collected for reconnecting gas sales or transportation service, during normal business hours, to any customer who has discontinued the same service at the same location during the preceding 12 month period. Standard overtime rates will apply after normal business hours.~~ C

Transportation customers who cease service and then resume service within the succeeding 12 months shall be subject to a reconnection charge of $160.00 whenever reinstallation of the required electronic measurement equipment is necessary.

18. DISCONNECTION OF SERVICE FOR NONPAYMENT OF BILLS – All amounts billed for service are due when rendered and will be considered delinquent if not paid by due date shown on the bill. If any customer shall become delinquent in the payment of amounts billed, such service may be discontinued by the Company under the applicable rules of the Commission. The Company may collect a fee of $30.00~~12.00~~ before restoring gas service, which has been disconnected for nonpayment of service bills during normal business hours. Standard overtime rates will apply for services performed after normal business hours. C

19. DISCONNECTION OF SERVICE FOR CAUSES OTHER THAN NONPAYMENT OF BILLS – The Company reserves the right to discontinue service for any of the following reasons:

    (a) In the event of customer use of equipment in such a manner as to adversely affect the Company's equipment or service to others.

    (b) In the event of tampering with the equipment furnished and owned by the Company

(c) For violation of or noncompliance with the Company's rules on file with the Commission.

(d) For failure of the customer to fulfill the contractual obligations imposed as conditions of obtaining service.

(e) For refusal of reasonable access to property to the agent or employee of the Company for the purpose of inspecting the facilities or for testing, reading, maintaining or removing meters.

The right to discontinue service for any of the above reasons may be exercised whenever and as often as such reasons may occur, and any delay on the part of the Company in exercising such rights, or omission of any action permissible hereunder, shall not be deemed a waiver of its rights to exercise same.

Nothing in these regulations shall be construed to prevent discontinuing service without advance notice for reasons of safety, health, cooperation with civil authorities, or fraudulent use, tampering with or destroying Company facilities.

The Company may collect a reconnect fee of $30.00~~12.00~~ before restoring gas service, which has been disconnected for the above causes. | C

20. UNAUTHORIZED USE OF SERVICE – Unauthorized use of service is defined as any deliberate interference such as tampering with a Company meter, pressure regulator, registration, connections, equipment, seals, procedures or records that result in a loss of revenue to the Company. Unauthorized service is also defined as reconnection of service that has been terminated, without the Company's consent.

(a) Examples of unauthorized use of service include the following, but are not limited to:

(1) Bypass piping around meter.
(2) Bypass piping installed in place of meter.
(3) Meter reversed.
(4) Meter index disengaged or removed.
(5) Service or equipment tampered with or piping connected ahead of meter.
(6) Tampering with meter or pressure regulator that affects the accurate registration of gas usage.
(7) Gas being used after service has been discontinued by the Company.
(8) Gas being used after service has been discontinued by the Company as a result of a new customer turning gas on without the proper connect request.

(b) In the Event that there has been unauthorized use of service, customer shall be charged for:

(1) Time, material and transportation costs used in investigation.
(2) Estimated charge for non-metered gas.
(3) On-premise time to correct situation.
(4) Any damage to Company property.

(c) Customer service so disconnected shall be reconnected after a customer has furnished satisfactory evidence of compliance with Company's rules and conditions of service, and paid all charges as hereinafter set forth in this procedure.

(1) All delinquent bills, if any.
(2) The amount of any Company revenue loss attributable to said tampering.
(3) Expenses incurred by the Company in replacing or repairing the meter or other appliance costs incurred in preparation of the bill, plus costs as outlined in number 20.b above.
(4) Reconnection fee applicable.

INTERRUPTIBLE GAS SERVICE EXTENSION POLICY
Rate 119

The policy of Montana-Dakota Utilities Co. for gas extensions necessary to provide interruptible sales or interruptible transportation service to customers is as follows:

1. Contribution

   (a) Prior to construction, the customer shall contribute an amount equal to the total cost of construction including all gas main extensions, valves, ~~service stub(s),~~ service line(s) ~~complete where applicable~~, regulators, meters (excluding electronic measurement equipment), any required payments made by the Company to the transmission pipeline to accommodate the extensions, and other costs as adjusted for federal and state income taxes. | C

   (b) The contribution shall be made by:

      i. A one-time payment prior to construction or,

      ii. The customer may post a bond, irrevocable letter of credit, or a written guarantee commitment in the amount of the total contribution required prior to construction. Such bond, issued by a bonding company authorized to do business in the state, letter of credit, or written guarantee commitment, shall be effective for a five-year period commencing at the plant in service date, and is subject to approval and acceptance by the Company. If at the end of the original five-year term, a contribution requirement exists for the subject project, the surety or guarantor shall pay the Company for such contribution requirement, or

      iii. Customer, upon approval by Company, may finance the amount of the required contribution subject to the following conditions: 1) maximum contribution to be financed shall be determined by the Company at its sole discretion, 2) maximum term shall be five years, 3) interest will be charged at the Company's incremental weighted cost of capital.

   (c) Upon Completion of construction, the contribution amount will be adjusted to reflect actual costs, and an additional charge may be levied or a refund may be made.

(d) Remote data acquisition ~~Electronic measurement~~ equipment costs shall be subject to the terms and conditions specified in Transportation Service Rates 81 and 82. | T

2. Refund

(a) If within the five-year period from the extension(s) in service date, the total of the customer's contribution and actual margin paid to the Company equals or exceeds the total present value of the revenue requirement associated with the extension, Company shall refund the amount exceeding the revenue requirement on the following basis:

i. Annually, beginning at the 2nd anniversary of the extension(s) in service date, the Company will refund to the customer, the amount exceeding the total present value of the revenue requirement at a rate of 50% of the current year margin associated with the customer" actual throughput.

ii. Customers who have posted a bond, letter of credit, or a written guarantee commitment will be notified of any reduction in surety or guarantee requirements based on the above calculation.

iii. No refunds will be made for amounts less than $25.

(b) Interest will be calculated annually by the Company on any refund amounts and shall be equal to the average commercial paper interest rate (A1/P1), not to exceed 12 percent per annum.

(c) No refund shall be made by the Company after the five-year refund period has expired, and in no case shall the refund, excluding interest, exceed the amount of contribution made by the customer.

FIRM GAS SERVICE EXTENSION POLICY Rate 120

The policy of Montana-Dakota Utilities Co. for gas extensions necessary to provide firm sales ~~or firm transportation~~ service to customers is as follows: | D

(A) General Rules and Regulations Applicable to all Firm Service Extensions

1. An extension will be constructed without a contribution if the estimated capital expenditure is cost justified as defined in ¶A.3.

2. The Company may require customer or developer cost participation if the estimated capital expenditure is not cost justified.

3. The extension will be considered cost justified if the calculated maximum allowable investment equals or exceeds the estimated capital expenditure using the following formula:

   Maximum Allowable Investment =

   Annual Basic Service Charge ~~Base Rate~~ + (Project Estimated 3rd Year Annual Dk x Distribution Delivery Charge~~Unit Margin~~)/LARR | T
   ~~LARR + O&M~~

   where: LARR = Levelized Annual Revenue Requirement Factor of 19.954%
   ~~O&M = Operating and Maintenance Factor of 3.870%~~ |

4. Cost of the extension shall include the gas main extension(s), valves, ~~service stub(s), or~~ service line(s)~~complete where applicable~~, any required payments made by the Company to the transmission pipeline company to accommodate the extension(s), and other costs excluding the distribution meter and regulator. | C

   ~~The service stub is that portion of the gas service extending from the main to the private property line or easement boundary.~~ | D

   The service line is that portion of the gas service extending from the gas main to the connection at the house regulator and/or meter. ~~for those customers served in the communities set forth in Rate Zone 2.~~ | D

   ~~The service line is that portion of the gas service extending from the service stub to the connection at the house regulator and/or meter. Service lines are installed at~~ | D

State of North Dakota
Gas Rate Schedule

FIRM GAS SERVICE EXTENSION POLICY Rate 120

5. ~~customer's expense and are owned by and shall be maintained at customer's expense~~

(A) General Rules & Regulations Applicable to all Firm Service Extensions (Cont.)

5. Where cost participation is required, such extension is subject to execution of the Company's standard agreement for extensions by the customer or the developer and Company.

6. A refund will be made only when there is a reduction in the amount of contribution required within a five-year period from the extension(s) in service date. Interest will be calculated annually by the Company on any refund amounts and shall be equal to the average commercial paper interest rate (A1/P1), not to exceed 12 percent per annum.

   No refund shall be made by Company after the five-year refund period and in no case shall the refund excluding interest, exceed the amount of the contribution.

7. The Company reserves the right to charge customer the cost associated with providing service to customer if service is not initiated within 12 months of such installation. N

(B) Customer Extensions

Cost participation for extensions where customers will be immediately available for service is as follows:

1. Contribution

   (a) When a contribution is required, the customer(s) shall pay the Company the portion of the capital expenditure not cost justified as determined in accordance with ¶ A.3.

   (b) The contribution shall be made by:

      i. A one-time payment prior to construction, or

      ii. Payment of 25% of the contribution prior to construction and the balance in no more than twenty-four equal monthly installments. If

customer discontinues service within the twenty-four month period, the balance will be due and payable upon discontinuance of service, or

iii. Customer may post a bond, irrevocable letter of credit, or a written guarantee commitment in the amount of the required contribution prior to construction. Such bond, issued by a bonding company authorized to do business in the state, letter of credit, or written guarantee commitment, shall be effective for the original five-year term and is subject to approval and acceptance by the Company. If at the end of the original five-year term, a contribution requirement exits in the subject project based on a recalculated maximum expenditure, the surety or guarantor shall reimburse the Company for such recalculated contribution requirement, or

iv. Customer, upon approval by Company, may finance the amount of the required contribution subject to the following conditions: 1) maximum contribution to be financed shall be determined by the Company at its sole discretion, 2) maximum term shall be five years, 3) interest will be charged at the Company's incremental weighted cost of capital.

(c) Upon completion of construction, the contribution amount will be adjusted to reflect actual costs, and an additional charge may be levied or a refund may be made.

(d) If within the five-year period from the extension(s) in service date, the number of active customers and related volumes exceeds the third-year projections, the Company shall recompute the contribution requirement by recalculating the maximum allowable investment.

(e) The recalculated contribution requirement shall be collected from the new applicant(s).

A Division of MDU Resources Group, Inc.
400 N 4th Street
Bismarck, ND 58501

State of North Dakota
Gas Rate Schedule

FIRM GAS SERVICE EXTENSION POLICY Rate 120

2. Refund

(a) The Company will refund to the original contributor(s) the amount required to reduce their contribution to the recalculated contribution requirement. No refunds will be made for amounts less than $25. Customers who have posted a bond, letter of credit, or written guarantee commitment will be notified of any reduction in surety or guarantee requirements.

(b) No refunds will be made until the new applicants begin taking service from the Company.

(c) If the addition of new customers will increase the contribution required from existing customer(s), the extension will be considered a new extension and treated separately.

3. Incremental Expansion Surcharge

(a) The Company, in its sole discretion, may offer an Incremental Expansion Surcharge (Surcharge) to a project consisting of 10 or more customers requesting service when the total estimated cost would otherwise have been prohibitive under the Company's present rates and gas service extension policy. If the Company and customers mutually agree that the project will be funded through a Surcharge, the project will be designated an expansion area and the Surcharge will be applicable to all connections within the expansion area. The contribution requirement to be collected under the Surcharge shall be the amount of the capital expenditure in excess of the Maximum Allowable Investment determined in accordance with ¶A.3.

i. A minimum up-front payment of $100.00 will be collected from each customer who signs an agreement to participate in the expansion.

ii. For projects that are expected to be recovered within a 5-year period, the Surcharge shall be set at a fixed monthly charge of $5.00 per month plus $1.50 per dk.

iii. For projects that are not expected to be recovered within a 5-year period, the Surcharge shall be set at a fixed monthly charge of $5.00 per month plus a commodity charge designed to provide recovery of the contribution requirement in a five-year period.

(b) The Surcharge shall remain in effect until the net present value of the contribution requirement, calculated using a discount rate equal to the overall rate of return authorized in the last rate case, is collected.

(c) The Surcharge shall apply to all customers connecting to natural gas service within the expansion area until the contribution requirement is satisfied.

(d) The net present value of the Surcharge will be treated as a contribution-in-aid of construction for accounting purposes.

(C) Developer Extensions

Cost participation may be required for extensions such as a subdivision or a mobile home court, in which a developer is installing roads, utilizes, etc., before housing is built.

1. Contribution

(a) When a contribution is required, the developer shall pay the Company the portion of the capital expenditure not cost justified as determined in accordance with ¶A.3.

(b) The contribution shall be made by:

i. A one-time payment prior to construction, or

ii. Developer may post a bond, irrevocable letter of credit, or a written guarantee commitment in the amount of the required contribution prior to construction. Such bond, issued by a bonding company authorized to do business in the state, letter of credit, or a written guarantee commitment, shall be effective for the original five-year term and is subject to approval and acceptance by the Company. If at the end of the original five-year term, a contribution requirement exists in the

subject project based on a recalculated maximum expenditure, the surety shall reimburse the Company for such recalculated contribution requirement, or

iii. Customer, upon approval by Company, may finance the amount of the required contribution subject to the following conditions: 1) maximum contribution to be financed shall be determined by the Company at its sole discretion, 2) maximum term shall be five years, 3) interest will be charged at the Company's incremental weighted cost of capital.

(c) Upon completion of construction, the contribution amount will be adjusted to reflect actual costs, and an additional charge may be levied or a refund may be made.

2. Refund

(a) If within the five-year period from the extension(s) in service date, the number of active customers and related volumes exceeds the third-year projections, the Company shall recompute the contribution requirement by recalculating the maximum allowable investment. Such recalculation shall be done annually based upon the anniversary of the extension(s) in service date.

(b) The Company will refund to the developer the amount required to reduce their contribution to the recalculated contribution requirement. No refunds will be made for amounts less than $25. Developers who have posted a bond, letter of credit, or written guarantee commitment will be notified of any reduction in surety or guaranty requirements.

(c) If the addition of new customer(s) will increase the contribution required from the developer, the extension will be considered a new extension and treated separately.

Gas Rate Schedule

NDPSC Volume 6
Original Sheet No. 66

NEW INSTALLATION, REPLACEMENT, RELOCATION AND REPAIR OF GAS SERVICE LINES Rate 124

A. ~~NEW INSTALLATION OF COMPANY-OWNED SERVICE LINES—~~The Company will install, at its expense, a service line extending ~~up to 150 feet~~ from the main to the connection at the premise ~~house~~ regulator and/or meter for all~~those~~ customers connected on and after (effective date of tariff) and all replacement service lines installed on and after (effective date of tariff). The service line installed by the Company will remain the Company's property.~~served in the communities set forth in Rate Zone 2. A contribution may be required for that portion of the service line exceeding 150 feet in accordance with the Firm Gas Service Extension Policy Rate. 120~~ N

B. ~~The following will apply to all new customer-owned gas service lines, and to the replacement, relocation and repair of all gas service lines on private property.~~A non-refundable contribution may be required for that portion of the service line cost not supported by the expected or actual connected load. The contribution requirement will be determined based on minimum footage allowances determined annually taking into account the maximum allowable investment defined in Rate 120 and the average installed per foot cost. The Company reserves the right to charge customer the total cost of the installed service line if service is not initiated within 12 months of such installation. N N

1. The portion of the ~~customer shall be charged for a new~~ service line not cost justified shall be charged to the customer on the basis of direct costs to the Company ~~including material, labor, transportation, etc. Such costs shall include ordinary payroll and general overhead loadings~~. The Company may, at its option, calculate a statewide average cost per foot for such work based on its experience and may use such calculated amount for billing purposes. No minimum amount shall apply. N

2. ~~If the customer's service line is less than 25 years old, and is coated steel or plastic pipe, such line shall be pressure tested in accordance with the Company's rules for pressure testing. If the service line is found to be leaking due to faulty installation or due to a lack of cathodic protection, has damaged coating, surface pitting, etc., the line will be repaired or replaced at no cost to the customer. All other repairs shall be at customer's expense~~. D D

NEW INSTALLATION, REPLACEMENT, RELOCATION AND REPAIR OF GAS SERVICE LINES Rate 124

~~3.For coated steel or plastic pipe service lines more than 25 years old which need to be repaired and/or replaced and for bare pipe service lines of any age, the customer shall be charged in accordance with B.1. above.~~ D

~~In accordance with Company Standards, service line replacement will be constructed with outside risers and meters. Such reconstruction will nearly always involve minor changes in inside piping. The inside piping changes may be incorporated into the total footage to be billed as provided in B.1. above~~.

~~4.Where the customer's gas service line must be replaced because the mains are being relocated (alley to street or street to alley), such line change or relocation will be made at the Company's expense if the service line is coated steel or plastic pipe and is less than 25 years old. If the line is older and passes the required pressure test, the replacement will be made at the Company's expense. If such older line does not pass the required pressure test, the line shall be replaced at the customer's expense except that the customer shall be charged only for the lesser of: (a) the equivalent length of the old service line or (b) the actual length of the new service line if it is shorter than the older service line being replaced. The basis for billing the customer shall be as outlined in B.1. above.~~

~~5.The customer has the option of waiving the pressure test and receiving a credit equal to the cost of the pressure test against the installed cost of a new sevice line.~~ D

2~~6~~.Where service line location changes are necessary made due to building encroachments (a building is being constructed or is already located over a service line, etc.), ~~or due to the necessity to increase the size and capacity of an existing service line~~ because ~~of increased demand,~~ the customer shall be charged for on the basis of direct costs incurred by the Company.~~, as outlined in B.1. above~~.

3~~7~~.Whenever a service line is damaged by ~~excavating and/or earth-moving equipment, etc., and is either~~ the customer or someone under the employ of the customer necessitating the service line to be either repaired or replaced in whole or in substantial part, such work shall be charged on a direct cost basis ~~including ordinary payroll and general overhead loadings~~. If the damage was caused by independent contractors, not in the employ of the customer, the charges shall be billed directly to such contractor. ~~Damages done by the customer or someone working directly for him~~ M

(The following proceedings were had and made of record, Monday, October 7, 2002, commencing at 9:00 a.m.)

MR. HOBERG: Let's begin. Let the record show it's approximately 9:00 a.m. on October 7, 2002. This is the time and place scheduled in the Public Service Commission hearing room in the State capital in Bismarck, North Dakota, for the hearing in the matter of the application of Montana-Dakota Utilities for a natural gas rate increase.

In June of this year the Office of Administrative Hearings received a request from the Public Service Commission to provide an administrative law judge to preside in this matter. My name is Allen Hoberg, and I've been duly designated as the procedural hearing officer to preside today.

Let's start with the appearances of the parties for the record in this matter, beginning with the applicant, followed by the Commission staff. Will counsel please state their appearances? Mr. Pearce, please.

MR. PEARCE: Yes. Thank you. William P. Pearce of Pearce and Durick, in Bismarck, appearing on behalf of the applicant, Montana-Dakota Utilities

Company.

MR. HOBERG: And who do you have with you?

MR. PEARCE: With me to my left is Mr. Don Ball, manager of regulatory affairs for the company, and to his left is Mr. Douglas Schulz, who is an attorney with the company, also appearing for the company.

MR. HOBERG: Thank you. You have a number of witnesses today.

MR. PEARCE: Yes. We have nine witnesses altogether.

MR. HOBERG: Thank you, Mr. Pearce. Mr. Binek, please.

MR. BINEK: My name is William Binek. I'm counsel for the Public Service Commission. I'm representing the Commission advocacy staff in this proceeding. Seated to my right is Mr. Charles King, a Commission consultant, and to the right of Mr. King is Michael Majoros, another consultant. And at the end of the table is Patrick Fahn, a public utility analyst with the Public Service Commission.

MR. HOBERG: Thank you, Mr. Binek. Is there anyone else present today who may wish to give testimony, either for or against the application?

9

Anyone else present? No one else present.

Then, of course, to my left we have members of the Public Service Commission. To my immediate left, Commissioner Leo Reinbold, and then Commission President, Susan Wefald, and Commissioner Tony Clark.

And starting with Commissioner Reinbold, who has the natural gas portfolio, I'll ask for your opening comments, please.

COMMISSIONER REINBOLD: Thank you. Good morning, and welcome. It's good to see so much interest. It's an interesting case. We're here to determine what needs to be allowed and also what must be disallowed. That's our job. We're here to do that by being fair to all parties concerned and get done by Noon because everyone has a plane to catch. Welcome.

COMMISSIONER WEFALD: On Wednesday?

MR. HOBERG: Thank you, Commissioner Reinbold. Commissioner Wefald, please.

COMMISSIONER WEFALD: Good morning. We know that this case is very important, both to the company and to the consumers of North Dakota, and we're looking forward to getting a good record. Thank you.

10

MR. HOBERG: Thank you, Commissioner Wefald. Commissioner Clark, please.

COMMISSIONER CLARK: Good morning. I look forward to hearing the testimony. Thank you.

MR. HOBERG: Thank you. Just for the record, our court reporter is Linda Gingery today.

Just a very brief summary of the application. It's set out very well in the notice of hearing. On April 12th of this year MDU filed an application to increase its rates for natural gas service by an amount sufficient to provide increased total annual revenue of $2,844,132. And then the rest of the proposals are adequately set forth in the notice of hearing, and I won't go through the rest of those today.

But on June 5th of this year, the Public Service Commission issued a notice of hearing, notice of public input sessions and notice of intervention deadline. And the notice of hearing scheduled a hearing for today and, of course, that's why we're here.

It's my understanding there have been no petitions to intervene in this matter filed with the Commission. However, there were public input sessions held via interactive television on July

11

15th of this year at Noon, Central Daylight Time, and giving members of the public an opportunity to express their concerns. And those sessions were held at Bismarck State College, Dickinson State University, Minot State University, Lake Region State College, North Dakota State Hospital, and Williston State College.

The issues, according to the notice of hearing, to be considered in this matter include:

Number 1: What is the value of MDU's property, used and useful, for the service and convenience of the public of North Dakota?

Number 2: What is MDU's rate of return on this property, used and useful, for the service and convenience of the public of North Dakota?

Number 3: What is the just and reasonable rate of return on MDU's property, used and useful, for the service and convenience of the public in North Dakota?

Number 4: What rates and charges are necessary to provide a just and reasonable rate of return on MDU's property, used and useful, for the service and convenience of the public of North Dakota?

Number 5: Are MDU's rate schedules

12

designed in such a manner that they result in a basis of charge to its customers that is just and reasonable without discrimination?

Number 6: Any other relevant information or proposals concerning the proceeding.

The hearing procedure today will be as follows: I'll first call on the applicant to present its case for the granting of the application. And Mr. Pearce has stated that he has nine witnesses on behalf of the company today. Each witness called by the applicant will be subject to cross-examination by Commission staff and by the Commission. And following the direct examination then by Mr. Pearce, cross-examination by Commission staff and questions by the Commission, I'll allow such further questions of the witnesses as are necessary.

Upon completion of the applicant's case, I'll call on the Commission staff to present its case. And Mr. Binek has informed us that he has two witnesses. It will be the same procedure there; direct examination by Mr. Binek, cross-examination by Mr. Pearce, questions by the Commission staff, and then such further questions of the witnesses as are necessary.

I think probably most of the evidence that's being offered today has already been docketed. Probably some additional evidence, too. And that will be offered also, though, and the docket number indicated when it's offered. And we'll mark the exhibits consecutively, 1 through whatever, and also indicate the docket number for those that have already been docketed. If there are additional exhibits being offered, we need seven copies for the record today.

No decision will be reached on this matter today. The proceedings are being transcribed and tape-recorded and will be reviewed by the Commission later. And, thereafter, the Commission will issue findings of fact and conclusions of law and an order as to whether the application should be issued, denied, or as to other appropriate administrative action.

If the party doesn't agree with the final decision of the Public Service Commission, they may have appeal rights or other rights under North Dakota Century Code Chapter 28-32, which is known as The Administrative Agencies Practices Act, or under the Rules of Commission, North Dakota Administrative Code, Article 69-02.

The issues today are as I previously stated. The burden of proof is on the applicant to show by the preponderance of the evidence, also known as the greater weight of the evidence, that it is entitled to a grant of the application it seeks.

Any questions about the procedures today? Mr. Pearce?

MR. PEARCE: No, sir. Except to point out that we will have our rebuttal case basically to put on after the staff's case.

MR. HOBERG: Correct. Thank you. Yes, there will be a rebuttal case presented. Mr. Binek?

MR. BINEK: Nothing.

MR. HOBERG: Just one other housekeeping item. There was a trade secret protection application filed in this matter and an order issued, so I would appreciate it if counsel would keep me apprised of when something that needs trade secret protection is going to be dealt with and we can deal with it appropriately. All right.

Mr. Pearce, do you have an opening statement to make?

MR. PEARCE: Yes, I do. I've got a brief opening statement I'd like to read.

MR. HOBERG: Please proceed.

MR. PEARCE: This case is an application by Montana-Dakota Utilities Company seeking the Commission's approval of an increase in its residential and firm general service gas rates that would generate an additional $2,844,132 in operating revenues, which is about a 4.1 percent overall increase. This increase is required to enable the company to continue to provide safe and reliable service to its approximately 83,500 customers in the state.

As the company's testimony in the case will show, the need for the increased revenue is driven by the necessity of meeting increases in the operating expenses of its gas distribution facilities in North Dakota. The company also needs an adequate permitted rate of return on the company's property devoted to gas distribution operations for it to be able to attract sufficient capital and maintain the quality, reliability and safety of its gas distribution services.

The last general rate increase was authorized by the Commission in November 1994, and it was a decrease in the gas rates as a result of a settlement that took effect in January 1999. This proceeding, of course, does not address the cost of

gas itself which the company acquires for distribution in its system. That's simply a pass-through component of the rates handled by the automatic adjustment procedures.

The list of company witnesses and the areas covered by their testimony will be summarized in the opening testimony of Mr. Wayne Fox, the company president.

One of the major components in the operating expense of the company is the depreciation expense allowance and that is a major factor in this case. The staff has done a curious thing not seen in the normal rate case proceeding. They have taken the depreciation study used in current rates and critiqued a very small portion of it, with the outcome being lower depreciation charges. This is not appropriate to base depreciation on a piecemeal critique of that study. We feel -- the company's position, as will be described by its witnesses, is it's premature at this point to make adjustments to the present depreciation rates which are based on a thorough depreciation study done by Stone & Webster in 1991. And they have been previously recognized by the Commission and applied in the previous rate case. The staff has not prepared a proper

depreciation study and no adjustment of the depreciation rates should be entertained by the Commission in this proceeding.

In addition, the question of the applicability of what's called FAS 143; that is, Financial Accounting Standard 143, will arise in the testimony that's already been filed in this case. This is a new financial accounting standard applicable to North Dakota's public utilities at the end of the year. FAS 143 will require companies to charge -- sorry -- to change the method of accounting for the expected retirement costs of an asset over the asset's useful life. FAS 143 is a very new and untested procedure at this point and the industry is currently engaged in a great deal of analysis and debate as to how and in what manner it should be implemented.

The implementation of 143 in North Dakota is not a matter which should be or reasonably can be addressed as an ancillary matter in a rate case involving a single utility company like Montana-Dakota operating in North Dakota. FAS 143 is a much broader matter than the specific issues in a single company rate case and many decisions need to be made before it can be effectively implemented.

We feel this complex question can only be properly addressed in a generic rulemaking proceeding by this Commission, in which all the utilities operating in North Dakota may participate and present their views on the question. For this reason, our position is that the Commission should not address FAS 143 in this case, but should defer that issue to its proper place in a separate rulemaking proceeding that would involve all the other utilities in which questions relative to the implementation can be addressed in an appropriate setting.

With that background, MDU makes -- moves the Commission to defer any action on FAS 143 in this proceeding and set the matter, that accounting standard for a generic rulemaking proceeding at some appropriate point in the future.

With regard to the design of the proposed rates, the company has proposed changes to accomplish the objectives of providing a measure of stability during periods of admirable weather; being user-understandable for consumers, being simple to administer, and providing for enhanced fixed cost recovery.

We have also included an alternative proposal in the event the Commission finds the primary proposal unacceptable. The company urges the Commission to accept the primary proposal as it provides the best fit with the objectives. However, should the Commission not adopt the primary proposal, the company urges the Commission to adopt the alternative proposal that will be discussed in the testimony.

MR. HOBERG: Thank you, Mr. Pearce.

Mr. Binek, do you have any opening to make, perhaps in response to the motion to defer in regard to FAS 143?

MR. BINEK: I'd like to make a couple comments.

First of all, I think it's appropriate to consider FAS 143 and its implications to MDU. Secondly, with regard to depreciation, depreciation is a major issue in this case. MDU would like to have the Commission defer any consideration on depreciation until it completes a depreciation study that I understand is presently in progress. The staff's position on that has been and continues to be that if a part of the case, and a very important part of the case, is not -- or should not be considered at this point, none of the case should be considered at this point.

There are other important issues in this case as well, such as the rate of return that the company should be allowed. We are far apart in our recommendations on that. The company is asking the Commission to allow a return on equity that is in excess of anything that we have seen, either in North Dakota or around the country for that matter. On the other hand, the recommendations of the Commission's consultants are in line with what is occurring not only in North Dakota, but across the country as well.

MDU's application is a bit curious because MDU's gas earnings have been very stable and are very reasonable at the present time. And it doesn't appear that MDU is in any need of any increase, but that will be determined by the Commission in this proceeding.

I think that's all I have.

MR. HOBERG: Thank you, Mr. Binek.

Mr. Pearce, I understand your motion to defer is a formal motion?

MR. PEARCE: Yes.

MR. HOBERG: And I would advise the Commission to take that under advisement and I don't know if a ruling on that is necessary right now, but

something to take under advisement as part of this proceeding. You don't expect a ruling?

MR. PEARCE: No, that's what we anticipated.

MR. HOBERG: All right. Thank you both.

Would you like to call your first witness, please, Mr. Pearce?

MR. PEARCE: Thank you. I think I'm going to ask, just for convenience, the application and supporting statements are already filed, but in case they need to be referred to, I'd like to mark those as Exhibits 1 and 2, the two books.

MR. BINEK: Your Honor, the direct testimony is not shown as separate docket entries so perhaps they be should be identified separately as exhibits.

MR. HOBERG: That's what we're going to do, but the application, I believe, is marked as Exhibit 1-Docket 3.

MR. PEARCE: Right.

MR. HOBERG: And what was the other document?

MR. PEARCE: Statements A through O. And that's going to be Exhibit 2 and it's also Docket 2.

MR. HOBERG: Is that all the direct?

MR. PEARCE: That's simply the application and statements. The direct will be, I believe, Exhibits 3, 4, 5, 6, 7, 8, 9, and 10. And it's the seven direct -- prefiled direct testimony. It's all in one, single book there, but I think that will have the next seven exhibit numbers.

MR. HOBERG: Let's go off the record.

(Exhibits 1, 2, 3, 4, 5, 6, 7, 8, and 9 were marked for identification.)

(Discussion off the record.)

MR. HOBERG: Okay. The packet that we have of all of the direct testimony of Montana-Dakota Utilities is marked on the outside as Docket No. 1, and the inside of each of the -- direct testimony of each of the witnesses will be marked consecutively as 3 through 9, and that's how we'll be referring to them during the presentations then.

Mr. Fox is the first witness?

MR. PEARCE: Yes, he is.

MR. HOBERG: Mr. Fox, please.

Please be seated. As you know, I'm required by law to tell all the witnesses at administrative proceedings that the maximum penalty for perjury in this state is a Class C felony, punishable by a maximum five years imprisonment, $5,000 fine, or both.

Mr. Fox, being advised of the penalty for perjury, do you promise to tell the truth in this matter? If so, answer I do.

THE WITNESS: I do.

MR. HOBERG: Thank you. Mr. Pearce, please.

C. WAYNE FOX,

having been first duly sworn, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. PEARCE:

Q. Would you please state your name and your business address?

A. My name is C. Wayne Fox. My business address is 400 North Fourth Street, Bismarck, North Dakota 58501.

Q. What is your position with Montana-Dakota Utilities Company?

A. I am president of Montana-Dakota Utilities, a division of MDU Resources Group, Incorporated.

Q. What are your duties and responsibilities with Montana-Dakota?

A. I have executive responsibility for the development, coordination and implementation of the

strategies and policies relative to all areas of operation.

Q. Would you please outline your educational and professional background?

A. In 1964 I received a Bachelor of Science degree in electrical engineering from Chicago Technical College, Chicago, Illinois. I received a Master of Arts degree in business administration from the University of Illinois, Springfield, Illinois in 1975. Upon graduating from college in 1974, I joined the Illinois Commerce Commission, the state body regulating public utilities in Illinois, as an electrical engineer.

Upon termination of my employment with the Illinois Commerce Commission in June 1980, I was serving as manager of the public utilities division. In that capacity my duties included testifying in formal cases before the Commission, formulating and coordinating Commission policies on technical and administrative matters, processing formal and informal cases, and advising the Commission on matters related to the regulation of public utilities operating in the State of Illinois.

In June 1980 I joined Montana-Dakota as assistant treasurer, regulatory affairs, retaining

that position until May 1982 when I was elected assistant vice-president, regulatory affairs. In May 1985 I was promoted to vice-president, regulatory affairs. In May 1987 my duties were broadened to include the company's purchasing and general services activities. At that time my title was changed to vice-president, regulatory affairs and general services. I assumed my present position in August 2000.

I also have been involved with the activities of the Electric Power Research Institute, the Edison Electric Institute, and the American Gas Association.

Q. Have you testified before this Commission and other state regulatory bodies?

A. Yes. I have previously sponsored testimony before this Commission, the Montana Public Service Commission, the Wyoming Public Service Commission, Minnesota Public Utilities Commission, and South Dakota Public Utilities Commission. In addition, during my tenure with the Illinois Commerce Commission, I testified in a number of cases before that Commission.

Q. What is the purpose of your testimony?

A. The purpose of my testimony is to provide

an overview of our North Dakota natural gas operations, explain our request for a gas rate increase, and discuss the policies and reasons underlying the major aspects of the request. I will also identify the company witnesses in this proceeding.

Q. Would you provide a summary of Montana-Dakota's gas operations in North Dakota?

A. The North Dakota natural gas distribution system serves approximately 83,500 customers in 76 communities. The customer mix is about 86.5 percent residential, 13.3 percent firm commercial, with the small interruptible and large interruptible customers making up two-tenths percent of customers. In addition, gas is provided to the U.S. Air Force Base at Minot and a location in northeastern North Dakota. The residential, firm commercial, and small interruptible customers use natural gas primarily for space and water heating.

As such, Montana-Dakota's system has a low load factor with peak gas requirements occurring during the winter, with summer loads being small by comparison. The total annual gas used by North Dakota customers is 18.3 megadecatherms as projected for 2003 in this case. Consumption by customer

class is as follows: 43 percent residential, 31 percent firm commercial, 8 percent small interruptible, 12 percent large interruptible, and 6 percent U.S. Air Force.

Montana-Dakota's North Dakota gas service area is divided into two operating regions, with regional offices located in Bismarck and Dickinson. In addition, there are a number of district offices located in communities throughout the state. As of December 31, 2001 the company had 587 full and part-time employees who live and work throughout our North Dakota electric and gas service area.

Q. Mr. Fox, did you authorize the filing of the rate application in this proceeding?

A. Yes, I did.

Q. Why has Montana-Dakota filed this application for a gas rate increase?

A. Montana-Dakota is requesting an increase in general gas rates at this time because the current cost of providing natural gas service to our North Dakota customers is not adequately reflected in the -- excuse me -- is not accurately -- adequately reflected in currently authorized rates. It should be noted that this application does not include any cost changes related to the cost of gas which is

handled through the Commission authorized Purchased Gas Cost Adjustment tariff.

Q. Would you please explain the basic elements that make up the total costs of providing gas service and which of these elements is subject to regulation by this Commission?

A. Yes. The cost of providing natural gas service can be best broken down into two major categories. First, the cost of the gas delivered to the town border station where it leaves the interstate or intrastate pipeline and enters our distribution system. And, second, the cost of delivering the gas from the town border station through our distribution system to the individual customers. We call this portion distribution costs or non-gas costs.

Natural gas purchased from a producer or supplier is a commodity like wheat or corn and prices are not regulated. The charges for moving the gas to our distribution system on the pipeline system are regulated by the Federal Energy Regulatory Commission or other regulatory agencies. These two elements which we call, quote, unquote, gas costs, are passed on to our customers on a dollar-for-dollar basis as specified in the

Purchased Gas Cost Adjustment Tariff, and there is no profit made by Montana-Dakota. This portion currently comprises about 66 percent of a typical residential bill for gas services.

The distribution cost of our rate is regulated by this Commission and is the subject of this proceeding. This portion includes operation and maintenance expenses, depreciation, taxes, and a component for the opportunity to earn a return on the investment we have in facilities to provide natural gas service. The distribution costs are currently about 34 percent of a typical residential bill. The last time this portion of the rates increased was in 1994.

Q. What is the amount of the increase requested?

A. As will be fully explained by other company witnesses, the company is requesting an increase of $2,844,132 based on a projected 2003 test year.

Q. How will the requested increase affect the various classes of customers?

A. The proposed percentage change in rates by customer class is as follows: Residential, 4.6 percent change; firm general service, 4.6 percent; Air Force, zero; small interruptible, a negative 4.1

percent; large interruptible, zero, for a total increase of 4.1 percent.

Q. What are the primary reasons that Montana-Dakota needs an increase at this time?

A. The primary reasons are increased operating expenses, operation and maintenance costs, depreciation and taxes other than income and a higher required return on equity.

Q. When was the last general rate increase for Montana-Dakota?

A. Montana-Dakota's last gas -- I'm sorry. Montana-Dakota's gas rates were last increased in November 1994. The increase was $565,000 annually and was authorized in case No. PU-399-94-297.

Q. Have the gas generates changed since that time?

A. Yes. In case number PU-399-96-325 the gas generates were decreased by $800,000 or about 1.2 percent as a result of a settlement accepted by the Commission with a lower rate becoming effective January 15, 1999.

Q. Would you please explain how Montana-Dakota has been able to hold the gas rates down since 1994?

A. From 1994 through 2001 the Consumer Price Index has risen almost 20 percent. In spite of this

increase, we have been able to hold the line on our gas rates by finding ways of operating our business more efficiently and taking advantage of new technology where it makes economic sense to do so. For example, we have created a customer service center in Bismarck representing a one-stop shop for our customers. And we have installed computers in our servicemen's trucks allowing them to receive orders electronically, resulting in savings of at least one hour per day. We continue to look for opportunities to reduce costs and increase efficiencies. However, we now find ourselves in a position where despite our efforts, our best efforts, we must seek rate relief.

Q. What policy changes are proposed by the company in this filing?

A. We are proposing a change in policy regarding service lines. Montana-Dakota is proposing to own all service lines on a prospective basis. Currently, Montana-Dakota owns the service lines in the communities designated as rate zone 2 in its tariff. The customers currently own the services lines in the communities designated as rate zone 1. We are proposing that Montana-Dakota own and pay for, subject to appropriate extension policy

considerations or conditions, all new and replacement service lines on a prospective basis. This change will remove the distinction between rate zones 1 and 2 and will serve as a uniform policy on a statewide basis for all of our service areas. It will also align the ownership of the service line with the responsibility for ongoing testing and maintenance of the lines, which rests with Montana-Dakota and will avoid customer confusion and frustration in those instances when a replacement is necessary.

Q. Is Montana-Dakota proposing changes in its rate structure in this proceeding?

A. Yes. The proposed changes in the rate structure, which will be fully described by other witnesses, accomplish the objectives of providing a measure of stability for our customers, being simple to administer, and providing for enhanced fixed cost recovery.

I should note that our witnesses also present an alternative proposal in the event that the Commission finds the primary proposal to be unacceptable. The alternative proposal is fully described in the testimony of other witnesses. I would urge the Commission to accept the primary

proposal, as it provides the best fit with the objectives noted above.

Q. Will you please identify the other witnesses who will testify on behalf of Montana-Dakota in this proceeding?

A. Yes, I will. I should note at line 22, Mr. Pearce, that there's a correction. We should strike the word "electric" appearing in the last line thereof and substitute the words "natural gas." I will finish my answer.

In addition to myself --

MR. HOBERG: Mr. Fox, I'm sorry to interrupt you, but just for the court reporter's benefit, all the names, of course, are listed in the prefiled testimony. Please continue.

THE WITNESS: Stephen Gaske, President of Zinder Companies, Incorporated, will testify regarding the appropriate cost to common equity and overall cost of capital for Montana-Dakota's natural gas operations. Mr. Craig A. Keller, vice-president, controller and chief accounting officer for Montana-Dakota, will testify regarding the capital structure and overall debt and preferred equity costs. Ms. Rita A. Mulkern, regulatory analysis manager for Montana-Dakota, will testify

regarding the total revenue requirements necessary for Montana-Dakota's North Dakota gas operations.

Mr. Richard A. Espeland, vice-president, human resources for MDU Resources Group, Incorporated, will testify regarding the supplemental income security plan. Mr. Russell A. Feingold, managing director of Navigant Consulting, Inc., will testify regarding certain rate design policy matters. And Ms. Tamie A. Aberle, pricing and tariff manager for Montana-Dakota, will testify on the specific rate design proposals.

Q. (MR. PEARCE CONTINUING) Mr. Fox, are the rates requested in this proceeding just and reasonable?

A. Yes. In my opinion, the proposed rates are just and reasonable because they are reflective of the total cost being incurred by Montana-Dakota in providing gas service to its customers. The proposed rates will allow Montana-Dakota the opportunity to earn a just and reasonable return on its North Dakota gas operations.

Q. Does this complete your direct testimony?

A. Yes, it does.

Q. And to the best of your information and belief, does the testimony you have just given

coincide with the prefiled direct testimony that's marked as Exhibit A?

A. It does.

Q. Did you prepare that testimony originally?

A. I did.

MR. PEARCE: I'll offer Exhibit A at this time -- Exhibit 3. I have no further questions of this witness.

MR. HOBERG: Any objection to Exhibit 3, Mr. Binek?

MR. BINEK: No.

MR. HOBERG: Exhibit 3 is admitted.

Mr. Binek, do you have any questions on cross-examination?

MR. BINEK: Yes, I do.

CROSS-EXAMINATION

BY MR. BINEK:

Q. Good morning, Mr. Fox.

A. Morning.

Q. Does MDU calculate its earned return each year for its North Dakota gas operation?

A. We do.

Q. What was the company's earned return on its gas operations during each of the years 1998, 1999, 2000, 2001?

A. I don't know right offhand. I can certainly provide that to you. We've filed an annual report with the Commission each and every year. I do know for 2003 without this rate increase, we would be a negative 4 percent.

(Exhibit 10 was marked for identification.)

Q. (MR. BINEK CONTINUING) Mr. Fox, I show you what has been marked as Exhibit 10 and ask if you can identify that exhibit? First of all, I guess I should ask if you've seen that previously?

A. I have not.

Q. Okay. Do you recognize that as an exhibit that has been docketed in an MDU case by the Public Service Commission?

A. I do not.

MR. HOBERG: Mr. Pearce, did you get a copy?

MR. PEARCE: No, I didn't. I'm wondering what it is.

Q. (MR. BINEK CONTINUING) Can you identify what the exhibit is, please?

A. It's a memorandum, internal memorandum, I believe, written by Mike Diller of the Commission staff, and it's written to Commissioners, Illona and Bill. And --

Q. What is the date of that document?
A. September 3rd, 2002.
Q. Okay. And what does it refer to?
A. It refers to 2001 annual reports.
Q. And in that document there are a number of companies listed, including MDU Gas, and it shows returns on equity earned by utilities for the four years that I had asked you about; is that correct?
A. It does.
Q. Do you have any reason to doubt the figures that are shown in that exhibit?
A. I do not.
Q. And would you accept the figures shown on that exhibit subject to check, subject to your own verification?
A. I would.
Q. What is the ROE shown for the year 1998 for MDU?
MR. HOBERG: I think we better have it offered and admitted before we testify.
MR. BINEK: I'm sorry. I will offer Exhibit 10.
MR. HOBERG: Any objection to Exhibit 10, Mr. Pearce?
MR. PEARCE: I guess I'm tempted to object

for lack of foundation since the witness who prepared it is not being offered, but given that Mr. Fox has indicated he would accept the numbers subject to verification, I don't have any objection.
MR. HOBERG: Okay. Exhibit 10 is admitted. Mr. Binek, please.
MR. BINEK: Thank you.
Q. (MR. BINEK CONTINUING) Now, Mr. Fox, would you -- for the year 1998 what is the ROE shown for MDU gas?
A. 14.55.
Q. And 1999?
A. 10.25.
Q. 2000?
A. 11.92.
Q. And 2001?
A. 11.90.
Q. And what is the four-year average?
A. 12.16.
Q. Okay. And it's your position that -- is it your position that an 11.9 return on equity is inadequate?
A. Dr. Gaske in this case has pointed out that because of the risk associated with our gas business, we should be earning considerably higher

than 11.9.
Q. So the earnings that you had in 2001, 11.9 were inadequate; is that your testimony?
A. That's correct.
Q. And the four-year average of 12.16 is adequate; is that also your testimony?
A. Let me explain that. It's inadequate based upon Dr. Gaske's testimony in this case, but keep in mind, that we are dealing with 2002 and 2003 is just right around the corner and we know based upon our rates-of-return analysis that we will be earning a negative rate of return for 2003 without the proposed rate increase. In fact, in 2002 we will be at zero. So we've had a drastic change in the last two years.
Q. Will the 2002 return be influenced by the very mild winter we had last year?
A. This is normalized.
Q. Okay. And what is your predicted return for 2002 under normalized weather conditions?
A. I believe it's zero. We have witnesses here which can attest to that and subject to check. It's considerably lower than what you find here for 2001.
Q. Is it true that you are predicting a

significant decline in your earned return between now and the end of 2003?
A. I am.
Q. Okay. On page 6 of your testimony you mentioned that the last gas rate increase was in 1994, and that that was a relatively small increase, $565,000. What did that amount to in percentage terms?
A. I don't recall.
Q. Okay. In 1999 you had a rate reduction of 800,000. Do you know what the percentage reduction was then?
A. In my testimony I say about 1.2 percent.
Q. Okay.
MR. HOBERG: Mr. Binek, can you bring your microphone over closer? It's on, isn't it?
MR. BINEK: Yeah.
Q. (MR. BINEK CONTINUING) Earlier this year the Commission reduced your electric rates; isn't that correct?
A. It did.
Q. What is it about the gas business that causes it to require an increase when the electric side of your operations justify a rate decrease?
A. Well, they're really two different

businesses. Dr. Gaske, I think in his testimony laid out very well the reasons. You know, we're a small gas utility --

MR. HOBERG: I'm sorry. Mr. Fox, can you bring your microphone a little closer, too? They are having a little trouble hearing both you and Mr. Binek in the back.

MR. BINEK: We're both soft-spoken.

THE WITNESS: Can you now hear me better?

MR. HOBERG: Yes. We can hear you upfront. It's just having trouble back --

THE WITNESS: I'll try to do better. We also have competition for alternate fuels. And, thirdly, we have a rate design that's in effect right now that doesn't allow us to fully recover our fixed cost of operations. And so Dr. Gaske does a good job of looking at that and I happen to agree with what he said. He said, I think, in his testimony that because of the smallness, which means that, you know, small change in one of our expense items or whatever creates a big difference in whether we are able to earn a return or not, an adequate rate or return on our business. And he said that's worth 100 basis point in and of itself simply because we're that small.

Q. (MR. BINEK CONTINUING) You mentioned competition from alternate fuels. What competition do you face from alternate fuels?

A. Propane, coal, and --

Q. How --

A. Excuse me. Gas bypass.

Q. How much competition do you face from coal?

A. Well, I have a neighbor -- I'll be happy to supply some of that, but we do have some competition. In fact, I've got a residential customer in my neighborhood that uses coal.

Q. It's very, very minimal, isn't it?

A. It is from a residential standpoint, but keep in mind that folks like the larger customers, such as out here at the Tesoro -- did I say that correctly? Amoco --

COMMISSIONER WEFALD: Tesoro.

THE WITNESS: Tesoro is, in fact, looking at that very option, whether to burn coal or continue with gas, and we, in fact, have lost a portion of that gas load now to gas bypass.

Q. (MR. BINEK CONTINUING) Propane, aren't you, in fact, putting in -- extending your natural gas delivery systems in the Bismarck area out into areas previously served by propane?

A. We are, but we're not picking up, you know, 100 percent or even 90 percent of that.

Q. But you are picking up a good majority of the customers out there that were previously on propane, aren't you?

A. We're primarily picking up those customers who have yet not committed, picking up the new customers. We're hoping for a conversion rate around 60 percent on propane out there. Certainly not the 100 percent. So how pervasive it is, it's there and continues to be there.

Q. Okay. So you had 100 percent of the customers out there using propane prior to extending your lines, now you're going to -- you're hoping to acquire 60 percent of those people presently using propane, is that --

A. Or said another way, Mr. Binek, we will lose 40 percent of that load out there or not be able to --

Q. Well, you're going to gain load out there that is presently served by propane, right?

A. That's correct.

Q. Okay.

A. My statement is also correct, too.

MR. HOBERG: Mr. Binek, your question -- I

don't know that we sufficiently defined what "out there" means.

Q. (MR. BINEK CONTINUING) I'm thinking specifically about areas north of Bismarck where lines are being -- distribution lines are being extended by MDU gas.

A. For the record I would clarify. We do have a new project. We call it the northeast Bismarck project, where we are spending monies to provide gas service to customers in that area, that hopefully will have some growth, plus pick up some of the ones that are now using propane.

Q. Thank you.

MR. HOBERG: Thank you.

Q. (MR. BINEK CONTINUING) And the other competitive fuel is oil?

A. Could be. For the larger customers you have coal, oil, bypass, primarily.

Q. Okay. The bypass would be served by the Williston Basin Interstate Pipeline?

A. That's one bypass that I'm thinking about. They actually went to Williston Basin.

Q. Okay. And that's an MDU Resources company?

A. It is, but it's money out of my pocket.

Q. Sure. I understand that. Has inflation

accelerated since 1994?
A. Yes, it has.
Q. Do you have any basis for assuming that inflation will accelerate between now and the end of 2003?
A. When you say accelerate, I'm not sure. We know we have inflationary pressures of probably three, three and a half percent per year.
Q. Will it get worse?
A. I have no idea.
Q. On page 7 of your testimony you state that you have so far avoided a rate increase by operating your business more efficiently and taking advantage of new technology. Have you suddenly lost the ability to operate more efficiently?
A. If I may, I'll go back in history a little bit. In 1994 we had our last rate increase application in here. Since that time, our employees -- we've had a decrease in our employees of over 30 percent. And that hasn't come about by huge layoffs. That came about by attrition and finding more efficient ways of doing things. Another statistic that I like to think about is -- let me check my notes here, if I can find it real fast -- is that in 1994 one employee -- I'm sorry --

248 customers was being served by one employee. In 2001 one employee was serving 370 customers. Just means that we've tried to find better ways of doing that.

And we continue to look for that, but I don't foresee us continuing that type of rapid growth in trying to achieve efficiencies that would mark that rate of serving more customers with less employees. In fact, we've kind of flattened in the last year or two. I think there is just so much that you can do. Although, I can tell you we have our employees out there looking for it. And that's where most of our ideas come from, is from our employees. And we have several programs that are geared to do that, to reward and provide some incentive for coming forth with ideas, and most of them are just recognition-type things.

Q. Have you exhausted all possible new technologies that might help you cut costs?
A. Again, probably not, but keep in mind, Mr. Binek, if I may -- can you still hear me all right?

MR. HOBERG: Yes.

THE WITNESS: -- is that we -- and, here again, to give you an example, we are small. And,

again, to give you an example of what that smallness can do for you, we had hoped to automate our meter reading across our entire service area, including that of North Dakota, but we find out with the sparseness of our operation and given that we serve very few so-called large towns, Bismarck, Billings, Montana being the largest ones, Rapid City, we certainly -- we could not commit the monies that would have been necessary to do that. So we went halfway. We decided to upgrade our semiautomatic ICON meter reading system to, again, accord new technology, but certainly not to the point where we would have liked to.

So it's looking, but it's -- you know, you look at all across that business venture, I don't see anything on the horizon other than what we've done today, such as the customer service center, automating and consolidating our meter reading. We do joint trenching. You know, we just keep looking under every little piece of dirt, so to speak, to try to figure out ways of doing it. But when you say "all," no, I wouldn't say all, but certainly we have come a long ways in the last five, six years.
Q. (MR. BINEK CONTINUING) As far as numbers of customers, have you been gaining in customer

count?
A. Not particularly.
Q. You have had some gains?
A. We have had some gains, but nothing materially. We grow about 1 percent or less per year in the gas business. Unless we take on a new project like northeast Bismarck, there isn't a lot of growth other than that.
Q. Could you explain what joint trenching is?
A. That means we get together with telecommunication companies, other utilities, anybody that's putting a hole in the ground and trenching it for a ways, we'd like to drop our underground facilities in there as well and that's worked out very well for us.
Q. So you're doing that right now?
A. We are doing that now.
Q. Are you doing that in northeast Bismarck as well?
A. We are wherever the opportunity comes along, especially with the telecommunications people, but that's slowed down, too.
Q. On page 7 of your testimony you propose a policy change with regard to the ownership of customer services. Does that policy change

influence your need for more revenue and, if so, how?

A. It does. We think we'll spend about -- other witnesses have it. It's about $500,000 a year, and that's included in this case.

Q. On page 8 you mention rate structure changes. Do those rate structure changes influence your need for more revenue and, if so, how?

A. It does not.

MR. BINEK: I have no further questions.

MR. HOBERG: Thank you, Mr. Binek.

Commissioner Reinbold, do you have any questions of Mr. Fox?

COMMISSIONER REINBOLD: A couple. Thank you.

EXAMINATION

BY COMMISSIONER REINBOLD:

Q. First of all, I want to get back to the residential customers burning coal in the City of Bismarck. Do you have any idea the numbers you're talking about, the number of households that are taking advantage --

A. It would be very small for the residential. I happened to use that. I kind of bristle at that every time I go by that person's home. That's the

reason I brought it up. But the coal, the competitive feature of that would be in the large customer list. And the reason for that, if the cost of gas goes up -- and primarily we're talking about the cost of gas that we don't control. We're talking about the wholesale. But if that would go up materially, then those folks start looking at different alternatives. The distribution portion of it doesn't have much influence on this.

Q. The reason I wanted to bring it up again is because it surprised me. I didn't know that happened.

MDU, you have gas operations in other states other than North Dakota. You have Montana?

A. Montana, South Dakota, and Wyoming.

Q. And are they in a similar calendar mode of applying for a rate increase, or don't you know?

A. Yes. In every state we are filing for a rate increase, either have or will. We filed in the State of Montana. We've already received an interim rate increase there. And we expect the process in Wyoming to go rather fast. The idea in most cases, and the other witnesses here will have a better feel for that, but we are hopeful of putting increases on the distribution site, increased rates in effect for

this heating season.

Q. You mentioned your customer service center and we've heard presentations on that. It's fascinating what you're doing. Can you elaborate a bit on what the customer service center does if somebody calls in?

A. Yes. Yes, I can. Am I close enough to this? A few years ago we decided to centralize what we call our customer service point. Historically, we would have a person located in each of our major areas talking to our customers, answering their inquiries, their questions. And we thought that we could consolidate that and still give personalized service to each customer by doing a couple things. One is when they call in, they would get a real person that would be able to meet their needs. And, secondly, through increased training, 8 to 10 weeks of training for each of these people, we thought that they would be able to handle particular questions, inquiries. In fact, they actually dispatch calls to our servicemen, that type of thing, in addition to that.

So we thought we could do that with a decreasing -- without decreasing our request time for service, decrease our customer acceptability. In

fact, I think it's enhanced our customer acceptability since we started that. There are a lot of things that have been very favorable about that and, plus, we've been able to save a considerable amount of money on an annual basis as a result of that.

Q. Better service and save money at the same time?

A. That's correct.

Q. You say when I call in or somebody calls in, you talk to a real person?

A. They do. I say that versus calling, as we sometimes do, call for help and we find that we have to punch one or two or three or four a couple of times in order to get someone to answer our questions and sometimes we never get someone to answer our questions. So we don't do things that way.

Q. Is there any way that you can take your experiences of talking with a real person and teach this to the telephone industry in the state?

A. Well, I didn't mention them by name, but you're right on track.

Q. I could. That's enough insults for now. Next.

MR. HOBERG: Thank you, Commissioner Reinbold. Commissioner Wefald, please.

EXAMINATION

BY COMMISSIONER WEFALD:

Q. You mentioned Tesoro Company. What impact does this one company have on the income of Montana-Dakota Utilities?

A. Well, we have a witness that would have it. Ms. Mulkern has that in her cost of service.

Q. Then I'll just wait and ask Ms. Mulkern. That's fine. And then each one percent -- we received this memo --

MR. HOBERG: Exhibit 10.

Q. (COMMISSIONER WEFALD CONTINUING) Exhibit 10 from staff. And it shows that 2001 11.9 percent rate of return. In your testimony you have said that you anticipate a rate of return of zero in 2002; is that correct?

A. 2003. No, 2002. 2003 would be negative.

Q. So can you share with me the difference in income or the difference in expenses that would relate to a drop from 11.9 percent to zero?

A. I can, but I think what would be best, Commissioner, if you can wait for Ms. Mulkern to come. She has all the full facts in front of her.

Q. Okay. And then in your expansion into north Bismarck, how are costs recovered for that expansion, and are they included in your cost for 2002 when you anticipate a rate of return to be zero?

A. Northeast Bismarck is included in this rate case.

Q. And what are the --

A. That's a 2003 test year.

Q. And that's a 2003 test year?

A. Mm-hmm.

Q. So what are the costs for that expansion, and how are they recovered?

A. Let's see, how are they recovered? They are included in this rate case so it would be recovered through the rates of all the folks, ratepayers in the State of North Dakota.

Q. Do you have an expansion tariff in place so that the customers in those areas pay the bulk of the expansion, or are the bulk of the expansion costs paid by all the ratepayers of the State of North Dakota?

A. There's a policy in place for that and, again, if I may, Ms. Aberle or Ms. Mulkern could answer specific questions on that.

COMMISSIONER WEFALD: Thank you. That's all my questions.

MR. HOBERG: Thank you, Commissioner Wefald. Commissioner Clark, please.

EXAMINATION

BY COMMISSIONER CLARK:

Q. Just one question. Do you have any other major expansion plans outside of northeast Bismarck in your service territory area?

A. In North Dakota, Commissioner?

Q. Right.

A. That's the only one I can think of right now. Like I said, the gas business is very slowly growing. It's less than 1 percent per year.

Q. Okay. And that would include both residential and industrial, you don't have any industrial-type expansion projects on the horizon, at least that would be included in this test year?

A. Nothing that -- nothing that we haven't had in the past.

COMMISSIONER CLARK: Okay. That's all I have. Thank you.

MR. HOBERG: Thank you, Commissioner Clark. Commissioner Reinbold, you have another question?

FURTHER EXAMINATION

BY COMMISSIONER REINBOLD:

Q. One other question. Do you serve the University of Mary with natural gas?

A. Yes.

COMMISSIONER REINBOLD: You do. Thank you.

MR. HOBERG: Thank you, Commissioner Reinbold. Mr. Pearce, anything on redirect?

MR. PEARCE: No. I have no questions.

MR. HOBERG: Thank you. Mr. Binek, anything further?

MR. BINEK: No.

MR. HOBERG: Thank you, Mr. Fox.

Let's take about a -- let's be back at 10 after 10:00, about a nine-minute recess. We'll start at 10 after 10:00.

(A recess was taken.)

MR. HOBERG: We're back on the record after a short recess. And I apologize. I neglected to ask for an appearance by Commission advisory staff, and at this time I will ask Ms. Jeffcoat-Sacco to make an appearance for Commission advisory staff.

MS. JEFFCOAT-SACCO: Commission advisory staff in this case is myself, Mike Diller, and Jerry Lein. And for purposes of this case, if there are

some questions of advisory staff during the hearing, I'd request that Mike be able to ask those, if that's acceptable.

MR. HOBERG: Any objection, Mr. Pearce?

MR. PEARCE: No, that's no problem.

MR. BINEK: No.

MR. HOBERG: Did you have any questions of the first witness?

MR. DILLER: I can ask the question I had of one of the other witnesses.

MR. HOBERG: Okay. Thank you, Ms. Jeffcoat-Sacco and Mr. Diller. You may not be asking questions, as I understand, of every witness, but you'll indicate to me if you have a question?

MR. DILLER: That's right.

MR. HOBERG: Okay. Thank you. Your next witness, please, Mr. Pearce.

MR. PEARCE: Thank you. Before I call the witness, I think there's one matter I'd like to clarify. I'm not quite sure what's the best way to do it. It turns out apparently there's a significant error in Exhibit 10. The 2001 MDU gas return does not correspond to the return that was actually filed with the Commission in the annual report. Apparently, it was mistranscribed when this

exhibit was made up, so I'm not quite sure what's the best way to do that. We can take judicial notice of the report that's on file with the Commission.

MR. HOBERG: This is on file in another matter?

MR. PEARCE: This is the annual report that the company has filed and I think Mr. Diller based his Exhibit 10 on. Perhaps maybe since he's now participating in the proceeding, he could simply clarify that there's apparently a transcription error made in preparing Exhibit 10.

MR. HOBERG: Is there an error, Mr. Diller?

MR. DILLER: Yes. I looked at MDU's annual report for its gas operation. It appears I picked up the 2000 number and put it in 2001. The actual earnings reported by MDU, I believe, is 1.6 percent for 2001, rather than 11.9.

MR. HOBERG: 1.6 percent. Why don't we just make that correction there? Is that sufficient, Mr. Pearce?

MR. PEARCE: Yes, that's fine. The report actually says 1.616, but 1.6 is fine.

MR. HOBERG: And then, of course, that would make a difference on the four average, too,

and make a difference on the average for all. For the purpose of this hearing are we mostly concerned about those four numbers from 1998 to 2001?

MR. PEARCE: That was the point of the exhibit, I think.

MR. HOBERG: Okay. Then that exhibit will be corrected as indicated. Thank you, Mr. Pearce. Your next witness, please.

MR. PEARCE: We'll call Dr. J. Stephen Gaske.

MR. HOBERG: Dr. Gaske's direct testimony does appear as Exhibit 4 in Docket No. 1.

Dr. Gaske, did you hear -- you can sit down.

THE WITNESS: I thought you'd swear me in.

MR. HOBERG: I am going to. You can sit down while you're doing it.

Dr. Gaske, did you hear the admonition I gave in regard to perjury?

THE WITNESS: Yes, I did.

MR. HOBERG: Being advised of the penalty for perjury, do you promise to tell the truth in this matter being heard? If so, answer I do.

THE WITNESS: I do.

MR. HOBERG: Thank you. Mr. Pearce,

please.

J. STEPHEN GASKE,

being first duly sworn, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. PEARCE:

Q. Dr. Gaske, have you prepared and had prefiled in this case prepared direct testimony of J. Stephen Gaske?

A. Yes.

Q. And if you were asked the same questions appearing in Exhibit 4, would your answers be the same today if you gave them live in this proceeding?

A. Yes.

Q. And to the best of your information and belief, is all the information contained in that testimony true and correct?

A. Yes.

MR. PEARCE: I will offer Exhibit 4 at this time and I'm not going to reread the testimony.

MR. HOBERG: Thank you, Mr. Pearce. Any objection to Exhibit 4?

MR. BINEK: No.

MR. HOBERG: Okay. Exhibit 4 is admitted. Are you tendering the witness for --

MR. PEARCE: Yes.
MR. HOBERG: Okay. Thank you, Mr. Pearce. Mr. Binek, do you have any questions of Dr. Gaske?
MR. BINEK: Yes.

CROSS-EXAMINATION

BY MR. BINEK:

Q. Dr. Gaske, on page 2 of your initial testimony, and that is Exhibit 4, at lines 8 to 10, you state that you have filed cost of capital and capital structure issues in six states, including North Dakota.

Was your latest North Dakota appearance in Case No. PU-399-01-186, which was MDU's electric service rate case?

A. Yes.

Q. In that case did you argue for the inclusion of an upward adjustment in the return to equity to account for flotation costs?

A. Yes, I did.

MR. BINEK: Okay. Your Honor, at this time I would like to have Mr. Gaske refer to some findings in this case. Do you wish to have this marked as an exhibit or just --

MR. HOBERG: Let's take official notice of that. I don't think we need to mark it as an

exhibit.

MR. BINEK: I do have copies, if people would like copies.

MR. HOBERG: That may be a good idea to put copies out for us, please.

MR. HOBERG: And, again, for the record, that's Case No. PU-399-01-186. Mr. Binek, please.

Q. (MR. BINEK CONTINUING) Okay. I've handed you a copy of the decision that the Commission issued in that case. The decision is dated April 24, 2002. And I would ask if you would please read paragraphs 14 and 15.

A. (Witness reviews document.)

MR. HOBERG: You don't want him to read them out loud, do you?

Q. (MR. BINEK CONTINUING) Yes, I would like to have you read them out loud.

A. "Under cross-examination, Gaske provided no empirical data to show that disallowing flotation costs would hinder the issuance of stock. On the contrary, Gaske agreed that most regulatory commissions do not allow flotation costs."

"Given that staff has provided evidence based on historical information, we find no need to rely on the theoretical" --

MR. HOBERG: Dr. Gaske, I'm sorry. Can you speak up a little bit, please? We're having a little trouble.

THE WITNESS: "Given that staff has provided evidence based on historical information, we find no need to rely on the theoretical information provided by MDU. In addition, Gaske admitted that most regulatory commissions do not allow flotation costs. The evidence indicates a negligible amount of flotation costs in the instant case. Therefore, the Commission will not include flotation costs in the determination of return on common equity."

Q. (MR. BINEK CONTINUING) Thank you. Your flotation cost approach in this case is essentially the same as your approach in MDU's electric case that was decided on April 24th of 2002; isn't that correct?

A. Yes, it is.

Q. And it's also correct that the Public Service Commission rejected the inclusion of flotation costs in that case --

A. Yes, that's true.

Q. -- is that correct? And it's also true that most state public utility commissions have

rejected the inclusion of flotation costs in determining the cost of common equity; isn't that also correct?

A. Some have accepted it and some have rejected it.

Q. Most have rejected it; would you agree?

A. At this point, yes.

Q. Where in your direct or rebuttal testimony in this case do we find empirical data to show that disallowing flotation costs would hinder the issuance of stock?

A. I never make the claim that it hinders the issuance of stock. What I do say is that without the allowance, an issuance of stock will result in a confiscation of property of the existing investors. So that's a very different claim than the one that you've asked me about. I don't base my claim on empirical evidence that they will be unable to issue stock. They will be unable to issue the stock on reasonable terms.

Q. Aside from North Dakota, what were the other five states where you filed testimony on cost of capital?

A. Let's see. Montana, Wyoming, New York, South Dakota, and actually I've done it in Alaska.

Q. In how many of those states did you recommend a flotation cost adjustment to the return on equity?

A. All of them.

Q. And how many of those states did the Commission accept your recommendation?

A. Actually, I should add I've also testified on flotation cost adjustment in a property tax case in Wyoming and, in fact, testified on that on two occasions.

Q. Okay. But in utility cases you're talking about the previous ones you mentioned?

A. In utility cases, most of those were settled or have not had a decision. The Montana case they did not allow flotation costs. In the Wyoming property tax case they did not allow it the first time, but the second time around I think I did a better job of explaining it and they did agree that a flotation cost adjustment was appropriate in order to be able to issue common stock on reasonable terms. It's an appropriate part of the cost of capital.

Q. Okay. But that was not a utility case?

A. No, it was not. But my point is that Commissions have rejected this issue in the past and

then turned around and realized and understood the issue so that they did allow it. They changed their minds.

Q. What rates of return did the Commissions allow in gas -- let me go back. Were any of these cases that -- the utility cases that you talked about gas utility cases?

A. Yes.

Q. And how many of those were gas utility?

A. I probably -- I don't recall exactly, but maybe about five of them.

Q. What rates of return did the Commission allow in each of those gas distribution cases?

A. To my recollection, the only one that went to a decision was a Montana case and I believe it was 11.7, but I would have to check to tell you.

Q. Okay. None of them have --

A. It might -- it might have been higher than that. I don't recall.

Q. I'd like to have you turn to your Exhibit JSG-2.

COMMISSIONER REINBOLD: What page is that?

MR. BINEK: It's Exhibit JSG-2.

MR. HOBERG: Toward the end of Exhibit 4, his testimony, about two pages before the end.

Q. (MR. BINEK CONTINUING) On page 1 you provide a number of rates of annual change for prices and gross domestic product. They end in 2001.

MR. HOBERG: I'm sorry. I misspoke. I was on page 8 when I said that. It's closer to about 10 pages from the end, JSG-2.

THE WITNESS: I think you're on the right page.

COMMISSIONER CLARK: Schedule 1.

COMMISSIONER WEFALD: Is it in the rebuttal testimony or the original testimony?

THE WITNESS: Original testimony.

COMMISSIONER WEFALD: Thank you. That will help me find it.

MR. HOBERG: Schedule 1, where it says 1 of 3 pages.

THE WITNESS: I think that's what he's referring to.

MR. HOBERG: Does everyone have it?

COMMISSIONER WEFALD: JSG-2, and which page of JSG-2 are we on?

MR. BINEK: Page 1 of 3.

COMMISSIONER WEFALD: Thank you.

MR. HOBERG: Mr. Binek, please.

MR. BINEK: It's Schedule 1, page 1 of 3.

Q. (MR. BINEK CONTINUING) Okay. On page 1 you provide a number of rates of annual change for prices in gross domestic product. They end in 2001, which is now more than nine months ago. What has happened to these indicators since last December?

A. I believe in the early part of the year there was relatively rapid growth in the economy. And I believe it slowed down since then, and I don't know what's going on right now. I do know that right now there's a debate whether we're in or going into another recession, but we really won't know that until the quarter is out.

Q. What about consumer prices, what's happening there?

A. I don't have that information.

Q. On page 2 of that exhibit you show a number of interest rates, but your series end last January. Can you provide the latest interest rates and match these series?

A. Let's see. The last one I had was as of the end of July, the corporate average, which was 7.38 in January, went down 11 basis points to 7.27 percent. The A-rated public utilities, which has been 7.66 percent, went down to 7.31 percent. And

the Baa-rated utilities barely changed at all, went from 8.13 to 8.07 percent. Since that time I don't have the exact numbers. I believe the numbers have gone down some. That, I guess, brings you up another six more months.

Q. Okay. So the interest rates generally have decreased; do you agree?

A. Yes. The Baa barely as much, but it's down.

Q. Do you know whether it's true that interest rates are now the lowest that they've been in decades?

MR. HOBERG: By "decades" you mean what, the last --

MR. BINEK: Last couple, three.

MR. HOBERG: Three decades.

THE WITNESS: It depends on what interest rate you're talking about. One of the things that has occurred in the past year is that investors have been very leery of investing in almost anything that has any risk at all attached to it. So they have been reluctant to be in common stocks or even risky bonds. The treasury bill rates are the lowest they've been in decades. The U.S. Treasury bond rates are also the lowest that they've been in

decades. However, if you look at the Baa public utility bonds, right now they're essentially higher than they were in 1999 or '98. Approximately where they were in '97. Higher than they were in '93. They're about where they've been for the last decade.

So to answer your question, depends on whether you're talking about extremely low-risk instruments. Those are low. Investors want those very badly right now because there's a great deal of uncertainty in the market and the economy, but your question is not true if you're talking about public utility bonds.

Q. (MR. BINEK CONTINUING) On page 3 of that same exhibit, you show average return on the book value of equity since 1977 up through 2001. What has happened to returns on equity during the past nine months?

A. I would imagine that they are pretty abysmal, but I don't know the numbers on that.

Q. Okay. On page 11 of your testimony you present the discounted cash flow formula. Is it true that the only difference between your presentation of this formula and that of Mr. King is that you increase the next year's dividend by a

factor of .625 and that Mr. King increases it by .5?

A. As far as the basic general formula, yes, that's correct.

Q. Is the principal reason for this difference your belief that Mr. King has failed to recognize the present value of future dividends and dividend increases?

A. I think that the best way to describe it is that he's neglected to pay any attention to the time value of money during the initial year.

Q. And that's present value, isn't it?

A. Well, the whole discounted cash flow model looks forward basically into an infinite period of time in the future and is based on discounted cash flow. The portion of the model that deals with that adjustment factor really is looking at the first year of an infinite number of years. That dividend tends to be the most valuable because it's one you get the soonest, and to the extent that you're getting it on a quarterly basis, the first one you get is more valuable than the second, more valuable than the third, et cetera, as long as the dividend doesn't change. And so I think the real difference between the two of us is a relatively small one. I recognize the time value of money and he doesn't.

Q. This really doesn't amount to much of anything as far as this case, does it?

A. No. That's why I was a little bit surprised that he put it in his rebuttal testimony.

Q. I recall an electric case we spent a lot of time on this issue for very little money.

A. Yeah. And I couldn't understand why he kept getting the math wrong and still does.

Q. Perhaps he might not think he's got it wrong.

A. It really goes -- it's not a real big dollar thing. It really goes to a question of whether you can do the math right.

Q. I think we'll let him respond to that one.

A. And that may be something -- well, I'll leave it at that.

Q. Please turn to page 5 of Schedule 2 of your Exhibit JSG-2.

COMMISSIONER WEFALD: Same book?

MR. HOBERG: Yes, same book.

COMMISSIONER REINBOLD: What page?

MR. BINEK: Page 5 of Schedule 2.

COMMISSIONER WEFALD: 5 of 9?

MR. BINEK: Of 2. Oh, 5 of 9, yes.

Q. (MR. BINEK CONTINUING) Is this the page on

73

which you developed the growth rates you use for your six proxy group companies?

A. These are the factors that I gave the most weight to, yes.

Q. The first column is Zacks five-year growth estimate, and the second column is your retention growth calculation; is that correct?

A. That's correct.

Q. Is it true that for five out of these six companies the Zacks forecast is higher than the retention growth forecast?

A. Yes.

Q. The third column is labeled "weighted average." Is that the weighting of two-thirds Zacks and one-third retention growth?

A. Yes.

Q. On what basis did you decide to make that weighting between the two growth estimates?

A. There were two factors that came into play. One is that I normally think of the retention growth rate as being sort of a baseline, relatively stable number that investors can look at as being a base level of growth throughout the life of the project or the company as long as they maintain that. The Zacks earnings growth estimates take into

74

consideration a lot of other ways that a company can grow other than by retaining earnings and reinvesting it to increase common equity just through retained earnings. So the Zacks earnings estimates which are put together by analysts and forecasts tend to include the other methods that companies can grow by. For these companies I think people who buy common stock place a fairly good amount of weight on those estimates and stock prices and dividend yields are dictated to a large extent by those analysts' estimates. So I tended to give them a little more weight.

The second reason I used that approach is that it somewhat mimics an approach that the Federal Energy Regulatory Commission actually requires almost as a generic approach where they give two-thirds weight to the Zacks earnings estimates and a one-third weight to the projected growth in the Gross National Product or Gross Domestic Product, rather than retention growth. So to my mind, it's a good way to put together a combination of the two that smooths out aberrations that may occur in one growth rate or the other and get a pretty good estimate of what investors reasonably expect over a long period of time.

75

Q. Isn't it true that two companies, Keyspan and Laclede Group, account for the highest observations?

A. Yes, highest observed growth rates.

Q. And those high growth rates for Keyspan and Laclede rates carry over to the next page, page 6, to yield the two highest rates of return; isn't that also correct?

A. Yes. Keyspan and Laclede also have the highest dividend yields.

Q. Did Mr. King include Keyspan in his comparable companies?

A. No, he did not.

Q. Do you know why Mr. King excluded Keyspan from his group of comparable companies?

A. He used different selection criteria than I did. Keyspan derives less than 75 percent of its earnings from utility operations or gas utility operations.

(Exhibit 11 was marked for identification.)

Q. (MR. BINEK CONTINUING) Would you please identify what has been marked as Document 11? I guess I also would like to say, would that be the cover page, index page, and page 27 of the 2001 form 10-K for Keyspan Corporation?

76

A. Yes.

MR. BINEK: I would offer Exhibit 11.

MR. HOBERG: Any objection to Exhibit 11?

MR. PEARCE: No. Assuming it is what it purports to be, I have no objection.

MR. HOBERG: Exhibit 11 is admitted.

Q. (MR. BINEK CONTINUING) Mr. Gaske, I'd like to have you look at the first line of the first column on page 27. Could you tell me what the number there represents?

A. It's the gas distribution revenues of Keyspan during various years in the recent past.

Q. It shows gas distribution revenues in 2001?

A. Yes, it does.

Q. What is that number?

A. 3.6 million.

Q. Now, I'd like to have you drop down a few lines -- is the number billion?

A. Yes. The numbers are expressed in thousands of dollars, so, yes, $3.6 billion.

Q. And now would you drop down a few lines and read the number for total revenue?

A. $6.6 billion.

Q. Would you agree that gas distribution accounts for almost exactly one-half of Keyspan's

total revenue?
A. A little more than that, but, yes. Somewhere in the 50 percent range, 50 to 60.
Q. The other company with very high weighted growth rate on page 5 of Schedule 2 is Laclede? Or I think you refer to as Laclede?
A. Yes.
Q. Okay. Could you explain how Laclede could generate a 12 percent annual growth in earnings when its retention of earnings would allow it to increase by only 4.2 percent?
A. Laclede, at the time that I did my testimony, the most recent Value Line page for them indicates that it had recently formed a holding company and that Laclede was going to begin essentially starting up some new businesses and getting into some other new lines. The Value Line ultimate conclusion was that Laclede's expansion into unregulated industry boosts its long-term earnings prospects.
So although Laclede did not have much in the way of other investments and other lines of business, particularly unregulated ones at the time, and still doesn't have a whole lot, investors were clearly expecting that they would get into some

additional lines of business and that in the long run that they were going to boost their earnings' growth rate above the growth rate that would be sustained by book value growth.
Q. So Laclede's high return is related to unregulated activities; would that be correct?
A. Not the current required return of the company at the time. The high growth rate and perhaps the dividend yield was lower than it might otherwise have been because of that high expected growth rate, but at the time the company was primarily a distribution company.
Q. But the high return that you're showing is due to unregulated activities, isn't it?
A. They didn't have much in the way of unregulated activities at the time. The high growth rate is based on the expectation that in the future they're probably going to make more money than they can make on unregulated operations, but there's a very different question there, because the current return reflects to some degree unregulated operations in the future, but it primarily reflects what they have in place and what their current business is, what their prospects for that business are and the risks attached to it. So you can have

high growth expected in the future without necessarily having a lot of risky investments right now.
In addition, the -- I suspect that at one level it's probably good for the Laclede investors for the company to diversify into a few other lines of business to more or less diversify the company in case something happens with the gas distribution business.
Q. Didn't Mr. King produce as his Exhibit CWK-5 a Zacks report that showed Laclede's consensus growth at 4.25 percent?
A. Yes. Later in the year after I prepared my testimony the projected forecast for Laclede went down. I actually didn't look to see what happened with the other companies, but he did produce the Laclede one and it went down from 12 to 4.
Q. Turning to page 6 of your Schedule 2, would you agree with me that if you left out Keyspan and Laclede, the average return would be considerably less than the numbers you show there?
A. The average for -- if you left the two out, the average cost of capital would be -- instead of 12.83, it would drop to 11.85. The median would drop from 12.51 to 12.4. So your median would drop

about 11 basis point. So, yes, it's a slightly lower number. Not a lot, but it's slightly lower.
Q. I'd like to have you turn to page 7 of Schedule 2, Exhibit JSG-2. Do we find again that Keyspan and Laclede generate by far the highest rates of return?
A. Laclede does. The Keyspan depends on your definition of "by far," but, yes, it is about 80 basis point higher than the next one.
Q. Now, I'd like to turn to your primary DCF analysis. A discussion of that begins on page 20 of your testimony.
COMMISSIONER WEFALD: Which testimony is that -- the original testimony?
MR. BINEK: That's the original.
Q. (MR. BINEK CONTINUING) The growth rate that you use for this analysis as a range --
A. Could I ask you to wait for a moment?
Q. Sure.
A. Okay. Where was it that you were going?
Q. Okay. Page 20.
A. I'm there.
Q. Okay. The growth rate that you use for this analysis is a range, isn't it?
A. Yes.

Q. That range is presented on lines 14 and 15 of page 21 as 6.75 percent to 7.75 percent; is that correct?

A. Yes.

Q. How did you arrive at that range?

A. I considered a variety of factors. I believe that natural gas is going to tend to become a more important fuel source in the future, at least in some places. I also looked at the data that you pointed me to earlier. If you go to Schedule 2 of Exhibit JSG-2 and page 4 of that schedule -- I'm sorry -- page 5 of that schedule at the back, when you put the -- when you just look at the Zacks data, you'll see that companies with projected growth rates above 7 percent or 7 percent above include every single company there, except WGL Resources. So the 7 percent number is towards the middle of that range, of the range that I adopted, 6.75 to 7.75. There's one company that's below that range. Keyspan is just slightly above that range. Laclede's well above the range, but everybody else is grouped right in the middle. They're all in the 7 percent range. I thought that that was a pretty good anchor.

The retention growth I usually think of as

being a base amount that a company can achieve and usually under most circumstances you would expect it to be able to do better than that. And the analysts in this case thought that the company should do better than that, but if you look at the weighted average in the last column, you'll see that you have several companies a little under that range. And, let's see, Keyspan at 7.5 and Laclede at 9.4. So I used -- essentially, after considering other factors other than the simple two-thirds/one-third objective approach, I felt that 6.75 to 7.75 really reflected what investors expected and you can see that from the Zacks forecast where virtually all of my companies are 7 percent or higher.

Q. Okay. Looking at the top range of 7.75 percent, can you show me anywhere on pages 5, 6, and 7 of Schedule 2 where you have developed an average growth for the six companies that is as high as 7.75?

A. Now, the purpose of a range is to more or less put the company within some range around which you think on a normal basis these companies would be. The Zacks 7.6 percent obviously is well above the midpoint of that range. I was trying to establish about a 100 basis point range that would

be reflective overall of the group. So 7.6 would be well above the average in that range and the average for the weighted average would be toward the lower end of the range, but falls within the range.

So using those two numbers as anchors, you can go a little above 7.6 percent on the Zacks average earnings and get to 7.75. You can go a little below the 6.9 percent average and get to 6.75 and that gave me a 100 basis point range.

Q. Again, looking -- I'll repeat the question and please answer the question. Looking at the top of the range, 7.75 percent, can you show me anywhere on these pages, 5, 6, and 7, where you developed an average growth for the six companies that is as high as 7.75 percent? Just yes or no.

A. There's no simple average that does that, no.

Q. Okay. At lines 19 through 21 of page 21 you state that your range of 6.67 percent to 7.75 percent is consistent with the retention growth for the six companies. Please turn to page 5 of Schedule 2 and read to me the average retention growth for the six companies.

A. Would you take me back to the first citation that you had?

Q. Page 5.

A. You were citing someplace --

MR. HOBERG: Page 21.

Q. (MR. BINEK CONTINUING) Pages 19 through 21.

MR. HOBERG: Wasn't it line 19 through 21?

Q. (MR. BINEK CONTINUING) Lines 19 through 21 of page 21. The average retention growth rate for the six companies.

COMMISSIONER WEFALD: Does it start out "in my opinion," is that the line?

THE WITNESS: Okay. I see what you are asking. Page 21, the last three lines.

Q. (MR. BINEK CONTINUING) Starting at line 13 is the beginning of the paragraph.

A. But I believe you asked the question about the last sentence?

Q. Right.

A. And the last sentence says that, "This growth rate range is also consistent with the retention growth rates projected for these companies and their ability to grow by means other than retained earnings," which is what I was talking about earlier, that typically companies have the ability to grow by other means than retained

earnings and that allows them to generally achieve a slightly higher or somewhat higher growth rate than solely with book value growths.

You then asked me to turn to page 5 of Schedule 2 of Exhibit JSG-2 and reconcile the 5.5 percent average shown there with what I said on page 21. And the reconciliation is quite simply that it's -- if a company can have a base growth rate of about 5.5 percent, but investment analysts are projecting an average of 7.6 percent, it's consistent to think that 6.75 to 7.75 is consistent with the idea that book value forms sort of a base and the other methods that they can grow by, including investing in an unregulated operation, comes up with a higher rate of return.

Q. Over the long run how does a utility company do better than the retention growth?

A. There are several ways they can do that. One actually is contained in Mr. King's testimony. Mr. King has a growth rate component -- he calls it SV, issuing stock at above book value. If a company has some unregulated operations and those are doing reasonably well, it will have a book value -- or market value above book value and it's able to grow in that way. I believe Mr. King for his companies

estimated about 1 percent additional kicker to the growth rate from that. I'd have to go back and check his numbers, but it's something in that ballpark.

Another way that they can do that is by essentially borrowing to invest in new assets, that if those assets earn more than the cost of capital, it increases -- the market value of those assets exceed the book value and the company over time can generate retained earnings from these new unregulated assets and essentially build their equity ratio back up again and then repeat the process. And that's a very, very common thing, is that companies borrow because they find that they have a really good investment that will make them better off. They do so, they invest in it, and if it pays off well and it's making a 20-percent rate of return, and they borrowed the money at 8 percent, they get a big kick in their earnings per share. The stockholders get the difference between the 20 percent the operation makes and the 8 percent that they borrowed at.

So those are a few of the ways and I think those are probably the primary ways. I could probably think of a few others that are less

important, but those are big ones. And my 5.5 percent earnings retention growth rate, I should note, is a little bit different from Mr. King's book value growth rate in that I have not included the SV factor in the 5.5. I have assumed that the SV factor -- or actually I should call it a term because it's used as a term, it's an add-on to the retention growth rate -- is encompassed in the Zacks earnings forecast, which are higher, and that the other ways that a company can grow, including the SV term, are in the Zacks earnings growth estimate. So retention growth is sort of a baseline, but you can do all these other things. And clearly investors are expecting some of that to happen.

MR. HOBERG: Dr. Gaske, for the record, what is the SV factor?

THE WITNESS: It's the stock -- the percentage increases in the shares outstanding times the premium over book value that you are able to sell your stock at.

MR. HOBERG: Thank you.

THE WITNESS: And explained in fairly great detail in Mr. King's testimony.

(Exhibit 12 was marked for identification.)

Q. (MR. BINEK CONTINUING) I'd like to refer

you to page 23 of your testimony. On pages 6 through 8 you describe data by Ibbotson Associates on returns to stocks, bonds and treasury bills since 1926. I've handed you a response that Mr. King filed to MDU's September 6, 2002 data request, question 14. And this is marked as Exhibit 12.

Have you seen this response?

A. Yes, I have.

Q. In this response does Mr. King represent that he has supplied the yearly returns to an S&P composite index and S&P utility index, long-term corporate bonds and public utility bonds for every year from 1927 to 2001?

A. Yes.

MR. HOBERG: Isn't it 1928?

MR. BINEK: Or '28.

Q. (MR. BINEK CONTINUING) Now, would you look at the bottom of that sheet and identify what is reported on the last four lines?

A. A geometric mean return for the series and an arithmetic mean return for the series, a standard deviation, and a median.

Q. Are you familiar with those terms?

A. Yes, I am.

Q. Would you please describe your

understanding of the meaning of each of those terms?

A. The geometric mean tells you the average historical rate of return that occurred throughout the period, assuming compounding. And it's a very good indicator of your past historical return that you earned. The arithmetic mean is the average of the return earned each year, year by year. And it's a very good indicator of future expected return.

The standard deviation tells you how much variation there is in a particular series of numbers. And, in fact, what the standard deviation really tells you is that if you assume that the data have what is referred to in statistics as a normal distribution, it's a number that you can add to the mean, the arithmetic mean, plus or minus, to determine a range within which two-thirds of the observations fall or would be expected to fall. In this case I'm not entirely sure whether he had done this as a population mean or sample mean. Usually it's calculated as a sample mean, so I would presume that, but maybe we'd have to ask him which kind of mean he used or rather what kind of standard deviation he used.

And the last number, the median, is the number that half of the observations are above and

half are below.

Q. If the standard deviation is higher than the mean, what does that tell you about the statistical significance of the mean?

A. That there's a high probability that the mean of that particular series is zero, or at least -- let's say the standard deviation is exactly equal to the mean, then there's about a 16 percent chance that the real number would be zero or less.

Q. Please read the arithmetic means and the standard deviations of each of these series.

MR. HOBERG: I think we better have this thing offered first, Mr. Binek.

MR. BINEK: Oh, I'm sorry. I will offer.

MR. HOBERG: Any objection to Exhibit 12, Mr. Pearce?

MR. PEARCE: No. On the assumption that Mr. King prepared this from published data, I have no objection.

MR. HOBERG: Exhibit 12 is admitted. Mr. Binek, please.

Q. (MR. BINEK CONTINUING) Now, would you please read the arithmetic means and the standard deviations of each of these series?

A. 12.33 percent for the S&P composite, and

20.3 for the standard deviation. For the public utility index, 11.11 percent. And 22.65 percent for the standard deviation. The long-term corporate bonds, 6.06 percent, and the standard deviation, 8.76 percent. The public utility bonds, 5.79 percent. The standard deviation, 8.11 percent.

Q. If I buy a share in a company, what price do I pay, the market price of the share or the book value of the share?

A. You pay the market price.

Q. If the market price is twice the book value, I still have to pay the market price, don't I?

A. Yes, you do.

Q. If the company is earning 20 percent on its book value and I pay a market price twice that book value, what is my return?

A. I can't calculate that in my head.

Q. Would it be 10 percent?

A. If there's no growth. Yes, if the company paid out its dividend, everything they make.

Q. What, in general, do you believe to be the relationship between market price and book value of the average company in The Value Line Investment Survey that you cite on page 25 of your testimony?

A. It's quite above book value. I don't recall the composites at this time, but it's probably in the neighborhood of four or five.

Q. Please turn to page 9 of Schedule 2 of your Exhibit JSG-2. We keep going back to that sucker.

COMMISSIONER WEFALD: Would you repeat the number again, please?

MR. BINEK: It's JSG-2, Schedule 2, page 9.

THE WITNESS: Which page now? I'm sorry.

Q. (MR. BINEK CONTINUING) Page 9. There you show debt and equity -- are you there? I'm sorry.

A. Yes, I am.

Q. There you show debt and equity ratios of your six proxy companies. They are all quite close together except one. Which is that one?

A. Keyspan.

Q. Keyspan has an equity ratio of only 38.84 percent. What effect would that have on the financial risk of that company?

A. Other things being equal, that should raise what we referred to as the financial risk. And Keyspan, if you look at page 2 of the same schedule, has an A plus and an A2 bond rating, which gives you a good idea of how investors view the financial risk. It's pretty comparable. Actually, it's the

only one that's identical to the first mortgage bonds of Montana-Dakota -- or MDU Resources that are secured by the public utility assets. So Montana-Dakota -- Montana-Dakota's bonds and Keyspan bonds have virtually the same rating so that the overall risk, that at least bond investors are looking at, is pretty much identical between the two.

Q. On page 7 of Schedule 2, doesn't that show that Keyspan has the second highest DCF return of the six companies?

A. Yes.

Q. Do you think that the low equity ratio of Keyspan might have some influence on the equity risk perceived by investors?

A. Well, two things interrelate in the sense that you can't -- when you look at the return on equity, you have to look at both the business risk of the company and its financial risk. And the two, in a sense, multiply against each other. So undoubtedly part of their rate of return is based on their high financial risk or -- and part of it is based on business risk. When you combine the two things, you come up with an overall risk assessment and, as I said, the bond rating agencies look at Keyspan as a whole as being almost identical to the

Montana-Dakota public utility assets. But both of them are rated -- have bond ratings below the average for that group, so I'm not surprised that Keyspan is above the average. Montana-Dakota Utilities do have low average bond rates for this group.

Q. I'd like to have you turn to page 32. On page 32 you list your costs of capital indications. What is the distinction between investor requirement and cost of capital?

A. The investor requirement is the return investors require on the sunk investment that's there. The cost of capital is what they require in order to be able to track new capital on reasonable terms.

Q. If we ignore flotation costs, we would focus on the first column; is that correct?

A. Yes.

Q. Now, I'd like to concentrate on the second stage retention growth. The number we see there was developed on page 6 of Schedule 2 of your exhibit; is that correct?

A. That's correct, yes.

Q. The growth component of that number was developed on page 5 of Schedule 2; is that also

correct?

A. Yes.

Q. Isn't it true that the retention growth that you used is not all retention growth, but only one-third retention growth, the other two-thirds being Zacks forecast?

A. Right, that's why I referred to it as a second stage retention growth, or it's a weighted average of Zacks and retention.

Q. If we developed a DCF using solely retention growth, would it consist of a growth factor of 5.5 shown on page 4 of Schedule 2 and a dividend yield of 5.14 percent developed on page 3 of Schedule 2?

A. Mathematically that would be correct. It wouldn't mean anything because it wouldn't match up with investors' expectations.

Q. What would the DCF result be?

A. If you add 5.5 and 5.14, you get 10.64 and then, obviously, you would add the flotation cost adjustment.

Q. Okay. Thank you.

MR. BINEK: Can I take a moment, please?

MR. HOBERG: Yes.

(Exhibit 13 was marked for identification.)

COMMISSIONER WEFALD: What number is this exhibit?

MR. HOBERG: Exhibit 13.

Q. (MR. BINEK CONTINUING) Mr. Gaske, does this -- I've handed you what has been marked as Exhibit 13. Do you recognize that exhibit?

A. It appears to be an exhibit you showed me earlier this year. I'm not positive it's the same one, but it looks to be almost identical.

Q. And you see a reference of Exhibit 14 in the right-hand corner of that exhibit and below that a Docket No. 80 under case PU-399-01-186?

A. Yes, I do.

Q. Was that an MDU electric rate case?

A. Yes.

Q. And this was a document that was introduced in that case; is that correct?

A. Yes.

Q. Can you tell me what this document is?

A. It looks to be a survey of rates of return that have been authorized -- or requested and authorized in past rate proceedings. It also shows the dollar amount that the increase or decrease and other information about when these cases occurred.

Q. Okay. And would you agree that -- I'm

referring to the first page of this document in the introduction, that it says that the survey covers orders issued by state regulatory commissions during the period October 1, 2001 through September 30th, 2001; is that correct?

A. I'm sorry. I missed where you were referring.

Q. It's in the first paragraph, about the third or fourth line down, it says that -- it indicates the period covered by the report is October 1, 2000 through September 30th, 2001?

A. Yes.

Q. Okay. And what is the date of this report?

A. It's dated December 15th, 2001.

Q. And it says that it's an annual survey?

A. Yes.

Q. So would it be safe to assume that this is the latest annual survey that has been put out by Public Utilities Reports?

A. That I don't know.

Q. Just assuming an annual survey issued December 15th of 2001.

A. Yeah, I would assume so. I don't know if it's some kind of a mutant average or something like that.

Q. Okay. But there's no exact science to this exhibit as far as use of it, but I'd like to explain to you, if you would look at the following pages, I've highlighted several cases and if you will look at those cases, they are all ones that were decided in the year 2001. I would also like to point out that under North Dakota, Roman numeral VII, in red highlight or red marker is Otter Tail Power Company Gas at 12 percent ROE, and I would ask that all of the parties acknowledge the fact that Otter Tail Power Company does not have a gas distribution company operating in North Dakota and so this is obviously an error. It's just a carryover from their electric case and the same reference is to their electric case, is just a mistake that they made. There are not all that many cases here. I'd like to have you start with the first case.

MR. BINEK: Yes. I was just getting to that. I would like to offer Exhibit 13.

MR. HOBERG: Any objection, Mr. Pearce?

MR. PEARCE: No. It's hearsay, but probably pretty reliable hearsay, so I won't object.

MR. HOBERG: Exhibit 13 is admitted.

Q. (MR. BINEK CONTINUING) Now, I would ask, would you please go through the highlighted cases

and just indicate for us the company name, the order date and the newly authorized rate of return on company equity, starting with Arizona, first of all?

MR. HOBERG: You want him to read these into the record?

MR. BINEK: He can or --

MR. HOBERG: Can't the document speak for itself?

MR. BINEK: That's fine. I have no problem with that.

Q. (MR. BINEK CONTINUING) I would like to have you just kind of peruse these different entries, though, and then I would -- the question I would have for you is, if you would agree with me that the ROE range for the majority of these cases range from 10.7 percent to 11.5 percent?

MR. HOBERG: Do you need a couple minutes to look at that, Dr. Gaske, or a couple seconds?

THE WITNESS: I don't see any that are below 11.7 -- or I'm sorry. I don't see any that are below 10.7. I do see a couple that are 12.25 and 12.1 on the last page.

Q. (MR. BINEK CONTINUING) But my question is, would you agree that the majority of the cases range from 10.7 to 11.5?

A. Well, if you start at the very bottom of the range and count upwards until you get to a majority, that's probably true. If you start at the top and work your way down, you probably get another number.

Q. Okay. Well, would you agree with this statement, that the majority of them range from 11 to 11 and a half percent? If you can't agree, that's fine. The document does speak for itself.

A. I only see five back in that time period were above 11.5.

Q. Okay. And there were several below 11?

A. Yes.

Q. Okay. Would you also agree with me that, according to this report, the highest ROE given in 2001 that was included in the survey was 12.25 percent?

A. Yes.

Q. Would you agree that there have been relatively few gas rate cases reported so far in 2002, reported by Public Utility Reports, if you know?

A. I don't know.

Q. Okay. Are you familiar with a case entitled Re Yankee Gas Services Company, a case

decided by the Connecticut Department of Public Utility Control on January 30th, 2002 and reported at 215 PUR4th, 185?

A. No, I'm not.

MR. BINEK: At this point, I would just like to show a copy of the case. I don't believe it needs to be offered as an exhibit, unless MDU would like to have it as an exhibit. It just refers to the ROE in this particular case, and I would like to have Mr. Gaske look at it.

MR. PEARCE: Well, I certainly would object to it being offered as an exhibit. I don't think that the rate of return on a case last year in the Eastern Seaboard has any relevance whatsoever to the return and costs in this case. So it certainly isn't relevant to this proceeding.

MR. BINEK: The only purpose is to show what is happening from basically the end of 2001 in the PUR report, what is shown up in PUR since then, kind of showing a trend.

MR. PEARCE: Well, that's the issue. Why would that be relevant to this case?

MR. BINEK: I think it is relevant.

MR. HOBERG: Dr. Gaske said he's not familiar with that case. Is there a better witness

to offer this through?

MR. BINEK: No, I don't think so. It's a case that's been reported and it's not a big issue.

MR. HOBERG: Are you withdrawing?

MR. BINEK: Well, my first question is whether the Commission would like to have it offered as an exhibit? I have three cases. I'll offer them as exhibits and if that's the course you would like to pursue and, apparently, based on the objections that Mr. Pearce has indicated, that would be the way to go.

MR. HOBERG: Okay. So you have two more besides this one?

MR. BINEK: Two more cases, yes.

MR. HOBERG: Are they the same relevancy that you're proposing?

MR. BINEK: Right. They're different -- in different jurisdictions. They're cases that have been reported in the year 2002.

MR. HOBERG: Mr. Pearce?

MR. PEARCE: Well, I would object to any such case. I mean, if they're cases reported in some public forum, anybody can look at them, but they certainly have no relevance that I can see to the issues in this case.

MR. HOBERG: Why don't you state them, give us the cites of those on the record, please, Mr. Binek, and we can make them available on an official notice basis, if the Commission wishes to use them, if the Commission believes they're relevant.

MR. BINEK: That's fine with me.

MR. HOBERG: Give Mr. Pearce a copy and perhaps after he has a copy of those, he will be able to make some argument that the Commission shouldn't take official notice of those because they're not relevant. At this point in time, you know, I don't know what the Commission would do with those. Maybe nothing. So let's take official notice of those three and pass them out to the Commission as a possibility that the Commission may take official notice of those in actually making a decision.

MR. BINEK: Very good.

MR. HOBERG: Why don't you read each of them as you're passing them out, what the decision is?

MR. BINEK: The first case is entitled Re Yankee Gas Services Company. It's Docket No. 01-05-19PH01, decided by the Connecticut Department

of Public Utility Control on January 30, 2002. And that is reported in Public Utility Reports 215 PUR4th, 185.

The next case is Re Berkshire, B-e-r-k-s-h-i-r-e, Gas Company. It's Docket D.T.E. 01-56, decided by the Massachusetts Department of Telecommunications and Energy, on January 31, 2002. And pages are eliminated at the bottom. That case is in 215 PUR4th, that's P-U-R, 361.

And the last case is a short one. Re Atlanta Gas Light Company, Docket No. 14311-U, decided by the Georgia Public Service Commission on April 29th, 2002. And that is reported in 217 PUR4th, page 190.

MR. HOBERG: Mr. Binek, you're not offering these for any of the facts contained therein, just for the rulings in these matters?

MR. BINEK: The only purpose for these cases is to show the return on equity that has been authorized by these other public utility commissions.

MR. HOBERG: As part of their orders in those cases?

MR. BINEK: Pardon?

MR. HOBERG: As part of their orders in

those cases?
MR. BINEK: Yes.
MR. HOBERG: Mr. Pearce?
MR. PEARCE: Well, I just want to make sure that my objection stands as to any conceivable relevance of these. He is simply taking three decisions from other jurisdictions based on totally different facts and circumstances. I would hope the Commission would not -- I'm sure they do not simply come to their decision by copying the results from other unrelated cases, so I don't think it will have any undue influence, but certainly it has no conceivable bearing on this case. We don't even know if these are all the decisions from that year. Even if they were, they certainly wouldn't be relevant.
MR. HOBERG: Thank you, Mr. Pearce.
Okay. Mr. Binek, do you have any further questions of Dr. Gaske?
Q. (MR. BINEK CONTINUING) I'd like to focus on some areas where you apparently agree with Mr. King. And this basically is in your rebuttal testimony, I believe.
MR. BINEK: That testimony hasn't been marked yet, has it?

MR. PEARCE: I didn't realize you were asking from rebuttal testimony. That isn't in the record, so we have to wait.
MR. BINEK: Okay. We'll wait. We'll cover it afterwards.
MR. HOBERG: You're bringing Dr. Gaske back on as rebuttal?
MR. PEARCE: Yes.
MR. BINEK: Okay. In the past we've kind of run these altogether. So that's fine. We'll cover him after he gives his rebuttal.
MR. HOBERG: I think that will be better. It will follow more clearly.
MR. BINEK: I have no further questions then.
MR. HOBERG: Thank you, Mr. Binek.
Commissioner Reinbold, did you have any questions of Dr. Gaske?
COMMISSIONER REINBOLD: Not at this time. Thank you.
MR. HOBERG: Thank you, Commissioner Reinbold. Commissioner Wefald, please.
COMMISSIONER WEFALD: None at this time, either.
MR. HOBERG: Thank you. Commissioner

Clark, please.
COMMISSIONER CLARK: I did have a couple.

EXAMINATION

BY COMMISSIONER CLARK:

Q. On page 28 of your testimony --
COMMISSIONER REINBOLD: What page?
COMMISSIONER CLARK: Page 28, lines 18 and 19.
Q. (COMMISSIONER CLARK CONTINUING) In this section you are discussing some of the business risks that you feel are faced by MDU.
A. Yes.
Q. You make a statement -- this follows up on previous testimony earlier this morning talking about the direct competition from propane heating oil. I think coal was used as another example of competition that MDU faces. Wouldn't raising rates be a strange action in response to direct competition?
A. Definitely not, under the circumstances. If you have direct competition, you will lose business, if it's really powerful direct competition. Currently, Montana-Dakota is able to maintain its business. If it has to maintain its rates at a level that it can't recover its costs, it

actually should try to go out of business and let the competitors have the business. So in a very short- run context, usually in markets you see that if there's a lot of competition, people are forced to lower their rates and the one who lowers his rates far enough that he can't recover his costs anymore, he goes out of business.
In Montana-Dakota's case I don't think that the competition at this point in time is so severe that they would go out of business, but if they were not allowed by this Commission to charge rates that would recover their costs, they should think about getting out of the business. Just as in a competitive market, if competition is the regulator that forces the rates to be below cost, a competitive company would after some time exit the market.
Q. Well, I'm asking because it seems counterintuitive that if you're facing competition and you've got potentially some customers who are on the edge, could potentially switch to another, in this case, heating source, that an increase in the rates would cause potentially some of those customers to switch over, and wouldn't that in the end, in fact, just increase the risk that MDU faces?

Wouldn't the better response be to find savings somewhere else, if you are, in fact, facing that competition?

A. Well, I think as Mr. Fox testified earlier, they have tried to find as many savings as possible. What really happens with natural gas is that the cost of the commodity drives the attractiveness to a great deal -- great extent, also. So that's probably a bigger problem for Montana-Dakota in terms of whether they increase the distribution charge by 4 percent or whether the suppliers to the company, whether the natural gas markets are selling gas at $2 or whether it's at $4. That's where they really have to be concerned about such competition. And right now they can compete. If the price of natural gas is driven upwards in the $4- and $5-range, you may see people shutting off their gas service at a fairly rapid rate.

Q. Another question on that same page, talking about kind of the general business climate and risks that MDU faces. On lines 10 through 12 there's a sentence there, On a practical level, MDU's relatively small natural gas distribution operations are heavily dependent on a relatively undiversified local economy.

Could you just expound on that a little bit?

A. Well, you have in their service territory some mining operations, refining operations, a lot of farming and farming-related operations, and they face some risk that some of these kind of operations, manufacturing-type things -- I shouldn't call it manufacturing, but processing foods and things like that, could shut down and they'd lose that business, but, to my mind, a much bigger risk for them is the fact that if operations like that shut down around here, the people who work at those plants and local economies will suffer and people will migrate out of the towns and Montana-Dakota will be sitting there with gas distribution mains in place and yet because of, you know, events in the local economy, they're at risk.

And people who serve larger cities have a much smaller risk in that regard. Most large cities have many, many different kinds of businesses and industries that support the population and when one leaves, usually others are able to expand to take up the slack. I don't see that in the towns that Montana-Dakota serves.

Q. I guess I've -- the reason I ask is, I've

always heard that North Dakota's economy, which would be true of economies of states like ours, is typically more resistant to booms and peaks and valleys. That, in fact, larger states more kind of dynamic economies are much more likely to have the peaks and valleys. And that's what we've seen certainly in this latest recession. We seem to be a little bit more recession proof. We seem to be a little bit less prone to the booms when times are good as well.

How does that fit with the comments in there?

A. As far as short-run booms and busts, I think you probably are pretty insulated from that because of a lot of agricultural-related things, but agriculture booms and busts a little bit. To the extent more energy production occurs in the state, you'll probably be more subject to booms and busts in the energy business.

On a longer-term basis, and Montana-Dakota has to think about longer-term basis, their plant is there for many, many years. They put it in and it will stay there for 30 years or something like that. As businesses shut down and people migrate out of towns, or just the natural change of people's desire

to, say, move to the big cities or whatnot, they can leave the towns, but Montana-Dakota's facilities are still there. They still have to try to recover their costs. To the extent you get some major employers that shut down for whatever reason, it's not a guarantee that the people will stay here or that the people will be able to pay their bills or things like that.

So even if you're resistant to short run year-to-year fluctuations in boom and bust cycles or even on two- or three-year cycles, on a longer run cycle, which really is very important to MDU because it has a lot of fixed costs, they have to worry about the big employers in this area, will they shut down and really dramatically change the economics of their business.

COMMISSIONER CLARK: That's all I have right now. Thank you.

MR. HOBERG: Thank you, Commissioner Clark.

Mr. Pearce, any further questions of Dr. Gaske?

MR. PEARCE: Just one short question, really.

REDIRECT EXAMINATION

BY MR. PEARCE:

Q. Dr. Gaske, there was some discussion on your cross-examination about Exhibit 13, which was a PUR report of decisions ending at a point in 2001. Would it surprise you that the cost of equity capital that you derived for Montana-Dakota for the 2003 projected year would be different from and perhaps more than any of the cases which the last report here seems to end in June of 2001 in this Exhibit 13?

A. No. No. In the last year the stock market has gone down considerably in general. Investors' risk aversions have increased and we've seen some fairly remarkable things happen in the financial markets and not all of them very good for investors.

Q. And the cost of capital is essentially unique to each entity, isn't it, depending on the circumstances and the business and the risk, and so on?

A. Yes.

MR. PEARCE: I have nothing else.

MR. HOBERG: Thank you, Mr. Pearce.

Mr. Binek, anything further of Dr. Gaske?

MR. BINEK: No.

MR. HOBERG: Thank you. Commissioner Wefald, please.

EXAMINATION

BY COMMISSIONER WEFALD:

Q. I just have a question about this risk aversion factor. I can only relate it to my own experiences in the market and --

A. I hope they've been good.

Q. Haven't -- just describe for me this risk aversion factor.

A. Well, one of the things that has happened quite a bit during the last year is that people have been selling off stocks or they really don't want to own common stocks. And they are trying to own short-term investments, things like U.S. Treasury bills, or cash or CDs even though -- and as a result of that, they have driven the short-term interest rates way down. They want to get out of stocks. They want to put their money in the safest place that they can.

And what happens there is that the interest rates on your CD at the bank and/or U.S. Treasury bills or even U.S. Treasury bonds have gone way down. Whereas, in my opinion, the required return on things like common equities has gone way up.

People just don't want to be in equities right now.

Q. That's the part I don't understand. Why would that go up? Why would it just be a certain amount greater than what you can get on a short-term money note, let's say? I mean, I don't understand your conclusion that that would go way up, if I'm only able to return -- get a return of a very small amount on a very short-term equity. Why wouldn't I be pleased if it was 5 percent more, and I could know that it's going to be even 5 percent more, let's say 8 percent rather than 3 percent, or I guess even right now many times in money market it's 1 percent? So why wouldn't I be pleased if I could get 6 percent?

A. The overall return might go up or it might go down some that you require on your common equities, but they won't go down nearly as much as on safer investments. But investors view the market as very risky. If you say -- you think of it in terms of a common equity has five units more risk than a bond, if the market is very risky, that extra five units of risk will be very valuable. If people are very uncertain about the market, they don't -- they're going to want a very high return to take the five units of extra risk.

If the economy is doing very well, things are very stable and people are very confident about the future, the price of risk, what they're willing to spend for -- or what they require for that extra five units of risk will be much lower. So you ask, you know, why don't they want 5 percent more than what they can get on bonds? Over time what they require will go up, the extra amount they require will go up and down. Right now we're in a period where people don't want to own common stocks. They think they're too risky and they do want to own bonds and short-term government bonds and short-term debt.

So the extra units of risk, let's say the five extra units of risk, those become very valuable or very expensive, they just aren't going to buy unless they think they are going to get a very good premium over what they can get on the bonds. So the premiums go up and down over time.

COMMISSIONER WEFALD: Thank you for that analysis.

THE WITNESS: Hopefully, your experiences have been better than mine in the market, but it has been a risky year or a very discouraging year.

MR. HOBERG: Thank you. Commissioner

Clark.

FURTHER EXAMINATION

BY COMMISSIONER CLARK:

Q. I do have a question on that. Is it that investors want to get out of the stock market, period, or does it require maybe a little bit more granular analysis, and that is that certain sectors are just horrendous? For instance, telecom is one of them. Fortunately, we can't invest in the telecom market because we are prevented by state law from doing that. Are certain stocks more attractive because of that, for example, potentially kind of old-fashioned utility companies that are regulated?

A. The utility companies are probably more attractive, much more attractive now than, say, a telecom stock. A lot of people wanted to buy telecom stocks two years ago. But relative to bonds, utilities are less attractive, so the premium that people require on utilities is, I think, higher now and has gone up over the last year. So some people selling telecom will buy utilities. Some people who have utilities will sell the utilities and buy bonds. But if you look at bonds versus utilities, I think that spread is increased. Utilities versus telecom, that spread has really

increased. Nobody wants the telecom stock right now. So all across the board, from the very safest to the very riskiest investment, I think everything is spread out.

Q. Would it follow then when the stock market get on a roll like it did for the past 10 years or so prior to the last few we've had, that utility regulated ROEs should go down then because it's easier to attract capital?

A. The spreads over bond yields should go down, but you can have a very good market, but the interest rates are very high. You can -- so it really depends on a lot more factors.

Q. I'm just wondering if then the argument would be, well, all the peer companies are doing so well, we need to increase our rate of return now to attract capital vis-a-vis the rest of the market?

A. Well, that one depends on -- yeah, how much the individual companies are willing to invest. But it really is a good question about -- people are afraid to invest in almost anything. So the measure, at least that I try to look at is, what kind of spread versus the bond yield, because those are much easier to determine than the equity returns.

COMMISSIONER CLARK: That's all I have. Thanks.

MR. HOBERG: Thank you. Any further questions of Dr. Gaske? Thank you, Dr. Gaske. Take an hour recess here, luncheon recess?

COMMISSIONER WEFALD: Can you tell me, please, the order of witnesses that are going to be followed for this average?

MR. HOBERG: I believe they're in exactly the same order as listed in the direct testimony, is that correct, Mr. Pearce?

MR. PEARCE: Yes, it is.

COMMISSIONER WEFALD: And then we'll go through and then the rebuttal will happen in the same order by those people following?

MR. HOBERG: Then it will be Mr. Binek's presentation of his witnesses after the direct of MDU and then followed by the rebuttal.

COMMISSIONER WEFALD: That's a little unusual, but -- because then what happens you have -- well --

MR. HOBERG: I don't think it's unusual. I think that's the practice we followed in the past.

COMMISSIONER WEFALD: But the thing is, there's a lot of information that has been agreed

upon by the parties by the time we get to the rebuttal. So we're going to have to cover things that perhaps aren't that important because the case -- they have agreed on a bunch of things as they have gone along.

MR. HOBERG: Well, I would assume those things we've agreed upon you're not going to be spending much time on, correct?

MR. PEARCE: No. The rebuttal only touches on points on which there's disagreement still. So the rebuttal -- anything that's been agreed to won't be testified to on rebuttal.

COMMISSIONER WEFALD: Okay.

MR. HOBERG: Is that the order you expected, Mr. Binek?

MR. BINEK: Well, we have done both ways where we've gone with questioning on both the direct and rebuttal testimony initially, and that was what -- kind of the mode I was in. It doesn't matter to me which way we do it, and this seems to be set up to do it the long way.

MR. HOBERG: The long way? I don't know that it's necessarily longer, as long as the parties understand that things that, you know, there's no disagreement about, you don't have to spend any time

on really.
MR. BINEK: Hopefully, it will work out that way.
MR. HOBERG: I think it's sort of six of one and half-dozen of the other, unless you --
MR. BINEK: It's fine to do it that way.
MR. HOBERG: Perhaps we'll reflect on that over the break.
MR. PEARCE: It seemed like it was the usual judicial procedure; plaintiff, defendant, and then plaintiff's redirect, is really the mode we are following, I think.
MR. HOBERG: That's what I thought, too. All right. Let's take a one-hour lunch.
(Lunch recess was taken.)
MR. HOBERG: Okay. We're back on the record after a luncheon recess. And just to kind of rehash maybe the concerns about the procedure today in regard to direct and rebuttal, I think everybody is basically pulling in the same direction and maybe to provide a little bit of consistency and some guidance, it seems like except for perhaps the first witness, Mr. Fox, who you wanted to highlight the direct especially, you're offering the direct, but you're not really asking many questions.

MR. PEARCE: Right.
MR. HOBERG: And maybe that will be the procedure for the whole rest of the direct. It can go relatively quickly, except for the PSC's case, but if you do really have -- if your questions are more along the lines of something for the rebuttal, perhaps you should save them for that, but there may be some questions to highlight or to ask something that somebody neglected to cover in the rebuttal, but, basically, I think the direct should go relatively quickly, at least for MDU's case, and the rebuttal will be where more of the questions are, but I think we'll get to the same place we would have if we had just forgot about the direct and went right to the rebuttal. I think that was a time where there was pretty much agreement in another case where we could just move right to the rebuttal, but that isn't the situation here, as I read it, anyway.
So we'll proceed with the direct and then perhaps move relatively quickly to the rebuttal, except for perhaps Mr. Binek's case. Is that clear? I maybe didn't make it very clear. I hope I did.
Mr. Pearce, do you want to proceed, please?
MR. PEARCE: Yes. I'll call Craig Keller.

MR. HOBERG: Mr. Keller, were you here earlier when I gave the admonition in regard to perjury?
THE WITNESS: Yes.
MR. HOBERG: Being advised of the penalty for perjury, do you promise to tell the truth in this matter being heard? If so, answer I do.
THE WITNESS: Yes, I do.
MR. HOBERG: Thank you. Mr. Pearce, please.

CRAIG A. KELLER,

having been first duly sworn, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. PEARCE:

Q. Mr. Keller, in connection with this case have you prepared or had prepared under your direction and control direct testimony of Craig A. Keller, CPA?
A. Yes, I have.
Q. And if I were to ask you the questions that are in that prepared, prefiled testimony today, would your answers be the same as appear in there?
A. Yes, they would be.
Q. And to the best of your information and

belief, all of your answers contain accurate and correct information?
A. Yes, they do.
MR. PEARCE: I will offer the direct testimony of Mr. Keller. I think it would be Exhibit 14.
MR. HOBERG: Exhibit 5.
MR. PEARCE: I'm sorry. Exhibit 5. I have no further direct questions.
MR. HOBERG: Thank you, Mr. Pearce. Any objections to Exhibit 5?
MR. BINEK: No.
MR. HOBERG: Exhibit 5 is admitted.
Mr. Binek, do you have any questions of Mr. Keller on direct?
MR. BINEK: Yes.

CROSS-EXAMINATION

BY MR. BINEK:

Q. Mr. Keller, would you please turn to your Statement A?
COMMISSIONER WEFALD: Where do we find that?
MR. PEARCE: Exhibit 2.
MR. HOBERG: There's a document entitled Statements A through O. Is that what you're

referring to, Mr. Binek?
MR. BINEK: Yes.
COMMISSIONER WEFALD: And this is Statement F?
MR. BINEK: Statement A.
Q. (MR. BINEK CONTINUING) The first two pages of Statement A present a balance sheet that is labeled MDU Utilities Co. The remaining 27 pages are of notes on the balance sheet; is that correct?
A. Yes.
Q. Those 27 pages are not headed MDU Utilities Co., but rather MDU Resources, Inc.; is that correct? Am I correct that the notes pertain to a different balance sheet than Statement A?
A. I believe the balance sheet is the -- the balance sheet of Montana-Dakota is not the consolidated balance sheet, whereas the statements would be the consolidated -- the statements that are in our consolidated balance sheet of MDU Resources Group.
Q. Do all the notes on pages 3 through 27 apply as well to the first two pages of Statement A?
A. They would apply to the Statement A. They may also apply to -- there will be information that will apply to some of the subsidiaries of MDU

Resources Group as well.
(Exhibit 14 was marked for identification.)
MR. BINEK: This will be Exhibit 14.
Q. (MR. BINEK CONTINUING) Now, I've handed you a document that's been marked as Exhibit 14. Can you identify that exhibit?
A. It says $150 million secured medium-term notes, MDU Resources Group, Inc.
Q. I'm sorry. Could you speak up a little bit?
A. It's the prospectus for $150 million secured medium-term notes, MDU Resources Group, Inc.
Q. Okay. And does this prospectus cover the $133.5 million in long-term debt that you list on page 1 of Statement F?
A. I believe it applies to a portion of that. I don't believe it applies to the entire. It would apply to the debt that was issued under this prospectus or under this here arrangement, financial instrument.
Q. Could you repeat your answer?
A. I said I believe it applies to the debt on this schedule of the $133 million that was issued under this financing instrument. So there is -- I believe there's also some debt that we have

outstanding that was not issued as part of this here prospectus here.
MR. BINEK: Okay. At this time I would offer Exhibit 14.
MR. HOBERG: Any objection to Exhibit 14?
MR. PEARCE: No.
MR. HOBERG: Exhibit 14 is admitted.
Q. (MR. BINEK CONTINUING) Who issued this prospectus?
A. MDU Resources Group, Inc.
Q. I'd like to have you turn to page 2 of the prospectus under the section titled "The Company." What company is described there?
A. It refers to the company as being MDU Resources Group, Inc.
Q. Does the company that -- the term "the company" include all subsidiaries under Centennial Energy Holdings?
A. I do not believe so. This states it's for the company's first mortgage bonds that are -- would be issued under our mortgage indenture, so that would apply only to MDU Resources and Montana-Dakota Utilities. It's on the first page, the very front of the prospectus, if you look on the very front of the prospectus. If you read the very first

sentence, it says, MDU Resources Group intends from time to time to offer up to $150 million aggregate principal amount of its secured medium-term notes as an additional series of the Company's first mortgage bonds having maturities ranging from 9 months to 35 years.
The only company that's able to issue notes under our mortgage indenture is Montana-Dakota Utilities or the utility.
Q. Lower down on that page of this, and I'm referring to page 3 now, is a section titled "Use of Proceeds." Would you please read that section?
A. "Unless otherwise set forth in a prospectus supplement, the net proceeds from the sale of the notes will be used to retire certain of the company's outstanding senior securities, including the refunding of outstanding first mortgage bonds, and for other general corporate purposes."
Q. Where in that section is there any specific reference to MDU Utilities Company or MDU Utilities Co.?
A. It doesn't state anything in this right here.
Q. Were those retired senior notes issued in the name of MDU Utilities Company or in the name of

the parent company, MDU Resources?
A. Well, they are one and the same. MDU is not a separate -- Montana-Dakota is not a separate corporation. So I believe all our debt is issued in the name of our legal entity, which would be MDU Resources Group, Inc.
Q. Where in this prospectus do we find a statement that the proceeds from the sale will be used only for MDU Utilities Company?
A. Well, I believe when it's saying -- refers to the company, it's talking about the company, MDU Resources Group, which is that legal entity only, and I think if we go down here --
MR. PEARCE: Could I just ask that we be careful for the record. I mean, there is no MDU Utilities Company. It's Montana-Dakota Utilities Company or MDU Resources Group, and I think we may be getting confused if we keep referring to MDU Utilities Company, which doesn't exist.
MR. HOBERG: Thank you, Mr. Pearce.
THE WITNESS: I guess when it refers to the company, it's talking about the legal entity, MDU Resources Group, and that is the same as Montana-Dakota. They're one legal entity. So when it refers to that, you know, I believe what it's

stating is that it is for the company, Montana-Dakota, MDU Resources Group, which is the same legal entity.
MR. BINEK: I have no further questions.
MR. HOBERG: Thank you, Mr. Binek.
Commissioner Reinbold, do you have any questions?
COMMISSIONER REINBOLD: No.
MR. HOBERG: Thank you. Commissioner Wefald?
COMMISSIONER WEFALD: I have none.
MR. HOBERG: Thank you. Commissioner Clark?
COMMISSIONER CLARK: None at this time. Thank you.
MR. HOBERG: Mr. Pearce, do you have any further questions of Mr. Keller?
MR. PEARCE: No.
MR. HOBERG: Thank you, Mr. Keller. Mr. Keller, do you have the exhibit that was handed to you that was marked? Thanks.
Your next witness, please, Mr. Pearce.
MR. PEARCE: I'll call Rita A. Mulkern.
MR. HOBERG: Ms. Mulkern, did you hear the admonition I gave earlier in regard to perjury?

THE WITNESS: Yes, I did.
MR. HOBERG: Being advised of the penalty for perjury, do you promise to tell the truth in this matter being heard? If so, answer I do.
THE WITNESS: I do.
MR. HOBERG: Mr. Pearce, please.

RITA A. MULKERN,

having been first duly sworn, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. PEARCE:
Q. Ms. Mulkern, did you prepare direct testimony and have it prefiled in this case?
A. Yes, I did.
Q. And if I were to ask you the same questions today, would your responses be the same as in that prefiled testimony?
A. Yes, they would.
Q. If you will look at Exhibit 6, I believe it would be, is that your prefiled testimony?
A. Yes, it is.
Q. And to the best of your information and belief, is the information contained in that exhibit true and correct?
A. Yes, it is.

MR. PEARCE: I will offer Exhibit 6 at this time, and I have no further questions.
MR. HOBERG: Any objection to Exhibit 6?
MR. BINEK: No.
MR. HOBERG: Exhibit 6 is admitted. Thank you, Mr. Pearce. Mr. Binek, did you have any questions of Ms. Mulkern?
MR. BINEK: Yes.

CROSS-EXAMINATION

BY MR. BINEK:
Q. Ms. Mulkern, where in your filings can we find the northeast Bismarck expansion costs for 2003?
A. The northeast Bismarck expansion was included in the capital or the plant additions for 2003. The details of that were provided in data request responses.
Q. Are these costs included in the rate base?
A. Yes, they are.
Q. Are they included in depreciation?
A. The depreciation, yes, they would be.
Q. Are they included in operating and maintenance expense?
A. The ongoing, essentially, yes.
Q. Are they included in the high rate of

return?
A. I guess I really can't answer that one.
Q. Okay. I'd like to now have you turn to Statement I, page 2 of 6.
MR. HOBERG: Exhibit 2, the blue book here.
Q. (MR. BINEK CONTINUING) Do you have it?
A. Yes, I do.
Q. Would you please read that paragraph for the record?
A. "See pages 3 through 5 for Montana-Dakota depreciation rates as set forth in a study performed by Stone & Webster Management Consultants, Inc., as of December 31, 1992 for gas and common plant. See page 6 for internally developed rates as of December 31, 2001 for computer equipment and network equipment."
Q. Now would you please turn to page 5 of Statement I?
A. (Witness complies.)
Q. Did your internal studies result in substantial increases to certain depreciation rates?
A. Excuse me. Could you clarify that?
Q. Well, you listed depreciation rates there. Did these internal studies that you've performed result in any substantial increases to any of those

depreciation rates?
A. I believe that these accounts were ones that were not included in the Stone & Webster study and that's why they were developed internally. So they have not changed.
Q. Okay. I'd like to have you turn to page 4 of 6. Is that the Stone & Webster study?
A. Yes, it is.
Q. Is there an account 391 on that page?
A. There is an account 391, office furniture and equipment.
Q. Is that where computer equipment is supposed to be?
A. No. Computer equipment is contained in various subaccounts under the 391. That account would be just for office furniture and equipment.
Q. Did you do a complete depreciation study as of December 31, 2001 or only a piecemeal study of general and common plant?
A. Can you repeat the question again?
Q. Did you do a complete depreciation study as of December 31, 2001, or did you only do a piecemeal study of general and common plant?
A. We did not do a depreciation study as of December 2001, and these depreciation rates set

forth on page 6 were not done either at December 2001.
Q. I refer you back to page 2 of 6. Your last sentence says, "See page 6 for internally developed rates as of December 31, 2001 for computer equipment and network equipment."
A. That means those are the rates in effect as of December 31, 2001, not that they were developed based on December 31, 2001.
Q. When were they developed?
A. I don't recall the exact date that they were done. They were included or used in the last rate case.
Q. The last rate case for the gas utility?
A. Yes, the last rate case for the gas utility.
MR. BINEK: No further questions.
MR. HOBERG: Thank you, Mr. Binek.
Commissioner Reinbold, do you have any questions of Ms. Mulkern?

EXAMINATION

BY COMMISSIONER REINBOLD:

Q. Ms. Mulkern, how long have you been at MDU? I missed that. How long have you been with them?
A. I started with MDU in 1981.

Q. Okay. In your work with MDU have you testified in other cases before the PSC?
A. I have testified before this Commission and Commissions in Montana and South Dakota and Wyoming.
Q. Okay. I was going to ask about the other states, but you answered before I asked.
COMMISSIONER REINBOLD: I have no further questions. Thank you.
MR. HOBERG: Thank you, Commissioner Reinbold. Commissioner Wefald, please.

EXAMINATION

BY COMMISSIONER WEFALD:

Q. Ms. Mulkern, I'm going to ask you the questions I had asked Mr. Fox because I've been referred to you for those questions. And so I asked him, each 1 percent of each -- I have to get out my notes before me.
Each 1 percent of the rates of return, how many dollars does that represent? So, for example, on Exhibit No. 10 where it showed that MDU Gas, let's say in the year 2000, had 11.12 percent and then it dropped in the year 2001 to 1.6 percent, what does each one percent represent, how many dollars?
MR. HOBERG: Do you have Exhibit 10?

THE WITNESS: No, I don't.
Q. (COMMISSIONER WEFALD CONTINUING) It probably is a different dollar number each year.
A. Yes, I guess in -- I guess to try to clarify, in 2001 we had a rate of return on equity of 1.6 percent. And we're saying in 2003 we're going to need $2.84 million. So, basically, to bring us up from 1.6 up to a 13.25, we would need 2.8 million. That's approximate.
Q. The 1.6 return on equity is in the year 2001. And the 13.25, you would like that in the year 2002?
A. The 13.25 is the equity return that we have requested in this case for 2003.
Q. Yes. So did you say that it would take 2.8 million to bring you that number in 2003?
A. That's right.
Q. So what would it take to bring you to that number in 2002? Is it a different number?
A. Yes. I can give you that. It would take $2.2 million to bring -- for 2002 to achieve a 13.25 percent return on equity.
Q. Okay. Thank you. Then you had answered a question from Mr. Binek, but I needed you to show me where that information can be found. The expansion

into north Bismarck, how the costs were recovered from expansion, are they included in your costs for 2002 when you anticipate the rate of return to be zero or the return on equity to be zero?
A. The costs for the northeast Bismarck expansion are -- in the rate case are the same costs as for any other new customer. The customers in northeast Bismarck will be paying a contribution for any costs over the extension policy, and according to that, they would give a contribution. So the costs in the case are the same as for any other new customer. And, also, the volumes associated with those new customers are also included in the case. Did I not answer your question?
Q. So you gave a dollar figure earlier to how much money. You said something had been returned in discovery. Can you just share that with me, because I haven't seen those discovery?
A. It's included in the discovery response dated July 25, and it is response No. 2.
Q. And do we have that in the materials that have been shared with the Commission?
A. We provided copies to the Commission.
Q. Where would I find that?
MR. HOBERG: Mr. Binek, do you have copies

of those data responses?
MR. BINEK: We should have copies of them.
Q. (COMMISSIONER WEFALD CONTINUING) But I wondered whether they had been provided to the Commissioners as part of your case.
A. They were not part of the case that was filed initially, but they were provided as -- detail provided as a data request. We did give a copy -- sent a copy, I believe, to the Commission.
Q. All right. So I would go back into the record for that.
MR. BINEK: Those are not a part of the record, Commissioner. Data requests are not a part of the record.
COMMISSIONER WEFALD: She told me she sent a copy to the Commission so I'm assuming she sent a copy to us. Is that wrong?
MR. BINEK: To the Commission staff.
COMMISSIONER WEFALD: Then we don't see that.
Q. (COMMISSIONER WEFALD CONTINUING) So I'm asking, is that information confidential, or is it available to the Commissioners?
A. It's available to the Commissioners.
Q. Where would I find it?

A. If someone could provide a copy of the data request response.
MR. HOBERG: Well, you have all of those, Mr. Binek. Do you make those available to the Commissioners?
MR. BINEK: We can make those available to the Commissioners. The consultant -- they were data requests that were made by the consultants.
COMMISSIONER WEFALD: I would like to see it, just that one.
MR. HOBERG: Just the one.
MR. BINEK: Pat said he could find it. Do you want that to be an exhibit in the record, or what?
COMMISSIONER WEFALD: I would prefer if Ms. Mulkern can just tell me the answer, but she's referring me to this exhibit, to this data request, so I would just like to have the information.
MR. HOBERG: Ms. Mulkern, do you recall the question? Can you give the response without looking at the exhibit?
THE WITNESS: If someone would provide me with a copy of the data request responses, I can do that.
MR. HOBERG: Okay.

THE WITNESS: It's been a while. Can you repeat the question?

Q. (COMMISSIONER WEFALD CONTINUING) Thank you. I just wondered, the 500 -- you mentioned a figure and I don't know exactly what it was. You mentioned a figure for the cost for the expansion in north Bismarck.

A. Okay. I think what you might be referring to earlier is Mr. Fox was talking about the service lines, where the company will own the service lines, and that he gave a figure of $500,000 and that was for the total company. For North Dakota for owning the service lines, it's going to be about $184,000. For the Bismarck expansion project we have about $120,000 in for 2002 and about $150,000 in for 2003.

COMMISSIONER WEFALD: Okay. Thank you. That's all my questions.

MR. HOBERG: Thank you, Commissioner Wefald. Commissioner Clark, please.

EXAMINATION

BY COMMISSIONER CLARK:

Q. Looking at that Exhibit 10, which is Mike Diller's memo to the Commission, what was the reason for -- what was the difference in 2001 compared with '98, '99, 2000 that drove the ROE down 10 percent?

A. There were various reasons. One of the main ones was the operation and maintenance expenses.

Q. That would account for how much of that?

A. About $770,000, or the difference in increase in operation maintenance expenses from 2000 to 2001.

COMMISSIONER WEFALD: Are you referring to a specific statement?

THE WITNESS: Not one that is included in the filing.

Q. (COMMISSIONER CLARK CONTINUING) So $770,000 out of -- what would the total be?

A. That was the increase from --

Q. So that would account -- 770,000 would increase the rest. Out of how much of an increase in expenses?

A. Out of 12.2 million.

Q. Okay. So we've got a ways to go there. What's some of the other?

A. Others would be --

Q. I'm just trying to get at what was, you know, so different about that year as opposed to the other years previous to it, the other three years previous.

A. There would be a difference in sales volumes between the two years that would have contributed, and then some of the other reasons we've given in the case that we filed, increases in depreciation and taxes other than income.

Q. Is there, you know, like one document that I can go to somewhere in the testimony or the file exhibits that's going to kind of break that down for me real easily?

A. One place you can look is in the annual report to the Commission that we file. There is a comparison in that report each year comparing to the previous year, so if you look in the report for 2001 there will be a comparison to the year 2002 in there.

Q. Let's go to the 770,000 for operating and maintenance. Could you break that down a little for me?

A. One of the increases would be, of course, due to labor expense.

COMMISSIONER CLARK: Maybe I should do this: Will Ms. Mulkern be available later on after staff?

Q. (COMMISSIONER CLARK CONTINUING) I assume you'll be part of the rebuttal.

A. Yes, I will.

COMMISSIONER CLARK: Okay. Maybe it would be better to delve into some of this more in-depth stuff later on after the staff case and during rebuttal. We can hone in on some of this stuff more specifically.

MR. HOBERG: Any further questions?

COMMISSIONER CLARK: No.

MR. HOBERG: Any further questions by the Commission of Ms. Mulkern? Mr. Pearce, any further questions?

MR. PEARCE: No.

MR. HOBERG: Mr. Diller?

EXAMINATION

BY MR. DILLER:

Q. I'm going to have to help the Commission in the end and to make sense of all this I want to make sure I understand your answer, Rita. You've mentioned a couple of numbers, 184,000 for the cost of the policy change, is that revenue requirements, rate base expense? What is that number?

A. That is the capital investment in plant for service lines.

Q. Just the capital investment. Is it the same answer for the expansion costs, that that's

rate base then?
A. That's right. That's also the capital addition for the plant.
MR. DILLER: Okay. Thank you.
MR. HOBERG: Thank you, Mr. Diller. Anything further then of Ms. Mulkern at this time? Thank you, Ms. Mulkern.
Mr. Pearce, witness No. 7.
MR. PEARCE: I'll call Richard Espeland.
MR. HOBERG: I guess it's not witness 7. Exhibit 7 is his testimony. Witness 5.
Mr. Espeland, did you hear the admonition I gave earlier in regard to perjury?
THE WITNESS: Yes, I did.
MR. HOBERG: Being advised of the penalty for perjury, do you promise to tell the truth in this matter being heard? If so, answer I do.
THE WITNESS: Yes, I do.
MR. HOBERG: Mr. Pearce, please.

RICHARD A. ESPELAND,

having been first duly sworn, was examined and testified as follows:
THE WITNESS: If I don't speak up loud enough, please tell me to try and force it out a little bit more.

DIRECT EXAMINATION

BY MR. PEARCE:
Q. Mr. Espeland, in the course of this case, did you prepare and have filed with the Commission direct testimony of Richard A. Espeland?
A. Yes, I did.
Q. Okay. And looking at Exhibit 7, if you will, is that the same testimony from you that was prefiled?
A. That's correct.
Q. And if I were to ask you the same questions, would you give the same answers today?
A. Yes, I would.
Q. And to the best of your information and belief, is all the information contained in your testimony true and correct?
A. It is correct.
MR. PEARCE: I'll offer Exhibit 7. At this time I have no questions.
MR. HOBERG: Any objection to Exhibit 7?
MR. BINEK: No.
MR. HOBERG: Exhibit 7 is admitted. Thank you, Mr. Pearce.
Mr. Binek, do you have any questions of Mr. Espeland?

MR. BINEK: Yes, I do have some questions.

CROSS-EXAMINATION

BY MR. BINEK:
Q. Mr. Espeland, you will agree that the costs of this plan have never been included in rates in North Dakota, wouldn't you?
A. That's correct.
Q. Why do you contend that the cost should now be borne by ratepayers?
A. When the program was implemented in 1982, it was not as common as they are today. It was more of a visionary plan. And today it's extremely common practice for these type of supplemental retirement plans to be in place. And it's appropriate for them to be in the rate base because it's part of doing business for those types of positions, as part of their total compensation program when you look at all of their compensation and benefits.
Q. Are you saying or suggesting that MDU's shareholders do not benefit from the efforts of these employees?
A. Both shareholders and customers benefit from these employees.
Q. But you're asking the ratepayers to pay

these costs, aren't you?
A. I think it's appropriate for the ratepayers to pay their portion of the cost for those employees, for the value they receive from those employees.
Q. But aren't you asking that the entire cost be on the ratepayers?
A. Yes.
Q. So you believe that the ratepayers are the only ones who benefit?
A. I think the ratepayers are the ones that have direct benefit from efficient, safe, reliable service. But, obviously, the stockholders of MDU Resources also benefits by a company that provides good services and a good rate of return and good customer service.
Q. Isn't one of the primary responsibilities of key employees is to make a profit for the company that in turn provides a dividend to shareholders?
A. That's correct.
Q. Your testimony in this case is essentially the same as it was in the MDU electric case that we heard a few months ago, isn't it?
A. That's correct. Yes, it is.
Q. Earlier I made reference to the findings of

fact, conclusions of law and order in the Commission's decision. In that case, which is PU-399-01-186, that decision issued on April 24, 2002, and the Commission has taken -- I believe has taken administrative notice of that decision.

Do you recognize the document that I've just handed you as a copy of that order?

A. I recognize it as what you referred to. I have not seen it previously.

Q. Would you please read paragraphs 66 and 67?

A. Paragraph 66, "Staff objects to including SISP in ratemaking expense. Diller testified that while the plan has been in effect since 1982, the company has never sought rate recovery in any subsequent electric or gas rate case. Staff opposes spending a million dollars a year on the benefit for a few employees. In addition to SISP, employees that are allowed to participate in SISP are paid very well, minimum of 75 to 80,000 per year, and participate in all other benefits offered to regular employees such as health insurance, life insurance, 401(k) participation, profit-sharing plans, incentive plans, defined benefit plans, Social Security, and discounted gas and electric service for those living in MDU's service territory."

Paragraph 67, "Diller testified that MDU's plan lacks symmetry and pointed out that the SISP benefits are heavily weighted in favor of the high-end salaried employees participating in the plan. For instance, an employee making $50,000 a year would receive a monthly SISP benefit of $1,330 per month, compared to a monthly benefit of $30,000 for an employee making $600,000 a year. In the case of a low-end employee, the monthly benefit calculates to be 2.66 percent of annual salary, compared to the high-end employee who would receive a monthly benefit of 5 percent of annual salary. Diller noted that only 27 employees of MDU's gas and electric employees are considered to be key employees."

Q. Is there anything factually incorrect in this description of Mr. Diller's testimony?

A. His facts and his math is correct to the extent it goes, yes.

Q. Okay. The number of employees, does that differ, the number of employees covered for this company, or is it the same employees basically covered?

A. Same basic group.

Q. And you read the description of benefits that these employees receive. Is that still true,

that they receive the same benefits that were described in the Commission's order in the electric case?

A. That's correct. Receive the same benefits.

Q. Isn't it true that even if this Commission doesn't allow the cost of this plan to be recovered in rates, the shareholders can continue to provide the benefit at shareholder expense? They can continue the plan just as it is right now, right?

A. Certainly they can and they may, because it's a competitive benefit that you need to attract and retain qualified people to run those operations and provide the service.

Q. What are the income ranges of the employees covered by this plan?

A. Montana-Dakota's range would be approximately $75,000 to its president, around 250,000 to 300,000.

Q. Does Montana include SISP as a cost to ratepayers?

A. I would defer to the regulatory staff on that, but I do not believe so.

Q. Does Wyoming include SISP as a cost to ratepayers?

A. The same answer. I would defer, but I

don't believe so.

Q. Same question for South Dakota?

A. And I don't believe so. I defer. At least I'm consistent.

Q. And as we've noted earlier, the North Dakota Commission has not included?

A. Not to this point.

Q. And, again, your testimony in this case and the position of Montana-Dakota Utilities Company is basically the same as it was in the electric rate case; isn't that correct?

A. That's correct. I provided a bit more information in my rebuttal testimony, but the basic facts remain the same.

Q. The electric case, a portion of that decision has been appealed by Montana-Dakota Utilities Company to the District Court. Isn't it true that the decision the Commission made on SISP, on the SISP issue, was not appealed?

A. I believe that is correct.

MR. BINEK: At this time, and I think administrative notice does this, but I just want to make certain that the findings of fact, conclusions of law and order in that electric proceeding would be incorporated into and made a part of this

proceeding.
MR. HOBERG: Yes, official notice would include that.
MR. BINEK: I have no further questions for this witness.
MR. HOBERG: Thank you, Mr. Binek.
Commissioner Reinbold, do you have any questions?
COMMISSIONER REINBOLD: I think I do, a couple of them.

EXAMINATION

BY COMMISSIONER REINBOLD:

Q. A good deal of the questions and the answers were relative to the electric case that was before us and the parallel. How can it be that the electric and the gas case benefits and circumstances are practically the same even though MDU has some areas of the state that are only gas and some that are only electricity? How do you account for the perfect parallel?

A. I'm not sure there's a perfect parallel, but the management group are similar and common. The amount of time they spend in the respective areas are allocated out based on where they spend their time, as would these costs. So we believe,

you know, as a group of costs and group of employees and it's allocated out based on where they do their work. Some may be full electric and some may be full gas, and others are split.

Q. Maybe some are just -- is the company something like Melroe? Is that a parallel in management and management salaries, and so on, to MDU? Do you know anything about Melroe here?

A. That keeps changing, but it's similar for the Bobcat division, so to some extent, but more Ingersoll-Rand would be a parallel to MDU Resources at a corporate level, but we don't pay those kind of salaries or benefits.

Q. And say a few words about MDU employee retention. How does MDU do? And compare it to whatever you want to compare it to. That's a pretty broad question. Take a shot at it.

A. I think retention is one of our goals, because if you want safe, reliable service, you need people that know history and what's been going on in the past, as well as how it all works. So retention is a goal and I think we've been very successful at that, providing a great place to work, providing competitive pay and benefits to the extent we're allowed to, and having them motivated by what they

do, providing a public service. There's a lot of motivation in that. And so I think we are a desirable place to work.

Q. So that's one of your goals you say?

A. Oh, absolutely.

Q. Getting back to the allocation of time and effort and salary because of the natural gas and the electric services, is it conceivable that, for example, somebody like Don Ball would be working 85 percent in natural gas and 5 percent in electricity?

A. Currently, I suppose his current time is spent more on the gas side than electric side because of the rate case, but I think over time that would not necessarily be true, but Mr. Ball would know better how he allocates his time.

Q. Just a curiosity on my part because we do see him a great deal. And nobody was going to catch on the fact that I don't add up to 100 percent here.

MR. HOBERG: Where's the other 10 percent?
THE WITNESS: We consider that overtime and extra effort.
COMMISSIONER REINBOLD: I guess that's all my questions. Thank you.
MR. HOBERG: Thank you, Commissioner Reinbold. Commissioner Wefald, please.

EXAMINATION

BY COMMISSIONER WEFALD:

Q. How many dollars is the company requesting in this case for SISP?

A. For the gas case I believe it's between 250 and $260,000 per year for 2002 and 2003.

Q. Where would I find this information? Where would I find that dollar number?

A. I'm going to defer in part to Rita and Tamie, but I found it someplace.

Q. Just take your time.

A. I believe it's in Statement N, as in November, page 8 of 23.

Q. Thank you. Page 8 of 23. It shows zero for the year 2001?

A. That's correct.

Q. And that's because nothing was allowed by the Commission?

A. Right. It has not been included previously.

Q. And so then you showed in 2002 a number and then 265,000 in 2003?

A. Right.

COMMISSIONER REINBOLD: Okay. Thank you.
MR. HOBERG: Thank you. Any further

questions, Commissioner Wefald?
COMMISSIONER WEFALD: No.
MR. HOBERG: Thank you. Commissioner Clark, please.
COMMISSIONER CLARK: I have no questions. Thank you.
MR. HOBERG: Thank you. Mr. Pearce, any further questions of Mr. Espeland?
MR. PEARCE: Just a couple.

REDIRECT EXAMINATION

BY MR. PEARCE:

Q. Mr. Espeland, I think you've already alluded to this indirectly, but it is true, isn't it, that all of the SISP costs is not assigned to all of the utility operations?
A. Oh, absolutely. Only the portion that would apply directly to the utility.
Q. So SISP is applied to other operations?
A. Yes.
Q. Now, the meter fact that Montana-Dakota Utilities didn't appeal the SISP decision doesn't mean that you've changed your mind, does it, on the value of SISP?
A. Has not changed my mind at all.
Q. And all of the ratepayers benefit from all

of the compensation given to or provided for employees, don't they?
A. That's correct.
MR. PEARCE: That's all I have.
MR. HOBERG: Thank you, Mr. Pearce. Anything further then of Mr. Espeland?
MR. BINEK: No.
MR. HOBERG: Thank you, Mr. Espeland.
THE WITNESS: Thank you very much.
MR. HOBERG: And your next witness, please, Mr. Pearce.
MR. PEARCE: Call Mr. Russell Feingold.
MR. HOBERG: Mr. Feingold, were you here earlier when I gave the admonition in regard to perjury?
THE WITNESS: Yes, I was.
MR. HOBERG: Being advised of the penalty for perjury, do you promise to tell the truth in this matter being heard? If so, respond I do.
THE WITNESS: I do.
MR. HOBERG: Thank you. Mr. Pearce, please.

RUSSELL A. FEINGOLD,

having been first duly sworn, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. PEARCE:

Q. Mr. Feingold, you were retained in this proceeding by the applicant as an expert outside consultant; is that right?
A. That's right.
Q. And did you prepare or have prepared under your direction and control direct testimony consisting of answers and questions that was prefiled in this case?
A. Yes, that's correct.
Q. Looking at Exhibit 8, if you would, does that contain -- is that a copy of your prefiled direct testimony?
A. Yes, it is.
Q. Do you have any corrections that need to be made in your prefiled testimony?
A. No, I don't.
Q. To the best of your information and belief, is the information in that testimony, Exhibit 8, true and correct?
A. Yes, it is.
MR. PEARCE: I'll offer Exhibit 8. I have no direct questions.
MR. HOBERG: Thank you. Any objection to

Exhibit 8?
MR. BINEK: No objection.
MR. HOBERG: Exhibit 8 is admitted.
Mr. Binek, do you have any questions of Mr. Feingold on direct, please?
MR. BINEK: Yes.

CROSS-EXAMINATION

BY MR. BINEK:

Q. Mr. Feingold, on page 5 at lines 15 through 18 you discuss the wider acceptance of three-part rates for gas distribution service. Do you see that reference in your testimony?
A. Yes, I do.
COMMISSIONER REINBOLD: What number?
MR. BINEK: Lines 15 through 18 on page 5.
COMMISSIONER REINBOLD: Thank you.
Q. (MR. BINEK CONTINUING) Would you describe these rates?
A. Yes. These rates generally consist of tariffs that include a rate structure with multipart components of rates. Typically, there's a -- for gas companies a commodity charge, which would be charged on a variable basis, and then there would be fixed charges, in some cases a demand charge or a capacity charge and then a customer or monthly

service charge.
Q. I take it you believe that these are preferable to the two-part rates now in use by MDU in North Dakota; is that correct?
A. They are preferable from a strict cost recovery perspective. I think I allude in my testimony to the fact that in some cases for smaller customers you may not be able to apply a three-part rate as easily as you would to a larger customer.
Q. Why haven't you proposed these rates for MDU?
A. Well, I think you'd have to ask MDU's company witness, but I can give you my perspective from the standpoint of someone who is commenting on the tariffs. And I believe that with regard to the smaller customers, i.e., the residential customers, there is not metering capability at this point to fairly apply a three-part rate to the smallest customer served on the system. In lieu of that, though, one of the proposals that the company is making is to try to recover a greater component of fixed costs from fixed charges, which is why the company has proposed the monthly service charge proposal it has.
Q. If you were to propose three-part rates, to

what types of customers would they apply?
A. Well, if I look at other utilities in North America, typically the ones that have three-part rates applied to them first and foremost are larger, more sophisticated customers where the economics permit the use of daily demand metering technology or equipment to be able to fairly assess at least the demand or capacity component of the charges.
Q. Do you recommend that this Commission direct its gas utilities to develop three-part gas rates?
A. I think it's something that's worthwhile looking at in the future. I think in response to a data request that was asked of me by staff I alluded to the fact that in Connecticut, for example, the Commission in Connecticut has actually looked at and has approved three-part tariffs for midsize general service type customers.
Q. Much of your testimony is devoted to supporting the company's proposed increases in customer charges; is that correct?
A. Yes. Although, I would say more generally it's to recognize the fact that fixed costs should be recovered from stable or fixed components of the tariff.

Q. Are you familiar with similar proposals in other states?
A. In other states served by the applicant?
Q. By the applicant or in other states in general.
A. Yes.
Q. In both cases?
A. Yes.
Q. Have these proposals encountered much opposition?
A. Well, I'm not sure how you define "much opposition." Certainly, from my perspective, they're eminently reasonable. And in some cases there has been a disproportionate amount of movement toward cost-based fixed charges.
Q. Where there has been opposition, from whom has the opposition been expressed?
A. The opposition has been expressed primarily from consumer advocates, entities that are representing smaller, perhaps lower income customers, because their contention is that perhaps those customers would be experiencing a larger increase than would be warranted at that point in time.
Q. Have Commissions generally supported

efforts to double or triple customer charges as Montana-Dakota Utilities proposes in this case?
A. Well, I think, first, in the case of Montana-Dakota the proposal is to move from a $6.50 per month charge to $11.70, which is 39 cents per day as proposed. I don't think I've seen tripling of proposals as you are suggesting.
Q. What about the large customer?
A. What about large customers?
Q. Have their rates more than doubled or proposed charges, customer charges more than doubled?
A. Yes. However, it's a very different situation with larger customers because the revenues or the billings that are associated with the fixed monthly charge is a much larger -- smaller percentage of the customer's total bill, so they don't see it in the same way that a smaller customer would necessarily --
Q. But would you agree --
A. -- so it is more acceptable to Commissions, in my experience.
Q. I'd like to have you turn to page 8 of your testimony, lines 18 to 19. There you mentioned FERC's straight fixed-variable rate design for

interstate pipelines. Would you please describe that rate design?

A. Yes. Essentially, the FERC fixed-variable rate design is a -- I characterize it as a cost classification and allocation method that recovers fixed costs through a capacity or demand charge and variable costs through a commodity charge.

Q. Isn't the fixed part of that rate design tied to the maximum volume throughput of the customer and not to the customer's existence as a pipeline user?

A. Yes. And rightly so because pipelines don't serve hundreds of thousands of customers as an LDC does so they don't tend to classify and treat those costs in the same way that an LDC does.

Q. Would you agree that the appropriate analogy to FERC's fixed charges at the distribution level would be to a demand charge such as you discussed earlier and not to current customer charge?

A. From a strict rate design point of view, I would agree with you, but we have to recognize that some of the costs that are captured in the pipeline's capacity charge are costs that are appropriately recovered in the monthly customer

charge for an LDC.

Q. From page 12 on in your testimony you discuss the alternative distribution delivery stabilization mechanism which the company is proposing as an alternative to increasing customer charges. Just to refresh the Commission's memory, would you please provide a brief description of this mechanism?

A. Yes. The distribution delivery stabilization mechanism or more appropriately, the acronym DDSM, is a proposal that essentially adjusts the company's non-gas costs or a distribution margin to reflect changes in consumption as a result of changes in weather patterns.

Q. Do other utilities in other states have weather normalization adjustment mechanisms?

A. Yes.

Q. Are you familiar with these adjustments?

A. Yes, I am.

Q. Can you describe some of those mechanisms?

A. I'm not sure what aspect you're actually looking for me to describe beyond the general description I just gave you, which is essentially defining how all of the other mechanisms that I'm familiar with operate generally and what -- their

structure to accommodate.

Q. Do those mechanisms typically have a year's delay in the pass-through of the effect to warmer or colder weather?

A. There are some distribution utilities in North America that do have that feature, yes.

Q. Do most of them?

A. Most of them do not.

MR. BINEK: I have no further questions.

MR. HOBERG: Thank you, Mr. Binek.

Commissioner Reinbold, do you have any questions of Mr. Feingold?

COMMISSIONER REINBOLD: Just a couple of questions.

EXAMINATION

BY COMMISSIONER REINBOLD:

Q. Have you been to North Dakota before this hearing?

A. Yes, I have, but have not testified before.

Q. Okay. Have you ever been to Mandan, North Dakota?

A. Yes, I was, and I think I was lost when I was driving.

Q. Okay. I don't have any real -- well, I've got a couple questions here just to make sure you

earn your money. RAFFCOSNCIFERCDDSMWNADSANUADZCK. What did I just say?

A. You mentioned every acronym that's in my testimony.

Q. Do you believe what I said to be an acronym?

A. It's a pretty long one, but, yes, I do.

Q. Quite technically it's not an acronym, unless it sounds like it might be a word and I can't imagine any of these being a word.

COMMISSIONER REINBOLD: That's all the questions I have at this time, but stay loose.

THE WITNESS: Okay. Thank you.

MR. HOBERG: Thank you, Commissioner Reinbold. Commissioner Wefald, please.

EXAMINATION

BY COMMISSIONER WEFALD:

Q. On page 9 of your testimony -- I have trouble seeing the lines. I think it's 18 through 20 on page 9.

A. Yes.

Q. The proposed basic service charge increases will also ensure recovery by the company of a greater portion of its fixed costs of providing service.

169

If the higher customer charges were put in place, what proportion of the -- what proportion of the amount of income that MDU wishes to recover would be recovered by the basic service charge?

A. I think the way that I could answer that, Commissioner, is if you turn to page 10 of my testimony --

Q. Okay.

A. -- lines 20 through 23, I try to quantify, I think, the question that you posed, and that is if the monthly basic service charges were increased, and I focused on the residentials and general service customers, I talk about the amount of fixed costs that would be recovered. So, for example -- well, on page 10 in particular I say that there's still roughly $1.5 million of remaining customer-related costs and 3.3 million of fixed demand-related costs represented by 25 percent, so we're saying that roughly 75 percent of the fixed costs for the residential and general are recovered through the customer charge or monthly service charge.

Q. That being the case, would MDU have a greater opportunity to overreturn from those customer -- let's say the residential customer

170

group?

A. I don't believe so. And the reason I say that is because the costs that would be recovered in those basic monthly service charges represent the non-gas cost margin that would be established as a result of this rate proceeding. So under the assumption that that set number of dollars that represents distribution margin is what the company requires to have the opportunity to earn a fair rate of return, it's entirely appropriate to recover those in the fixed charges of those classes, but it doesn't in any way suggest that there would be the opportunity for overrecovery because of the way that they are being recovered through those charges.

Q. Why wouldn't there be an opportunity for overrecovery? Because in some years even with the present -- even with the present rate structure, if you have a really good year where it's cold and you're selling a lot of natural gas, then you're able to recover more income, and so why wouldn't that just be exacerbated then? I know you're going to be decreasing the cost of the natural gas to some extent for those customers, but still if you have a year where you're selling more than the normal, just explain that to me, why that would be there.

171

A. Certainly. I mean, if we recognize that the monthly service charges are applied on a customer's bill by essentially a monthly charge, so, in other words, if you have a $10-per-month monthly customer charge, whether you use zero decatherms of gas or 10 decatherms of gas in a particular month, you will be charged $10 because that reflects the recognition that the company incurs fixed costs that don't change whether the customer uses zero gas or 10 units of gas. Okay. So if it's a colder than normal year versus a warmer than normal year, it will not impact that $10-per-month charge applied to the number of customers served by the utility. In fact, it takes weather-sensitivity away from the utility business and instead of exacerbating, actually ameliorates the situation that you talk about with swings because of weather and that's one of the main reasons that this is being proposed.

Q. Are you the person to ask questions about how the rate design was done to establish that this is the correct amount of the residential gas service charge?

A. Well, I think the best person to ask that would be the next witness, Mrs. Aberle, but what I can answer here is that in reviewing the company's

172

embedded cost-of-service study, I was convinced that the numbers that came out of that study formed the basis for evaluating what rate level should we set in this case, so I'm comfortable with that connection. But I think she can talk to it in more detail.

Q. But it all depends on the assumptions that are put into that gas cost-of-service study as to which things are given to which customer group, correct?

A. That's correct, but I would venture to say based on my review of Mr. King's testimony, that with regard to the customer-related costs that form the basis for the monthly service charges, staff and the company are really not that far apart. It's a matter of how far do you go and how fast to get to cost-based rates.

COMMISSIONER WEFALD: Thank you.

MR. HOBERG: Thank you, Commissioner Wefald. Commissioner Clark, please.

COMMISSIONER CLARK: I have no questions. Thank you.

MR. HOBERG: Any further questions then of Mr. Feingold? No further questions. Thank you, Mr. Feingold.

THE WITNESS: Thank you.
MR. HOBERG: You have one more witness on direct?
MR. PEARCE: Yes. I'll call Tamie Aberle.
MR. HOBERG: Ms. Aberle, were you here earlier when I gave the admonition in regard to perjury?
THE WITNESS: I was.
MR. HOBERG: Being advised of the penalty for perjury, do you promise to tell the truth in this matter being heard? If so, answer I do.
THE WITNESS: I do.
MR. HOBERG: Mr. Pearce, please.

TAMIE ABERLE,

being first duly sworn, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. PEARCE:

Q. Did you prepare the direct testimony of Tamie Aberle that's been prefiled in this case?
A. I did.
Q. Looking at Exhibit 9, is that a copy of your testimony as prefiled?
A. Yes, it is.
Q. And if I were to ask the same questions,

would you give the same answers as are in that testimony?
A. Yes, I would.
Q. And to the best of your information and belief, is all of the information contained therein true and correct?
A. Yes.
MR. PEARCE: I will offer Exhibit 9 at this time, and I have no further questions on direct.
MR. HOBERG: Any objection to Exhibit 9, Mr. Binek?
MR. BINEK: No.
MR. HOBERG: Exhibit 9 is admitted. Thank you, Mr. Pearce. Mr. Binek, any questions of Ms. Aberle?
MR. BINEK: Just a few.

CROSS-EXAMINATION

BY MR. BINEK:

Q. Concerning your proposed distribution and delivery stabilization mechanism that you discuss on page 12 of your testimony, do I understand this mechanism is being proposed only as an alternative to the dramatic increases in customer charges?
A. It is our secondary proposal in lieu of the increased customer service charges that we have

proposed.
Q. Okay. So does this then mean that if the company get the customer charge increase it is seeking in this case, the DDSM proposal is withdrawn?
A. Correct.
Q. What if the company get no rate increase whatever or even a rate reduction, what happens to the DDSM proposal?
A. I'm sorry. I believe I might have misspoken on your earlier question. I was speaking of the increase in the basic service charges, not the overall revenue increase. Our DDSM proposal would apply regardless of the increase or decrease in the overall rates, if we were not to receive the basic service charges that we proposed.
Q. Okay. But if you got the basic service charges, then you're not seeking the DDSM?
A. Correct.
MR. BINEK: That's all I have for right now.
MR. HOBERG: Thank you, Mr. Binek.
Commissioner Reinbold, do you have any questions?
COMMISSIONER REINBOLD: None at this time.

Thank you.
MR. HOBERG: Thank you. Commissioner Wefald, please.
COMMISSIONER WEFALD: No, I have no questions at this time.
MR. HOBERG: Thank you. Commissioner Clark?
COMMISSIONER CLARK: None. Thank you.
MR. HOBERG: Anything further then of this witness at this time?
MR. PEARCE: Nothing.
MR. HOBERG: Thank you, Ms. Aberle.
Let's take a 10-minute recess at this point.
MR. BINEK: Could we take a little bit longer time? I wasn't anticipating that my witnesses would be going up this soon.
MR. HOBERG: Fifteen minutes?
MR. BINEK: I think 15 minutes.
MR. HOBERG: Okay. We'll be back at 25 to 3:00, please.
(Recess was taken.)
(Exhibits 15-48, 16 and 17 were marked for identification.)
MR. HOBERG: We are back on the record

after a fairly short recess.

Before we begin the direct -- or the presentation of the State's case, we perhaps have some unfinished business. We have a couple of exhibits from MDU, is that correct, Mr. Pearce?

MR. PEARCE: Yes. I don't believe that I formally offered Exhibits 1 and 2. That's the application and the book of statements. I'll offer them at this time.

MR. HOBERG: Mr. Binek, any objection to 1 and 2?

MR. BINEK: No.

MR. HOBERG: Okay. Exhibits 1 and 2 are admitted. Thank you. Mr. Binek, please.

MR. BINEK: Thank you. I'll call Charles King.

MR. HOBERG: Mr. King, did you hear the admonition I gave in regard to perjury earlier?

THE WITNESS: Yes, I did.

MR. HOBERG: Being advised of the penalty for perjury, do you promise to tell the truth in this matter being heard? If so, answer I do.

THE WITNESS: Yes, I do.

MR. HOBERG: Thank you. Mr. Binek, please.

CHARLES W. KING,

having been duly sworn, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. BINEK:

Q. Please state your name for the record.

A. My name is Charles W. King.

Q. And what is your occupation, Mr. King?

A. I'm president of the economic consulting firm of Snavely King Majoros O'Connor & Lee.

Q. And what is your address, business address?

A. 1220 L Street N.W., Suite 410, Washington, D.C.

Q. Mr. King, have you -- how long have you been engaged in your present occupation?

A. In the present occupation close to 40 years. Virtually all my professional life.

Q. And you have testified in a number of state utility rate proceedings?

A. Yes. I've distributed a listing of my appearances and if you count them up, they come to over 300.

Q. Okay. And you have also appeared before the North Dakota Public Service Commission, have you not?

A. Yes. I appeared in MDU's electric case earlier this year and last year in Xcel's gas case.

Q. Let's see. Mr. King, I show you what has been marked as Exhibit 15-48. And can you identify that exhibit?

A. That's my testimony. I believe my exhibits are attached to it. Yes.

Q. And was this testimony prepared by you or at your direction?

A. Yes, it was.

Q. Are there any corrections that need to be made to your testimony?

A. No, there are not.

Q. And if I ask you the same questions today that are in your testimony, would your answers to those questions be the same as stated in your prefiled testimony?

A. Yes, they would.

Q. You also have before you Exhibits 16 and 17. Would you identify those exhibits?

A. One of them is a month-by-month statement of MDU's working capital, and the other one is an exhibit from the earlier MDU case, the electric case of earlier this year, and -- which shows the respective revenue sources for a number of

utilities.

MR. BINEK: Okay. At this time I will offer Exhibits 15, 16, and 17.

MR. HOBERG: Mr. Pearce, any objection to any of those exhibits?

MR. PEARCE: No.

MR. HOBERG: Exhibits 15, 16, and 17 are admitted.

MR. BINEK: Thank you.

Q. (MR. BINEK CONTINUING) At this time, Mr. King, I would like to ask you to give a summary of your testimony and also any rebuttal that you -- or any responses that you might have to the rebuttal testimony that has been filed by Montana-Dakota Utilities in this case.

A. Certainly. In the interest of time, I don't think I will go through in detail the portions of my testimony principally relating to rate design where I don't think there is any disagreement between us and the company. Unfortunately, most of my rate-of-return testimony there is disagreement.

The testimony overall deals with four subjects; the rate of return, cost allocation; that is, classed cost allocation, rate design, and, finally, the DDSM proposal. The cost -- I'm sorry.

Cost-of-capital testimony in turn has three parts. One is capital structure. The other is cost of the debt, and the other is cost of equity, and we don't seem to agree with MDU on any of them.

With regard to capital structure, there are two disagreements. One is that I include short-term debt and the company does not. And the other one is I used a historical 2001 capital structure and the company does a projected 2003 capital structure.

With regard to short-term debt, the reason for including short-term debt is that portions of the rate base are financed by short-term debt. If short-term debt were used for things totally out of rate base, such as expenses, then maybe we could exclude it, but, obviously, when you have elements that are in the rate base that vary throughout the year, why the company has to use short-term debt to finance that. And that's why I have my exhibit -- what is it -- 16 or 15? I didn't write it down. Sixteen, and this is taken from the company's Statement E.

And it's -- unfortunately, it is four of the five items that make up working capital. I did not -- I neglected to put in DSM expenses, but it wouldn't detract from what the exhibit shows, which

is throughout the year there is significant variation in the amount of working capital. And when you have that kind of variation, it's necessary to finance it through short-term debt. So I suggest that contrary to what the company says, it does not finance its working capital with long-term debt and equity, that there is an element of short-term debt. To be sure, it is a small amount. And you will find in my capital structure a relatively small amount of short-term debt.

As regards the forecast capital structure, the company's position in this case is considerably different than it was in the electric case. In the electric case the company accepted a historical end-of-year 2000, in that case 2000 capital structure. In this case the company wants a forecast capital structure. And I think it's mid -- it's the average for the year 2003. Now, the reason one uses future test years is to capture exogenous effects or outside effects, such as inflation, and in this case, the necessary expansion of the system into the northern suburbs of Bismarck.

These are things that are objectively determined. They are reasonably knowable. They are reasonably objectively analyzed. The capital

structure of the company is a creation of its own management. If the company says that its capital structure is going to change, there is no way of determining that, in fact, it will change in that manner. For this reason, most Commissions use historical -- recent, but historical capital structures, unless the company can articulate why the capital structure will change. Otherwise, you invite the company to engage in gaming of the regulatory system by projecting a capital structure usually with more equity than debt so that the overcomposite becomes more expensive. And I don't think the company should be permitted to do that in this case.

The debt cost we have a significant difference in. The company is proposing that the debt be limited to first mortgage bonds with a cost of 9.302 percent. I have proposed that we use a parent company's debt cost, which includes 6.167 percent. If -- I don't know if you want to look it up, but if you would want to look it up, Statement A, which is the company's balance sheet.

MR. HOBERG: In Exhibit 2.

THE WITNESS: Statement A in Exhibit 2. And earlier I asked Mr. Keller -- we asked

Mr. Keller whether the first two pages were for MDU Utilities Company. He answered yes. And if the subsequent pages pertain to MDU Resources Group, and the answer to that was yes. If you turn to page 11 of the Statement A, you'll find a list of long- term debt. That list does not begin to match the list that Mr. Keller has presented in Statement F, which is where he proposes his debt costs. The only debt that he shows is the secured medium-term notes, Series A, and then pollution control refunding revenue bonds. These are merely a portion of the parent company's total debt. Not included are -- and he has about 133,000 of first mortgage bonds. Not included are senior notes, $405,000 -- million dollars. Commercial paper, $219 million. Revolving line of credit, $25 million. Term credit agreements of $11 million and pollution control note obligations of $11 million -- I'm sorry -- $2.5 million. The company has reflected only a portion of its total debt.

Now, in rebuttal Mr. Keller has said that that doesn't -- other debt doesn't pertain to MDU Utilities, but you heard a few minutes ago that MDU Utilities Company isn't really a company. It's simply a division of the larger company. The larger

185

company is the entity that generates the debt, that raises the debt and distributes it to the subsidiaries. What the company has sought to do here is to build a firewall between the debt it wants to assign to the regulated piece and the debt it wants to assign to the unregulated piece. And, surprise, the debt it wants to assign to the regulated piece is 9 percent, and the debt it wants to assign to the unregulated piece ranges all the way down to 2 percent. And it should not be allowed to gain the system this way, by pretending that some debt pertains to the utility operations and other debt pertains to the non-utility operations.

Mr. Keller will tell you that that's how the debt instruments are written. Of course, they're written that way because that was how they were intended to be written so that they would appear that there is a distinction between debt raised for the utility and debt raised for the non-utility. Truth is, debt is all fungible. It could be spent anyplace the company chose to spend it. For that reason I have used the blended rate, debt rate of the entire company, meaning MDU Resources, as the debt cost. And it makes a very, very significant difference in the result. The debt

186

cost -- let me get my notes here -- again, is 9.3, if you use the company's first mortgage bonds as it proposes. It's 6.2 or 6.167, if you use the parent company's blended debt, which I developed in an exhibit to my testimony.

Now, equity, I have to kind of go through and tick off the items where Dr. Gaske and I disagree. The reality is we agree on a lot of things, specifically the formula for discounting cash flow, but, first of all, Dr. Gaske wants to include flotation costs. We're doing this all over again. In the electric case I demonstrated, and I simply repeat it in this docket, that if you include flotation costs, they come to .1 percent of the cost of the value of the total equity of the company. And I'm game to include that as a component of capital costs, but it would be lost in the rounding. Dr. Gaske seems to believe that it is appropriate to assign the incremental cost of flotation relative to the newly-issued stock and take that percentage and apply it to the entirety of equity. And this is a gross overcompensation of the company, and in the last case the Commission explicitly agreed with me.

Now, selection of comparison companies, Dr. Gaske point out correctly that in the Xcel

187

case -- I'm sorry -- in the last case. Two things, he points out in the Xcel case that I used a much different and smaller group of companies and I used both gas companies and combination companies. And the answer is I didn't really pick those companies. In that case I was rebutting Dr. Olson, who had made the pick. And rather than fight with Dr. Olson over the pick, I accepted his listing.

In the last MDU case, the electric company case, I took some purely electric companies and some combination companies, and I argued that the combination companies were more representative of MDU's electric service. And I was going to do what Dr. Gaske suggests, which is include full gas companies and combination companies until I looked at what has now been marked Exhibit 17, which is an exhibit that I entered into -- in the MDU case. And it shows the proper portion of the revenue of each of these companies. The companies in boldface are the ones I wound up selecting. If you look at those companies and look at the electric revenue and then look at the gas revenue, what you'll see is in every case the electric revenue is a multiple of the gas revenue. And as a consequence, while one can say that the investors might view these companies as

188

electric companies that also provide gas service, it doesn't work the other way around. No one views these companies as gas companies that also provide electric service, which is why I did not include these companies in my comparison group this time. Instead, I included purely gas companies.

Now, the other -- well, let's go through what I did that I don't think Dr. Gaske and I disagree with on. I used the DCF formula and I did two -- three versions of it. First, is the so-called classic version, which Dr. Gaske has another name for, and we also used pretty much the same sources; Zacks for the future forecast of earnings growth. And then we did the same development of dividend yield. We had the silly little disagreement over whether the growth factor for next year's dividend should be .5 -- or .5g, g being the growth factor, or .625g. And Dr. Gaske says that I don't reflect the time value of money. And he's right. I didn't. I just took half a year and said, all right, that's the probable time the next dividend increase will occur so we take one-half of growth, which seems logical.

Now, if I were to include the time value of money, I would probably reduce that .5. Why?

Because a dividend increase six months from now is worth less than a dividend increase right now. So I would have to take -- I would have to reduce that .5 by some factor reflecting half a year's loss in value because of the time value of money. So instead of increasing it as Dr. Gaske has done, I would have reduced the factor. But, again, we're talking about peanuts here in terms of impact on the total results.

The other thing I did was similar to Dr. Gaske's formula. I took the retention rate of the respective companies as determined by their dividend payout ratio or their earnings retention ratio times Value Line's forecast of their future return to book equity. And unlike Dr. Gaske, I added a piece for the probable or the likely increase in value that one would get from selling -- or companies would get from selling stock at greater than book value, which would enhance the book value of the shares. And I developed an internal retention growth estimate. And then I used -- I did get out the history of earnings gross and I developed that, and I think Dr. Gaske and I both agree that that probably isn't worth a whole lot.

I then developed what I regarded as the

composite rates of return for each of the 11 companies that I picked, as opposed to I think five or six that he used. And that was a judgment call, and Dr. Gaske is very unhappy with what I did there. But if you look at it, you will see what I have done in each case is taken the classic DCF return, which is probably the best estimator, and then turned and looked at the retention growth method. If the retention growth looks like it's totally out of whack with the forecast, and in some cases they are, simply no way that the company could be growing as fast or as slowly as the investor survey shows, I modified that classic DCF in the direction of the retention growth. And I came up with 11 estimates of the overall rate of return.

Then when I got those 11 estimates, I went through a little analysis of whether MDU is more or less risky than those 11 companies. And I determined a couple things. One is MDU has relatively high equity proportion in its capital structure, which saves it from a lot of financial risk that the other companies have. It was about equal to the best or the highest of the equity ratios. I don't pretend that that is the predictor of relative risk, but it is an element of relative

risk. Another element of relative risk is how much nonregulated activity the company has. In general, it's accepted that unregulated activities are riskier than regulated activities. Why? If your earnings are short, you come into a Commission like this and you get an increase in your rates. You have monopoly power. There is never a question that you're going to collect the money if the Commission let's you do it because you are a monopoly. That's not true of any unregulated activities. By definition, unregulated activities simply don't have the degree of security, the low-risk properties that regulated activities have.

There are a couple of other reasons I didn't mention in my testimony I probably ought to bring up now. Earlier in the day we heard from Mr. Fox that MDU was facing competition from propane and oil. Now, I live in Washington, D.C., and have done a lot of cases involving Washington Gas Light Company and so I'm familiar with competition there. There was no mention of competition from electricity. In Washington, D.C., the -- about two-thirds or three-quarters of the entire commercial load has been lost by the gas industry or the gas company to the electric company. And the

reason is that's a warmer climate. In Washington the climate is warm enough that you can build a compressor in an air-conditioning system that also heats. You can't do that in this climate. It would be ruinously expensive. Residentially you can sell people a heat pump. Heat pumps simply don't work in North Dakota. You freeze to death, along with paying an astronomical electric bill. So the relative degree of competition for gas in North Dakota, I submit, is considerably less than it is elsewhere in the country.

There's another difference. In Washington and even in Spades and Atlanta there is a much more active competitive supplier business. In Atlanta, the other company I'm familiar with, the Commission decided to totally restructure the gas industry. That no one -- the utility would no longer buy gas on behalf of its customers. It would have instead merchants would come in and you would be a customer of the ABC Gas Company, which would buy your gas and pay Atlanta Gas Light to deliver it to your house. So that from 600,000 customers, Atlanta Gas Light went to 11 customers.

That sounded like a wonderful idea, except that one of them with a nice Georgian name of

193

Peachtree Energy went bust and left Atlanta Gas Light hanging for quite a few million dollars, just stiffed them flat, and the company suffered a very significant loss. And Washington Gas Light has a similar problem. They've lost about two-thirds of their commercial load to competitive suppliers. Now, they still use WGL as their delivery to customers. One of the problems is that they haven't got the transportation capacity locked up that WGL had. And there's a great fear that if we have a cold winter, these people aren't going to be able to get the gas into Washington. Those are risks that larger companies have that MDU doesn't have because MDU does not seem to have anything like the active competition for the gas supply business that you get in bigger places.

So I think that is an important difference between MDU -- those two, the degree of competition and the effect of suppliers, is an important reason why MDU is probably less risky than the average utility, in addition to the point that I make in my testimony. Dr. Gaske says that MDU has the risk characteristics of a small company. Well, he's comparing apples and oranges. He's comparing the gas distribution business of a large company with

194

the risk properties of a small company, a small stand-alone company. What we're trying to find is not that. We're trying to find the risk characteristics of the gas operations of a large company. A large company gives you the security of financial strength and also diversification of financial resources. You remember where all those extra sources of debt came from, which a small company doesn't have and small companies indeed are more risky, but only when they are stand-alone operations. Principally, because their sources of financing and the support they can put behind that financing in terms of business is much less.

Well, all this comes together on page 34 of my testimony where I present my composite cost of capital and that is -- there I take the proportion of the capital structure, the cost elements, and the weighted costs. I've come up with 10.5 percent as a cost of equity, which is halfway between the average cost of equity of my 11 companies and the lowest cost of equity within that category, that group of 11 companies, reflecting the fact that MDU is less risky than the average for the 11. That's 10.5 and then you get the weighted cost in the final column, overall return to capital is 7.98.

195

Now, the rest of my testimony deals with capital structure. The only area where I think I seem to hear disagreement from the company pertains to the cost of service study. Where Ms. Aberle says that customers cause most or half the cost or a third of the cost, I believe is their position, of the mains system. And I take exception to that.

And the reason is that the main system may be driven by the addition or -- well, never the subtraction, but always the addition of customers, but only out in the margins. Indeed, they're putting more mains out in north Bismarck, but you heard testimony earlier that they only add 1 percent more customers every year, so that's a negligible impact on the cost of mains. Most of the cost of the mains is what you call an embedded cost. It's there. It's been there for centuries -- I mean, for decades. And it's not going to be affected by any increase or decrease in the number of customers. It's not going to be affected by any increase or decrease in the amount of gas that goes through it. It will be impacted by the maximum amount of gas that goes through in any one day, but we reflect that. We recognize that in allocating a portion of the main's cost to throughput as among the various

196

classes of customers.

My -- when you can't find causation and that's the case with mains. They are simply there, what I would call an institutional cost. They're not caused by anything. They're there. When you can't find causation, then maybe you should look to value of service as an allocator. And value of service is measured by the amount of gas delivered to each of the three or four various categories of customers, which is what I have done in the alternative calculation that I have presented. And it does change the results some, but not a whole lot. We both agree that the small interruptible customers are being overcharged. We don't agree quite about what to do about it. The company would reduce their rates while increasing everybody else's rates.

I went through a number of previous Commission decisions, not just with MDU, but with all the other gas companies and also electric companies, and it appears to have been this Commission's policy over the years that when there is a rate increase, everybody ought to bear a little of the pain. And if you want to even out differences among the classes, you might change the

percentage increase, but everybody get some increase. And what I have seen is a number of cases where the overcharged class got half the increase that the undercharged class got. And that's what I proposed in this case. If you increase rates, increase everybody but the small interruptible customers and then give them half the increase you get for the rest.

The other rate design issue deals with this matter of customer charge increases. What the company and I agree on is that we should get rid of the declining block commodity rate and take the revenues you get from those high early blocks and put that in the customer charge. So even if we do nothing whatever in terms of overall revenue recovery, we would be increasing the customer charge as the company wishes. And then I agree that probably if we're going to have a rate increase, we might flow more of that increase into the customer charge than into the commodity charge. But nothing like the enormous increases in the customer charge that the company has proposed.

If we have a rate decrease, which is what staff is recommending, I would recommend that that decrease come entirely out of the customer charge --

I beg your pardon -- out of the commodity charge and the customer charge be left untouched. Well, actually they would be increased because we're flattening the rates, but the revenue recovered from the customer charge plus the early block pieces would not be reduced. We would flow all the reductions into the commodity charge.

On the DDSM, I don't even know whether there's a proposal still, but if it is, I think it's one that should be rejected because of the year's deferral. It could really backfire big time and get us all in a great deal of trouble, because if you had a warm winter and you tallied up a whole lot of money that you ought to collect from ratepayers because you didn't pay very much last winter and this winter it's colder than all get-out and everybody is paying enormous gas bills, both because of the amount of gas they're using and because the price of gas usually goes up when you have a cold winter and then on top of that you hit them with a DDSM charge, it will be very, very unpopular.

If you're going to have a weather normalization program -- I think they're not a bad idea. More and more states are using them. -- they have to be maybe not real-time, but they have to be

concurrent. The warm weather charges that you want to collect from customers have to flow to customers during the warm weather and the cold weather charges that you would to subtract from their customer bills have to be during the cold weather. Otherwise, you are losing the effects, the beneficial effects on ratepayers, which is to even out their year-to-year gas charges.

I think I've said quite enough so I'm going to shut up right now. Thank you very much.

MR. BINEK: At this point I tender the witness for cross-examination.

MR. HOBERG: Thank you, Mr. Binek. Mr. Pearce, if you have any questions.

MR. PEARCE: Yes, I do have several.

CROSS-EXAMINATION

BY MR. PEARCE:

Q. This is just a minor point, but turning to page 2 of your testimony, Mr. King, line 23 and line 27, I suppose you mean gas there. You have electric operation there in both cases.

A. Oh, dear. I'm sorry. That part of my testimony I had simply taken and listed from the earlier.

MR. HOBERG: So you would agree that should

be gas?

THE WITNESS: Yes, it should be gas.

Q. (MR. PEARCE CONTINUING) One of the downsides of word processing, isn't it?

A. That's right.

Q. Exhibit 17, I think, was just introduced and it's electric and gas utilities percent regulated revenue?

A. Yeah.

Q. I think you said you introduced that in the electric case. Dr. Gaske tells me that he introduced that as part of his testimony in the electric case. It's not critical, but maybe --

A. Well, I don't care who introduced it. I thought it was mine, but welcome -- nonetheless, it shows what it shows.

Q. Right. We'll both accept that as true. Now, turning to page 28 in your testimony through 29, I just wanted to clarify a point. It's your testimony that by your understanding Dr. Gaske's 1.625g factor there is based on his assumption that the first dividend would be received three months from the date of purchase; is that right?

A. Well, that's how I calculated it, but Dr. Gaske says that isn't so and I'll let him

explain why it isn't so.
Q. Now, have you -- Dr. Gaske's prefiled testimony, rebuttal testimony is in the record, although it hasn't been introduced as an exhibit. I think you said you had read it; is that right?
A. Yes.
Q. If I could just show you one page, although it's not an exhibit yet, but just to make sure we are on the same wavelength. I'm looking at his JSG-4, page 2 of 3 on Schedule 3. It has the -- I believe what's the classic DCF formula. I just wanted to confirm that we agree that that's the --
A. I think it is, yes.
Q. Okay. Now, turning back to page 20 of your prefiled testimony, and this is the testimony right after your table 7 at the bottom of the page. You say -- in fact, it's the last line of that page, line 22. For example, there are no examples of level or declining earnings in the Value Line forecasts. I'm going to show you --
(Exhibit 18 was marked for identification.)
Q. (MR. PEARCE CONTINUING) Exhibit 18 is a packet of six pages, and before I identify it further, could I ask you -- well, let me back up.
Which issue of Value Line did you use for

your analysis? Do you have that there?
A. Mine are all dated June 21.
Q. Of 2002?
A. Yeah.
Q. Okay. Now, looking at what's been marked as Exhibit 18, it is -- and I'll tell you what it is, is sheets from Value Line for six companies of that same date. Would you agree that's what it appears to be?
A. Yeah. None of them are the six companies that I was analyzing.
Q. Right. Right. No.
A. Or the 11 companies.
Q. You make in your testimony a very broad statement about Value Line. I just wanted to lead you over to some other companies that were not in your testimony.
A. Well, I didn't mean to imply that they never, ever predict declining earnings. I was talking about among the 11 companies that I was looking at.
Q. Okay. Just to go through this, looking at these companies, and I realize this is very fine print for a person of my age, but looking at the third line there, earnings per share, and then down

toward the bottom is return on common equity, I think. Would you agree if you have a chance to look at each of these six sheets, that there is, in fact, declining earnings and earnings per share from 2000 -- between 2000 and 2001 and, in fact, out through the 2005, 2007 period?
A. Oh, sure, for these companies. These are in the oil business. I don't know what Holly Corp is. Crude oil. We're looking at oil companies for some reason.
Q. I believe they're all energy companies.
A. Tesoro is one of them.
Q. Right.
MR. HOBERG: Are you offering Exhibit 18, Mr. Pearce?
MR. PEARCE: Yes.
MR. HOBERG: Any objection to 18, Mr. Binek?
MR. BINEK: Well, the only objection I would have is based on the comments that Mr. King has made, that none of the companies that he's talking about are included here, and so I guess I would question the relevance of this.
MR. HOBERG: What is the relevancy, Mr. Pearce?

MR. PEARCE: The way the testimony is written the implication appears to be that all of Value Line's companies that it analyzes are overly optimistic and there's never any report of declining earnings and we simply wanted to show that although -- that without regard just to utility companies, as a general principle, that's not true for Value Line generally.
MR. HOBERG: Do you have any objection for that limited purpose, Mr. Binek?
MR. BINEK: No, I guess that's okay.
MR. HOBERG: I'll admit Exhibit 18.
MR. PEARCE: That's all the questions I have.
MR. HOBERG: Thank you, Mr. Pearce.
Commissioner Reinbold, did you have any questions of Mr. King?
COMMISSIONER REINBOLD: Yes, I do.

EXAMINATION

BY COMMISSIONER REINBOLD:

Q. Mr. King, you said something about heat pumps wouldn't work in this part of the country in North Dakota?
A. That's what I've been told. I'm not an engineer and I can't really testify as an expert on

that subject.
Q. Would it surprise you if I directed you to a window in this room and directed you to look to the northwest and see a brand-new huge church building which is being heated and cooled by 120 wells 160 feet deep in the parking lot?
A. Goodness.
Q. Doing it very efficiently. A young entrepreneur, who was a well driller, got it started and he's worked this type of work as far away as South Carolina. So it may not work everywhere, but it does work over at our church. It's very expensive and it will be expensive for a long time, but it does work.
A. I hope you're comfortable at Christmastime.
COMMISSIONER REINBOLD: That's all I have for now.
MR. HOBERG: Thank you, Commissioner Reinbold. Commissioner Wefald, please.
COMMISSIONER WEFALD: Yes, I have a few questions.

EXAMINATION

BY COMMISSIONER WEFALD:

Q. On page 34. I understand there's a disagreement between the company and the staff about

whether short-term debt should be included and as you've said, it's only 2.78 percent that you've included in your calculations.
A. That's right.
Q. And you're asserting -- my first question is, are you asserting that short-term debt should be included?
A. Yes.
Q. Because you have information on the record and where is that that shows that they're using short-term debt?
A. Well, you never know. You can't trace the source of money from where they get it to where they use it because it all goes in effect into the bank account and then back out again. But the proposition is that when you have expenses that fluctuate -- or capital costs or expenses that fluctuate, particularly capital costs fluctuate month to month, the normal way of financing those would be through short-term debt. Now, they are high in June and low in January and where are you going to get the money to cover those, you go to the bank and borrow it.
Now, in fairness, MDU does not use much short-term debt. And the reason is that the company

generates a lot of internal cash primarily from excessive depreciation charges, but that's what Mr. Majoros is going to talk about. But they do use some, and this is what I reflect here. And the reason I put in this exhibit is to show that there's significant variation from month to month in the working capital.
Q. How did you come up with this?
A. It's from the company's own -- well, the numbers are presented up in the front. Let me find the table for you. It's page 5.
Q. Yes.
A. Table 1.
Q. But I just wondered how you were able to determine it was $9,639,000 --
A. That I think I got from there --
Q. -- if you said it's hard to trace?
A. Oh, you can determine how much short-term debt there is. What you can't do is determine where they spent it. That's what I meant is hard to trace. I believe I got that -- here it is. Look at my Exhibit CWK-1, which is attached to my testimony.
Q. Okay.
A. Go to the last page of that exhibit and

there at the bottom you'll see the 9 million and you'll see the 4.542 percent. That's the source of those numbers. And this is a company data response.
Q. All right. And on page 43 of your testimony you talk about penalties for failure to interrupt should be increased, on line 11.
A. Yes.
Q. Do you have any recommendations about that?
A. Well, I was going to recommend the company's proposal be accepted. And it's the company's judgment as to what it takes to make interruptible customers interrupt, but if they don't interrupt, you could have a disaster. You can have the pipeline suddenly unable to deliver gas to the city gate and everybody goes cold. So if -- and the company isn't planning. They don't make the commitment to the pipelines. They don't build their own main structure to handle the interruptible customers' loads at the peak day. The assumption is when it really gets high gas demand, phone them up, have them cut off. They don't cut off, the company can be in trouble.
Q. Right.
A. So I think it's very important that there be sufficient pricing to persuade those customers

they better interrupt.
Q. Well, what I was wondering is, it says here, penalties for failure to interrupt should be increased since the company apparently believes that the current penalties are not sufficient. So did the company present what you feel is a sufficient penalty then to --
A. Well, I really do have to defer to the company. I guess I accepted their judgment in that regard. Maybe I'm naive, but in this regard I --
Q. You're not disputing what they're proposing?
A. I'm not disputing their judgment on that. But I think if you want to know what is the basis of the exact amount of increase, you better ask Ms. Aberle.
Q. All right. Then my next question was page 44. This is under the question, have you calculated the increased customer charges that would result from eliminating declining block rates. It's my understanding that you think that we should be eliminating the declining block rates. And so is it your recommendation that this size increase that is reflected in paragraphs 19 through 23 is what should be put in place for customers?

A. Well, what I did in my Exhibit CWK-8 was calculate the revenue that is recovered in the high initial blocks of the present rate structure. And then I divided that by the number of customer bills and got the amount of increase you would need in the monthly customer charges in order to recapture that same money in the customer charges instead of in the initial declining block rates. And that's the numbers you see here. This is a totally revenue neutral proposal.
Q. Right. I see. This doesn't reflect any increase that the company may want?
A. No increase, right.
Q. This is just what would occur if you eliminated the declining block rate?
A. Right.
Q. So then this would be the minimal amount -- this would be the bottom amount that we would be looking at --
A. Yeah.
Q. -- for a customer rate increase before you'd --
A. Yeah.
Q. -- project any -- if you were going to do any increase for their rate case?

A. Right. What I'm suggesting is, even if you reduce rates, you ought to keep these customer charges, because I am sympathetic to the company's desire to capture somewhat more fixed costs in the customer charge. So I think if you were to reduce the rates, it would be inappropriate to reduce the customer charge. Reductions ought to come out of the commodities.
Q. Even in this situation for the large customer who goes from $17 to $45, which is a triple increase?
A. It's a big increase, but it is, as I believe an earlier witness pointed out, those customers use so much gas that this is small potatoes in terms of their total bill.
Q. All right. And then on page 45, the question is, are there any other proposals the company has made that you believe the Commission should consider regardless of the change in overall revenues, and your answer is on lines 12 through 19. I recommend the Commission consider the company's proposal to convert the basic service customer charge from a monthly charge to a daily charge. And then you go on and then you say. My only concern is whether it might be accepted by the average customer

as a reasonable way of charging for service.
To me it would be very confusing as a customer to not know every month, not to have the same amount each month on my bill for my customer charge.
A. Yeah, and I'm sympathetic to that. I think that's a legitimate concern and that's why I put that sentence in there. I guess I'm tossing the ball back to you as to whether you think that is something that will go down with the average customer.
Q. Because, otherwise, you might have one rate that would be there for the 28-day month, another one for the 30-day month and another for the 31?
A. You get a lower customer charge in February, right. But I think the virtue from the company's standpoint is it gives them a little more flexibility as to when they send their meter readers out. Now, it's got to be -- I guess I don't know whether they bill by the calendar month or whether they bill -- each customer get from a certain day to a certain day, but whatever it is, they're locked into pretty much a 30-, 31-day interval and this would permit them to alter the interval, if they had to.

Also, we put in a data request asking how many customers did they have that had partial month bills in a given year, and it was a huge number. I don't know why, but it was -- I was surprised by how big it was. And it's one of the reasons that I sort of gave a backhanded endorsement to this proposal. But it's certainly not something that I would insist on.

Q. When you say -- what do you mean by a partial month bill?

A. What we asked was in any given -- I don't have the data response with me. They had said they had a lot of customers who came -- who got on and off during the year. And the consequence of signing on for a part of a month instead of the full 30 days, they had 20 days or 10 days or whatever. And I said, all right, well, how big a deal is that? How often does that occur? And it was in the thousands. It was quite remarkable that it was as much as it was. Evidently, there must be a lot of customers who simply turn off gas service in the course of the year and disconnect. And then reconnect later. It could be vacation homes or people who decide they don't need gas in the summer because they don't need the heat in the summer and

they cancel gas service. You have to ask the company why it's so large, but it was a large number. And this would facilitate dealing with that problem.

Q. I will ask the company a few more questions about this, but then does it also -- in your understanding of this does it reflect -- let's say the company read my meter on January 15 and then they didn't get around to reading my meter again until the 20th of February. So then there might be -- would I get a 30-something day --

A. Thirty-five-day month, it's possible.

Q. And then the next I get a 25-day one if they went back and did it again on the 15th again of the next month?

A. If you're like me, you write your bills once a month when you get paid, and customers could really get messed up if they started changing the -- if they got out of the monthly cycle of billing, which this would permit them to do. So maybe that's a good reason not to permit this change.

COMMISSIONER WEFALD: Who would be the MDU person I would ask these questions of just so I can understand it better?

MR. HOBERG: Mr. Pearce?

MR. PEARCE: I suppose probably Mrs. Aberle.

MR. HOBERG: Tamie Aberle.

COMMISSIONER WEFALD: I do have some questions about that so I will ask Ms. Aberle.

Q. (COMMISSIONER WEFALD CONTINUING) All right. And then, now, this is a bigger, broader question.

A. I like big, broad questions. I give big, broad answers.

Q. So now let's say a hypothetical utility has divisions and one of them makes -- one of these 11 divisions that they have and only one is a utility division, but it's still a -- it's a company with many subsidiaries, and one is the utilities and one of those divisions makes bad business decisions and starts to go into a -- close to a bankruptcy situation. So within the -- it's my understanding what happens sometimes then is that the bond rating of the whole company can get lowered and then a Commission has to worry about what are the -- whether the riskiness of their bond rating at that time is going to be passed on to their customers.

When you're talking about looking at bonds for the whole group of MDU companies, all of these

divisions, if I accept your premise that the bonds are good for everyone and it's the whole, big company that has a bond rating and not just one division, am I setting myself up in the future then to set precedents that if they make a bad decision with one of their divisions, that I'm going to need to accept that bond rating for the utility company as well?

A. Well, you have exactly that situation with your telephone company.

Q. Right.

A. And it's a difficult problem. US West was a thoroughly successful company, but it got bought by this Qwest outfit, which has gone south, and it's junk bond status. And your question is, okay, what are you going to do about assigning a bond yield cost to US West?

Q. Well, and I don't have to worry about that because under price cap, but let's say there's a hypothetical company that's in the same situation, but we know that that's reality in some cases today. And so what I'm concerned about is your --

A. Well, what I would say is that if the utility piece of it is a -- is profitable and would support an adequate bond rating, then for -- but the

rest of the company caused it to go south, I think you would have to impute a bond cost that reflected the utility's performance. Fortunately, for MDU Resources that's not an issue, because not only is the utility profitable, but the parent company is also profitable.

But I think your concern is a very legitimate one, that if the non-utility activities of the company soured the bond ratings such that there were astronomically high debt costs, is it fair to ratepayers to pass those debt costs through to them? And I would say no, because that is a result of -- it's in a way analogous to why we don't use MDU's equity costs because its equity cost is seriously influenced by its nonregulated activities. If you could demonstrate that the bond -- the debt cost is influenced adversely by the nonregulated activities, then I think it's appropriate to impute a different debt cost. Fortunately, I don't think that's an issue here because it's clear that the company seems to have a good debt rating.

COMMISSIONER WEFALD: Thank you.

MR. HOBERG: Thank you, Commissioner Wefald. Commission Clark, please.

COMMISSIONER CLARK: I have none. Thank

you.

MR. HOBERG: Thank you. Any further questions of Mr. King? Mr. Binek?

MR. BINEK: Just one.

REDIRECT EXAMINATION

BY MR. BINEK:

Q. I guess I would like a little bit of clarification about this heat pump business. When you were making reference to the use of heat pumps, you were -- I'm assuming you were thinking about a unit that does both heating and air conditioning, kind of a stand-alone unit, versus something that draws heat off of groundwater?

A. Yeah.

Q. Is that correct?

A. Mr. Majoros can testify about heat pumps. He has one in his house and he says he hates it.

Q. Okay. But there are different kinds of heat pumps?

A. Yes. Essentially, it's an air-conditioner that works two ways, and it only works as an air-conditioner in the reverse direction down, I'm told, to about 45 degrees Fahrenheit. If it get colder than that, you have to supplement with resistance, electric resistance heating, which is

why it becomes very expensive if you have a cold climate, because up here you would have that resistance heating on all the time and that scarfs up an incredible amount of electricity.

Q. These are the kinds of units that we often see in motels; isn't that right?

A. Yeah.

MR. BINEK: Okay. No further questions.

MR. HOBERG: Thank you, Mr. Binek. Mr. Diller, any questions? Okay. Anything further then of Mr. King? Thank you, Mr. King.

Let's take a short break and then we can perhaps take Mr. Majoros and finish off the day that way. Let's be back at -- a five- to seven-minute recess.

(Recess was taken.)

(Exhibits 19 and 20 were marked for identification.)

MR. HOBERG: We're back from a short recess. And, Mr. Binek, you were ready to call your next witness.

MR. BINEK: Yes. I will call Michael Majoros.

MR. HOBERG: Mr. Majoros, you were here earlier when I gave the admonition regarding

perjury; is that correct?

THE WITNESS: Yes, sir.

MR. HOBERG: Being advised of the penalty for perjury, do you promise to tell the truth in this matter being heard? If so, answer I do.

THE WITNESS: I do.

MR. HOBERG: Thank you. Mr. Binek, please.

MR. BINEK: Thank you.

MICHAEL J. MAJOROS, JR.,

having been first duly sworn, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. BINEK:

Q. Would you state your full name for the record, please.

A. Yes. My name is Michael J. Majoros, Jr.

Q. What is your occupation, Mr. Majoros?

A. I'm vice-president of the economic consulting firm of Snavely King Majoros O'Connor and Lee, Incorporated.

Q. And how long have you been at that firm?

A. Approximately 22 years.

Q. What is your educational background?

A. My educational background is in accounting. I've passed the CPA exam, taken courses in the MBA

program at George Washington University, and have taken several continuing education courses.

Q. And you have testified in a number of state commission utility rate cases?

A. Yes, sir.

Q. You have before you documents Exhibit 19-49, I think it is, and Exhibit 20. Could you please identify those two exhibits?

A. Yes. Exhibit 19-49 consists of my testimony, my Appendix A, which is a summary of my qualifications and experience, and my Exhibits MJM-1 through MJM 12.

Q. And what is Exhibit 20?

A. Exhibit 20 is a packet of exhibits I prepared in response to primarily Mr. Jeter's rebuttal to me.

MR. BINEK: At this time I would offer Exhibits 19 and 20.

MR. HOBERG: Mr. Pearce, any objections to Exhibit 19?

MR. PEARCE: No.

MR. HOBERG: How about 20?

MR. PEARCE: No.

MR. HOBERG: Exhibits 19 and 20 are admitted.

Q. (MR. BINEK CONTINUING) I should have asked, if I were to ask you the same questions today that are in your testimony, would your answers be the same?

A. Yes, sir.

Q. Are there any errors in your testimony that need to be corrected?

A. I noted a couple of typos, but the one that I would like to correct is on page 5, line 5. There's a range of years in that sentence, 1996 to 2000. I'd like to change that to 2003.

Q. Any other corrections?

A. No. No, sir.

Q. At this time I would ask that you please provide a summary of your testimony and also provide any response that you may have to rebuttal testimony that has been filed by Montana-Dakota Utilities in response to your direct testimony.

A. Okay. The objective of my testimony is to recommend the appropriate jurisdictional revenue requirements for the North Dakota gas division of Montana-Dakota Utilities, Incorporated. I've attempted to recognize the legitimate needs of the company to recover its costs, but at the same time I've attempted to ameliorate any added burden on

ratepayers from excessive recoveries. Ms. Mulkern proposes a $2.8-million base rate increase using an 11.44 percent rate of return. I recommend a $1.4-million base rate decrease using Mr. King's recommended 7.98 percent rate of return. My adjustments are summarized at page 3 of my testimony.

I propose to reduce the Company's depreciation rates. I propose to eliminate bonuses and commissions from the company's costs and hold the 2003 labor cost levels equal to the 2002 levels. I propose to eliminate the SISP from benefits expense. I propose a five-year rather than three-year rate case amortization period. And I propose to eliminate the general inflation from other unadjusted operation and maintenance expenses.

At pages 4 to 7 of my testimony I've included certain financial analyses. At the top of page 4 of my testimony I demonstrate that the company's gross margins declined from 2001 to 2003. The decline is caused by major increases to operation and maintenance expenses, excluding the cost of gas. Increased O&M expenses is a major driver in this rate case. From 1996 to 2003 O&M expenses, excluding the cost of gas, increased at a

compound rate of 2.5 percent. And that is shown on my Exhibit MJM-2. However, that 2.5 percent is slightly misleading because from 2000 to 2003 the expense is actually ratcheted up and continued on from there. The compound growth rate from 2000 to 2003 is actually 5.7 percent, which, in my opinion, is unreasonable.

I am also recommending a change in depreciation rates. Since depreciation produces cash flow for this company, I conducted certain cash flow analyses. Although depreciation is not intended to finance capital additions, some equate it to additions as if that was its intent. As I stated in my testimony, the purpose of depreciation is not to finance plant additions. Nevertheless, I've determined that this company's depreciation seems to always produce more than sufficient cash flow to cover its additions.

At page 6 of my testimony I've included a table of -- comparing annual depreciation cash flow to annual construction additions at the total company level for the years 1996 to 2002. Mr. Jeter challenged this table so I've provided an expanded table, which is the first page of Exhibit 20. Even with the revisions --

COMMISSIONER WEFALD: Where is Exhibit 20, please?

MR. HOBERG: That's the one that was just introduced, that separate one.

COMMISSIONER WEFALD: Thank you.

THE WITNESS: Even with Mr. Jeter's changes, at the total company level since 1996 this company's depreciation expense has exceeded its capital additions by $409,000. I also -- Mr. Jeter also challenged my Exhibit MJM-3, where I compared the gas utility only depreciation expense to additions. Mr. Jeter claimed that I failed to include common plant depreciation expense in column 2. Consequently, on the third page of Exhibit 20 I've made the adjustment in accordance with Mr. Jeter's testimony. And what this demonstrates is that since 1986 this company's gas company North Dakota depreciation expense has exceeded the additions to gas plants in North Dakota by $8.2 million. In my opinion, this has resulted from excessive depreciation rates which have been charged to ratepayers.

At page 7 of my testimony I cite and quote from what I consider to be a landmark U.S. Supreme Court decision on the subject of depreciation.

COMMISSIONER WEFALD: That's where?

THE WITNESS: Page 7 of my direct testimony.

COMMISSIONER WEFALD: Page 7. Thank you.

THE WITNESS: In that case, which is known as Lindheimer v. Illinois Bell, the Court equated excessive depreciation to the extraction of capital contributions from ratepayers. And it clearly stated in the beginning of the second paragraph, Confiscation being the issue, the company has the burden of making a convincing showing that the amounts it has charged to operating expenses for depreciation have not been excessive. This morning I heard the word "confiscation" from Mr. Gaske, and I understand the company in this case has the burden of proof. And my testimony states that their depreciation expense is excessive, and I provided my reasons for making that claim.

Here's how I arrived at that conclusion. First, I reviewed this company's depreciation reserve levels and that's accumulated depreciation. I have testified or been involved in more than 80 proceedings on the subject of public utilities depreciation. Based on my experience, if you refer to page 9 of my testimony, the 70.7 percent reserve

ratio for the distribution plant is very, very high. And it suggests that prior depreciation rates may have been excessive. I asked the company if it conducted any studies to measure the adequacy of that reserve and it has not. The company's current depreciation rates are based upon an 11-year-old study conducted by Stone & Webster, which does not exist anymore, at least Stone & Webster doesn't, to the best of my knowledge.

That was the next place I looked. I've included as MJM-4 to my testimony the first few pages from that Stone & Webster study. These are also included in the company's Statement I, if I could refer you to those pages. Two things caught my eye in reviewing this. The first thing that caught my eye was the negative 140 percent net salvage ratio for services. That is shown in about the fourth column. It says estimated retirement costs percent amount.

COMMISSIONER WEFALD: Will you just show me what you're looking at?

THE WITNESS: I'm looking at Exhibit MJM-4, page 1 of 2.

COMMISSIONER WEFALD: MJM. Thank you.

THE WITNESS: About halfway down -- well, a

third of the way down the page, account 380, the second number in that line is negative 140. And that's a very, very high negative net salvage ratio. That also suggested to me the possibility the current depreciation rates are excessive.

The next thing that caught my eye, if you come over three columns, the column that starts with the number 39 and then goes to 36, those are average service lives. The average service life for distribution mains, which is the single largest account on the company's books, is 36 years. If you put a circle around that, and then coming down the page, the average service life for services, which is the second largest account, is 34 years. Based on my experience with gas companies, those are very, very short lives. Short lives equate to high depreciation rates. If they're too short, the resulting depreciation rates are excessive.

Consequently, I conducted certain tests of those lives based upon the information available to me. These are called geometric mean turnover analyses. They're included as Exhibit MJM-5. And these two analyses would indicate that overall the average service life for mains is in the 108-year range and the average service life for services is

in the 69-year range. Mr. Jeter, through a data request, identified certain discrepancies in my calculations. So I redid the GMT studies. They're included again with Exhibit 20. And when I make the adjustments identified in the company's data request, the corrected GMT studies would support lives for mains of 116 years and lives for services of 74 years.

At this point I'm pretty convinced that the company's depreciation rates are excessive. I conducted one more analysis based upon the company's data request to me. This, I must admit, was after I had filed the direct testimony. It's contained on page 2 of Exhibit 20. And here I've compared the company's current average service lives to industry statistics.

COMMISSIONER WEFALD: You're on which page?

THE WITNESS: Second page of 20.

COMMISSIONER WEFALD: The second page?

THE WITNESS: Yes. And I obtained these statistics from the AGA/EEI. They are proprietary and confidential so I've only summarized them here. But if you look at, again, mains, the company's average service life is 36 and you look across that line and it's basically much lower than the industry

averages. And services is about five to six years lower than the industry averages. Given all that, I mean, I could have recommended longer lives, but I did not because there's a bigger issue in depreciation.

As I indicated, I'd like you now to go back to 4, Exhibit MJM-4. On that first page you can see at the bottom of the page where it says total depreciable plant, the first column is, of course, the description of the plant accounts. The next column is plant balance, and the next column is the cost of removal or the negative net salvage that's incorporated in the current depreciation rates. And that happens to be $46.5 million. Now, that's the total estimates back at that time. That, again, is about almost 50 percent of the total plant balance. What that means is, that in calculating those rates, those depreciation rates, an additional 50 percent was added to the plant balance in order to collect 150 percent of the plant balance.

So -- and that might be reasonable. I did some more investigation. And what I discovered -- I'm going to point you again back to that 140 percent for services, because that is a huge rate, and the resulting depreciation rate of 8.22 percent

is the highest rate I think I've personally seen for a gas service account. It's way -- very much higher than normal. So I asked for the company's actual net salvage data and what I discovered is shown on my Exhibit MJM-6. And what that shows --

COMMISSIONER WEFALD: Just one moment, please.

COMMISSIONER REINBOLD: What are we looking for?

COMMISSIONER WEFALD: MJM-6.

THE WITNESS: MJM-6. What that shows is that on the gas side, the total net salvage for the years 1997 through 2001 was 1.4 million.

COMMISSIONER WEFALD: Where do you see that?

THE WITNESS: Where it says total under net salvage, natural gas.

COMMISSIONER WEFALD: Okay.

THE WITNESS: But what's really extremely interesting about that number is it's positive and the company is collecting for negative net salvage to the tune of about $2,000,000 a year in its current depreciation rates. Furthermore, in doing this investigation, I discovered that there apparently was a sale of a building in 2001 which

produced about 4.9 million, a 4.9-million gain that was a common plant. And the company included that also as positive salvage.

Now, Mr. Jeter wrote many, many, many pages of testimony rebutting me, but he never addressed this threshold issue, which is that the company's current depreciation rates are charging ratepayers about $2,000,000 a year for negative net salvage when the company normally experiences positive net salvage. And that difference is, in my opinion, even with the lives which I know are much too short, but that overcollection is what produces the excessive depreciation reserve levels.

I talked in my testimony about a certain new accounting requirement, Generally Accepted Accounting Principle. First of all, the acronym for that is GAAP, G-A-A-P. And I readily admit that GAAP does not control ratemaking. But what I find interesting about SFAS No. 143 are the principles which underlie it, and I believe they make sense and I'm just recommending to you to consider those principles. The principles are fundamental. Before you include any cost in today's cost for some future potential expenditure relating to the removal of a plant or mass property plant, you have to establish

a legal obligation to incur that cost. Otherwise, that cost will just be expensed as incurred, rather than used to inflate depreciation rates.

Now, Mr. Jeter has included a lot of testimony about how to implement FAS 143, but he failed to focus again on the fundamental issue, which is does this company have asset retirement obligations, those legal retirements. And the answer is based upon all of the responses that were submitted to me is, the best answer is they don't know, but I think the most likely answer is no, based on what I'm finding out in other states and in other proceedings. The natural gas industry does not have asset retirement obligations for distribution plant. And if they do, they're rare. There are some unique circumstances involved.

So what's going to happen as this company is subject to SFAS No. 143, just like all companies in the country, regulated and unregulated. And what's going to happen is that on their nonregulated books when SFAS No. 143 is implemented, all of that excess depreciation which is included in the distribution plant reserve reflected by that 70 percent is going to be pulled out of that reserve and treated as a regulatory liability to ratepayers.

So the company has said they are going to do -- they recently embarked on a new depreciation study. I don't know how that's going to be treated there. My suspicion is, you know, if I were involved in that study, I'd say for ratemaking purposes, perhaps you ought to use the remaining life method which will amortize that excess back to ratepayers over the remaining life of the existing investment.

But what I've done for the purposes of this rate case, since clearly their current depreciation rates are excessive as a result of this negative net salvage is, I've merely eliminated from the existing depreciation rates. I haven't changed any of the lives or anything like that. I've just stripped out the negative net salvage and said let's collect that, the average of that on sort of a normalized expense basis. This is a procedure that is used in Pennsylvania regularly. It's been recently approved in two cases in Kentucky. In my opinion, it is consistent with the likely result.

COMMISSIONER REINBOLD: With what?

THE WITNESS: It is consistent with the likely result of the implementation of SFAS No. 143, combined with another statement of accounting policy on property plant and equipment. It keeps the company whole. It keeps ratepayers whole and it removes this excessive recovery from current depreciation rates. I talked a lot about depreciation because, of course, it's the biggest adjustment in my testimony.

I'm also recommending the elimination of wages and bonuses. I'm recommending the elimination of the supplemental security income plan. I'm recommending a five-year rather than three-year rate case amortization period, and the disallowance of inflation to other O&M expenses.

That concludes my summary.

MR. HOBERG: Mr. Binek, did you have some questions?

MR. BINEK: Yes. I just have a clarification concerning the statement about elimination of wages and bonuses.

Q. (MR. BINEK CONTINUING) When you talk about the elimination of wages and bonuses, what -- is it your recommendation that the -- you eliminate the 2003 increases as an expense in this proceeding? You're not telling the company that they can't give raises or bonuses, if they want to, it just should not be charged to the ratepayers?

A. That's correct. Elimination from the rate

case.

Q. Right.

MR. BINEK: Okay. At this time I'll tender the witness for cross-examination.

MR. HOBERG: Thank you, Mr. Binek. Mr. Pearce, please.

MR. PEARCE: Thank you.

CROSS-EXAMINATION

BY MR. PEARCE:

Q. Mr. Majoros, I may have misheard. I was a little alarmed when you said elimination of wages. I don't assume you mean all wages to employees should be taken out of the rate case?

A. Not all.

Q. Now, to clarify a point that may be misleading, you talked about the Lindheimer, Illinois Bell case and cited the Court's reference to confiscation being the issue. What the Court is talking about, isn't it, is that Illinois Bell alleged that its property was being confiscated by exceptionally low rates? It isn't a matter of the other side claiming that the depreciation rates were confiscatory?

A. Well, I believe you're probably correct, but the words stand on their own.

Q. Yeah. It's sort of a pejorative word. I just didn't want it to be taken out of context.

A. But I heard that word this morning. That's the only reason I brought it up.

Q. Turning to your Exhibit 20, and this is page 1 of 4 of MJM-5, which is your geometric mean turnover analysis for the mains account. You described your technique using the geometric mean for a life estimate there and, of course, a geometric mean uses a product of two ratios there, doesn't it? You take the square root, of course, the usual way the geometric mean is done. That technique means -- now, for example, if you -- looking at, say, 1996, for example, if you substituted; that is, interchanged columns C and D, the additions and retirements, you'd have the same result, right, because they both appear as numerators in effect in that calculation so it doesn't matter how you take them? In other words, you would get the same lifetime if you had single-year retirements of 119 -- I mean, single-year additions of 119,000 and single-year retirements of 1,096,000, you interchange columns C and D, is what I'm saying and you get the same number?

A. Yes.

Q. You referred to Stone & Webster as nonexistent. Now, you're not suggesting, are you, that they were not in their day a highly reputable and very large company?

A. I just -- when I talk about them, I'd like to be looking at their study. Yeah, they were a large company in their day.

Q. For whatever reason, I believe they have, in fact, disbanded or disappeared. You have not done an actual depreciation study, a full study comparable to their 1991 study, have you?

A. You know, I'm not really sure of everything they did in that study. I know what they said they did. I've tested the lives of the two largest accounts in the company's books, and if I could refer you to the Stone & Webster study, I have it here before me. I'll just refer you to page 4. I used the geometric mean turnover approach to test that. And in the Stone & Webster study they say in the second paragraph, quote, The turnover testing is a procedure in which the adjusted turnover period, i.e., the number of years it takes an investment in plant to be retired, is determined by aggregating additions from the year 1991 backward until the total is equal to the plant balance in that year and

then adjusting for the rate of growth in the account.

So, you know, turnover method is not new. Other firms have used it. And I'm not recommending any changes in service lives.

Q. You're not suggesting the way you characterized it a moment ago that Stone & Webster didn't actually do what they said they did?

A. Well, I don't know how they arrived at the negative 140 percent for services and you can't tell from that study.

MR. PEARCE: Okay. I don't have any other questions.

MR. HOBERG: Thank you, Mr. Pearce.

Commissioner Reinbold, did you have any questions in there?

COMMISSIONER REINBOLD: Just a couple. Thanks.

EXAMINATION

BY COMMISSIONER REINBOLD:

Q. I lost track of something here. The 1991 Stone & Webster survey, what was the point that you were making about that?

A. Well, the first point is it's 11 years old. The second point -- the point I just made was, they

apparently employed one of the very procedures that I've used here to test lives in that study. And the reason I bring that up is because Mr. Jeter and now Mr. Pearce have sort of implied that I haven't done any kind of complete study, whether it's -- you know, given the level of available data, the use of the geometric mean turnover approach is as legitimate as any other approach.

Q. Okay. Turning to your reference to selling a building, can you flesh that out a little bit?

A. Yes. There apparently was a building sold in 2001 and it produced a gain of about $5 million. And the company debited cash, put that money in cash and credited it to accumulated depreciation. Now, if that building was included in rate base, which I imagine it probably was, that gain probably ought to be shared with ratepayers. By using the company's approach here, you would not have known about it until I found it.

Q. I understand now.

COMMISSIONER REINBOLD: That's all.

MR. HOBERG: Thank you, Commissioner Reinbold. Commissioner Wefald, please.

COMMISSIONER WEFALD: Yes.

EXAMINATION

BY COMMISSIONER WEFALD:

Q. On page 5 of your testimony you say the compound growth rate from 2000 to 2003 is 5.7 percent and you have a chart, an exhibit that reflects that. I think it's Exhibit MJM-2.

A. That's correct.

Q. Okay. What specifically do you think is driving this?

A. I think that commissions and bonuses and the SISP and the imputation of inflation in year 2003 are driving this.

Q. On page 10, why are the company's depreciation reserves so high? I need to have you help me with this. It's negative 140 percent factor on line 8, which means that the current depreciation rates for service was substantially increased to recover not only the existing investment, but also another 140 percent for future costs of removal?

A. That's correct.

Q. So I just need an example here. When they put in a gas main, the current depreciation rate is -- according to your understanding, it doesn't recover not only the existing investment to the main, but another 140 percent for future cost of

removal of the main?

A. Here I'm talking about services, which --

Q. Services.

A. -- is from the main to the house. And if it costs $1,000 to put that service in, its depreciation rates were designed to collect $2,400, which was the original cost plus another 140 percent for future cost of removal.

Q. What do you -- if you have looked at other depreciation studies, what would you say would be a more normal future cost of removal?

A. Well, typically, that number is driven, based from my experience, is typically driven by some internal cost allocation policy in which the cost of removal is -- you know, they have to figure -- when they go out and replace a main and a service, they have to figure out how much of that cost they want to assign to cost of removal. So they come up with an allocation factor, which results in that allocation.

I explained in my testimony here about Elizabethtown Gas. This was just, you know, within the last two months where I went out and watched a typical main replacement project for that company. And what I discovered in watching and observing that

project, was that the replacement of an existing service, first of all, is very rare. It's a --

Q. You mean the part from the main to the home?

A. Right.

Q. That's the service?

A. That's the service. Because what they do is, they'll have a main running down a street and want to replace that main. They will trench a couple of feet away and a lot of times they will keep that existing service. They may insert something into it to maintain, but it's rare that it actually gets removed. So the replacement cost is just the cost for disconnecting from the original main and then extending another tap over here.

So, in my opinion, that cost is really a replacement cost and probably ought to be capitalized to the new main or something like that. So it's difficult to answer your question about what is a typical removal cost. It depends on how a given company allocates that cost. What's important to understand about this particular company is they don't record any cost of removal at all for services. They're collecting 140 percent, but not recording any cost of removal, as difficult as that

is to believe.

Q. They're not reflecting any cost of removal where?

A. No cost of removal in their books and records. I went through their summary tables and I can see some cost of removal for mains. I could see -- I was looking for account 380, services, and it's not there. They're not recording any -- as big as that number is, you would think that that would certainly be one of their recurring costs of removal, they would record it, and it's not there.

Q. So does that suggest to you that they're not having any --

A. I don't think they do.

Q. -- costs of removal?

A. I speculated in my testimony and Mr. Jeter took, you know, a shot at me, but what I found out in the Elizabethtown Gas case is that for years and years and years that company and probably most gas companies, the people in the fields never recorded costs of removal. They treated everything as a service transfer expense and just expensed it.

Q. All right. Now I want to go -- all right. Now, I want to understand MJM-4.

A. Yes.

Q. You said another --
COMMISSIONER REINBOLD: What page is it on?
COMMISSIONER WEFALD: MJM-4. It's in the back of his testimony here. Page 1 of 2.
COMMISSIONER REINBOLD: Okay.
Q. (COMMISSIONER WEFALD CONTINUING) Now, on this one you said another 50 percent was added to the total depreciation plant.
A. Yes.
Q. That's down at the bottom.
A. Yes.
Q. I need you to lead me through that again.
A. First, the third column is plant balance.
Q. Right.
A. Okay. I always go back to services because it's the best example of this.
Q. It shows a negative in front of that 46. What is it, 46 million?
A. That's at the bottom. I was trying to lead you to how I got to that number.
Q. Okay.
A. So if we look at services, the plant balance is $200,727,046.
Q. All right.
A. The company applied a negative 140 percent

salvage ratio to that to come up with an estimated future negative -- future cost of removal of $28,101,844. It added that amount to the plant balance to arrive at something called the estimated service value, which is $48,174,590.
Q. Where is that number?
A. That is under a column titled estimated service value.
Q. All right.
A. Okay. It then divided that estimate service value over the estimated remaining life of 21.8 years. That's about the third from the last column.
Q. Yes.
A. To come up with an annual accrual amount of 1.6 million, which in turn produced an annual depreciation rate of 8.22 percent, which is then applied every year to calculate depreciation expense and, in fact, the company applied that rate to services in this case and, of course, the plant balance -- this was the 1989 -- 1991 plant balance. That has increased, I believe, substantially. So in this case, the recovery is more than that.
So, anyway, going back to that column where they've applied the 140 percent, they also applied

negative 40 to mains and then they have some positives offsetting it, but the sum of all those positives and negatives sums to negative 46,495,732, which, again, you can see has been added to the plant balance to arrive at that estimated service value, which is then being depreciated.
Q. All right. Thank you. All right. Then go to MJM-6.
A. Yes.
Q. Now, you made the point and I just -- is this what you said, that MDU is charging customers negative net salvage when the company has a positive salvage value?
A. Yes.
Q. So the $2,733,666, tell me about that number again.
A. What I've done there is you'll notice I've separated the plant into electric, natural gas and common utility.
Q. Yes.
A. The common utility I didn't know exactly how to allocate that back to the electric and natural gas, so what I did was allocate that 5.5 million back to electric and gas based upon the totals right above that, you know, the 1.412 and the

1.44. The sale of the building is included in that common utility plant column. I mean, the gain on the sale of the building.
Q. The sale of the building is included in which column?
A. Common utility. It's the first big number on that, over in the right-hand column, the 4.889 million.
Q. I'm somehow missing that.
A. All the way to the right.
Q. All the way to the right. I'm seeing the number -- am I looking at the correct number under common utility, 5,529,260?
A. Right. At the top of that column.
Q. All right.
A. That's the gain on the sale of the building.
Q. Oh, that 4,889,037?
A. Yes.
Q. Okay. Then I need you to go to MJM-1.
A. Okay.
Q. And this gives -- page 2 of 4.
A. Yes.
Q. This goes over the numbers. You're contrasting your numbers to the company's numbers

and its income statement?
A. Yes.
Q. And at the present time, let's skip over the operating revenues --
A. Okay.
Q. -- because those are the same?
A. Yes.
Q. And then you go down to the operation expense, and there isn't a difference in your cost of gas, there's a slight difference in your other O&M?
A. Yes.
Q. But the big difference then comes when you get to depreciation?
A. Yes.
Q. And the company is projecting in 2001, 2002 and 2003 over $3 million, but let's use the 2003 figure because that's the one you're looking at also.
A. Mm-hmm.
Q. Is that correct, $3,261,000?
A. Yes.
Q. And you're projecting $1,089,000?
A. Yes.
Q. So you're right. This is a big ticket

item. So I need to have you tell me how did you come to that $1,089,000 versus the $3,261,000. Where would I see what you've done to make the difference here?
A. It's in my Exhibit MJM-7.
Q. All right.
A. Page 1 of that exhibit is the company's current depreciation rates without the negative -- without the net salvage built in. I've stripped out, you know, the 140 percent and those numbers we were looking at in that column.
Q. You've stripped out all of that or only the one for the services?
A. All of them.
Q. You stripped out all of them?
A. Yes.
Q. Did the company show any cost for some of those, to remove some of those?
A. Yes. They have costs to remove some, but overall the cost has been positive as shown on Exhibit MGM-6.
Q. And that's because of the building being added in?
A. No. The building is separate. That's in common utility. The natural -- on the natural gas

side, for the last five years, setting aside common, setting aside electric, the actual net salvage experience for the company has been positive every year.
Q. All right. So those positive numbers mean that there's a positive -- that it is a positive cash flow, doesn't mean that its cost -- when the first one says 440,703 --
A. Mm-hmm.
Q. -- in 2001, that means that that's a positive number, there were no costs that the company incurred?
A. That is a net positive number. Net pluses and minuses.
Q. So they had some costs, they had some money that they showed from what? Income from what?
A. I don't know. Probably is some reuse involved in that. Let me see. It seems like the company is obtaining a fair amount of positive salvage on underground conductor and devices, which, you know, I don't know if they are selling them or reusing them. So that's one source. I'm sorry. I'm looking at the records.
Q. Okay. Take your time.
A. I was having a disconnect there. What the

heck is going on? There's a positive salvage on mains. I'm just looking at 2001.
Q. That means they will sell gas mains?
A. I don't know. I don't know what the source is. Power operated equipment could be reused. Bottom line, I don't know all of these things. I do know that it's been positive, net positive.
Q. All right. And so you added up those net salvages on the natural gas and it came to 1,444,452?
A. Yes.
Q. And is that what you subtracted then from -- then we still have a different number from their 2003, 3,261,000 and your 1,089,000. What's the number?
A. I stripped out the negative salvage -- all the salvage ratios from the depreciation rates themselves. And in distribution plant that resulted in a 2.37 percent composite depreciation rate rather than the company's existing depreciation rate. The next thing -- so I applied the rates without the net salvage allowances to the plant balances, which is the way it's done in the rate case, and then to that total I subtracted the average positive salvage that the company has experienced in the last five years,

including the gain on the sale of the building. If the company had regularly experienced negative net salvage, I would have added, you know, one-fifth of that amount to the annual depreciation expense.

And, again, the average net salvage is $848,010 shown at the bottom of MJM-6, page 1.

Q. Right. And then you did what with the sale of the building?

A. I included that in that average annual experience amount.

Q. Over five years?

A. Yes.

Q. To give the ratepayers a credit --

A. Yes.

Q. -- for that? And that's how you came up with the Snavely King $1,089,000?

A. Well, the Snavely King $1,089,000 is shown ultimately on Exhibit MJM-7, page 3.

Q. All right.

A. Up above it says company proposal, 2003. Those numbers show the application of the company's depreciation rates to plant balances of the sum $3,261,000 that they're proposing. And below shows the application of the depreciation rates without the net salvage built into them to the same plant

balances. That sums to $1,937,000, from which I subtracted the average annual net salvage of $848,000 to arrive at my recommended $1,089,000.

Q. Thank you. Now, the current income taxes, we haven't heard anything about that and yet I notice that that's also a substantial difference in the amount.

A. Are we --

Q. Page 2 of 4 of MGM-1.

A. Yes. Current income taxes, I've used the same procedure as the company to calculate that amount and that amount -- that calculation is shown on page 3 of 4 of Exhibit MJM-1.

Q. And your calculation shows 500 -- a charge of 529,000; is that what the negative --

A. That's a negative current income tax expense. And the reason for that has something to do with the deferred fuel lag, I think, the lag and the recovery of deferred gas expense resulting from the PGA.

Q. Help me interpret the negative number. I'm sorry. I'm having trouble with that. The negative number means that just -- is that something they will pay or they won't pay? I see a positive number of 4,322,000 in current income taxes that they are

going to pay in 2001. Does that mean they are actually going to pay 4,322,000 in 2001? I'm looking at MJM-1, page 2 of 4.

A. I don't know. My suspicion is they didn't pay that --

Q. All right.

A. -- as a result of all kinds of timing differences.

Q. But the next number means that they would have a credit of $3,067,000, is that what that negative -- is that what the parentheses mean?

A. Yes. And it has to do -- again, it has to do with the interrelationship of the PGA and deferred fuel balance.

Q. And the next number means that they would also have a credit of $1,961,000?

A. That's what -- yes.

Q. So the number that you're showing as a credit of $529,000 is actually less of a credit than what the company is showing to the ratepayers?

A. Yes, because I'm showing more income than they are so I have less of a tax credit than they do.

Q. You're showing more income than they are?

A. Net income before taxes.

COMMISSIONER REINBOLD: Mr. Hearing Examiner, if we are not going to finish off this witness tonight, let's wait until morning.

MR. HOBERG: I think perhaps we're close.

COMMISSIONER REINBOLD: Are we close?

MR. HOBERG: Well, we only have Commissioner Wefald, Commissioner Clark and perhaps not very many questions. Mr. Diller has a couple.

COMMISSIONER REINBOLD: Okay. You're the Hearing Examiner.

MR. HOBERG: I think maybe, if we can, finish it off in just a few minutes.

Q. (COMMISSIONER WEFALD CONTINUING) If I can just understand that number, then I'm done. All right?

A. The negative current tax number. Every time I come to North Dakota I get one of these.

Q. Maybe Mike Diller can explain it to me, but I better ask you. Why you're showing that it should be a smaller credit for the customers than the company does?

A. Because my net income before taxes, what I estimate for 2003, is higher than the company's. That's one reason why my recommendation is for less of an increase. I'm recommending a decrease.

Q. All right.
A. So the more net income before taxes that you estimate, the less current taxes -- no. The more current taxes you would have. And we're dealing with negative numbers here because I'm estimating more net income. I'm estimating more current taxes, which is less of a credit than the company.
COMMISSIONER WEFALD: All right. Thank you.
MR. HOBERG: Thank you, Commissioner Wefald. Commissioner Clark, please.
COMMISSIONER CLARK: Just a couple questions.

EXAMINATION

BY COMMISSIONER CLARK:

Q. The 140 ratio, maybe you mentioned this, but I'm not sure that I picked it up. Now that I understand the math better, again, how is that arrived at for, you know -- and I know you didn't have access to the information that the consulting firm that did it back in the early '90s. But typically how would that be figured and what input would go into figuring that 140?
A. Typically, the way it's done is, in the

depreciation studies that I've been involved in, there are typically tables that show annual retirements by year, then gross salvage by year, and cost of removal by year. And the net of those gross salvage and cost-of-removal numbers are related to the retirements to arrive at these ratios.
Now, there's all kind of problems with that approach to the analysis, but that's the way it's typically done, or has been typically done. I look through the Stone & Webster study and I don't see any of those kind of analysis, so I don't know -- you know, I do know that in that study it said to the extent such data, net salvage data was available. I think it's quite possible that it was an off-the-top-of-the-head estimate because the company doesn't record any net salvage for services.
Q. So your recommendation is because it's a positive number, it should just be sort of zeroed out?
A. No. I'm recommending we abandon the procedure entirely and take -- because the new thinking in the accounting profession is that if you don't have a legal obligation to incur that kind of cost on a long-life asset, you probably should expense it or perhaps, in my opinion, capitalize it

to the replacement. Most of these things -- in this we're dealing with mass property plant here. We're not dealing with power plants or nuclear plants. We're dealing with services and mains that get turned over all the time. There's constant activity. They have blanket work orders to do this kind of work. And that to me looks a heck of a lot more like an annual operating expense than something you should treat as a capital cost to inflate depreciation rates. On the other hand, you treat it as a replacement cost and capitalize it.
Q. Now, that is starting to get into the point about the AROs or asset retirement obligations and that gets into the SFAS No. 143. Okay. Let's assume that in college I was reading about the Civil War --
A. Yeah.
Q. -- as opposed to GAAP. Can you give me some examples of, you know, in a concrete way what this ARO means? I understand it is talking about incurring legal obligations. But what -- kind of lay out a couple of examples of what would be an actual obligation.
A. I think that one that pops in is the retirement to remove a nuclear plant and that's

going to cost some money. So what -- and there may be a legal requirement to remove any kind of electrical plant, although I'm not sure.
COMMISSIONER WEFALD: Or gas plant.
THE WITNESS: Maybe a gas plant, manufactured gas plant or something like that. But if there is, what this thinking says, if there's an obligation -- normally when you buy a gas -- say, you buy a manufactured gas plant and it costs $1,000, you debit gas plant, that's plant in service, and you credit a liability, long-term debt or cash or something, but you have something. So the cost of that plant is $1,000. The rationale that underlies FAS 143 is that if you have a legal obligation to then remove that plant, say you estimate it would cost you $200 to remove it and you have a legal obligation to do that, then that is part of the cost of the plant so it gets capitalized as $1,200. But you don't do that unless you have a legal obligation to incur that cost. If you don't have a legal obligation to incur that cost, and this is just replaced as normal things do, you probably would expense that cost.
COMMISSIONER CLARK: Okay. That's all I have right now. Thank you.

MR. HOBERG: Thank you, Commissioner Clark. Mr. Diller, do you have some questions?
MR. DILLER: I hesitate to ask a question. Commissioner Reinbold looks like he's ready to leave.
COMMISSIONER WEFALD: We could maybe wait until tomorrow morning.
MR. DILLER: I don't have that much. It's real general.
MR. HOBERG: Any further questions then of Mr. Majoros?
COMMISSIONER WEFALD: I don't want Mr. Diller to not ask questions.
MR. BINEK: I'm going to have a couple of short questions. I mean, they shouldn't take but a couple minutes.
MR. HOBERG: Is yours pretty short, Mr. Diller?
MR. DILLER: Yes, it is.
MR. HOBERG: Commissioner Reinbold?
COMMISSIONER REINBOLD: You're the Hearing Examiner.
MR. PEARCE: I have one question, if I may, at some point, too.
MR. HOBERG: So we have four questions left

of Mr. Majoros. He's going to be back tomorrow, isn't he? Let's recess tonight and finish in the morning.
(Recessed at 5:04 p.m., the same day.)

STATE OF NORTH DAKOTA

PUBLIC SERVICE COMMISSION

IN THE MATTER OF:

Montana-Dakota Utilities Co. Natural Gas Rate Increase Application

CASE NO. PU-399-02-183

TRANSCRIPT OF HEARING

State Capitol
Commission Hearing Room
Bismarck, North Dakota
October 8, 2002

Before Allen C. Hoberg
Hearing Officer

(The following proceedings were had and made of record, Monday, October 8, 2002, commencing at 9:00 a.m.)

MR. HOBERG: Let's go on the record. This is day two of the hearing in the matter of the application of Montana-Dakota Utilities Company for a natural gas rate increase. Yesterday we concluded -- almost concluded -- we did conclude the direct examination of Montana-Dakota Utilities and we're taking the direct testimony of the staff's case, and we have concluded Mr. King and we're almost, I think, done with Mr. Majoros.

Is there anything we should discuss preliminarily before we finish the testimony of Mr. Majoros today?

COMMISSIONER REINBOLD: I have to leave by 5:00 today.

MR. HOBERG: Hopefully, we're all able to do that. All right. Then I think --

MR. BINEK: Just one point. Yesterday Mr. Pearce or someone from MDU had indicated that one of their witnesses needed to leave early.

MR. PEARCE: That's no longer the case. I'm sorry. I forgot to mention that to you. We have no constraints anymore.

MR. HOBERG: I think when we get done with Mr. Majoros, we'll pause briefly and talk with counsel about what we're going to do in regard to rebuttal testimony, the order. I know you handed out a sheet here, and then mark your exhibits. It's a little bit different format for the exhibits for the rebuttal here, so the Court reporter -- we'll take time to mark those with the Court reporter. That will just take a couple minutes, though, I think.

All right. I believe we had concluded the Commissioners' questions of Mr. Majoros. So, Mr. Binek, did you have any additional questions of Mr. Majoros?

MR. BINEK: I do, but I think that you were at Mr. Diller.

MR. HOBERG: Was I at Mr. Diller? I'm sorry. Okay. Mr. Diller, please.

EXAMINATION

BY MR. DILLER:

Q. Good morning, Mr. Majoros.

A. Good morning.

Q. The depreciation issue is fairly huge in this case. It looks like it's $2.2 million of the difference between the company and staff position

and so I've got a few more questions on depreciation.

Maybe we could just start first by if you could answer this question. If we were -- if the Commission was to adopt your position, how many years would it take for the depreciation reserve to straighten itself out?

A. I would -- to answer that -- I can't give a precise answer to that question. But I would say if you adopt what I'm recommending here, which is to eliminate the negative net salvage from the company's depreciation rates, which would reduce those rates, and then amortize the positive net salvage that they've experienced, including the gain on the building over five years, that, combined with normal plant growth, should start to resolve that problem in about five years, I would think. Would be well on its way to resolving itself.

Q. So in your mind this wouldn't be a fix that would straighten itself out over one year's time, it would take a number of years?

A. Yes.

Q. And you're guessing maybe five years?

A. I'm guessing five years for it to make a significant dent. It will never resolve itself

entirely until, you know, all of the assets are fully depreciated and that would generally be over the average remaining life of these assets.

Q. The difference is so big between the parties I was just wondering -- I mean, if the Commission decided that it wanted to end up somewhere in between, would it matter whether the differences were resolved over five years' time or 10 years' time or 15 years?

A. No. What the Commission -- you know, the Commission could also recalculate rates with new service lives and calculate remaining life rates and then that resolution would be probably longer than five years.

Q. Can you tell me why depreciation is such a big issue here philosophically? I mean, why does the company care whether we use $1 million worth of depreciation expense or $3 million of depreciation expense? Forget about that expense is supposed to match revenues, expense is supposed to match the customers causing the cost, but philosophically, why would the company care one way or the other?

A. Probably because it represents pure cash flow to the company. The more depreciation that's charged, the greater the free cash flow flowing into

the company. Any reduction to that amount is a reduction in cash flow.

Q. Would there be any benefit if the state were to go to, let's say, retail wheeling or some kind of electric reform where it wasn't under rate-of-return regulation, would it be beneficial to have your plant assets depreciated more than is necessary at that point in time or less than is necessary?

A. Well, at that point in time, I think that if I were running the company, I'd want the correct depreciation rates.

Q. You'd want the correct ones?

A. Yes.

Q. It wouldn't be beneficial in a competitive environment --

A. No.

Q. -- to have your assets overly depreciated?

A. No, because in a competitive environment, depreciation does not drive cash flow. It's only in a regulated environment that depreciation drives cash flow because it's built in as a component into the price that's being charged to ratepayers. In a competitive environment, depreciation is an after-the-fact entry on the company's books. Prices are set by the market in a competitive environment.

Q. Okay. So in your mind it's all about cash flow?

A. In this case, yes, that is correct.

Q. Okay.

A. It's all about cash flow and the correct theory and rates.

MR. DILLER: Right. I think that's all the questions I have.

MR. HOBERG: Thank you, Mr. Diller.

Mr. Binek, did you have some more questions of Mr. Majoros?

MR. BINEK: Yes, just a few.

REDIRECT EXAMINATION

BY MR. BINEK:

Q. Mr. Majoros, should ratepayers have benefited from the gain in the building sale?

A. Yes.

Q. How should that gain have been reflected in depreciation?

A. Probably under the existing procedure should have been reflected in depreciation as a positive net salvage ratio in the structures and improvements account.

Q. Was it, to your knowledge?

A. No, it was not.

Q. Okay. What salvage value did the company apply to account 390, that's general plant structures and improvements?

A. If you turn to my Exhibit MJM-4, page 2 of 2, which is common plant, general plant, the building I think was included in account 390, structures and improvements, and you can see that that was depreciated using a negative 10 percent net salvage ratio.

Q. What are the advantages or disadvantages of extending the time period for correcting the depreciation as you have proposed?

A. What are the advantages or disadvantages?

Q. Yeah.

A. To whom?

Q. For the ratepayers.

A. Well, I would say for the ratepayers the advantages of going with my proposal is we get that reserve situation resolved quicker rather than later.

Q. Does it result in lower rates?

A. Yes.

MR. BINEK: I have no further questions.

MR. HOBERG: Thank you, Mr. Binek.

Mr. Pearce, did you have some additional questions?

MR. PEARCE: No. No, I don't.
MR. HOBERG: Thank you, Mr. Pearce. Any further questions then of Mr. Majoros at this time?
COMMISSIONER WEFALD: I have one.
MR. HOBERG: Commissioner Reinbold, please.

EXAMINATION

BY COMMISSIONER REINBOLD:

Q. Yes. Mr. Majoros, review for me again when you say small interruptible customers are being overcharged, how, when and why. You said that, didn't you?

A. No, I think Mr. King said that.

Q. Oh, okay. I'm long behind in my notes.

A. One reason they're being overcharged is probably too much depreciation is flowing into their rates.

Q. Okay. I'll take that for now. And I understand the term, but I want to hear you define the phrase "cash flow," in your mind.

A. Cash flow?

Q. Yeah.

A. As I'm using it here it means cash flowing from ratepayers into the company without any corresponding cash outflow. Arrives at the company -- if we talk about labor expense, cash

flows into the company from ratepayers, but there's an offsetting cash outflow, so there's zero cash flow impact of that being included in rates. But with depreciation, cash flows in and there's no corresponding cash flow out, so it's there, stays there for the company's use for whatever it chooses.

Q. So then it becomes a balancing act?

A. Not in my mind, no.

COMMISSIONER REINBOLD: Okay. That's all I have then.

MR. HOBERG: Thank you, Commissioner Reinbold. Commissioner Wefald.

COMMISSIONER WEFALD: On -- well, I guess this relates to whether I'll have a chance to ask a question of staff after we hear the rebuttal of MDU. If I won't have a chance, then I would ask now. But if I will, then I would wait.

MR. HOBERG: Whether he's coming back on as surrebuttal?

COMMISSIONER WEFALD: Yeah.

MR. HOBERG: Mr. Binek, do you intend to call these witnesses, Mr. King and Mr. Majoros, after the rebuttal of MDU?

MR. BINEK: It's going to depend on what the rebuttal of MDU is. Ordinarily, we would not,

but if there's some new evidence that comes in, for instance, we would probably want to rebut that.

COMMISSIONER WEFALD: Should I just ask my question now?

MR. HOBERG: Well, Mr. Pearce, it sounded like yesterday you were expecting them to be called back on.

MR. PEARCE: No.

MR. HOBERG: You weren't. Oh.

MR. PEARCE: I certainly wasn't. I would be quite surprised. In fact, I hope it won't just go on forever and forever that we would have another surrebuttal on the surrebuttal.

MR. HOBERG: Perhaps ask it now then.

COMMISSIONER WEFALD: Then I'll ask my question now.

EXAMINATION

BY COMMISSIONER WEFALD:

Q. On page 17 of Mr. Jeter's testimony he says --

COMMISSIONER REINBOLD: What page are you on?

COMMISSIONER WEFALD: Page 17 of Mr. Jeter. That's in this book here, in the rebuttal testimony.

Q. (COMMISSIONER WEFALD CONTINUING) The

paragraph starting with line 4, the question and then it goes through line 12. "Included in this discussion --

MR. HOBERG: Commissioner Wefald, excuse me. He needs a chance to find it here.

Q. (COMMISSIONER WEFALD CONTINUING) It's in the rebuttal testimony and exhibits. It says, "Included in his discussion of salvage on page 12 of his testimony at lines 1 through 2, Mr. Majoros says, it appears that the company has not recorded any net salvage at all for services; is that true?"

"No. I understand from company personnel that the company has recorded 1.4 million of net negative salvage for services during the years 1995 through 2001. Mr. Majoros took his data from a report of retirement work in progress, which because of the use of blanket work orders show services combined with mains. That is apparently the reason he concluded there was no net salvage applicable to services."

Yesterday I remember that you said that there was no net salvage applicable to services. Did you get your information from this report of retirement work in progress?

A. I got my information from the company's

response to my data request to provide all net salvage for even back prior to 1995, and it may be that they provided a blanket work order or this retirement work in progress material in response to that. But I can tell you that material clearly shows various accounts on it and the one that is strikingly missing is services. So for the company to say that it has recorded 1.4 million of negative net salvage for services, they haven't proven it to me. At this point everything I have says they didn't record any net salvage for services. And I'm responding based upon the information they provided me. Mr. Jeter makes this statement, but there's not a document to support it in his testimony or exhibits.

Q. When you requested the information from MDU, what did you ask for? What did your data request say?

A. My data request No. 21 referenced statements A through F, G through L, N through O, and those are the company statements. Question, Please provide annual North Dakota gas utility gross salvage and cost of removal by plant account beginning in 1986 through 2003.

Response, Please see Attachment A. For the

years '86 through '94, the information is available for the total company only. For the years 1995 to 2001 show both -- the years 1995 through 2001 show both total company and as allocated to North Dakota. Please see Statement O, pages 5 and 6, for salvage and removal costs for projected 2002 and 2003.

And this material I got, here is the -- I guess it's the retirement work order document that Mr. Jeter is referring to. If you want to take a look at it, you can see that it has account numbers and accounts, but one account that is missing is 381. There has not been -- I mean, 380, services. There has not been any net salvage recorded from 1995 through 2001 for services.

Q. Do you want to have that entered into the record?

A. Sure. It will be the response to data request 21. I have it here. I don't know if I have all of it. I mean, I took the pages that I relied on.

MR. HOBERG: Do you have a copy of that, Mr. Binek?

MR. BINEK: We should have a copy.

MR. HOBERG: Let's go off the record.

(Discussion off the record.)

MR. HOBERG: Let's go back on the record. We're going to mark the data request 21 as Exhibit 21 for the record. Did you have any further questions, Commissioner Wefald?

COMMISSIONER WEFALD: No.

MR. HOBERG: Thank you. Any further questions by the Commissioners of Mr. Majoros? Any further questions by any of the parties of Mr. Majoros? Thank you, Mr. Majoros.

MR. BINEK: Off the record, please.

(Exhibits 22, 23, 24, 25, 26, 27, 28, 29, and 30 were marked for identification.)

MR. HOBERG: We're ready to go back on the record. We're back from a short recess to mark exhibits, and I believe we're at the point where Montana-Dakota Utilities will call their rebuttal witnesses, starting with Mr. Jeter; is that correct?

MR. PEARCE: Yes, it is.

MR. HOBERG: Okay. Please call your next witness.

MR. PEARCE: I call John Jeter.

MR. HOBERG: Mr. Jeter, I don't think you've been sworn yet.

THE WITNESS: No.

MR. HOBERG: Were you here yesterday --

well, let me give it today.

THE WITNESS: I was here. I heard it.

MR. HOBERG: But I should give it once at the beginning of the day, just to refresh everybody's recollection, and I'm required to do so by law, anyway.

Let me tell all the witnesses again that the maximum penalty for perjury in this state is a Class C felony, punishable by a maximum five years imprisonment, a $5,000 fine, or both.

Mr. Jeter, being advised of the penalty for perjury, do you promise to tell the truth in this matter being heard? If so, answer I do.

THE WITNESS: I do.

MR. HOBERG: Thank you. Mr. Pearce, please.

JOHN A. JETER,

having been first duly sworn, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. PEARCE:

Q. Would you please state your name and business address?

A. John A. Jeter, 1304 South 185th Circle, Omaha, Nebraska.

Q. What is your occupation?
A. I'm a certified public accountant and self-employed consultant. I retired from full-time association with Arthur Andersen & Company in 1991 after over 37 years with that firm.
Q. What is the nature of the work you performed while you were there?
A. I was involved in examinations of financial statements, and to a much lesser extent in design and installing accounting systems. For many years I performed other financial and accounting consultation services for utility clients.
Q. Would you summarize your educational background and professional experience, please?
A. I'm a graduate of the University of Nebraska at Omaha, from which I obtained a Bachelor of Science degree with distinction in accounting in 1954. I was admitted to the Arthur Andersen & Company partnership in 1967. I'm a member of the American Institute of Certified Public Accountants and the Nebraska Society of Certified Public Accountants. In 1994, I was elected to the Board of Directors of Tucson Electric Power Company and became a director of its parent company, UniSource Energy Corporation, when it was formed. I retired

from the UniSource board and its subsidiary boards in May 2001.

In 1991 I began consulting on my own with utilities regarding accounting and regulatory matters. As is true in this case, I have also consulted in association with Zinder Companies, Inc., a firm that provides economic and financial consultation to regulated utilities.

Q. What experience have you personally had in the utility field?
A. I have participated in or been responsible for regular audits of financial statements, registration statements filed with the Securities and Exchange Commission, the SEC, for the sale of securities, installations of property records and information systems and a variety of other special accounting services for regulated industry clients. For many years before I retired from Arthur Andersen I had regional responsibilities for its regulated industries practice, and was a member of the partnership team that established policies with respect to issues facing clients in rate-regulated industries.

I often taught at both training sessions for Andersen personnel and in training sessions

Andersen offered for its clients and others. This training ordinarily involved accounting issues, tax issues, and various regulatory matters. In 1992, I prepared a paper and presented it twice in a tutorial sponsored by the Institute of Electrical and Electronics Engineers, Inc. Power Engineering Society. The title of my portion of the tutorial was, quote, Accounting for Depreciation, Return, and Income Taxes, unquote.
Q. Have you previously testified before any regulatory agencies?
A. Yes. I've testified before the Federal Energy Regulatory Commission, the FERC, and its predecessor, the Federal Power Commission, the National Energy Board in Canada, the Interstate Commerce Commission, and regulatory agencies in North Dakota and a number of other states, and the province of Alberta, Canada. My testimony has addressed depreciation, accounting for income taxes, post retirement benefits other than pensions, working capital, and various other topics related to accounting and ratemaking issues. I have attached Appendix A, which is a his of my testimony in regulatory proceedings since the beginning of 1996.
Q. What is the purpose of your rebuttal

testimony in this proceeding?
A. I've been asked by Montana-Dakota Utilities, paren, quote, Montana-Dakota, quote, or, quote, the Company, unquote, to respond to the direct testimony of Michael J. Majoros, Jr., on behalf of the staff of the North Dakota Public Service Commission regarding depreciation rates.
Q. I believe you are sponsoring Exhibits 22, your testimony, with JAJ-2 attached, and also Exhibits 29 and 30; is that right? Exhibit 29 we just marked.
MR. PEARCE: That's actually a page from Mr. Jeter's testimony. And Exhibit 30 is a summary of negative salvage from Montana-Dakota Utilities.
MR. HOBERG: Exhibit 29 is a page from his testimony?
MR. PEARCE: I believe that's what it is.
THE WITNESS: It's a new schedule that I prepared.
MR. PEARCE: It's a schedule. I have my little yellow thing on the wrong sheet. That didn't make too much sense, did it?
MR. HOBERG: So are you offering --
MR. PEARCE: I'm not offering yet. I'm just mentioning those are his exhibits; 22, 29 and

30.

Q. (MR. PEARCE CONTINUING) Will you please summarize your conclusions?

A. Yes. The company is using the depreciation rates included in Case No. PU-399-94-297 based on a depreciation study completed in 1992. Currently, Montana-Dakota has retained AUS Consulting to complete another depreciation study by December 31, 2002. There should be no change in depreciation rates until that study has been completed and the appropriate review has taken place as Mr. Majoros did not prepare a depreciation study, has not presented -- has presented no evidence that the depreciation rates should be changed at this time. A proper depreciation study will involve reviewing additions, retirements, transfers, balances, salvage, removal costs, and accumulated depreciation for the entire history of each account in gas plant and common plant for Montana-Dakota's gas distribution, none of which Mr. Majoros did.

Mr. Majoros' reference to cash flow as a basis of setting depreciation rates is completely incorrect and his use of the rough turnover estimation procedures is not reliable and is not used to measure depreciation rates when study data

is available, as it is in this case. His comments regarding net salvage are largely his unsupported opinions and are not based on any analysis of Montana-Dakota facilities, experience, or operations.

Q. Would you please describe the facilities being depreciated by the company?

A. Montana-Dakota's facilities include gas distribution properties in North Dakota that are used to serve approximately 83,500 customers in 76 communities. In addition, there are common facilities that are used in connection with the electrical gas operations in North Dakota and other states, the costs of which are directly assigned or allocated to the North Dakota gas operations.

Q. On pages 5 through 9 of his testimony, Mr. Majoros discusses a relationship between cash flow and depreciation. Is this a normal type of depreciation analysis?

A. No. Mr. Majoros states that depreciation is not intended to finance additions on page 6, lines 3 through 4, but then compares Montana-Dakota's companywide depreciation expense with the plant additions that were made during the years 1996 through 2001. It is well established that

depreciation is not intended to finance plant additions and the relationship between the two is largely meaningless for determining the appropriate time period during which the company's plant should be depreciated.

In spite of this, Mr. Majoros concluded at lines 25 to 26 at page 6 of his testimony that the company, quote, is financing all of its plant additions from depreciation funds it collects from ratepayers and still has a substantial amount of additional cash for other matters, end quote. There is no way he can support that conclusion, because he is assuming incorrectly that there are no other requirements for the cash flow.

Moreover, since depreciation is meant to recover the existing investment, it is irrelevant whether investors reinvest the recovered funds or, instead, find other uses for the funds. The appropriate depreciation rate is dictated by the need to recover the invested capital during the life of the facilities. By ignoring that fundamental purpose of depreciation, Mr. Majoros is effectively proposing that the depreciation rate should vary from time to time depending on the amount of cash the company is investing on projects deemed by

Mr. Majoros to be beneficial to ratepayers. Presumably, in years when the company has, quote, additional cash for other matters, unquote, Mr. Majoros would reduce the depreciation rate. Conversely, in years when the company needs to undertake major investments in plant, Mr. Majoros presumably would propose major increases in depreciation rates so that the company will have sufficient cash flow to fund all of its investments without borrowing, retaining earnings, or issuing common stock.

It is doubtful that Mr. Majoros really means to revolutionize the concept of depreciation so that customers' rates can be increased dramatically to provide financing for new investments. Nevertheless, that is the logical corollary to the new, quote, cash-flow-needs, unquote, standard for setting depreciation rates that Mr. Majoros is advocating.

Q. Is Mr. Majoros' assertion concerning Montana-Dakota's source and uses of funds factually accurate?

A. No. In addition to the fact that the comparison he made is meaningless, the amounts used are not comparable. The depreciation -- and I'm now

referring to his page 6. The depreciation in column 2 includes depreciation of common plant, but the amounts for, quote, construction/acquisition (sic) in column 3 do not include those for common plant.

Now, I'd like to insert here the fact that yesterday Mr. Majoros put forth Exhibit 20, and included in that exhibit is a schedule which is entitled page 6 table expanded. That's the top page of Exhibit 20. What he did there was to add the common plant construction in column 5, which is why it exceeds the amounts in column 3, and then show the corrected incremental cash flow. He could easily have left out columns 3 and 4 because they are obviously -- well, 3 is correct, but column 4 he could have left out because it's no longer correct and I think he would agree with that.

But I wanted to point out that he has now corrected that. During this 1996 to 2001 period there were 28,000 -- $28,064,555 of additions to common plant. This changes the incremental cash flow in his column 4 from $28,473,000 to $408,000. Now, with his expanded schedule, he comes to $409,000. So we differ again by rounding differently on that number by 1,000. The last year in the column and in his original table in his

testimony was shown as 2002 and should have been 2001, and he carried that into his expanded table. Mr. Majoros also -- excuse me. I've come to the next question.

Q. Mr. Majoros also made an analysis using just a North Dakota distribution and general plant additions and depreciation expense amounts in his Exhibit MJM-3. Is that any different?

A. No. It's also meaningless for similar reasons. Once again, his conclusion is completely incorrect. After observing that the depreciation expense for the years '86 through 2001 exceeded the plant additions by 4.5 million he says, paren, on lines 8 and 9 on page 7, close paren, quote, It seems that ratepayers rather than investors have been financing the company's North Dakota plant through excessive depreciation, end quote. Interestingly, he asserts that there is, quote, excessive depreciation, end quote, and has at this point in his testimony mentioned no basis for that other than the comparison of depreciation cash flows and plant additions, which even he agrees are not the basis for setting depreciation rates.

I'd like to insert here also based on his Exhibit 20. Well, let me first explain. The next

paragraph of my testimony I was planning to strike because it was incorrect. However, in Exhibit 20 he revised the Exhibit MJM-3 and in revising it, it's now incorrect. I said earlier that it was when it wasn't and now he's revised it and now it is, in fact, incorrect. And that's the third page in Exhibit 20. He added depreciation of common plant to the depreciation of distribution plant that was originally in his exhibit and that shows in column 2, increased amount there. But he did not add the common plant additions in column 3. Had he added them, I think the schedule would not show what he intended it to show.

For instance, in the first year, 1986, the additions, including common plant, are $2,699,841, compared to the 1,945,514 of depreciation expense. And, therefore, there would have been a negative number in the fourth column of 754,327. I didn't go through all of these to make that correction, but the only other one I did was in '89 and it has the same type of effect only more so.

COMMISSIONER WEFALD: Can you just repeat for me again which document you were looking at?

THE WITNESS: All right. His Exhibit 20 that was entered yesterday, and it's the third page

of that, ma'am, if you just turn back into it. It's several different things, and the third page is the one I was referring to.

COMMISSIONER WEFALD: Thank you.

THE WITNESS: Yes. Now, that is supposedly the same thing as his Exhibit MJM-3, which was attached to his original testimony. And what he has done, if you look at the two, you can see that he has added amounts in column 2 each year so that the total depreciation expense instead of being $33,405,083 as it was in his original exhibit is now $37 million.

MR. HOBERG: Mr. Jeter, are you still wanting to strike that 15 through 21?

THE WITNESS: Yes. I would like to strike it, because I was referring to his original exhibit which was not inconsistent.

MR. HOBERG: Lines 15 through 21 on page 7 should be stricken and replaced with what you just said?

THE WITNESS: With what I said, yes.

COMMISSIONER REINBOLD: What are the lines?

MR. HOBERG: 15 through 21 of page 7 of his rebuttal.

THE WITNESS: It does not change anything.

I still think the exhibit is meaningless, but I had called attention to something I thought was wrong and I was wrong. It is incorrect in his new version attached to part of Exhibit 20.

MR. HOBERG: Thank you. Please continue.

THE WITNESS: It is incorrect in his new version attached to -- as part of Exhibit 20.

Q. (MR. PEARCE CONTINUING) On page 7, at lines 12 to 13 of his testimony, Mr. Majoros states, An excessive depreciation rate is one that produces depreciation and expense more than necessary to return a company's capital investment in an asset over the life of the asset.

Do you agree with the statement?

A. No, because it's incomplete. The Federal Energy Regulatory Commission in its Uniform System of Accounts for natural gas companies, paren, also used by this Commission for the gas companies subject to its jurisdiction, close paren, defines depreciation as:

> The loss in service value not restored by current maintenance, incurred in connection with the consumption or prospective retirement of gas plant in the course of service from causes which

> are known to be in current operations and against which the utility is not protected by insurance. Among the causes to be given consideration are wear and tear, decay, action of the elements, inadequacy, obsolescence, changes in the arts, changes in demand, and requirements of public authorities, and, in the case of natural gas companies, the exhaustion of natural resources.
>
> The term "service value" is defined as the difference between original cost and net salvage value of gas plant. Since service value includes net salvage in addition to capital investment, Mr. Majoros omitted an important aspect of the recovery of cost that is necessary through depreciation provisions.
>
> I'd like to also comment here about some of the things that were said yesterday. The expense provision for depreciation includes cost of removal or salvage net and that means that they would either be higher or lower depending on the estimates of whether there's net cost of removal or negative salvage or salvage itself. The reserve is there for

the retirement of the asset and for the cost of removal or salvage as often happens. His comparison is misleading because he's leaving out those aspects of reserve for depreciation in his comparison.

Q. How would the omission of net salvage affect his determination of excessive depreciation?

A. Well, his comparisons are not only baseless, but they're also incorrect in that the entire cost is not included in his thinking. If the net salvage is negative and is estimated at 30 percent of the asset cost, he would be asserting that since the depreciation expense exceeds current additions, it is excessive. That is a wrong comparison to start with, but, in addition, he would be leaving out the fact that the expense would have to be 130 percent of the amount necessary to recover the investment in order to provide for the negative salvage or cost of removal in excess of salvage.

Q. On page 7, line 16, through page 9, line 2, Mr. Majoros quotes a U.S. Supreme Court decision in 1934 as a basis for his contention that excessive depreciation results in the extraction of capital contributions from ratepayers.

Would you please comment on that?

A. Yes. Mr. Majoros seems to have missed the

point of the Court's ruling. He refers to a cite of this decision in the NARUC Depreciation Manual as proof that it is still relevant law. The section in which this term is cited is The Brief History of Utility Regulation. Now, as an aside to that, that's a nine-page chapter. It's the first chapter of this book put out by the NARUC. The following chapter is entitled, quote, Current Concepts of Depreciation, end quote. So the chapter that he's referring to is actually a history of what has happened. Obviously, depreciation practices were still in the development stage in 1934.

Now, I'll go back to the text here. The NARUC text point out the fact that this decision overruled a 1930 decision for depreciation on fair value. That means a value that reflects changes because of inflation, typically, over time. In other words, at that time they were depreciating plant using reproduction cost, new. In other words, they were taking account of inflation over time and then depreciating that inflated amount rather than the original cost of the plant.

Now, since some of my comments about things I've read are not necessarily believed by others, I'd like to read into the record the information

that I was just talking about. And this is from page 3 of this NARUC Depreciation Manual. And it's the third full paragraph.

In 1930 the opinion of the Court had changed and reflected the belief that depreciation expense should be based upon present value rather than original cost. United Railways and Electric Company of Baltimore versus West, 280 U.S. 234, 1930. That opinion appears to have been overruled in the 1934 decision, Lindheimer versus Illinois Bell Telephone Company, 292 U.S. 151, 1934, wherein the Court stated, The method is designed to spread evenly over the service life of the property the loss which is realized when a property is ultimately retired from service. According to the principle of this accounting practice, the loss is computed upon the actual cost of property as entered upon the books, less the expected salvage and the amount charged each year is one year's pro rata share of the total amount.

So this issue had to do with whether we depreciate fair value of the property determined using various indices to estimate the value of an existing property that had been in existence for some time and then depreciating that value, or if we

should use original cost. I frankly had not heard of this case until this testimony was done. And the case you hear of is discussed in the rest of my written testimony. So I'll begin there.

Subsequent to the Hope Natural Gas Company case decided by the Supreme Court in 1944, most regulatory commissions stopped using the value method for measuring the rate base investment and switched instead to the original cost method of measuring rate base. To that extent, I believe the 1934 decision cited by Mr. Majoros is consistent with current regulatory practice, which generally uses original cost rate base for ratemaking. I believe the references in the decision to excessive recovery of depreciation refer to the use of value rather than cost in setting rates. That is certainly not an issue in this case since neither the rate base nor the depreciation amount is derived from an estimate of the current value or replacement cost of the plant.

Q. On page 9, lines 3 through 24, Mr. Majoros shows the relationship of the accumulated depreciation reserve to the plant in service and concludes that the reserves are extraordinarily high, to use his term, and that they suggest that

higher depreciation rates have been excessive.

Do you agree with this conclusion?

A. No. Without information about the average age of the plant, prior retirements, et cetera, it is not possible to tell at what level the accumulated depreciation provisions the reserve should be. Once more, Mr. Majoros has expressed his opinion without benefit of any evidence to support it.

Now, I'd like to comment here again that in his discussions yesterday he mentioned the 70 percent ratio of one of the plant items depreciation reserves to the plant cost itself. And I think we need to understand what's in those depreciation reserves in order to understand those ratios. They're not used to separate. This book says over and over that that shouldn't be done. And there are very few situations in which regulatory bodies actually look at the reserve for depreciation and say that reserve is too much or too little and we're going to correct that right away. It's done in the telephone industry to some extent, but other than that, it's practically not done at all.

The reserve has the provisions that have been charged to expense for cost recovery and for

net salvage, whether it's positive or negative, in it. Credits for salvage increase the reserve. Plant cost retired is in the reserve as a negative amount. In other words, we depreciate over the years with the idea that when the plant is retired, that depreciation reserve will equal the amount of the cost of the plant and the two will offset. It also has charges for the cost of removal because when plant is retired and must be removed, then those costs are charged to the depreciation reserve also because they have been provided for in the provision for depreciation and that goes into that reserve.

Deciding whether reserve is too high or too low is difficult. Mr. Majoros compared the reserve for all distribution facilities which is impossible to understand on its face because it includes a lot of different kind of properties, a lot of different existing ages of those properties, and a lot of different lives of those properties. You need analysis, but usually that's not done in modern depreciation practices other than as a sort of test of what's been done in more detail using curve fitting techniques that are typically used in determining depreciation rates.

Q. Are there others aspects of the level of the depreciation reserves that should be considered?

A. Well, yes. The amount in the reserve includes amounts that are set aside for the net negative salvage, as well as the amounts needed to recover original investment in the plant. Obviously, that makes the percentage relationship of the reserve to the plant amounts look larger than it would if only the investment recovery portion of the reserve were compared. More importantly, the larger the reserve balance is, the lower the rate base is and the lower revenue requirements for return and income taxes are. In some cases the level of reserve can also affect the levels of property taxes paid, and reduce them if the reserve is higher.

Q. Could you quantify the effects of the lower rate base?

A. Yes, I can do that roughly, and I want to emphasize the word "roughly." The direct effect of the lower rate base caused by larger depreciation reserve balance is to lower the revenue requirement. If it is assumed that depreciation has been less -- had been less by the amount of Mr. Majoros' proposed annual adjustment of depreciation since rates were set to be effective in late 1994, we would have

eight years, '95 through 2002, of Mr. Majoros' $2.172 million proposed depreciation expense reduction accumulated in the reserve for depreciation by the end of 2002. That would have reduced the reserve by $17,376,000 and increased the rate base by the same amount.

The effect of an increase in rate base of $17,376,000 would be to increase the revenue requirement. I've computed those amounts using Montana-Dakota's proposed 11.044 percent rate of return shown on Dr. Gaske's testimony and the 39.61 percent combined federal and state income tax rate supplied to me by the company.

Q. And what are the effects on revenue requirements using those assumptions that you mentioned?

A. The revenue requirement avoided because of the 17,376,000 is in the depreciation because that's in the reserve is about 3.2 million annually, which exceeds the 2.2 million annual depreciation adjustment proposed by Mr. Majoros. This means that there would be a greater reduction of revenue requirement -- I said would. There will be a greater reduction of the revenue requirement every year from 2002 on by having the 17,376,000 in the

reserve, than Mr. Majoros' proposed reduction in annual depreciation expense. In addition, the revenue requirement reduction does not reduce the amount of investment being recovered by Montana-Dakota as Mr. Majoros' proposed depreciation expense reduction would. The higher depreciation reserve balances, resulting in a lower rate base, has benefited Montana-Dakota's customers and continues to be a benefit in terms of reducing the revenue requirement.

Q. On page 10, lines 2 and 3, Mr. Majoros states, according to the company, no specific studies have been prepared regarding the adequacy of the depreciation reserve or calculation of any theoretical depreciation reserves.

Is that true and, if so, can you explain why it is true?

A. I understand it is true, and it's certainly appropriate. Theoretical depreciation reserves are discussed in the NARUC text on depreciation, this document, to which Mr. Majoros referred in his testimony. On page 24 the author states, quote, If, for example, depreciation rates have been prescribed by regulatory authorities for an appreciable period in the past, it would be inconsistent to deduct in

establishing a rate base a larger or smaller amount than book depreciation reserve accumulated under the prescribed rates, end quote.

The reason that the company has not done studies of the adequacy of the depreciation reserves or determined theoretical depreciation reserves is that it's inappropriate. Adjustments of depreciation are nearly always done on a prospective basis based on the determination of changes in average service lives or determinations of average remaining service lives, more often remaining service lives.

Q. On page 10 of his testimony Mr. Majoros expresses his opinion that the 1991 depreciation study by Stone & Webster included an extremely high cost of removal factor for account 380, services. Do you agree?

A. No. The 1991 depreciation study of Stone & Webster included a review of account 380 additions from 1936 through 1991 and related salvage data to the extent that it was available. I'd like to insert here some discussion, because I did not talk about the level of net cost to remove or net negative salvage that is in this case and I think that it is more understandable if you start to think

about what's involved than it is if you just look at those rates and say they're too high.

For instance, in salvage in the services area, the service again is the line from the main in the street to the home. They're typically a small-diameter pipe. The installation -- and I think there was an example of $1,000 installation yesterday, and I'd like you to think about what happens when that is installed and then a period of time of 35 years goes by and then it's taken out. For whatever the reason, maybe it's replaced, maybe it's taken out because the home is no longer occupied, but for whatever the reason. It seems to me that it probably would cost about the same amount in terms of labor, time, and equipment, and so forth to take that line out as it did to put it in in the first place. However, in 35 years the cost of doing that is going to have increased. I looked at the Consumer Price Index, and in 1967 the Index was 32.9, in January. In January of 2002 the index was at 177.1. So if the cost of doing these activities has gone up by the inflation amount shown by the Consumer Price Index, the cost would be over five times as much.

So when an estimate of net cost of removal

is 140 percent of the original cost of the facility, that may be pretty close to what's involved, but it may also be short. It may actually cost more than that. So I was accused of not having thought about this or reacted to those salvage amounts. I didn't look at the study in any detail at all, but I'm certainly more willing to accept what people did in an extremely detailed study than to just say offhand those are wrong. And so I think that the amounts that are there are reasonable, probably. Now, I can't swear to that because I haven't done the work that's necessary, but I would certainly wait until somebody does the work in the current study to see if those amounts are reasonable.

And I should mention the inflation during that 35-year period that I talked about was greater than normal. It amounted to 4.9 percent a year because of very high years in the '70s and '80s that we had some very high inflation, but even at 3 percent a year in 35 years, prices will go up 2.8 times so it's still something that has to be dealt with when you're dealing with longer life properties.

I'll continue with the rest of that answer. I would rather rely on that study than Mr. Majoros'

reaction, which seems mainly to be based on the effects of the salvage estimate rather than the basis for it.

Q. On the same page 10 Mr. Majoros concludes that the 36-year life for account 376, mains, and the 34-year life for account 380, services, may be excessive based on his experience in investigating other gas depreciation rates.

Will you please comment?

A. Yes. Again, I would rely on Stone & Webster's 1991 depreciation study. Mr. Majoros' opinion may be based on his experience, but his opinion was formed without any specific determination of the proper life or any specific basis for the life he would have led. The Stone & Webster's study used data from 1936 through 1991 and curve fitting techniques that resulted in the use of the R3 Iowa Curve to determine the 34-year life for the account 380, services. The study used data from 1944 to 1991 for account 376, mains, in the same manner to determine an R5 curve fit and a 36-year life.

The approach used by Stone & Webster for these two accounts is widely used by depreciation experts, including the FERC staff, to determine the

appropriate lives to use to depreciate gas utility plant.

Q. On page 11, lines 1 through 15, Mr. Majoros discusses the geometric mean turnover studies he used to test service lives.

Will you please comment on that?

A. Yes. First, the use of the word "studies" should not be interpreted to mean he did a depreciation study. What he did is a very limited review of certain data, with some unexplained calculations. He said in the testimony that he used the last five years of additions and retirements. However, his Exhibit MJM-5 shows additions and retirement for the period 1985 through 2001. In addition, his exhibit labels certain of the data as a three-year band and it appears not to be for any three-year period. His schedules on Exhibit MJM-5, pages 1 of 4 and 3 of 4, show average plant balances in column b for each year based on the balances at the beginning of the current year and the beginning of the prior year, which means the average balances are all shown for the wrong year. They are all actually averages of the year previous to the one shown.

The average plant balance additions and

retirement shown under the three-year band caption are in each instance the sum of the current year and the previous year amounts from columns b, c, and d. Thus, they are not for three years and they use those incorrect average balances from column b that I discussed. Using the data for this 17-year period Mr. Majoros computed a life estimate of 108.07 years for account 376, mains, and a life of 68.53 years for account 380, services. He does not explain how the data for this 17-year period is reliable, nor how the method he used works to determine the lives.

Now, I'd like to insert here a comment based on the discussions yesterday in the hearing. Exhibit 20 has comparisons of company and industry averages and to put the lives that Mr. Majoros determined in that methodology in context, I'd like you to look at the second piece of paper in Exhibit 20, which is the statistics for lives that he presented. And in that example taking mains, which is account 376, the company life is shown as 36 years. The lives that he got averages from statistics for gas plant, and I assume a rather wide group in the United States are around the 50- to 55-year lives. The minimum life was 10 and the maximum life was 80.

As I'll discuss later, Mr. Majoros has adjusted his MJM-5, and he now finds that the life should be 116 years. One hundred sixteen years exceeds the maximum life of 80 years shown on his schedule by quite a lot and I think is totally meaningless in the context of depreciation rates for this company.

Similarly, on the services the company is using a 34-year life. The range for others is from 10.2 to 40 years. And the maximum life shown was 63 years. His revised determination is 74 years. Again, substantially higher than any other company has or is using. That's in the survey that he produces numbers from.

I'm going back to the text now. In the case of account 376, mains, the 1.167 million of retirement for all of the years from 1985 through 2001 are only 6.2 percent of the balance at the beginning of 1985, and a smaller percentage of the 1985 balance plus subsequent additions. In the NARUC depreciation text mentioned by Mr. Majoros, the turnover methods are discussed in Chapter 8. The geometric mean turnover method he used is described on page 81 as follows, quote, The Asymptotic method and its simplified form, the

geometric mean method, are based on ratios of annual additions and retirements. The latter method more readily indicates trends, but is also prone to producing results with considerable variability. The simplicity of the turnover method and the ease with which they may be applied explain their popularity. Their use is restricted by the assumptions of uniformity and their failure to provide an indication of retirement dispersion. These problems led to their replacement by the Simulated Plant Record model.

Further, under the caption "limitations" on page 92 of the same text, NARUC text, the following summary statements about turnover methods are made. Quote, All of the methods assumed uniformity of the growth ratio and dispersion of retirement for each vintage. A more reliable estimate may be made if the property has experienced at least one life cycle, roughly twice the average life, since, under the consistency assumptions above, the property will be at stability. Since utility property typically does not meet the above consistency assumptions, the method may produce considerable variations in life indications. This is especially true for the geometric mean method.

Now, if you think about applying that, this document says that you need roughly twice the average life of data. Twice of average life that he determined would be 232 years, and I don't think we have any data back to the 1700s.

The 1968 addition of the NARUC text stated on page 138 -- now this is a long time ago, this document. Turnover methods are currently used very little because improved methods have been developed for determining service lives from recorded data. I do not believe Mr. Majoros' conclusions based on his very rough analysis of this data should be given any weight in determining the proper lives to use for Montana-Dakota distribution facilities.

Q. Turning for a moment back to page 14, line 21, you said chapter 8. Did you mean chapter 7?

A. Excuse me. Chapter 7. I misspoke. I also would like to insert here that during Mr. Majoros' summary yesterday he mentioned that the Stone & Webster study had talked about a turnover method and he quoted a paragraph from page 4 of their report. I'd like to quote it again and comment on it, if I may.

I believe the quote was -- and this is from page 4 of that document. The turnover testing is a

procedure in which the adjusted turnover period, the number of years it takes an investment in plant to be retired, is determined by aggregating additions from the year 1991 backward until the total is equal to the plant balance in that year and then adjusting for the rate of growth in the account.

Now, keep in mind, they're talking there about dealing with additions back through the years from the time that they did their study until they could account for all of the balance that was there when they looked. I just mentioned he looked at only 6.2 percent of the retirements in his study and that the additions would have been something less than 50 percent. So he did not do what Stone & Webster said they did. They were both called turnover methods, but his method is a much simpler and less reliable method.

Q. On pages 11 -- sorry. On page 11, line 18, through page 12, line 11 of his testimony, Mr. Majoros discusses net salvage ratios and refers to his Exhibit MJM-6. He concludes that the company's net salvage recovery is vastly overstated.

Do you agree?

A. No. I believe the 1991 depreciation study prepared by Stone & Webster is a much more reliable

source of information regarding net salvage than a cursory look at the net salvage for all accounts over a five-year period. By the way, Mr. Majoros talked about that method being used in, I believe, Pennsylvania and Kentucky. Which said another way is that it's not used in the other 48 states, nor by the FERC, nor by the FCC, nor by anybody else that I'm aware of. It is a method that is bound to charge the wrong customers for these items. The new financial accounting standard is clearly aimed at having the cost of removal spread over the life of the facility so that the customers that have the benefit of that facility are paying for it. Spreading net cost of removal or salvage from a previous five-year period doesn't accomplish that at all and it is bound to be incorrect.

There's been several mentions of a gain on the sale of a building. And I may cover that later in the printed documents. I will. But it's been mischaracterized as a gain several times, including this morning again in cross. There was no gain on the sale of the building. Salvage is the entire amount realized from the sale of the property when it's retired, not the gain on the sale. This building was sold for book value. The salvage went

to the depreciation reserve and there it reduces rates for customers because it's a reduction of the rate base.

And in addition to that, it equaled the amount that they needed because they sold it for book value. So this using a five-year average and including $4.6 or 8 million in the future five years based on that, is totally wrong. First of all, even if that should be done that way, and it shouldn't, but if it should be done, there's not going to be another sale of a building likely in every five-year period in the future, nor one-fifth of that amount realized in any of the five years. It's just absolutely wrong.

I want to make sure everybody understands there was not a gain on the sale. There was nothing that the customers are never going to realize. This building was sold for its net cost. In other words, its original cost less the depreciation that had been accumulated on it from the time that it was placed in service.

And I'm going to continue reading now from my text. I also believe that the cost of removal will tend to be paid near the end of the average life of plant facilities and cannot be estimated

accurately using broad averages of short periods of data as was done by Mr. Majoros. Mr. Majoros used data without so much as questioning. The amounts by year for natural gas vary from $79,685 to $440,703. In addition, the amounts for common utility facilities varied from 12,377 in 1997 to $4,889,037 in 2001.

As I mentioned, I understand that the large amount in 2001 involved the sale of an office building for 4.6 million. The electric amounts include an insurance recovery of about 1.8 million and much of the other salvage during the period is for vehicles and work equipment. These are relatively short-life assets. The salvage very often is trade-in value when work equipment is traded in on new work equipment.

I will discuss the recommendation -- excuse me. In summary, Mr. Majoros has very little basis for his comment and for the effect of net negative salvage he used in his final recommendation. I will discuss that recommendation later in the testimony.

I do not understand Mr. Majoros' comments about the recovery being overstated. I assume the accounts being recovered are being recorded by the company in the records. Perhaps he means that the

amounts being recovered are excessive, and I have commented above about his complete lack of evidence for that claim. He also states on page 12 of his testimony that the company's, quote, ratepayers are being penalized, end quote. The ratepayers will receive full benefit of the amounts recorded by the reduction in rate base as I described above.

MR. HOBERG: Perhaps this would be a good time to take a 10-minute recess. I think we're going to continue for a while. Let's take a 10-minute recess at this point.

(Recess was taken.)

(Exhibit 21 was marked for identification.)

MR. HOBERG: We're back from recess and, we'll continue the examination of Mr. Jeter.

Mr. Pearce, please.

MR. BINEK: Your Honor, I just wanted to mention that I passed out copies of Exhibit 21 during the break.

MR. HOBERG: Thank you, Mr. Binek. This is the big one. It's the data request 21 and the response, which is marked as Exhibit 21. Thank you.

COMMISSIONER REINBOLD: 21?

MR. HOBERG: 21, yes, Exhibit 21.

Mr. Pearce.

Q. (MR. PEARCE CONTINUING) Mr. Jeter, included in Mr. Majoros's testimony in a discussion of salvage he says, it appears that the company has not recorded any net salvage at all for services. Is that true?

A. No. I understand from company personnel that the company has recorded 1.4 million of net negative salvage for services during the years 1995 through 2001. Mr. Majoros took his data from a report of retirement work in progress, RWIP, which because of the use of blanket work orders shows services combined with mains. That is apparently the reason he concluded that there was no net salvage applicable to services.

Now, earlier this morning this was discussed again. And at the time that I wrote the testimony, I had just been informed of that. Subsequently, I asked for some data from the company to explain that. And I should mention I think this was an unfortunate thing. The response to the original data request was misleading. I think there was reason to believe looking at it that there were no salvage amounts for services because they didn't show there. And they were combined because of the kind of blanket work order treatment the company

gives them.

But, in any event, there were actual net cost of removal for services during the period involved. And I have with Exhibit 30 summarized several pages of data that I was given by the company. Each of those pages is headed up services-removal cost. And I have taken the total amount for the year from each of those pages and summarized it in the column called annual on the top page. And you can see from that, that this totals up to $1,387,946.12 or 1.4 million. And the documents that I got did not have monthly detail for all of the months of the year, but on that top schedule I summarized some of those just to get a feel for it. The trouble is, those monthly amounts are not necessarily representative in North Dakota because they're for January and I doubt that there's a lot of construction going on in this part of the world in January, no more than necessary probably. But in any case there were, in fact, a million-four of cost of removal.

Now, I said in my testimony net negative salvage. Looking at these schedules, there could have been some positive salvage that's not accounted for here. I doubt it because typically service

lines don't generate any material that can be sold or used again. But that could be that there is some actual salvage values that are not even in this more detailed review.

Q. Mr. Majoros then guesses the company may be recording cost of removal in connection with services replaced as service transfer expense. Is that what the company is doing?

A. No. As I mentioned above, the company has informed me that the net salvage has been recorded in the accumulated depreciation accounts, the reserve.

Q. Then to the extent you relied on his statements about account 380, services, his conclusion is unsupported; is that right?

A. Yes.

Q. On page 12, lines 13 through 21, Mr. Majoros discusses FAS No. 143 and the changes he believes will be required for fiscal years beginning after June 15th of 2002. Would you please summarize the effects of FAS 143?

A. Yes. I prepared Exhibit JAJ-2, a simple example of the accounting changes involved. On the exhibit -- and it probably would help if we look at that together -- I have assumed a $10,000 plant is

completed on January 1, 2001 and there is an estimate of $500 of cost of removal and no salvage at the time of its estimated retirement on December 31, 2010.

COMMISSIONER WEFALD: I need some help with where this exhibit is found.

THE WITNESS: It's attached to my testimony.

MR. HOBERG: His rebuttal testimony, the very last page.

THE WITNESS: The very last page. In that section we --

COMMISSIONER WEFALD: TAA-5, is that the one we are looking at?

MR. PEARCE: JAJ-2. You must be in the wrong --

COMMISSIONER WEFALD: JAJ-2?

THE WITNESS: Yes.

COMMISSIONER WEFALD: Thank you.

THE WITNESS: The owner of the plant applies a credit adjusted risk-free interest rate to discount the cost of the removal obligation to its present value of $254.17. Now, I'm assuming those things, and the assumptions are basically all shown at the top of the exhibit.

COMMISSIONER WEFALD: Where is this $254 figure?

THE WITNESS: It's at the right-hand side of the top little section there, right below the 7 percent, and it was derived using the 7 percent. That's the present value of $500 10 years out using a 7 percent discount rate. In other words, if you invested $250.17 at 7 percent, 10 years later you would have the $500.

Under existing accounting, as shown at the top table on the exhibit, the depreciation expense would reflect the $500 of cost of removal as an additional provision for depreciation of $50 per year and the total depreciation expense credited to the reserve for depreciation would provide for the retirement of the asset and the cost of removal. The plant and reserve accounts would be zero at the end of the life.

Now, you can see there I've labeled it expense. That's the provision for depreciation that goes to expense and is credited to the depreciation reserve which increases the reserve. At the end of the life -- and this assumes perfect estimation -- there would be $1,000 of plant taken out of the plant records and charged against the reserve, and

there would be payments of $500 to remove that facility. And the balance in the depreciation reserve would therefore become zero and the balance in the plant account would also be zero. That's quite a lot simpler than what I'm going to tell you about next.

Because under SFAS 143 the $254.17 present value of the estimated cost of removal would be recorded on January 1, 2001 as a liability and as an addition to plant. Now, you can see that in the first line of that lower table where plant starts out at $10,254.17. Depreciation of the adjusted plant would be $1,025.42 per year instead of the $1,050 recorded under existing accounting rules. Now, you can see that's a lesser amount, and the reason it's smaller is that we're dealing with a present value of that future payment that has to be made and that's the amount that would be depreciated and recovered through depreciation. In the depreciation -- well, let me read on.

The present value of the liability that would be set up offsetting that addition to plant must be increased each year as the time for settlement approaches. The accretion recorded to do that is the discount rate times the beginning of the

year balance each year. On the exhibit that shows up as $17.79 in 2001 and increases each year until 2010 when it is $32.71. Once again, the plant and reserve accounts, as well as the liability accounts all stand at zero at the end of 2010.

Now, let me take you through this again. We depreciate that additional $254 and, therefore, at the end of 10 years, that's the amount that's in plant and that's the amount we've provided for so the reserve zeros out, and the cost of removal would no longer be charged to the reserve because it's already been taken care of on a present-value basis. But in addition to that cost to be recognized, there is the accretion each year, which is also an expense that reduces the net income of the company. And that accretion increases over time and takes care of the total discount or $254.83 during the life of the facility. Then when the $500 of cost of removal is paid, that obligation is taken care of. Because the amount at the end would be $500 because of the interest being added each year to raise it to that level. In other words, the present value five years out is greater than the present value 10 years before the cost has to be paid.

Now, I think it's also important to note

that the total expense recorded under both of these systems is $10,500. And that's shown in the total expense column of the second table to be $10,500. That's the sum of the depreciation expense of $1,025.42 each year and the accretion over in the third to the last column. Therefore, that amount changes each year and it increases over time, not a particularly handy thing from a regulatory standpoint in my estimation. But the total cost is the same.

Now, Mr. Majoros said in his testimony, and I'll talk about this a little bit, but he talked about only paying the present value and not taking care of inflation. The inflation is specifically required under 143 and it is required, if you think about it, because you have to pay the cost of removal in whatever the dollar values are at the time that the facilities are retired. So inflation is part of the process, and it's taken into account here without regard to this discounting. The discounting must also be taken into account to cover all of the cost. In other words, that's part of the $500 of cost of removal that I assumed in this case.

Q. (MR. PEARCE CONTINUING) Just one quick question, Mr. Jeter. I think, if I heard correctly,

you may have misspoken. In the upper part where you said the figure at the bottom of the plant retirement comment, I think you said 1,000 as I heard it. I think you meant 10,000?

A. Yes, definitely. It's the total cost of the plant.

Q. Would you please comment on Mr. Majoros' discussion of FAS 143?

A. Yes. The new accounting standard will cause Montana-Dakota and other companies to change their accounting for retirement obligations. Mr. Majoros indicates that when companies do not have the asset retirement obligations described in FAS 143, quote, these costs will likely be expensed, end quote. If a company does not have such costs, I do not understand what it is that he would have them -- expect them to expense. He mentioned yesterday, if I understood it right, that the principles of SFAS 143 are that you expense the costs as they're incurred and, to the contrary, 143 is aimed directly at expensing the cost of retiring facilities during their life, over their life. And that's done as I attempted to show in the simple example. In talking about this, he talked about only the present value being recognized and that

would not recognize all of the cost.

In addition, his comments on lines 17 to 18 about measuring those costs at their present value, not the future inflated value, suggests a misconception. I don't know why, but he seems not to believe that the full amount of those costs needs to be recovered. The requirements of SFAS No. 143 are to estimate the future cash flow as expected to be spent removing facilities retired and to discount those amounts to present -- current present values. The requirements -- the required computations specifically include an adjustment for inflation. That's covered in paragraph A20 of this document called Statement of Financial Accounting Standards No. 143.

Mr. Majoros is apparently mixing the effects of inflation with the discount rate used to discount the future cash flow to present values.

Q. Do you agree that GAAP does not control ratemaking as he asserts on page 13, line 2?

A. Regulatory agencies are not required to follow the specifics of each accounting standard. Because of this, Statement of Financial Accounting Standards No. 71, accounting for the effect of certain types of regulation, provides for the

accounting necessary to reflect the effects of such regulatory actions. However, I do not think that anyone knows whether the FERC or the various state regulatory agencies will follow this new accounting in setting rates as he suggests will be done. Frequently, these agencies have decided to retain the accounting for ratemaking that they have been using when the FASB publishes a new standard. I believe that is something yet to be decided.

Q. Is FSA-143 relevant then in this proceeding?

A. Well, I believe it is. And the Commission could rule in this proceeding as to the method Montana-Dakota should use in the future for recording asset retirement obligations and the related operating expenses and how such items should be treated for ratemaking purposes. However, it is possible that the Commission will prefer to deal with the question in a ratemaking -- in a rulemaking-type proceeding involving all of its jurisdictional companies. If it is ultimately decided that the provisions of SFAS No. 143 are to be used for ratemaking, it is obvious that those provisions are relevant. If existing practices are retained, the company must still comply with SFAS

No. 143 and difference must be accounted for under the provisions of SFAS No. 71.

Now, I should mention at this point that this simple example that we went over doesn't begin to recognize the complexities of applying this in real life. The assumption, for instance, that this is a plant that is built and the entire amount is retired 10 years later doesn't apply to things like mains and services and telephone poles, and so on. Those things tend to be retired over a very long period before and after their average lives. So the computations involved -- and the document allows shortcutting so that you may be able to make the computations based on an average life even though you know that the lives of individual items in a group property will be very different. It does add a great deal of complexity to accounting for these items and I think it would add a great deal of complexity to the ratemaking function to wade through this kind of accounting each time a company asks for a rate change or each time you asked a company to change its rates.

And so I do think this is something that really is better dealt with in a rulemaking proceeding as the company has already asked to have

done rather than in a rate case. But it's relevant because Mr. Majoros brought it into the case. I responded to it only because he had talked about it.

Q. Would you please comment on Mr. Majoros' recommendations concerning SFAS-143?

A. Yes. The cost of removal charged to customers already includes the legal asset retirement obligations defined in SFAS No. 143. However, I believe the Commission may require the company to provide for similar obligations that may not meet that definition and those costs should also be included in cost to service. I certainly do not agree that, quote, The company's experience suggests that it does not have any such obligations, end quote, as Mr. Majoros states at the top of page 14. The definition of a, quote, legal obligation, unquote, in FSAS 143 is quite broad and includes entity promises to a third party, which may include the public at large, about its intention to perform retirement activities. Paragraphs A2 and A3 of the statement discuss that.

I do not agree with his comment on page 14 at lines 3 and 4 that, quote, the costs should be measured at their net present value, unquote. My Exhibit JAJ-2 shows why that shouldn't be done. If

rates are set based on the SFAS 143 procedures, the company must be allowed to recover depreciation of the present value of future net negative salaries and the accretion of the liabilities for asset retirement obligations. The sum of these two elements of cost is equal to the undiscounted cost of removal and both must be recovered to compensate the company for costs it is required to pay when costs are recorded as required under the provisions of SFAS No. 143. Here again, Mr. Majoros seems to be mixing the discounting and the effects of inflation. I believe both should be taken into account in setting rates.

One thing I'd like to add right here. We haven't talked about the rate base effects, but, obviously, if additions are made to plant to set up the obligation, you would probably need to consider whether or not those additions are included in rate base and whether that obligation is an offset. I think theoretically that would be the proper approach, but there are other ways that could be considered. In any event, I did not talk about the rate base treatment, but it would have an impact because of that growing obligation and the straight line depreciation on the other side. So it's

something to be considered.

I do not know how the five-year rolling average expensing approach Mr. Majoros recommends on lines 4 to 9 of page 14 works. However, as I explained above, if the Commission elects to follow the provisions of SFAS 143 in setting rates, the costs that need to be recovered are the depreciation present value of the asset retirement obligation, plus the accretion applicable to the present value obligation. That accretion must be expensed each year to adjust the net present value of the obligation to the new current level. The depreciation would be the same each year for any specific obligation, but the accretion would increase over time. Consequently, it would be appropriate to use -- or it could be appropriate to use a projected average amount over several years in order to allow the recovery of the total of the two parts required to be recorded under the provisions of SFAS No. 143.

If the Commission elects to continue to follow the practices it currently follows, then the differences between the two methods should be recorded as a regulatory asset or liability. The differences would be between, one, the recovery of

the estimated net salvage on the existing basis and, two, the expensing of depreciation of the capitalized present value of the asset retirement obligation, plus the accretion that must be recorded under the provisions of SFAS No. 143 beginning in 2003. In the long term, the amounts allowed would be the same, but the timing of the expense would be different under SFAS No. 143 for what -- from what it has been under Generally Accepted Accounting Principles.

In other words, like so often has happened in the past for deferred income taxes and other items that have been handled differently for regulation, there would be an adjustment made on the books to recognize the difference caused by ratemaking not being exactly in agreement with the other General Accepted Accounting Principles.

Q. Is there any basis for the depreciation recommendation shown on Mr. Majoros's Exhibit MJM-7?

A. No. Mr. Majoros has ignored the previous depreciation study with regard to negative net salvage and has also reduced the recommended provision for depreciation for 2003 by $848,000 based on a five-year average of salvage value he obtained from the company. A review of the data

shown on his Exhibit MJM-6 makes it clear that this five-year summary is not reliable for the use he made of it. If this is the five-year average he recommended on page 14, lines 4 to 8, I strongly disagree with his recommendation. As discussed earlier, there are large amounts included in the exhibit which are not recurring, such as the four-million-six sale of the office building and should not be included in any case. That transaction is unlikely to be repeated every five years. Because of this and other problems with this approach, it should not be considered.

Now, I have prepared a schedule that might help understand how that $848 amount was worked into his depreciation recommendation, and this is Exhibit 29. Most of this exhibit comes from Mr. Majoros' Exhibit MJM-7, which is near the back of his testimony. The column A just shows the average plant. And if you look at the bottom of page 1 of MJM-7, you can see that it totals to 68 million -- excuse me. I'm in the wrong column. The average balance is 68,870 -- excuse me -- 68,787,446. And I've taken the very detailed schedule and summarized it to show distribution and general separate from common. And the common facilities have to be

summarized from his schedule and that's done in note 2 at the bottom, that the schedule shows 5,381,000.03, and 1,768,000 separately on the schedule. So you must summarize those to get to the total, and then there's a little bit of amortization other in that plant and that's $299.

Similarly, on the second page of his exhibit, the annual depreciation for the year 2001 that he recommended is shown and it's been summarized in much the same manner. The 1,291,000 is the top line on his exhibit and then I've combined numbers to arrive at the general and the common plant and then the $7 of amortization plant is added and that agrees with his 2,079,802.

Then for the year 2003 on his Schedule MJM-7, page 3 of 3, this is what was being discussed yesterday with some confusion about how we got from where we are to where he recommends. I've again summarized from his schedule and here his numbers are much more summarized, but the total depreciation at that stage of his 2003 recommendation is 1,937,000 as shown at the bottom of column C. More importantly, the annual salvage which he determined on his MGM-6, which is the exhibit just ahead of the one we've been looking at, is $848,010. He arrived

at that by adding to the natural gas plant about 50 percent of the common plant to come to a total five years that he attributed to natural gas of 4,240,000. And, again, this includes that four-million-six sale of a building, but at this stage only to the extent of about 50 percent, because he has allocated part of it to electric and part of it to natural gas.

And I've taken his computation and broken it down. In that four-million-two is included the 1,444,000 of natural gas plant and when you divide that by five years, it's $288,898. And I've taken that up to show in total for distribution in general of $289,0000. That reduces the provision for depreciation in his recommendation. And you can see that happening between columns C and E. Then the rest of that 848,000 is common facilities. And he would have us deduct $559,000 of salvage with respect to common properties which have a depreciation provision of $440,000 so that the provision for common properties would end up being a negative $119,000 in a year. But that all adds into the total that he did recommend of $1,089,000, and that is shown as the very last figure on page 3 of 3 of MJM-7.

Now, I just thought it would help to run through those numbers. I apologize for the details, but I think that it does help understand what it is that's being proposed.

Mr. Majoros -- now, some of this will be a bit repetitive. Mr. Majoros also allocated the common property amounts between electric and gas utilities based on the salvage amounts for each of them separately, which is not the basis used by Montana- Dakota for the allocation of common plant costs. I think it overstates somewhat the amounts attributed to natural gas based on information I've received from the company, but I can't quantify that for you. In any case, he did not support his allocation, other than to say that it was allocated based on the amounts of salvage.

The net result of Mr. Majoros' adjustments would be a 2,172,000 reduction in the amount allowed for depreciation to an amount of 1,089,000. His proposed adjustment would be over 71 percent of the amount currently being recorded by the company. The proposed adjustment is not supported by any evidence and should not be approved. On page 14, lines 16 to 17, Mr. Majoros states that these adjusted rates, quote, are still excessive because they're based on

lives that are too short. They are conservative from the ratepayers' perspective, end quote.

I do not believe that what Mr. Majoros means by -- excuse me. I do not understand what Mr. Majoros means by conservative, but, in my opinion, his proposed rates are not conservative from any standpoint. Any further reduction would make them even less conservative. With the net salvage adjustment he made, the overall average rate he is proposing is 1.58 percent. It cannot be considered conservative in any way. It is almost certainly inadequate.

Q. Would you please summarize your testimony?

A. Yes. No adjustments in depreciation rates should be entertained until the current depreciation study is completed and an appropriate review has taken place. Current rates are based on a comprehensive study prepared in 1991 and used again in 1994. Mr. Majoros has not done a depreciation study and has no basis for suggesting the changes in depreciation rates he is proposing. His review of the depreciation rates currently in effect is entirely superficial and contains many errors. Thus, the depreciation rate should not be changed based on Mr. Majoros' proposal.

Q. Mr. Jeter, did you prepare Exhibits 29 and 30?

A. Yes, I did. Well, Exhibit 30 has information I received from the company. I prepared the summary.

Q. Right. The first page?

A. Yes.

MR. PEARCE: I will offer Exhibits 22, 29, and 30 at this time.

MR. HOBERG: Any objection?

MR. BINEK: Well, I do have an objection to Exhibit 30. According to testimony of the witness, the response to the data request that was submitted to the consultant was misleading. And may I ask a question of the witness?

MR. HOBERG: Yes.

BY MR. BINEK: Is it correct that the information was never provided to Mr. Majoros?

THE WITNESS: Well, first, I'd like to say I don't think it was intentionally misleading. I think it just happened to be because of the way those schedules were prepared. I think the company probably thought that he had all the information he needed. However, he didn't, and it was understandable, in my opinion, that he didn't

realize that that was there. However, I mentioned it in my testimony so he has been aware of it since my testimony has been filed.

MR. BINEK: But that information was never provided to him, was it, to your knowledge?

THE WITNESS: Not to my knowledge. Could have been. I don't know.

MR. BINEK: I will object to --

MR. PEARCE: What's the basis for the objection? That doesn't go to admissibility.

MR. BINEK: The information that this exhibit relates to is based on information that was requested by the Commission consultant and was never provided to him in the response to his request.

MR. HOBERG: You're not saying it's not relevant now?

MR. BINEK: I'm just saying that it has been brought into this proceeding at this time without having previously been provided to us, even though the information contained in it was requested.

MR. HOBERG: Mr. Pearce.

MR. PEARCE: Well, it's certainly relevant. That doesn't go to the question of relevancy. As Mr. Jeter pointed out, his rebuttal testimony does

state that there was, in fact, a million-four in net salvage in the services account so that would have given Mr. Majoros, I would think, the opportunity to request a data basis for that statement.

MR. HOBERG: Okay. Well, I think it's something that's certainly relevant and helpful to the Commission to have at this point. Do you need some chance to respond further to that then, Mr. Binek?

MR. BINEK: May I ask the witness another question?

MR. HOBERG: You may.

MR. BINEK: Does this information change Exhibit MJM-6?

THE WITNESS: I don't think it would.

MR. BINEK: Thank you. I will withdraw the objection.

MR. HOBERG: Okay. Thank you. I'll admit Exhibits 22, 29, and 30 then. Does that conclude the questions of Mr. Jeter?

MR. PEARCE: Yes, it does.

MR. HOBERG: Thank you, Mr. Pearce.

Mr. Binek, did you have some questions of Mr. Jeter?

MR. BINEK: Yes.

CROSS-EXAMINATION

BY MR. BINEK:

Q. Mr. Jeter, on page 3 of your testimony you state that you've testified before the FERC, the ICC and a number of state regulatory commissions on depreciation and a number of other accounting issues. Have you ever sponsored a full depreciation study?

A. No. Not the kind of study that was done in this case. I have in natural gas pipelines cases where the natural resource declines were involved and that was basically a unit of reduction approach, but I have not done a statistical curve-fitting type of studies.

Q. Okay. Thank you.

MR. BINEK: I guess could we go off the record for just a moment?

MR. HOBERG: Let's go off the record, please.

(Discussion off the record.)

MR. HOBERG: Back on the record.

Q. (MR. BINEK CONTINUING) Mr. Jeter, on page 4 you state that AUS Consulting is due to make a complete depreciation study by December 31, 2002. What is the purpose of that study?

A. Well, that information was given to me by the company, obviously. My assumption is that it would be a complete update of the depreciation work done in 1991. And, by the way, I don't know that there's any reason to expect very much change since 1991. There may be, but I don't know of any reason.

Q. Why wasn't a depreciation study done prior to the filing of this rate case?

A. I don't know. You'd have to ask one of the company witnesses.

Q. Okay. If that new depreciation confirms Mr. Majoros's suspicion that MDU's depreciation rates are too high by approximately $2 million, is it MDU's intention to file for a rate reduction?

A. I also don't know that, but I do think that could be answered by one of MDU's subsequent witnesses.

Q. Would you agree that if depreciation rates are significantly changed as a result of the study, those changes, whether up or down, should be reflected in rates?

A. Yes. I think the rate change should coincide with the changes in the depreciation being recorded by the company.

Q. So, basically, by deferring this study

until December 31, 2002, MDU will be asking this Commission to conduct two rate cases in the space of six months; is that correct?

A. If the decision were made to reflect those new depreciation results, assuming they change the amounts -- I guess I should say assuming they change the amounts significantly, then there might be a need to review that study and then adjust rates for the company to reflect whatever change that made in the cost of service, but that would obviously be somewhat limited compared to a full-blown rate proceeding, I would think.

Q. Please turn to page 6 of your testimony and read the sentence beginning on line 1.

A. By ignoring that fundamental purpose of depreciation, Mr. Majoros is effectively proposing that the depreciation rate should vary from time to time depending upon the amount of cash the company is investing in projects deemed by Mr. Majoros to be beneficial to ratepayers.

Q. Where in his testimony does Mr. Majoros make this proposal?

A. I think this is just a corollary to what he's saying. He has talked a great deal about cash flow. But he's not mentioned the fact that the cash

343

requirement for plant comes when the plant is built or purchased. And that's a cash flow that's already taken place. The cash flows for depreciation are the recovery of those amounts over the life of the plant. And some of that cash may be required to pay off debt that was incurred when the plant was built. That hasn't been mentioned. But that's one of the things that must be done.

To the extent that the facilities have been built with equity funds, retained earnings, or newly acquired equity, those investors also require the recovery of their funds. Now, they may recover the funds from one plant facility, reinvest it in the company through retained earnings and invest it in another facility, but that's the way that works. And to suggest that the cash flow from depreciation is just free and there's nothing else to do with it isn't correct.

And I think the thrust of what he was saying -- although, he said at the beginning it's not the way you set depreciation rates, you don't make these cash flow comparisons, but then he proceeded to make the comparison and suggest that the customers are spending all of the money that's being spent for facilities. That's not the case.

344

And I don't think he made that case and, therefore, you have to kind of assume that he's suggesting some new change in approach. That's all that whole top of that page is talking about.

Q. Would you please turn to page 6 of Mr. Majoros's testimony and read the question at the top of the page?

A. Is depreciation intended to finance plant addition?

Q. What is the first word of Mr. Majoros' answer?

A. No. Now, I just mentioned that he said that.

Q. On page 8, at lines 17 through 20, you accuse Mr. Majoros of ignoring net salvage as a component of depreciation. Where in his testimony did Mr. Majoros assert that net salvage should be ignored?

A. Well, he took it out. The net salvage that was being recorded as a result of the 1991 study was removed from his computations of depreciation, as I understand it.

Q. What do you think the 848,000 is?

A. Well, four-million-six of it divided by 2, roughly, is the sale of the building, which really

345

doesn't have a lot to do with the salvage and the net salvage on services and mains. And it seems to me that if one proposes to take a five-year snapshot and divide that by five and use that over the next five years, then you must think that that is going to be repeated in the next five years. Otherwise, you're not doing something that makes any sense at all.

Q. But is that net salvage?

A. I don't think it's going to be repeated in the next five years.

Q. Is the number that Mr. Majoros used net salvage?

A. It is, but it's not salvage in the sense of a depreciation study reflecting the salvage applicable to the facilities involved over the life of the facilities. It gets away from the whole concept of depreciation and the concept under the new Financial Accounting Standard in 143, which is clearly not to recognize this thing based on some average of some short period. It's to recognize them based on the life of the facility and the expected cost at the end of its life to remove those properties or the expected credit in the event that there is, in fact, positive salvage.

346

Q. In fact, does Mr. Majoros include net salvage in his final depreciation recommendation only as positive rather than negative salvage?

A. Yes. Well, he included net salvage and it was positive. I mean, because of the period he selected and some of the extraneous items included in that period.

Q. On page 9 you take issue with Mr. Majoros' observation that the Supreme Court found that excessive depreciation resulted in extraction of capital contributions from ratepayers. Is it possible to have excessive depreciation of the original cost of an asset or group of assets?

A. I have to know what you mean by "excessive."

Q. How would you define excessive depreciation?

A. Well, if you mean is it possible to have estimates of the life of a facility that turn out to be wrong and turn out to be wrong because they're too short, then some would say that would generate an excessive amount of depreciation expense in the ratemaking situation revenues to cover that expense.

But the excess depreciation in that situation, and this is assumptions that -- we say

the life is going to be 20 years and then we discover after the plant has been in service for 10 years, that it's going to be 15 or 25. If it's going to be 25, then you could say that was excessive. It may not have been. The life used during that first period might be exactly right in terms of the best estimate you could get, but when you get better estimates of what the life is, you should adjust. And the typical method of adjusting depreciation is over the remaining life of the facility.

Q. If a utility depreciates a category of plant on the basis of 140 percent negative net salvage when the negative net salvage is, in fact, only 15 percent, would that constitute excessive depreciation?

A. It might if you accept your assumption. Those are both assumptions. One of them is an estimate made by somebody using judgment and historical facts, and so forth, and the other is just an assumption of 15 percent being the right answer. If that 15 percent were to be the amount determined in a new depreciation study, then I would say that you could say that that had been excessive, but only based on saying we made a wrong estimate in

the past, not based on the fact that we know more now and we're adjusting our estimate. So there's a fine line between whether it's really excessive or it's excessive relative to what you would be thinking it should be in the future.

Q. On page 11 of your testimony you purport to demonstrate that since 1995 the depreciation which Mr. Majoros claims to be excessive would by now have paid for itself in the form of rate base deductions; is that correct?

A. In effect, that's a short way of saying it, I guess.

Q. Did you quantify your rate base deduction by multiplying Mr. Majoros' $2.172 million depreciation expense adjustment by the eight years that have transpired between 1995 and 2002?

A. Yes.

Q. Mr. Majoros' correction is to eliminate the negative salvage and to amortize positive salvage over five years; isn't that correct?

A. That's my understanding, yes.

Q. What makes you believe that Mr. Majoros' adjustment, if applied in 1995, would have amounted to 2.172 million?

A. Well, I emphasized the word "rough" when I

started on this. I did not attempt to go back and figure out what Mr. Majoros' adjustment would have been had he made it in '95. I think that's clear from the way I described it. But I would admit that had he made a similar adjustment back in 1995, it probably would have been somewhat less because there was less plant at that time. I think. Now, I did not do that. This is very rough. It's an example more than anything.

Q. Well, Mr. Majoros would not have included the $848,000 in positive salvage because it didn't occur until 2001; isn't that correct?

A. I don't know what the positive salvage or negative salvage would have been or what five-year period he would have chosen.

Q. MDU's gas distribution plant was a smaller total amount in 1995; would you agree?

A. Yes. And I already said that would have an impact. I did not calculate it.

Q. And so the elimination of negative net salvage would have been a correspondingly smaller amount, wouldn't it?

A. Probably. I don't know. I haven't looked at it.

Q. Wouldn't the result have been a rate base

offset somewhat smaller than the 17.376 million that you ponder on line 4, page 11?

A. It might very well have been, yes.

Q. On page 12 of your testimony you argue that it would be inappropriate to calculate theoretical depreciation reserves to determine whether a reserve excess or deficiency exists. Are you familiar with the term "remaining life depreciation"?

A. Yes.

Q. Would you please describe what that term means?

A. It involves determining the life of the facility, an estimate of the age of all of the facilities, and thereby arriving at a remaining number of years that you would expect those facilities to exist before they're retired. And then converting that to a rate using the total cost of the facility less the depreciation reserve as of the same day.

Q. Does MDU use remaining life depreciation?

A. Yes. It's my understanding that that's been done based on what I've read in the 1999 -- '91 study.

Q. Doesn't remaining life depreciation effectively amortize any reserve excess or

deficiency over the remaining life of each category of plant?

A. Yes. That's why most depreciation studies don't include trying to figure out what a theoretical reserve will be. It's taken care of over the remaining life in any event.

Q. Earlier you discussed R3 Iowa curves. Do you know what a generation arrangement is?

A. Yes. I don't know that I could describe it. I've read quite a little bit about it.

Q. How do you calculate an average remaining life?

A. Well, it's calculated based on the retirement dispersion that is determined using the curves after having determined from the existing data about plant what is the best fit. In other words, the Iowa curves are based on actual evidence of what the lives of various kinds of facilities were. And it was found that using those curves, you could ordinarily find a fit for almost any sort of -- as they referred to them, industrial property, to one of the various curves, the right, left and symmetrical curves.

Once that's done, you have a dispersion of the asset retirements that you would expect and you

can determine using the remaining life of those that have not already been retired what the remaining life would be to use in that situation. Now, that's a pretty rough discussion of that. I have not done that kind of a study. So I understand what's done, but I'm not an expert on using those studies to do what's done other than on a very broad basis.

Q. What is an O curve?

A. I don't know.

Q. Do you know why an O curve is different than an R curve?

A. Did you say L?

Q. An O.

A. No. I think there have been some additional curves developed. I'm not familiar with the O curve.

Q. On pages 13 and 14 and 15 you challenge Mr. Majoros' discussion of service lives for mains and services. Did Mr. Majoros recommend any changes to the service lives underlying MDU's current depreciation rates?

A. No.

Q. From the standpoint of its impact in this case, your criticism of Mr. Majoros' service life discussion is irrelevant; isn't that true?

A. Well, I think it's relevant because I would hate to think that anybody would seriously contemplate a change in depreciation rates based on the 116- and 74-year lives he determined with the only computations he did with respect to service lives. I certainly agree he did not reflect those in his final recommendation. To that extent, it's irrelevant, I would agree, but I don't think I could just not comment on it when I don't think it should be used.

Q. On page 21 you argue that if the Commission elects to apply FAS 143 to MDU's cost of removal, there would have to be two elements of expense; one, the depreciation of the annual present value of future expense and, two, the accretion of the asset's value each year; is that correct?

A. Yes.

Q. You also contend that over the life of the plant both methods recover the same amount; is that correct?

A. Yes.

Q. Do they recover that same amount at the same rate --

A. No.

Q. -- that is, is one method front-loaded more

than the other?

A. The SFAS 143 method would recover plant by increasing amounts over time. It would not be front-loaded. It would be back-loaded.

Q. Okay. And the present method is front-loaded?

A. The present method is -- I think I would call it level. There are methods --

Q. Well, if you have the other method being -- what did you refer to -- back-loaded, then isn't this more front-loaded?

A. In other words, there is more and more expense over time each year. In the present methodology there's the same amount of expense each year, unless there are changes in estimates. You would have depreciation that is level with respect to it. Now, we should be careful about this, because inherent in this discussion is a discussion about a piece of plant that is installed and then later it's retired, all of it. We have many pieces of plant here that have varying lives, with an average life near the center of that long dispersion period of retirement. And if you superimpose SFAS 143 over that kind of a situation, I'm not sure I could even answer the questions, but I think it

355

would still involve back-loading or growing expense over time with respect to any property or group of properties. I frankly haven't looked at that.

Q. Is Montana-Dakota Utilities subject to FAS-143?

A. It is subject to it when it becomes effective, yes.

Q. Isn't it effective now?

A. No, it's effective -- well, it's effective for some companies now, but for companies with calendar-year financial statements, it's effective for next year.

Q. Does MDU intend to implement FAS 143?

A. I certainly think so. They won't be able to file financial statements if they don't.

Q. So you agree that the company is going to have to comply with FAS 143 and you talked about the complexity of FAS 143. But since the company does have to comply with it, the records will be available for ratemaking purposes; isn't that correct?

A. Sure.

Q. I'd like to have you turn to your JAJ-2. If the company did not have a legal obligation for the $500 removal, then the bottom half of your table

356

would be incorrect; isn't that correct?

A. Well, the entire exhibit would be incorrect if they don't -- now, excuse me. You specifically put the legal obligation in there and I now understand your question better. That could be true. And as I mentioned in the testimony, the legal obligation is fairly broadly defined. And if we think about what that means in terms of what a company has to do, it's a little hard to imagine very many things that a company would actually remove at the end of the life if they're not required to do so.

Now, there are a lot of people that are making requirements of companies to do that kind of thing. The regulatory agency could probably rule on such things and that makes it become a legal obligation, as I read the new standard. The cities that they deal with who were putting things into the streets and alleys, and so forth, may have something to say about whether those items are removed when they're retired. And it seems to me that with the increased concerns of environmentalists, that's all going in the same direction. We are going to have more and more requirements, rather than less. But if there are things that the company feels it must

357

remove, even though there is no legal obligation to, it would seem to me they would be very limited. I mean, I don't know why they would remove anything if they are not required to do so.

Now -- and it isn't just removal. In some cases they could be required to be do something to pipe that's in the ground, for instance, to make it safe, fill it with an inert substance, for instance, or do something like that, and that's cost of removal as well, even though technically you're not removing it, you're taking care of a cost that's your obligation at the end of the life, if you are doing that in accordance with some legal requirement as defined.

Q. In your earlier testimony you said that it would cost the same to remove a service as the original cost. Do you think that this company digs up an existing service when it replaces it?

A. I don't know, but I should straighten out what I said there, if you didn't hear me earlier. What I meant was, it would cost the same in time. The effort to remove a service might be the same as it is to put it in in the first place. In fact, it may be greater because nowadays a lot of services are plowed in and I don't think you can plow them

358

out if you are required to do the removal.

But, in any event, what I really was talking about was not cost the same, but take the same amount of effort, and if it took the same amount of effort, my whole point with that was it might cost a great deal more because of inflation.

Q. But only if they have to dig up?

A. That's correct. And it isn't enough to determine what it would cost. You've got to determine whether or not it has to be done and, if so, when and under what circumstances.

Q. And isn't that one of the important concepts of FAS 143, is that it shouldn't be shown as salvage unless there's an obligation to remove it?

A. Well, as cost of removal.

Q. Okay.

A. I mean, actually, 143 does not discuss salvage. Salvage is to continue to be accounted for.

Q. I used the wrong term. Cost of removal.

A. Cost of removal is what it's aimed at. And it definitely is saying if you have an obligation because of the use of the facilities, then you have to recognize it. And I don't think there are very

359

many companies that are in business for a profit that are incurring and paying costs of removal that they don't have to pay. I mean, I just don't think that's very --

Q. I would agree with that. Are you familiar with the concept of insertion?

A. Not unless you define it for me.

Q. That's okay. Are you familiar with the concept of abandonment in place?

A. Yes.

Q. Okay. What is that?

A. Well, I earlier talked about abandoning buried pipe, for instance, and in some cases that probably will be allowed and it will just stay where it is. It won't be removed. It may require something being done to it if it is, in fact, abandoned. I know, for instance, in gas transmission facilities, cross-country lines, they're trying to provide for all of the things they're going to be required to do because some of that line is very large and if it decays and rusts out, and so forth, you can have a big cavity there, and so they're faced with some significant amount of costs, but not to remove the line necessarily. They may leave it there, but shore it up so that it's not

360

going to be a problem over a long period of time in the future.

Q. That's when they replace it, right?

A. Well, replace or abandon. If it's abandoned, that would be more likely. If they replace it, I think in the transmission facilities they typically loop it and put another piece of pipe beside it so they wouldn't necessarily retire it, but if they are retiring it, they might leave it underground or because of right of way and other considerations, they might actually take it out and replace it with other pipe.

Q. I'd like to now talk a little bit about this building sale that you've discussed at length.

A. Yes.

Q. Where was that building?

A. Downtown Bismarck. It was the Schuchart building, as I understand.

Q. When was that building sold?

A. It was the first year of that period, so it must have been in 2001. That's when the sale was recorded. I'm not sure if the accounting -- I would say in as large a transaction as that, that's the year it happened also.

Q. What was the original cost of that

361

building?

A. I don't know.

Q. When was the building purchased?

A. I don't know.

Q. Why was it sold?

A. I don't know.

Q. What was the sale price?

A. The only information I have on that is the sale price was equal to the net book value at the time of the sale, which means the total cost of the facility that the company has paid for it, less the accumulated depreciation, was equal to the sales price.

Q. And what was that net book value at the date of sale?

A. Well, it was four-million-six or so. Exact amount I'm not sure.

Q. Who was the building sold to?

A. I think it was sold intercompany with respect to MDU Resources. Now, I'm not real familiar with that, but I believe it was sold to an affiliate, in any event. Might actually have been another division of the same company. I'm not that familiar with their corporate structure.

Q. How did the sale price come to match the

362

net book?

A. By agreement, I assume. I don't really know that.

Q. Do you know if MDU tried to obtain the market value?

A. I have no idea.

Q. Would you please provide the journal entries in the company's books that relates to the sale of this building as a late-filed exhibit?

A. I don't have access to those. I think somebody else that's testifying after I am can.

MR. HOBERG: Is this a request you are making of the company?

MR. PEARCE: I think Mr. Keller would be an appropriate witness for that.

MR. HOBERG: Do you want to reserve that question for Mr. Keller?

MR. BINEK: I can reserve that question, unless the company is willing to provide the information.

MR. PEARCE: It's certainly willing to provide, but I think he can clarify exactly what you want and describe it by official title. So I think it might be easier to put in through Keller.

Q. (MR. BINEK CONTINUING) You state in your

testimony that the other 48 states do not use a current period recognition of net salvage; is that correct?

A. I said that this morning, but that's an assumption on my part based on the testimony to the effect that Pennsylvania and Kentucky are doing such things.

Q. I'd like to have you turn to page 157 of the 1996 NARUC manual that you've been referring to.

A. Yes. I'm sorry. What was the page?

Q. One fifty-seven. Would you please read the two paragraphs, the first beginning with the statement, "historically, most regulatory commissions"?

A. Historically, most regulatory commissions have required that both gross salvage and cost of removal be reflected in depreciation rates. The theory behind this requirement is that since most physical plant placed in service will have some residual value at the time of its retirement, the original cost recovered through depreciation should be reduced by that amount. Closely associated with this reasoning are the accounting principle that revenues be matched with costs and the regulatory principle that utility customers who benefit from

the consumption of plant pay for the cost of that plant, no more, no less. The application of the latter principle also requires that the estimated cost of removal of plant be recovered over its life.

Some Commissions have abandoned the above procedure and moved to current period accounting for gross salvage and/or cost of removal. In some jurisdictions gross salvage and cost of removal are accounted for as income and expense, respectively, when they are realized. Other jurisdictions consider only gross salvage in depreciation rates with the cost of removal being expensed in the year incurred.

Q. Thank you.

MR. HOBERG: Mr. Binek, do you have a number of additional questions?

MR. BINEK: No, I don't believe so.

MR. HOBERG: About how many do you have left?

Q. (MR. BINEK CONTINUING) How often should depreciation studies be done?

A. Well, it's a little bit varied around in various jurisdictions. Many jurisdictions require that studies be done on a periodic basis and I think five years would be fairly typical of that. Others

don't make any requirements and I think some companies go longer times between. Now, they may have looked at the facilities and decided that there aren't any significant changes in what they are seeing with respect to the lives of facilities, and so forth in their records and, therefore, elect not to do it quite as often. But I would say probably in some cases even three years, but depreciation studies are expensive and so three to five to longer periods are probably fairly typical, but with attention to it much more often than that in terms of just deciding whether or not it is required.

MR. BINEK: I have no further questions.

MR. HOBERG: No further questions. Let's take a luncheon recess here. I'm wondering, though, what we should take? An hour? Commissioners request an hour.

COMMISSIONER WEFALD: 1 o'clock.

MR. HOBERG: Let's be back at 1 o'clock.

(Lunch recess was taken.)

MR. HOBERG: Okay. We're ready, back from the luncheon recess, and I think we were -- we just completed the cross-examination by Mr. Binek.

So, Commissioner Reinbold, do you have any questions of Mr. Jeter at this time?

COMMISSIONER REINBOLD: I do not.

MR. HOBERG: Thank you. Commissioner Wefald, do you have any questions?

COMMISSIONER WEFALD: I have one.

EXAMINATION

BY COMMISSIONER WEFALD:

Q. In your testimony you say that the company -- you understand from company personnel and from the exhibit you prepared has recorded 1.4 million of negative net salvage -- of net negative salvage for services during the years 1995 though 2001?

A. Yes.

Q. How does this number of actual cost of removal of services in five years compare to the plant removal costs of service which were figured at 140 percent depreciation?

A. I'm sorry. I don't know that because I didn't have the retirement date that goes with those costs of removal. I think that would be something to look at, but I just did not do it.

Q. So who would I get that --

COMMISSIONER WEFALD: Can MDU provide that information to the Commission as a late-filed exhibit?

MR. HOBERG: Mr. Pearce, did you understand the question and hear it?

MR. PEARCE: I'm not exactly sure we understand the question. Give us a moment here. We'll certainly do the best we can. We'll have to check with the other MDU personnel who are not here, but we'll certainly try to prepare what we understand that request to be.

MR. HOBERG: So it's possible you'll be able to file a late-filed exhibit on that?

MR. PEARCE: Yes.

MR. HOBERG: Okay. I don't think we've had any other late-filed exhibits to this point so that would be Late-Filed Exhibit 1, if you will, that information.

Q. (COMMISSIONER WEFALD CONTINUING) If this number were less than the planned removal cost of service at 140 percent, do some Commissions take a look at actual removal cost and use those versus what the company has planned through depreciation?

A. Well, I would say that most would look at the actual relationship between the cost of removal and the cost of the facility as they're retired, but you almost have to deal with this by vantage. In other words, if some mains were put in in 1968, say,

and removed in 1998, you would expect that to be something like what they had estimated in the depreciation study.

Q. In this case we're talking about the services, not the mains.

A. Okay. Well, and this would be true of either. Let me say services then. They would keep track of how many dollars of plant were involved adding services each year and you almost have to look at it year by year when the retirements are coming out, because, for instance -- and this isn't quite so true for services -- but if something goes in and then two or three years later is taken out of service for one reason or another, I mean, property is destructed or a road moves, any number of things can cause that, then you wouldn't necessarily expect the cost of removal to be what they estimate for the whole life of that group of assets in that vantage.

Q. Well, for example, I live in an older neighborhood built in 1915, so we started out with a coal furnace in our house, which was converted to natural gas when natural gas was brought to Bismarck. Do you know the year natural gas was brought to Bismarck?

A. Well, I understand it was quite early

because I was talking to somebody about the fact that natural gas came into Nebraska in either the late '40s or early '50s, and I understand it was earlier than that here, so it may have been.

Q. So let's say it was even 1950 and at that point then my service main was probably installed to my home.

A. Yes, I would -- it would have to have been.

Q. I've lived in the house since 1970 and there hasn't been any change in my service main during that time so I've been in there 32 years now. So are they anticipating someone is going to be coming out to my house in a couple years and taking out my service main that's underneath my cement driveway?

A. I don't know how long the kinds of equipment that might have been installed in the 1950s would last, but there's a range of time over which assets are retired and so a 50-year sounds like a long time, but that range may go -- assuming that the average life is 50 years, you could have some of them that last 90 years and some 10, but it would be over that whole range and many of them would be clustered around the 50-year point and it might make sense for that facility to be removed or

replaced, or both, because of safety or some other requirement, depending on the condition.

It's hard to answer it any better than that, but I think there are those kind of considerations and in a situation like that, assuming that you would continue to use the house and want gas service, there might just be a new service put in and the existing one removed at the same time or secured and not actually taken out of the ground. Because I suspect that 50-year-old pipe is not going to be worth much to anybody. First of all, if you're removing, retiring it, more than likely there's a reason for that and it's not very good stuff and so you wouldn't expect to be able to use it.

Q. So your answer to my question is that there is more to look at than the actual removal cost versus the planned depreciation removal costs?

A. Well, I think you can look at those things. I just believe you need to look at them in more detail and get down into it and know exactly what it is that you're looking at because there would be varied reasons for things once you got into the details and I think that it's necessary to look at those details.

But your thought of comparing what's actually happening in cost of removal and the relationship of that to the cost of the facilities that's being retired is exactly on point. I think that's what would be done in a depreciation study in connection with trying to estimate what those amounts would be. That's almost exactly what they would be doing. But it would be done at a more detailed level than on a broad overall basis because you don't learn as much unless you get down into those details.

Q. What if the Commission were to say to MDU that we should wait until they get their new depreciation study before we would proceed with this case?

A. Before you would complete the case?

Q. Mm-hmm.

A. I think that's a policy decision on their part. I couldn't answer that. My suspicion is they wouldn't want to do that, but I don't know.

COMMISSIONER WEFALD: Thank you.

MR. HOBERG: Thank you, Commissioner Wefald. Commissioner Clark, did you have any questions?

COMMISSIONER CLARK: I have none. Thank

you.

MR. HOBERG: Thank you. Any further questions of Mr. Jeter?

MR. DILLER: I just have one that I might add on to Commissioner Wefald's.

Since we're getting the cost of removal for service signs, I think you said five years, Commissioner. Did I hear that right?

COMMISSIONER WEFALD: We know they have put on the record 1.4 million is their cost of removal and I asked how that would compare to what they had planned in their depreciation study.

MR. DILLER: I think it would be helpful, too, along with that late-filed exhibit, if we could have the number of service lines retired during the last five years.

MR. HOBERG: You want that as a separate exhibit?

MR. DILLER: However they want to do it.

MR. HOBERG: Late-Filed 2 then. Is that possible?

MR. PEARCE: Sure.

MR. HOBERG: Thank you, Mr. Diller. Any further questions of Mr. Jeter? Mr. Binek?

MR. BINEK: Yes, I have one.

FURTHER CROSS-EXAMINATION

BY MR. BINEK:

Q. You said that you incurred 1.4 million in cost of removal; is that correct?

A. Yes. Now, I think somebody said five years. That data was actually from '95 to 2001, so it's actually seven years.

Q. Okay. But those were the costs incurred by the company. What were the amounts that the company collected for salvage?

A. I think that's the same question as we were just discussing. I don't know because I don't know the amount of the plant that was retired, nor how old it was so I can't answer that question, but I do think that that would be answerable with the additional data in the late-filed exhibit, if I understand what's been asked for.

MR. BINEK: I would ask that that be included in that data.

COMMISSIONER WEFALD: And, actually, if it's supposed to be seven years, I would appreciate that. I'm sorry. I didn't realize. '95 through 2001 is seven years.

THE WITNESS: That doesn't match his exhibit, but that's what the data was that I got.

MR. HOBERG: Mr. Pearce, did you get that?

MR. PEARCE: Yeah, that's fine. I have one redirect question, too.

MR. HOBERG: Okay. Does that conclude yours, Mr. Binek?

MR. BINEK: Yes.

REDIRECT EXAMINATION

BY MR. PEARCE:

Q. Mr. Jeter, in the course of your cross-examination you were asked to read two paragraphs from a NARUC manual. Would you comment on the content of that paragraph and add any additional information you might wish?

A. Yes. The sense of that was that their gross salvage and cost of removal are to be reflected in depreciation rates and that it's difficult to estimate and that some Commissions have abandoned the procedure and moved to a current period accounting. And I just want to say that I think that's absolutely wrong for the reasons I talked about earlier, because it doesn't reflect those costs over the proper period and get the right customer charged with those costs over the life of the facility that's involved.

And then I'd also like to read in the

paragraph that followed the ones that I did read. It says, Determining a reasonably accurate estimate of the average or future net salvage is not an easy task. Estimates can be the subject of considerable discussion and controversy between regulators and utility personnel. This is one of the reasons advanced in support of the current period accounting for these items. When estimating future net salvage, every effort should be made to ensure that the estimate is as accurate as possible. Normally, the process would start by analyzing past salvage and cost-of-removal data and by using the results of this analysis to project future gross salvage and costs of removal.

And the reason I'm very much opposed to this is the reason that the Financial Accounting Standards Board has issued its new SFAS 141. They are deadset on recognition of these costs over the life of the facility, not at the end of the life. And if you think of that in terms of a nuclear generating station, you can see why. Because if you wait until the end of the life of a nuclear plant and then put that cost of removal into the rates at that point, you're charging the future customers, if you can recover, rather than those that benefited

from the use of the nuclear plant during its life. And that's just plain wrong, as far as I'm concerned, from a regulatory standpoint. And it's easier to understand with a nuclear plant, but it's the same thing with others. It's much more difficult to estimate some of these lives of mass properties where they retire over long periods of time, but it's still doable and it's certainly worth the effort in order to get the costs recognized at the time that those properties are serving customers.

MR. HOBERG: Mr. Jeter, did we get in the record what you were reading from again?

THE WITNESS: I'm sorry. I was reading from page 157 of the NARUC Public Utility Depreciation Practices Manual, dated August 1, 1996.

MR. HOBERG: Thank you.

THE WITNESS: And it was -- the part I read was the fourth paragraph on that page and it continues on page 157 and it continues on the next page.

Q. (MR. PEARCE CONTINUING) Just one thing. I think you misspoke. You said 141 and you meant 143, FAS?

A. Did I say 141? I'm sorry. Yes, SFAS 143.

MR. HOBERG: Mr. Binek, do you have another question?

MR. BINEK: Yes, I have one more.

RECROSS-EXAMINATION

BY MR. BINEK:

Q. If you use recent past salvage as a guide, would the overall net salvage be positive or negative?

A. Well, recent based on Mr. Majoros' exhibit would be positive salvage.

MR. BINEK: Thank you.

MR. HOBERG: Anything further then of Mr. Jeter? Thank you, Mr. Jeter.

MR. PEARCE: I'll call Craig Keller.

MR. HOBERG: Mr. Keller, you testified yesterday; is that correct?

THE WITNESS: Yes, I did.

MR. HOBERG: I just need to remind you then that you're still considered to be under oath.

THE WITNESS: Yes.

MR. HOBERG: Mr. Pearce, please.

CRAIG A. KELLER,

having been previously sworn, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. PEARCE:

Q. Mr. Keller, you previously identified yourself and gave your position with the company, I think, yesterday. And you have filed some rebuttal testimony in this case. I would ask if you could simply summarize the main points of your written rebuttal testimony and then add anything that you feel is a part of rebuttal to the staff's case.

A. Sure. I would like to start by addressing the capital structure and costs of debt that was used by Mr. King. And I'd like to start by just making sure that when we use the name MDU Resources Group or Montana-Dakota, that we understand that they're the same legal entity and that the balance sheet is the same. MDU Resources Group in essence is really a separate cost center within that legal entity where we track the costs for our resources group and we allocate those to our different businesses. So, you know, when we talk about Montana-Dakota, we talk about MDU Resources Group's balance sheet, we're talking about the same thing.

And I think it's in this statement, Statement A, where Mr. King tries to, I should say, connect the dots between Centennial's debt and

MDU's. He looks at Statement A and on page 1 where we have the unconsolidated balance sheet of MDU Resources Group and he's using that to connect to the consolidated footnotes in that same schedule. And the difference between a consolidated balance sheet and an unconsolidated balance sheet is that MDU's unconsolidated balance sheet does not reflect the assets and liabilities of the subsidiary companies. It only reflects the investment MDU has made in those companies. On the consolidated balance sheet it would reflect all the assets and liabilities of those companies and in essence you'd have a grossed up balance sheet of all the assets and liabilities of the corporation.

In Statement A, page 1 of the balance sheet, that only reflects the unconsolidated balance sheet of MDU. However, when we go to pages, I think, 3 through 29, which are the footnotes, those reflect the consolidated footnotes of the company, the ones that were attached to the company's annual report. On page, I think, 11 of that, footnote 6, it lists the long-term debt, including Centennial's, on which it would be listed because it's a consolidated balance sheet. And Mr. King implied that that debt was part of the unconsolidated

balance sheet of MDU and that's not correct. That would be Centennial's debt and is not really part of Montana-Dakota's individual balance sheet.

Yesterday King made a statement that MDU was attempting to build, quote, a firewall around MDU to separate the debt of Centennial from MDU. And that is exactly what MDU is trying to do. And I'd like to explain to you the reasons for this and why I believe the Commission should support MDU in its efforts. In questioning Witness King, Commissioner Wefald raised a concern as to the negative effect a bad business decision at Centennial, one of its companies, would have on MDU and its cost of debt. And, quite frankly, MDU, as well as the rating agencies, are also concerned about this. The concern is that bad decisions made at Centennial Energy or one of its subsidiary companies could cause default or cause a bankruptcy that could roll up into Montana-Dakota or MDU. And what we're trying to do is prevent this from happening.

One of the things that -- we heard Mr. King use the term "firewall." The same kind of philosophy or term is used by the rating agency. They call it ring fencing and attorneys call it

bankruptcy proof, but what we're trying to do is protect the assets and the customers of MDU from our nonregulated businesses. And the concern we have is that in the event that there were a default at Centennial or one of its companies, we do not want that to cause a default of MDU. Likewise, if there was a bankruptcy at MDU -- at Centennial, we do not want a bankruptcy judge to have the ability to collapse the corporation and provide the creditors of Centennial or the subsidiaries of Centennial, we do not want them to have access to the assets of the utility. We want to protect our customers from this happening.

And there's some things we can do. And one of them is we need to keep separate and distinct books from Centennial, which we currently do. We need to conduct the business of the utility in a manner that is clearly distinguishable and separate from the operations of Centennial, and we do that. MDU does not participate in a money pool or comparable intercompany fund arrangement with Centennial. This means that MDU does not commingle its corporate funds with those of Centennial. It means that MDU and Centennial maintain their own distinct and separate credit facilities. Neither

have access to the other's credit agreements. To further strengthen this point, MDU does not lend funds or otherwise extend credit to Centennial, and Centennial does not do the same back to MDU.

Mr. King stated yesterday in his testimony that all debt is raised and issued by MDU and is simply pushed down to Centennial and the subsidiaries of Centennial, and this is not correct. A first mortgage lien of MDU's electric property and gas is what's used to secure the long-term financing for MDU. The only property that can be pledged under this is qualifying utility property, and this is our electric and gas property. Centennial cannot pledge its nonregulated assets under this agreement and it cannot access this agreement. There are no cross-default provisions in this credit facility where a default at Centennial would trigger a default at MDU. And there are no requirements from MDU from the capital to advance funds for Centennial or a subsidiary of Centennial under this agreement.

Centennial's credit agreements are separate from MDU and require Centennial to use the funds that they raise under this agreement to conduct the operations of Centennial and the Centennial subsidiaries in order to preserve Centennial's

financial integrity. And, simply stated, if we allowed MDU to have access to the funds raised under Centennial's financing agreement, we in essence would give a bankruptcy judge an opening to take and collapse the company in the event of bankruptcy by Centennial to give those creditors of Centennial access to our assets. And they would do this under the assumption that we may be using these funds to benefit MDU at the expense of the Centennial creditors. So we do not want to do this.

And to further strengthen this position, we make it not only clear to anyone that has borrowed money to Centennial that MDU does not guarantee the debt, but nowhere in those instruments do we allow the name MDU to be used in Centennial's credit agreements.

I'd like to comment on Mr. King's Exhibit 16 yesterday. What that was, it was an exhibit showing the working capital of Montana-Dakota. And on there he had materials, fuel costs, prepayments, customer advances. And he made the comment there were material differences in these accounts. In my rebuttal testimony I stated that these accounts remain relatively constant and support the long-lived assets such as property and plant. And I

further stated it is the Company's policy to finance our long-lived assets with long-term debt. This helps mitigate exposure from interest rate volatility over the asset's life.

Now, looking closer at this exhibit, you'll see that from June to July there's a big decrease in the customer advances. And this decrease accounts for essentially most of the variance in the schedule. And this was a result of a refund of a customer advance that was out of the ordinary. It was an abnormal customer advance and it does not reflect normal activity. Without this adjustment in here, the fluctuations would be minimal and it would really be insignificant to the rate base.

You know, I find it interesting that Mr. King himself is inconsistent in his method of determining capital structure with that of setting debt cost. In arriving at debt cost, Mr. King uses the argument that all debt is commingled. Mr. King uses the argument because it provides him with the lowest cost on debt. If Mr. King makes his argument and assumes that debt is commingled, then it would only be logical and consistent to assume that equity, as well as all capital, is commingled. To follow through with his arguments and logic,

Mr. King should then have used the capital structure of the consolidated MDU resource company versus just the capital structure of MDU.

Now, if you look at the consolidated capital structure, the equity portion is over 60 percent, compared to the capital structure just of MDU, which is roughly 50 percent equity. However, if you were to use a consolidated capital structure, you would have to increase the costs of capital. So he chose to ignore. What he does, he picks the capital structure when it fits him and he takes the weighted average wherever it provides the lowest cost of debt, and it, in my mind, is arbitrary and inconsistent.

In testimony yesterday Mr. King stated that the Commission should use December 23rd, 2001 as a base for the capital structure. As I point out in my rebuttal testimony, North Dakota Administrative Code 49-05-04.1 allows for projected test periods. MDU extends a considerable effort to develop budgets and forecasts from which to make decisions and guide our organization. Mr. King did not provide any testimony or evidence to suggest or dispute the accuracy of these projections and, in fact, Mr. Majoros accepts the projected revenue from this

2000 test period in his testimony.

MR. HOBERG: I'm sorry, Mr. Keller, what was the code section you referenced?

THE WITNESS: 49-05-04.1.

MR. HOBERG: That would be the North Dakota Century Code then.

THE WITNESS: Okay. I stand corrected.

MR. HOBERG: Thank you.

THE WITNESS: In setting capital structure and determining debt cost, Mr. King's methods and arguments are illogical, unfair, and even ignore North Dakota's Century Code. Mr. King's attempt to commingle debt with that of Centennial and that of MDU is not only bad public policy, but it also increases the financial risk for our customers. The capital structure that MDU has filed is correct and should be used.

I'd also like to just briefly document addressing comments made on 143. I think Mr. Jeter has done a very good job of addressing the company's position, but the industry itself -- when I refer to industry, I'm really talking about EI and AG, which are associations for electric and gas industries. They are recommending that we take a go-slow approach to FAS 143, and we agree with this. The

methods we use now are straightforward. They're easy to understand and they're easy to implement.

MDU will need to adopt and comply with FAS 143. We're still studying the effects of that and we don't know the ultimate outcome, but we believe that any changes that are required because of that will have little or no effect on MDU or its customers. And the reason we say that is because if there's any difference between what's required in 143 versus what we do for regulatory purposes, we will defer on said regulatory assets as allowed under FAS-71.

I also thought it would be appropriate for me to talk a little bit about the negative salvage or positive salvage and the removal of costs. I worked in the tax department for a number of years, and through the years I spent a lot of time combing through the depreciation reserves for MDU. And I've looked back over probably, oh, early '70s to late '80s. And over all that time, when I looked through those, when you see large amounts of positive salvage, it almost always resulted from one of three things. Either there was a sale of an asset or some insurance proceeds that we received or we traded an asset for another asset.

If we looked at the period we're talking about, there was a sale of an asset and that was the Schuchart building we talked about. And that was sold at net book value. Mr. Majoros refers to that and he focuses on that part of the reserve where the salvage shows up. However, there's also offsetting adjustments in the reserve for the retirement of the asset as well. So the effect was that there was no gain or loss on that asset. And while there shows large amounts of salvage, there really -- all the company did was collect its cost for that building from the affiliate to which it was sold.

Insurance proceeds in this time period, we received insurance proceeds due to the hailstorm we had in 2001, and we received money for a lot of vehicles and other stuff that was damaged. At the end of it, when we did some repairs and stuff, we had money left over. We took that money and we credited the reserve salvage for that so our customers would benefit in the future from that, rather than take any of that money to the bottom line for the shareholders. That money will help lower depreciation rates going forward.

On trade-ins, we have a program where we trade in our equipment, some of our equipment every

other year. It's a very effective program and we can trade equipment in and get brand-new equipment for almost little or no cost. The effect of this is that when you look at a reserve, you'll see large amounts of salvage going in. In effect, all it is, we're trading in. We're showing the salvage on one hand. We're replacing a piece of equipment so we have a property addition on the other hand. There's really no net increase in plant because of those transactions. It just shows up as salvage.

Removal costs, when we talk about mains or services, in talking to some of our people our normal policy -- or I should say a normal retirement of a service in our company would be that we would take, we would cut the service -- the riser off, which would be next to the customer's premises. We would cut that off below the surface and cap it with a weld or if it's plastic, we put a seal on there. But we also will cut it at the main, and we'll cap it there as well. But we just don't cap and leave the whole service line in the ground. The policy or the procedure we usually do is, we take and remove at least a portion of that service line to move it beyond the public easements, and we do that for some reasons. One of them is that we don't want gas flow

in this thing. We don't want the exposure of gas flowing through there. We also don't want dead lines sitting next to the -- you know, to the mains. We don't want the risk that someone may inadvertently mistake a dead service line for the main and think that they've located the proper line, and we don't want to have a situation with our line locators going out there and accidentally marking the wrong line.

The cost can be quite expensive to do this here, because what you're usually doing here, what my people are telling me, is a lot of times when you are doing removing, you're excavating and repairing under concrete and asphalt so the cost can run pretty high. And I think those contribute to the $1.2, $1.4 million that we're seeing in there. The other comment they're saying is that there are now rules that require the company to maintain detailed records of our dead lines. And so our concern or our thoughts are going forward is that rather than seeing a decrease in these costs, we may see these costs increase in the future because we expect there could be more rules coming down regarding dead lines.

So I guess the bottom line is, we've got

all these things going through reserves. Unless you do a thorough depreciation study, ask the right questions, I think it's very difficult to know what the proper depreciation rates are going to be. And it would be my comment the last time we did a thorough depreciation study was 1991. It was done by Stone & Webster. And we haven't done one since. We're looking at doing one.

One of the reasons we haven't had one completed is that right now it's tough to get consultants. Everyone is busy with 143 and everything else. We also ran into a problem in that Stone & Webster, who previously did our study, they had some financial problems, some people turnover and they moved. They have lost all our records that we had. So it's not just a matter of updating our records going forward. We're going to have to go back and provide and reprovide all our records from back as early as we can -- you know,. I think we have most of our records, but we're going to have to redo it. So it's going to take a little longer than our prior study. But we're hopeful to have it done by the end of the year.

It would be my recommendation since the last thorough study done was 1991, that that should

be used for setting rates in this case, and that 143, as recommended by Mr. Fox's opening remarks, is that we should move this to another day. It shouldn't be handled in this case.

MR. HOBERG: Thank you, Mr. Keller.

Any additional questions of Mr. Keller?

MR. PEARCE: I have no questions. I just will offer the exhibit.

Q. (MR. PEARCE CONTINUING) Craig, did you prepare your prefiled rebuttal testimony?

A. Yes, I did.

MR. PEARCE: And that's marked as Exhibit 23. I'll offer that at this time.

MR. HOBERG: Exhibit 23-53 --

MR. BINEK: No objection.

MR. HOBERG: -- is admitted. Okay.

Mr. Pearce, did you have some questions of Mr. Keller?

MR. PEARCE: I don't.

MR. HOBERG: I'm sorry. I looked at Mr. Binek and said Mr. Pearce. Mr. Binek.

MR. BINEK: I was about to start asking questions.

COMMISSIONER REINBOLD: These guys are not interchangeable.

MR. HOBERG: Mr. Binek, please.

MR. BINEK: Thank you. I'll take his money, though.

CROSS-EXAMINATION

BY MR. BINEK:

Q. Mr. Keller, if there's a bankruptcy of MDU Resources that is a result of activities of either unregulated or regulated entities of Montana-Dakota or MDU Resources, isn't a bankruptcy court going to look at all assets of MDU Resources to satisfy creditors' claims?

A. There's -- it depends on what level. You're saying it's at the parent company level?

Q. Right.

A. At the parent company level, they can look at the assets of that, yes. However, I should point out what we're protecting, is we're protecting our regulated customers from the nonregulated business and that's what you're -- you know.

Q. I realize that, but the protection only goes so far.

A. Well, we're trying to do everything we can do to strengthen that as best we can.

Q. Now, I'd like to have you turn to page 3 of your rebuttal testimony. And specifically at line

16. Are you there?

A. Yep.

Q. Okay. At line 16 you object to Mr. King's use of a historical year-end 2001 capital structure and argue instead for your forecasted 2003 capital structure. What capital structure did the company use in its rate-of-return testimony in the electric case earlier this year? That's PU-399-01-186.

A. I'm going to defer that to Rita.

Q. Okay. Now, please turn to page 5 of your rebuttal testimony. At line 14 -- beginning at line 14 you state that FAS 143 does not provide levelized depreciation rates, but instead pushes higher costs toward the retirement date of an asset due to the discounting method used.

Is it your contention that the current method of recovering negative salary produces a levelized effect on ratepayers over the life of an asset?

A. My comment when I made that comment, and I think Mr. Jeter addressed that quite well, is that because of the discounting that is associated with 143, it tends to push numbers, push a cost toward the back end because of the way the discounting interest accretion is done and that's what I'm

addressing here. If you're going to ask specifics on 143, I guess I would defer to Mr. Jeter because I think he's the expert in that area.

Q. Okay. Let's move forward a little bit and see where we end up here.

A. Okay.

Q. If we assume that an asset has a removal cost of, say, 50 percent of its original cost, that cost is recovered ratably; that is, evenly over the life of the asset, correct?

A. That's the theory behind it, yes, the goal.

Q. And that's what you mean by levelized?

A. When I mean levelized -- when I use my primary term levelized, is that we have rates that are consistent and that the rates aren't changing from year to year. That's what I refer to as levelized. And my concern was under FAS 143 because of accretion, if you follow that to the rule, you're not going to get -- you know, you'll see it pinned on the asset as the asset ages. Because of interest expense, accretion is going to change every year. You will not get levelized rates. They will constantly fluctuate. And when I refer to levelized, that's what I'm referring to.

Q. Haven't you forgotten the rate base effect?

When an asset is new, it has very little negative salvage, the removal costs accrue and ratepayers pay a return in income tax on the whole investment; isn't that correct?

A. Can you restate that for me, please?

Q. When the asset is new, it has very little negative salvage cost that's accrued; is that correct?

A. If you're accruing it ratably, I would assume so, yes.

Q. And the ratepayers pay a return in income tax on the whole investment; isn't that correct?

A. On the whole investment net of depreciation reserve?

Q. Yes.

A. Yes.

Q. Only later when the accumulated reserve is built up to a reasonably high level do ratepayers get the benefit of the rate-based deduction represented by accruals of removal cost; isn't that also correct?

A. I would disagree with that. They get the benefit the whole time because -- they get a return basically based on the unrecovered book value, so, you know, that rate base deduction, as you collect

more depreciation will grow, but they're getting the benefit over the whole time.

Q. But it grows; isn't that correct?

A. On that particular asset, yes.

Q. Isn't it true then that the existing system is front-loaded in contrast to the back-loaded recognition of costs under the FAS 143 procedure?

A. I would disagree with that as well. I think the idea of 143 is to accrue it ratably over the life so that you have a proper matching of use with cost. So, you know, I think when we say -- I think 143 tries to separate the interest component from the other pieces. What they're trying to do, I think, is to add some more complexity there, but I think the intent is to accrue it ratably.

Q. Because of system growth and because of inflation isn't the company always adding more plant expressed in dollars than it is removing old plant? Maybe -- they're adding more new plant than they're removing old plant?

A. Are we talking dollars? Are we talking feet? What are we talking?

Q. Dollars.

A. I believe that we've been holding -- you know, they've been fairly constant over the last few

years, that our overall utilities additions and reserve has been fairly constant, but, you know, I think in some years it's less, some years it's more.

Q. Has there ever been a year when the company's gross plant declined?

A. Gross plant declined? The gross plant?

Q. Right.

A. I couldn't answer that question.

Q. Now, please turn to page 6 of your rebuttal testimony, line 2.

A. Excuse me?

Q. Page 6, line 2. There you say that you consider this plant to have an indefinite life. What do you mean by indefinite life?

A. When you say plant, we're talking about the system. We have an obligation to serve the customer. And so as long as we have that obligation to serve the customer, you know, we think that we're going to have to maintain the replacements whenever necessary to keep the system operating.

Q. Okay. Can you identify the specific plant accounts that you consider to have an indefinite life?

A. Well, I mean, I think what -- the responsibility is to -- we have the obligation to

provide service, reliable service indefinitely, so I would guess that the accounts and the assets we have are necessary to do that, so my question would be which of them -- you know, unless technology makes something obsolete, I'm guessing we need all those accounts. We're going to have to replace all of those assets to continue that service.

Q. Did you hear me asking questions about the building that was sold?

A. Yes, I did.

Q. And I think that I was referred to you.

A. Okay.

Q. First of all, what building is this that was sold?

A. It was the Schuchart building.

Q. Okay. Now, where is that building located?

A. It's located on Divide, the old Gold Seal building.

Q. That's the gold building up here?

A. Yeah.

Q. When was that building sold? I'm going to go through the same questions.

A. I think -- I believe it was transferred, sold to an affiliate, I believe it was July 1, 2001.

Q. What was the original cost of that

building?

A. I don't have the information. It was several million dollars. I don't know the exact number.

Q. Okay. But you can provide that information?

A. We can provide it, yes.

Q. Okay.

A. Now, are we talking about the original cost? There was an original cost plus improvements that were made to the building.

Q. Right. And I think we're going to want all of that.

MR. HOBERG: You want a late-filed exhibit, Mr. Binek?

MR. BINEK: Yes, please.

MR. HOBERG: That would be 3, Mr. Pearce.

MR. PEARCE: That's fine.

Q. (MR. BINEK CONTINUING) And when was the building purchased, do you know that?

A. It was purchased in the early -- early to mid 1990s. I'm not certain of the date.

Q. Okay. Once again, I would ask that all of this information be included in a late-filed exhibit, but I'll go through it anyway --

A. Sure.

Q. -- if you can provide some information. Why was the building sold --

A. Initially, when the building --

Q. -- or transferred? I think you used the term transferred.

A. Transferred, sold. Initially, when it was purchased, we were running out of space in our current building so we acquired this building. As the company grew, the share of activities associated with the resources group became less and it was decided that it should be moved outside of the utility since it's -- you know, I think the utility now is quite a bit less than half of the operations over there, so it was decided to move to a different company.

Q. Okay. And the sales price, do you know what the sales price was?

A. The sales price was set at the net book, unrecovered book value of the asset, and I don't know the number. It seems to me it was in that four- to five-million-dollar range. I don't know. It's here someplace.

Q. And what was the entity that it was sold to?

A. It was a subsidiary of Centennial. I believe the subsidiary's name is Future Source. I can't give you the exact legal name. Future Source.

Q. Once again, that will be included, I assume. And I asked Mr. Jeter, I believe it was, to provide all of the journal entries relating to the sale.

A. Okay.

Q. Was there an appraisal done prior to the sale or transfer of this building?

A. I don't believe so, but I can't answer that for sure, but I do not believe there was an appraisal done.

Q. Do you know what the tax appraisal of the building was at the time of the sale?

A. No.

Q. Can you provide that information also?

A. Yes, we can.

MR. BINEK: Okay. And I'm asking that all of that information be included in a late-filed exhibit.

MR. HOBERG: Late-Filed Exhibit 3.

MR. BINEK: I have no further questions.

MR. HOBERG: Thank you, Mr. Binek. Commissioner Reinbold, did you have any questions?

COMMISSIONER REINBOLD: I think so. Probably a statement, too. Everybody is making statements.

EXAMINATION

BY COMMISSIONER REINBOLD:

Q. You know, when I was a kid out at Hebron, 50 miles west of here, MDU was a pickup and two guys with patches on their arms and natural gas and electric service and that was MDU. And everybody accused them of long coffee breaks. And that was kind of a joke in the community, you know. But that wasn't -- I don't think it was the case. They're very efficient. And the point I want to make now is that from that point to now we've really come a long way. And when I say that, I understand MDU Resources Group, Inc., has purchased a number of businesses.

Can you kind of rattle off a list of the businesses that the big MDU Resources now has?

A. Well, I think probably best would be to talk about the lines of business we have. We have, of course, our electric/gas utility operations. We have WBI, which has a transmission and gas storage gathering, as well as an oil and gas exploration, and they also do some -- they have some companies in

what I call innovative technology, where they're looking at, I would say, breaking technology that's applicable probably to some of the things we're in. We also have Knife River Corporation, which invests in aggregate mining, as well as building, road construction and stuff, activities.

We have USI, which is Utility Services, Inc., which is involved in the building and developing of a -- I should say replacing, I would say, utility, electric, gas, overhead, underground lines. They work with the generation side. They do work in telecommunications, as well as inside electrical work, as well as traffic light signaling. And then we have Centennial Power, which is involved in the investment in IPP, looking at doing investments in IPP. And we also have our foreign operations that are currently in Brazil that have made investments in, I think it's 200 megawatts of a gas turbine and they're also looking at some other projects in South America.

Q. You've come a long way?

A. Yeah.

COMMISSIONER REINBOLD: That's all the questions I have.

MR. HOBERG: Thank you, Commissioner

Reinbold. Commissioner Wefald, please.

EXAMINATION

BY COMMISSIONER WEFALD:

Q. In Mr. Jeter's testimony he had said that Montana-Dakota has retained AUS Consulting to complete another depreciation study by December 31, 2002. Are you anticipating that the study will be done by December 31, 2002?

A. Well, we're very hopeful it will be done. As I said, you know, one of the issues and problems we ran into is that we have to provide all our historical records because of the fact that, you know, they inadvertently were lost, but we're hopeful we'll have that completed in that time frame, yes.

Q. That was one thing I was wondering about. With the 1991 study, if the Commission wanted to go in and take a look at that and you're recommending the Commission use the 1991 study, is there any backup data that's available to the Commission at this time other than the few summary charts?

A. I couldn't answer that without talking to our plant people or Stone & Webster and find out what exactly -- you know, what records they do have left from that, you know, that they were able to

locate versus what they don't, but I'm not sure how much information would be available.

COMMISSIONER WEFALD: Thank you.

MR. HOBERG: Thank you, Commissioner Wefald. Commissioner Clark, any questions of Mr. Keller?

COMMISSIONER CLARK: I do have a few.

EXAMINATION

BY COMMISSIONER CLARK:

Q. Getting back to this building, if through the tax appraisal that MDU is going to be submitting, and I understand there wasn't, doesn't sound like, a fair market appraisal done, but if the tax appraisal comes back in the market that the assessors here were setting the value of that, if that ends up being far in excess of the net book value, would it be fair to ratepayers to somehow give them some sort of realization of the difference between the two that, in fact, this asset that had been in the rate base that the ratepayers have been paying for was then transferred to another affiliate within the MDU group, but at far less than the market value of that?

Would it be fair to somehow credit, maybe through an offset of that credit that was originally

given, so that the ratepayers see some realization of that?

A. You know, I would comment that that may be fair for the portion that was allocated to the utility business. A couple comments I'd like to make. One, is that while we didn't do a fair market value, we believe that the book value was very close to the fair market value. So we don't believe, you know -- if we thought there was a big discrepancy in the values, we would have went through and did a fair market value of that, but we don't think there was a big difference between fair market value and net. I'm not sure what the tax value is. I'm not sure if that is a locally assessed or centrally assessed asset. If it's locally assessed, we would have the tax value. If it's centrally assessed, I don't believe it would have a value just for that stand-alone business.

Q. What would be the basis of saying that you think it's pretty close to what the fair market value was, the net book?

A. Well, because we haven't had it that long and we made some pretty substantial investments in there, so we're pretty comfortable that the fair market value -- the fair market value would not have

been much higher than the book value was.

Q. Getting back to the depreciation study that is ongoing, kind of lead me through the -- why was the decision made to have a depreciation study at this time? Was it for the rate case?

A. I'm going -- I'm going to defer that to Rita, but I believe one of the things is, one, it's been a while since we had one, but, secondly, with the cases coming up, we wanted to take a look at it. You know, we look at our plant all the time. We don't think -- you know, one of the comments made, we don't think the makeup of our plant has changed a lot since our last study, but, you know, we thought it may be appropriate to do one. I think it was recommended that we do one for these cases, but Rita could probably answer that better than I can.

Q. When it was originally contracted to be done, was it contracted to be done by the time that this rate case was to be taken up by this Commission?

A. We -- right now, I don't think there's as many consultants in the business doing depreciation studies. You know, the number of consultants -- there seems to be a lot fewer than there have been in the past. We had a very difficult time getting a

depreciation consultant. It was tough to get them. You know, they're quite busy right now. It was difficult to get one. The individual we hired did a depreciation study, just completed one for Great Plains, and we asked him to start on this one as soon as he could and he said he would do his best effort to get it done by the end of this year.

Q. I guess I'm a little confused by that, because I know in the RFP that we put out here at the Commission, I think one of the things that was originally in that was a depreciation study and at some point we decided to peel that off and that I guess MDU would be handling it, but -- and maybe Mike will be able to speak to this when we get to Mr. Diller's questions, but it seemed to me that we had at least five that said that they could get it done by the time that we needed to get it done.

You're saying MDU didn't find anybody out there who could get it done in time?

A. We looked for consultants that had been used by our peers that we knew were very reputable and very good and, you know, we kind of basically looked at -- you know, the people we looked at were the ones we wanted to use. They're very busy right now and timingwise it takes a period of time to do

this and it takes a period of time to gather all these records that we have to go back and recreate, so, you know, we just had difficulty getting a commitment to get it done in a time frame that -- in time to have -- you know, time to have -- prior to the case being filed or this date.

Q. Well, the depreciation case that you have, the study that you have being done, is it going to be ready for the rate cases in the other states within your jurisdiction; South Dakota, Montana, Wyoming, the ones we've heard about that will be --

A. Again, I'm going to have Rita -- he's going to do the study for Montana-Dakota gas operations and would include all our jurisdictions. Timingwise, if that's going to fit with our schedule, Rita could probably answer that.

Q. Okay. Do you know how much -- how much did this particular study cost that you're doing? I know we heard before they're fairly expensive.

A. I'd have to get you that information.

Q. Has MDU received any preliminary information yet on that depreciation study, or is that just all delivered at once?

A. We haven't received any preliminary numbers, no. We're in the process now of providing

information so the consultant can do his work.
MR. HOBERG: Commissioner Clark, did you want a late-filed exhibit on that question?
COMMISSIONER CLARK: I'm sorry. Which question?
MR. HOBERG: The one about how much it costs.
COMMISSIONER CLARK: Yeah, that would be good, if you can provide it.
MR. HOBERG: Late-Filed 4, Mr. Pearce.
COMMISSIONER CLARK: That's all the questions I have. Thank you.
MR. HOBERG: Thank you, Commissioner Clark. Mr. Diller, please.
MR. DILLER: Just a couple.

EXAMINATION

BY MR. DILLER:

Q. Mr. Keller, do you have any knowledge of any agreements that the staff reached verbally with the company as to who was going to do the depreciation study? Do you have any knowledge of that?

A. I don't have any knowledge of that, no.

Q. Okay. I'd also like to add on to Commissioner Clark's late-filed exhibit, if it's all

right, the cost associated with supporting this 11-year-old depreciation study in this proceeding. Since it's going to be virtually obsolete in three or four weeks or a couple of months, whatever it is, I think that would be some information that the Commission might be interested in.

A. Could you rephrase that? Make sure we get what you're looking for.

Q. I just want to know what -- I want to know the total cost to the company to support the 11-year-old depreciation study in this proceeding. Had the depreciation study been done before this proceeding, we wouldn't have spent all this time and money talking about an old study that's not going to be worth anything in a couple of months. So I'd like to know what the total cost to MDU is to support.

A. Well, you know, to say it's not worth anything I think is kind of -- it's a study, but it was a thorough study that was performed and, you know --

Q. Did I hear you say -- I couldn't really hear. You said it real quickly. You said it wasn't done in time because you lost some information?

A. I said one of the reasons we can't get it

done as quickly as we'd like was because we didn't lose some information. Stone & Webster, who performed the last study, lost a lot of the data.

Q. So then if staff had hired a consultant then to do the depreciation study, since we had offers to do that in time for this proceeding, would we have had the same problem? Would we have --

A. It would have been difficult to give you the information. Again, Mr. Jeter may be able to better address this than I can, but I believe to do a thorough, detailed study, I think there's a lot of historical information you're using and, you know, I think there would have been -- to do a complete study, which we are expecting done, I think would have been -- you know, may have been difficult for your consultant to do in time.

Q. Do you understand the question? I'm asking for the cost of --

A. Yep.

MR. DILLER: Okay. I think that's all the questions.

MR. HOBERG: Thank you, Mr. Diller. Any further questions then of Mr. Keller? Mr. Pearce, any?

MR. PEARCE: No.

MR. HOBERG: Mr. Binek, please.
MR. BINEK: Just a couple other questions regarding this depreciation study.

RECROSS-EXAMINATION

BY MR. BINEK:

Q. When did MDU retain a consultant to do the depreciation study?

A. I believe we started looking for one about maybe April and we had -- I think he committed to us, I think, maybe in May. I'm not sure of the dates. And we asked him to complete the Great Plains study and then begin work and complete the Montana-Dakota gas study.

Q. Okay. Included with the late-filed exhibit 4, I would like to ask that any correspondence relating to the contract with -- is it AUS?

A. Yeah.

Q. -- concerning the contract and the contract itself be included in that exhibit.

MR. HOBERG: Mr. Pearce, can you do that?

MR. PEARCE: Well, I assume that's possible, barring some kind of a confidentiality provision that that consultant may have. I don't suppose there is, but I don't know of that, so with that possible proviso.

MR. HOBERG: Anything further, Mr. Binek?
MR. BINEK: No.
MR. HOBERG: Any further questions of Mr. Keller? Thank you, Mr. Keller.
MR. PEARCE: Can we take a couple minutes? We have some exhibits to mark for Dr. Gaske.
MR. HOBERG: Yeah. Let's take five minutes.
(Recess was taken.)
(Exhibit 31, 32, 33, 34, 35, and 36 were marked for identification.)
MR. HOBERG: We're back from recess, and you're taking the rebuttal of Dr. Gaske at this time, Mr. Pearce?
MR. PEARCE: Yes.
MR. HOBERG: Dr. Gaske, you testified yesterday. I'll remind you today that you're considered to be under oath still.
THE WITNESS: I understand.
MR. HOBERG: Mr. Pearce, please.

J. STEPHEN GASKE,

having been previously sworn, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. PEARCE:

Q. Dr. Gaske, you've prepared prefiled rebuttal testimony in this case, have you not?

A. Yes, I have.

Q. Rather than go through all the testimony, I'm simply going to ask you to summarize that testimony, if you will, and add any additional rebuttal points that you feel are appropriate after the staff's direct case.

A. I will try to go through and summarize my testimony, but I won't read the whole thing. But during the course of the summary I would like to direct the attorneys and the Commissioners to various points in the record, because in the course of summarizing this, I hope to lead you through the facts that have been introduced into the record so that, hopefully, you'll be able to follow along why I'm saying what I am and what the basis of the testimony is.

As a broad general overview there are really four big issues with regard to rate of return. One is the question of the flotation cost adjustment. Another is the comparable companies that we use in our DCF analyses. One is the growth

rate that we adopt, and the last is our assessment of risk. With regard to those four things, I advocate a flotation cost adjustment, which I'll talk about in a few minutes.

There's not a big difference between us with regard to the comparable companies. But there are some differences and there's some key factors that you need to understand. There are large differences between us with regard to the growth rate, and I believe very strongly that my growth rate analysis is based on relatively objective, publicly available information. In contrast Mr. King's is really based on a fairly subjective analysis that on its face appears to be fairly biased.

With regard to risk assessment I have two different opinions, depending on which proxy group you use. If you were to adopt the Moody's gas distribution companies as the appropriate proxy group, I believe that Montana-Dakota is slightly above average in terms of their risk. They're slightly riskier than the average company. If you were to adopt the companies that derive more than 75 percent of their revenues from gas distribution operations, then I believe Montana-Dakota is average

relative to that group.

So having said that, I want to walk through and summarize the rebuttal testimony. With regard to the flotation cost issue, it's very important, I think, to understand why you should be allowing a flotation cost adjustment. The standard that's used to evaluate whether a cost of capital or rather allowed rate of return is sufficient is often referred to as a capital attraction standard. That standard requires a rate of return that is sufficient to enable the company to attract capital on reasonable terms. Now, whether the company actually is going out and raising capital, whether it's growing, whether it needs new capital or whether it's built a system that is not growing at all, it still needs to have an adequate rate of return. And so the standard that was established to set that rate of return was this capital attraction standard. There also is a comparable earnings standard, but when we go to using a DCF analysis, we're really looking at a capital attraction standard.

When you set a rate of return based on DCF analysis, in theory you are finding the cost of capital that makes the investors indifferent as to

whether they invest in this plant or in this company and put utility assets in the ground or whether they put their money in U.S. Treasury bonds or CDs or anything else. In other words, it's exactly the amount of money they need to be compensated for the additional risk.

In theory that means that when they invest $1 in utility assets, the value of that investment will be $1. That will be the market value after it's in the ground, if everything goes well. If they do invest $1, though, and they have to raise equity capital to invest $1 in utility assets, they have to essentially raise more than that. They have to go out into the market and raise perhaps $1.05. The five cents goes to the investment bankers and then they have $1 investment in utility assets.

Consequently, the rate of return needs to be adjusted to reflect the cost of flotation. It doesn't mean the company is going to go out and issue common stock. It doesn't mean that it's done so recently. It means that in order to be in a position to attract capital, in my opinion, to meet the capital attraction standard, it has to have a rate of return so that it can go out and issue that common stock without diluting the existing

investors' investment. I put together a numerical example of this concept that I'd like to hand out as an exhibit. It a little bit complicated, and I won't spend too much time on it, primarily because I think you'll fall asleep if I do.

MR. HOBERG: Is this 31?

MR. PEARCE: Yes.

THE WITNESS: Have you handed them out to everyone?

COMMISSIONER REINBOLD: What number is that?

MR. PEARCE: 31.

THE WITNESS: The general assumptions here are that the company has existing equity of $100, book value of $100, and it has a rate of return that is exactly equal to the investor requirement as determined by a DCF analysis. Under those circumstances, the market value should be $100. The number of shares outstanding is 100, so that the existing investors will have a book value of $1 per share and they have a market value of $1 per share. And I've put $1 into plant and that's what it's worth in the market. If they require a rate of return of 15 percent, they would get $15 of return. And that's what this shows across the first line of

numbers there.

If the public utility then goes out and issues new common stock because it needs to build new plant, and it issues $100 in new common stock, under the example here that I have, I've assumed that the investment bankers take 10 percent of that. They take $10. So the company issues $100 in common stock. They raise $100. $90 of that gets invested in a utility plant that's allowed to earn a rate of return. If they earn exactly the 15 percent required, the utility -- the new utility plant will have a book value of $90 that will go into the rate base. The market value will also go up by $90 because they're earning exactly their allowed rate of return. The number of shares outstanding has now doubled. They issued 100 shares all at $1 apiece. But they got net proceeds of $90 so they have 200 shares outstanding now and the new book value is 95 cents per share. And the new market value, if they are earning 15 percent, is also 95 cents per share.

The impact on the existing shareholders is that they were sitting there with stock that was worth $1 and now their stock is worth 95 cents. The reason being is that the company went out and built a utility plant and raised new common equity to

build that plant and was left with only $90 that they could put in their rate base, even though they had to issue $100 worth of common stock. The effect was to dilute the existing investors' return and the value of their stock. If they earn a 15 percent rate of return, the new larger company would have -- in the last column it shows that the new larger company would make $28.50 a year. They get a 15 percent return on the plant that's in the rate base, but they get a zero percent return on the flotation costs that they incurred.

And just in this example, instead of getting a 15 percent rate of return on all of the dollars that were spent, they get a 14.25 percent rate of return. They don't get the 15 percent that the DCF analysis told you that they required. They were not in a position to issue new common equity on reasonable terms without diluting the value of the stockholders' investment.

The second example I have here is a flotation cost adjustment where you increase the allowed rate of return by 10 percent. You multiply 1.1 times the 15 percent that investors require. That comes out with an allowed rate of return of 16.5 percent, which is more than what investors

require, but the goal here is to increase the market value above the book value by 10 percent. Here, if you look at the first line of the second example, you have a book -- starting book value of $100. Because you've applied a flotation cost adjustment, the market value is actually $110. So the market value is actually worth more than the book value. And with 100 shares you have $1 in book value and $1.10 in market value per share.

Now, when the utility goes out and says we need to build new plant, we need to raise common equity to invest in new plant, they sell 100 shares of stock for $1.10 because that's the market value of the stock. They raise proceeds of $110. $10 goes to the flotation costs. That ends up going to the investment bankers. And they're left with $100 that they can invest in utility plant. So by issuing the new common stock, they can add to their new plant by an amount of $100. That new equity if it has an allowed rate of return -- or I'm sorry. They add to their existing plant an amount of $100. If they get a 16.5 percent rate of return on that, it should be worth $110.

In total now, the company has 200 shares outstanding. They have $200 in their rate base

that's earning a return, and they have a market value of $220. The market value is higher than the book value in this case because you've made a flotation cost adjustment. The price per share and the book value per share is $1. $1 for the book value and $1.10 for the market value. You can see that those numbers are the same after the issuance as before the issuance.

The existing shareholders don't lose anything by virtue of the fact that the company has issued common stock. So the company is able to issue the common stock on reasonable terms without diluting the value of these existing shareholders' investments. That -- I don't think I'll walk you through the rest of it because it's a similar example down below.

The last example is just a much larger stock issuance, but the result is the same. You start with a book value of $1. You have a market value of $1.10. You're able to issue common stock and still -- the existing shareholders are still in the same position they were before.

Now, the question is, if the company has not been issuing common stock in recent years, why do you allow this? It's not because they need to be

compensated precisely for what they have just issued in the last year. It's not because they need to be compensated for what they know; in fact, right now they're going to earn next year. It's because the company needs to be in a position to do this at all times. It's a little bit like insurance. I didn't have a car accident last year, so why do I need insurance this year? I didn't have to raise capital last year. Why do I have to have a flotation cost adjustment so I'll be in a position to do so this year? That in essence is what the issue is about.

I mentioned in my rebuttal testimony that a number of other economists advocate exactly the same kind of adjustment. It's not an unusual thing. It is supported by the economic literature. Mr. King has indicated that the company's experience in the recent past has been that flotation costs have been 0.1 percent of the capital rates. That's actually very misleading, because, in fact, that's not what the flotation costs have been on the capital that has been raised.

Let me give you the biggest area where that becomes misleading. Mr. King has noticed that the company issued about $400 million worth of shares to buy other companies. Well, that's not raising

capital. You don't have big flotation costs to swap shares with someone. It's just a share swap. No cash was raised that could be used to go out and put mains in the ground for the public utility customers. Transactions like that don't have very big flotation costs associated. So you really can't include that in the concept of what does it cost this company if it were to have a need to go out and raise cash for the utility operations. The recent historical experience for the company is shown on page 5 of my rebuttal testimony, at lines 12 to 15.

COMMISSIONER WEFALD: Which page, please?

THE WITNESS: Page 5. In recent years the company has raised $157 million. It incurred flotation costs of 5.2 million and the flotation cost adjustment or the amount of flotation costs was 3.43 percent of the net funds that they raised. So that's been their recent experience. If they had no recent experience whatsoever, they would still need a flotation cost adjustment. If they had raised lots of money recently, they would need one on a forward-looking basis. Because this is much more of a concept similar to the idea of risk where it's a forward-looking thing where you need to be in a position to do so at all times.

The study that I've done that appears in my direct testimony was to look at many gas distribution companies and the costs that they have incurred in the past. And I came up with an average of about 4.85 percent as the average for gas distribution companies in terms of the flotation costs. I recommended in this case an adjustment of 4.75 percent as being on a forward-looking basis what the company might on average expect to incur. Sometimes they might get less than that. Sometimes they might have to pay more. And it's just depending on conditions in the market at the time.

I guess to summarize, there is a need for the flotation cost adjustment. Mr. King's adjustment of 0.1 percent does not reflect what it costs to raise capital, and I'll leave it at that on that issue.

The next issue I want to talk about is the proxy group. I have another exhibit to show you. Essentially --

MR. HOBERG: Are you offering 31?

MR. PEARCE: I'll offer it now.

Q. (MR. PEARCE CONTINUING) Dr. Gaske, did you prepare Exhibit 31?

A. Yes, I did.

MR. PEARCE: I'll offer Exhibit 31.

MR. HOBERG: Mr. Binek, any objection?

MR. BINEK: No.

MR. HOBERG: Exhibit 31 is admitted. Please continue, Dr. Gaske.

THE WITNESS: The next exhibit is Exhibit 32.

MR. HOBERG: I've got that here for the Commissioners.

THE WITNESS: I just noticed that there's one thing that's not correct here and that's in the sources I have bond ratings. And, in fact, there are no bond ratings on this page. I had carried that over from a copy of another exhibit. So --

COMMISSIONER WEFALD: Cross that out?

THE WITNESS: -- you can cross that out. The other source is the percent gas distribution, and with one exception that was taken from Mr. King's testimony. The one exception is Keyspan. And if you'll recall yesterday, an exhibit was introduced that showed it was from the Keyspan 10-K and it showed their percentage of revenues from gas distribution and I was asked about that percentage. I did not calculate it in my head, but I went home last night or back to the hotel and calculated 54.5 percent. So it's at the bottom there.

These are the proxy companies that Mr. King and I have used. They're all put together. We have used two different groups. I've used the Moody's gas distribution group. It's a group that I've used routinely in the past in gas distribution cases. The companies in that group are marked with an X here. It's commonly used as a group of companies that are representative of the gas distribution industry and people look at this group for information in general about the industry.

Each of the companies is included in Value Line as being a gas distribution company. Each of the companies is also included in the CA Turner Reports as being a gas -- or gas distribution or integrated gas company. So they are widely perceived to be gas companies. I believe it's appropriate to use these companies for a DCF analysis. It is something -- as I note in my testimony, Mr. King used the same companies about a year ago before this Commission.

Mr. King has proposed an alternative proxy group. And that's companies that derive at least 75 percent of their revenues from gas distribution companies -- or gas distribution operations. The

percent gas distribution column, as I said before, is taken right out of his testimony. You can see that the companies that meet the standard that he established include all of the companies down to Peoples Energy Corp, which derives 80 percent. So actually all of the companies that really meet the standard derive not just at least 75, but derive more than 80 percent from gas distribution.

Mr. King has proposed to also include WGL Holdings, but in my rebuttal testimony I asked the question since they didn't meet his criteria, you know, why would you include it? So that in essence is -- if you want to look at the companies and the criteria that were used to select them, that compares our two groups and accounts for some -- to a small extent some of the differences between the two of us in our studies.

The next area that I want to talk about is the growth rate differences between the two of us. And to help you in the discussion of this, to help me in the discussion of this, I've prepared another exhibit. I know it's been marked as Exhibit 33. Since I'm leaving 32, is there anything --

Q. (MR. PEARCE CONTINUING) Are you finished talking about 32?

A. Yes.
Q. And did you prepare Exhibit 32?
A. Yes, I did.
MR. PEARCE: I'll offer Exhibit 32.
MR. BINEK: No objection.
MR. HOBERG: Exhibit 32 is admitted.
THE WITNESS: The data on Exhibit 33 attempts to do an apples-to-apples comparison between Mr. King's study and my study and other alternatives that have been discussed on the record, as well as alternatives that I have included in my rebuttal testimony. The first column of numbers shows the average results from various studies using various growth rates. My -- and I should say that column is what I refer to as the investor return requirement. It does not have a flotation cost adjustment. The cost of capital after flotation cost adjustment is shown in the last column, but for purposes of this discussion and comparison, I'm really going to focus on the first column.

My second stage retention growth method, which was conducted on Moody's gas distribution group, came up with a 12.83 percent rate of return on average. That simply is a weighted average, two-thirds of the weight on the Zacks analyst

estimate and one-third on the book value growth rate -- or, actually, the earnings retention growth rate.

The second one is the basic study. That's identical to what Mr. King refers to as a classic study, where you simply add the Zacks growth rate estimates. The only difference between us really comes about because we have different companies in our proxy groups. The primary one in my study was one that I looked at the results, I made some subjective judgments and came up with an average of 12.63 percent. And you can see where I made my subjective judgment, my average rate of return actually comes in below what either the second stage retention or the basic came in at. And that was very specific to the companies in the Moody's gas distribution group.

The next group, going down the list, is really derived from cross-examination yesterday when I was on the stand. I was asked what would the average results be if Keyspan and Laclede were removed from my groups, and I couldn't calculate the average in my head, but -- exactly. I think I had some ballpark number, but my second stage retention results would have been 11.75, and my basic would

have been 11.51. Now, I believe that it is appropriate to include Keyspan and Laclede in the results, but these are some numbers that you have before you in the record and when you sit down to consider rate of return, you're going to be looking at these numbers and having to weigh them against the others. I really do believe that those two companies should be included in the group and so you can take those numbers for whatever they're worth. I don't put lots of weight on them.

The next set of numbers are numbers that appear in my rebuttal testimony. I would direct your attention to Exhibit JSG-4, which are the exhibits that are attached at the back of my rebuttal testimony.

MR. HOBERG: JSG-4?

THE WITNESS: Yes. Schedule 1 in particular.

COMMISSIONER CLARK: Which page?

THE WITNESS: I'm sorry. Schedule 1, pages 1 and 2.

Here what I've done is to simply take the companies that meet Mr. King's criteria. They derive at least 75 percent of their revenues from gas distribution based on his numbers. It includes

all of his companies, except Washington Gas Light or WGL. I've used his Zacks numbers, his stock price, his dividend, and his book value per share with the growth rate. The average Zacks growth rate for these companies is 6.38 percent and the average of Mr. King's estimates of the book value growth rate is 7.14 percent. I've taken a weighted average of those two, giving two-thirds weight to Zacks and one-third to the book value growth and come up with an overall weighted average growth rate. I've then taken his stock price and dividend data and adjusted the dividend yield for the .625 dividend adjustment factor that has been somewhat notorious in the case.

And so I've done this in an objective way that matches up with my second stage retention growth method of really taking the information from both of these growth rates and combining them. And I come up with an average of 11.8 percent without flotation costs and 12.4 with. So if you do what I think is much closer to a proper analysis of the growth rate, you would come up with at least 11.8 percent for these companies.

The next page is virtually identical. It's all Mr. King's data and just taking a weighted average and I come up with a -- when I weight book

value growth and Zacks equally, 50-50 for both, I come up with 12 percent for these companies. And those are the numbers and that's the approach.

The last group of figures that I want to talk about are from Mr. King's analysis. His first DCF analysis is based on his book value growth rate. And for his companies, which also included WGL Resources, he came up with a 12.18 percent return and that comes from his testimony on page 20. It's table 7 on that page. Now, you can see the 12.18 percent return in table 7. Immediately thereafter on pages 20 and 21, he indicates that he really doesn't think that this is representative of what investors expect, primarily because for the 11 companies in his analysis, Value Line does not project that their earnings are going to go down in the future.

Well, in fact, if these companies had negative growth rates, nobody would be buying them. He also thinks that Value Line is biased because they project that all 11 companies are going to have increased earnings in the future and they're going to maintain or even increase their current rate of return. So he pretty much discounts and rejects this data. The theory is that Value Line is biased.

Yesterday, in cross-examination of Mr. King, sheets from Value Line were introduced. It showed that Value Line indeed does project declining earnings, declining return on equity for companies. They're not biased. When they believe that a company's earnings are going to go down and its rate of return is going to go down, they do project that. The fact that you can look at these 11 companies and say, gee, they're going to grow in the future is not at all surprising. That's what you expect. That's what the Zacks analysts expect. That's what investors would logically expect for those companies. That's what you expect out of most companies. So at this point in time, you can't take that information and say, well, that means they're biased, just because they think the companies are going to grow or maintain their current rates of return. So Mr. King gives very little weight to the book value analysis, but when you really look at his reason for giving little weight to it, it doesn't make any sense.

He has a historical analysis which is based on historical growth rates. That appears on page 22 of his testimony in table 8. Here, his average rate of return is 11.72 percent. Now, when you look at

table 8 fairly closely, you can see that there's some pretty wild swings. There are some companies that in the past, in the very recent past, have had negative growth rates. No one would actually expect that to be the case in the future. And he has Southwest Gas with a positive 37 percent growth rate, and I don't think you can really expect that to happen in the future, either. These are kind of wildly out of line.

My rebuttal testimony discusses the fact that you really can't give much credence at all to these historical results. Certainly, Value Line, when it does its book value projections, book value growth projections, they were aware of this historical data. The Zacks analysts, when they did their projections, they were aware of this data. I'm sure they took it into consideration. So you really don't have a whole lot here on historical growth numbers typically because they were fairly short periods of time in the past to do much with. But, nevertheless, he has these numbers and he does place some weight on them.

His last approach, the classic approach is that -- that appears on page 23. And I'm sorry. The summary of the three-year results appears on

page 23. The actual analysis appears on page 18, table 6. And here you can see that the average rate of return was 11.29 percent. And that's very straightforward. It's just adding the Zacks analysts' growth forecasts.

One of the major places that I think Mr. King's analysis is flawed is in how he's taken this information and used it subjectively. He says that he started with the classic result, 11.29 percent. And from that he then looked at the book value results. They're a whole lot higher. So he considered those and worked those into the calculation, these much higher numbers. He also took the historical results, also quite a bit higher. So after he gets finished including these higher numbers in his results, he comes up with a lower average on its face that just doesn't make a whole lot of sense.

Now, he says that he went company by company and really analyzed each company individually and described why he did what he did, but the fact of the matter is, is that the level of bias is pretty high when you consider that after consideration of much higher numbers, he ends up with a lower number than he started with. That

gives him a 11.23 percent rate of return. You, as Commissioners, will have to decide out of this evidence that's in the record which of these numbers are credible and which ones to place true weight on. And I would say that, in my opinion, the 11.23 number doesn't make any sense whatsoever.

To the extent that you place any weight on the numbers and evidence that he has put in the record, the recalculation that I've done that gives very explicit consideration to both Zacks and the book value growth rate; the two-thirds/one-third or the 50-50 analysis. They come out pretty close to each other; 11.8 percent or 12 percent before flotation costs. Those at least you can trace mathematically. You can debate whether or not the assumptions are correct and actually have some reasonable basis for decisionmaking.

Now, yesterday I talked about the fact that I generally believe that book value is a floor for your long-term growth rate. I think Mr. King agrees with me on that, but then he ends up saying that he really considers book value to be a ceiling because it has the highest number. But if you look at page 19, lines 5 to 13 of his testimony --

COMMISSIONER WEFALD: 15 to 19 of his

testimony?

THE WITNESS: Page 19, lines 5 to 13.

There he says that the book value growth model is less useful for gas utilities than it used to be for two reasons. One, is that these companies are somewhat diversified. They don't just get their income from regulated operations. The other is that he thinks very few utilities are so closely regulated that the only source of growth in earnings is the increase in book value. Now, I agree with both of those statements. They parrot exactly what I said yesterday when I was on the witness stand.

What these two statements say is that these companies have some unregulated operations so book value growth is not necessarily the best indicator of their growth rate because they have ways they can grow even faster than that. So later in his testimony or around this point in his testimony where he says that book value is a ceiling, the reasoning he has in his own testimony suggests, indeed, that it should be a floor, which is what I think. So when you're looking at his testimony and looking at the 12.18 percent book value and the reasons that he gives for rejecting it, I think you'll find that the record shows that they're not

particularly good reasons, that they don't actually fit with the reasoning of his own testimony. That's one reason in addition that I really don't give a whole lot of credibility to that 11.23 percent that he came up with subjectively.

If you look at the ultimate results he comes up with subjectively, which appear on page 24 of his testimony in table 10, he has his 11.23 number there, and these are his kind of subjectively derived numbers. The range of rate of return there is 9.5 percent to 14 percent. If you go back to Exhibit JSG-4, Schedule 1, that's at the back of my rebuttal testimony, and looking at Schedule 1, page 2 of 2, that's the 50-50 weighting. The range of returns on that exhibit is 9.53 to 14.09. In essence, it's virtually identical to the range that he has in his ultimate DCF analysis. But the average is very different. The average for the group is 12 percent. So I would submit they're not enormous differences between us, but somewhere in the course of making some subjective adjustment, he's come out with a very low number that just is not reflected by the record.

I believe that Zacks growth rate and the book value growth rate should both be given at least

some serious consideration, should both be reflected, and that the appropriate growth rate is somewhere between the two, not below either of them. So having said that --

MR. HOBERG: Commissioner Wefald.

COMMISSIONER WEFALD: On Mr. Gaske's -- now we're about page 10 of his 29 pages of testimony. How much longer is he anticipating going, because I do want to make sure that we have a chance to ask questions of the other people who are here and have a chance to hear the other presentations?

THE WITNESS: I think I've gone through the really detailed parts. It won't -- I don't think it will be nearly as long to do the last.

COMMISSIONER WEFALD: Thank you.

THE WITNESS: The next area that's fairly important is the risk assessment. Mr. King believes that the company, Montana-Dakota Utilities, is a relatively low-risk operation. His primary reason for saying that is that Montana-Dakota Utilities is a part of a very large company. Now, yesterday he gave an example of Atlanta Gas Light, who lost a customer and, you know, obviously had some risk there.

The thing about Atlanta Gas Light is that

in my direct testimony I have evidence that compares the size of Atlanta Gas Light to the size of Montana-Dakota's gas distribution operations and that appears on JSG-2, page 1. And it looks like Atlanta Gas Light's assets are 3.3 billion as opposed to Montana-Dakota's gas distribution assets of 183 million. The operation operating income for AGL was 209 million, but Montana-Dakota's gas distribution operating income was $4 million, an enormous difference in size. For AGL, with a large territory, a very large population, that it serves, it can lose major customers and it will hurt AGL. Montana-Dakota, on the other hand, can be hurt much more if large companies, large operations leave its service territory leaving people unemployed, and perhaps stranded facilities behind or other impacts along those lines.

It's interesting, his argument on the small company issue, because one of the reasons he says Montana-Dakota has low risks is that we're only looking at the gas distribution operations. We're looking at them as a stand-alone operation and they're 100 percent gas distribution, whereas these other companies are diversified, at least to some extent, and at that part of his testimony he says,

essentially gas distribution is less risky than a diversified company. However, when he gets to the small company issue, he says, well, actually, these gas distribution operations of Montana-Dakota, they're part of a great big company.

So there's a direct contradiction there in what he's saying. On the one hand, the company is low risk because we'll look at it on a stand-alone basis, 100 percent gas distribution business. On the next hand, it's also low risk because it's part of a larger holding company with other operations so we'll look at it on a consolidated basis for that issue. Two diametrically opposed positions on the risk when analyzing risks in different situations, but both of those positions lead to the same conclusion, low risk, at least in his mind.

Now, one of the things that he talked about yesterday was, for example, competition. All of these companies, including Montana-Dakota, face competition. So it's not a major factor to distinguish them. He talked about Washington Gas Light in particular, and I have another exhibit and I won't spend too much time on it, just to introduce it into the record, but I went on the Washington Gas Light Website because I happen to be a customer of

theirs. I know something about what happens in their service territory and what has happened in the past.

This Exhibit No. 35, which I think was just --

MR. HOBERG: Exhibit 34?

THE WITNESS: I skipped over 34 in the interest of saving time.

MR. PEARCE: While we're paused for a moment, I'd like to offer Exhibit 33, which I didn't do before, the DCF summary.

MR. HOBERG: Okay.

THE WITNESS: In the late '70s and early --

MR. HOBERG: Just a minute, please.

Mr. Binek, any objection to 33?

MR. BINEK: No.

MR. HOBERG: 33 is admitted then. You skipped over 34, Dr. Gaske?

THE WITNESS: Yes, I did.

MR. HOBERG: Are you still offering 34?

THE WITNESS: Yes, I think I'll mention it very quickly at the end.

MR. HOBERG: Okay.

THE WITNESS: In the Washington, D.C. area a lot of new homes were built with electric heat

pumps in the late '70s and early '80s. It was a relatively new type of appliance. The cost of gas at that time was over $4 a decatherm. On an inflation-adjusted basis we're probably talking about $12, $15, and new homes were being built with these heat pumps. The thing about the heat pumps is that they didn't really work very well. My parents have one and they have heavy sweaters that they wear all the time. People figured that out and not a whole lot of heat pumps are being put in place. The price of gas relative to electric heating has come down considerably since then.

On their Website they talk about the fact that they have an active program for conversions. A lot of people who bought houses that had heat pumps in them are converting. In their Website they say that for gas heating, gas heating is preferred 4 to 1 in their service territory. They have about 80 percent of the heating market. They also in the same exhibit say that 9 out of 10 new homes in the metropolitan area are heated with natural gas.

COMMISSIONER WEFALD: What is the relevance of this exhibit?

THE WITNESS: The relevance is that yesterday we were told that, well, the proxy

companies really face a great deal more competition than Montana-Dakota does. Montana-Dakota faces competition, potential competition from propane. This company faces competition from electric heat pumps. And I wanted to place this in context, that, in fact, they're winning 90 percent of the new business. So they do have competition, and I don't dispute that. Montana-Dakota has competition, and I don't dispute that, but it's really a matter of what degree and how much weight do you give that competition in distinguishing between the companies.

MR. HOBERG: Are you offering Exhibit 35 then?

MR. PEARCE: Yes.

MR. HOBERG: Any objection to Exhibit 35, Mr. Binek?

MR. BINEK: No. I think it's kind of what we were trying to establish yesterday.

MR. HOBERG: Okay. 35 is admitted.

THE WITNESS: Okay. The last exhibit that I want to introduce is the bond ratings for the companies in Mr. King's proxy group. Now, Mr. King says that Montana-Dakota has very low risk relative to these companies, but when you look at the bond rating, it's right about at the average or the

median of the group. It's not exceptionally low. What's interesting about this is that, as he and I both discuss, Montana-Dakota has at least for this -- in this filing and for the utility operations they have a higher equity ratio than many of the other companies. I maintain in my rebuttal testimony that, in fact, they have slightly or somewhat above average business risks. So you have financial risks represented by the capital structure and you have business risks also in there.

When you put the two together, the company has about average risks and that's borne out by these bond ratings, which reflect a combination of both business and financial risk. In my direct testimony, as I said earlier, Montana-Dakota's first mortgage bonds have a lower average rating than the Moody's gas distribution group. And my overall assessment of that group indicates to me that they have above-average risk relative to that group, but relative to Mr. King's proxy group, they have essentially average risk and that's supported in part by these bond ratings, that they have a higher equity ratio, but I think they have higher business risk.

One of those risks is the fact that they're

small. In his testimony Mr. King at one point, and I want to direct you there, but he says, for example, Southwest Gas may be actually less risky because it's growing rapidly. Well, in Montana-Dakota's service territory there's little or no growth at all and, in fact, if you look behind what's going on a little bit, they have customer growth of about 1 percent per year, but a lot of that is people moving out of small towns to the larger cities. So you have a situation where they're needing to expand facilities in the city, but they still have costs that they have to recover in the smaller towns that factor declining population. And in the long run that's a problem for the company.

Mr. King indicates that a fast growing company like Southwest Gas has low risk. Well, when you -- I talked about this in my rebuttal testimony. If you look at Montana-Dakota, it's at the other end of the spectrum.

I have some additional things in my rebuttal testimony. I demonstrate that the premiums between Baa bonds and U.S. Treasury bonds are the highest now they have -- or just about the highest they have been in 10 years, other than briefly after

September 11th. The force and weight of that is that Mr. King has some testimony where he takes the rate of return that's been allowed in some past periods and says, well, here's what the treasury bond rates were then and here's what the treasury bond rates are now, but Baa bond rates are much closer in risk to the common stock of a gas distribution company. And the higher the risk, the bigger the premium. And we talked about this at great length yesterday so I'm not going to go any further than that.

But if you really look closely at the question, I believe that this increase in the risk premium required by investors probably indicates that if you use the past allowed rates of return as a benchmark, you probably ought to have even higher rate of return now, but that's just as a benchmark. The real heart and soul of both analyses are the DCF analyses, and, hopefully, I've helped you understand what the difference is between the two -- between the two of us on that issue.

MR. HOBERG: Thank you, Mr. Gaske. Did you want to offer 34 and 36?

MR. PEARCE: 36, I would offer.

Q. (MR. PEARCE CONTINUING) Did you want to

say something about Exhibit 34, Dr. Gaske?

A. Yesterday I was asked various questions about, I believe it was Exhibit 11 that was introduced that showed returns over a long period of time. Exhibit 34 looks at Ibbotson data, and it finds that when you do a statistical analysis of the difference between bond returns and stock returns, you're assured that there's a difference at a level of about 99.93 percent. And that shows up on the last page of it. I won't go into a lot of detail on the statistical techniques and things like that, but that's the correct way to analyze something like that.

I looked at the average difference between the two and I found what you would expect, that the probability that the premiums are higher than average is 50 percent and the probability that they are lower than average is 50 percent. In other words, the historical premiums do represent the best estimate of what kind of premiums have been available over a long run in the market. And the questions yesterday about standard deviation and mean, I believe were really off point for whatever point ultimately is to be made with that data. So I put this in the record to have what I believe is a

more appropriate analysis.

MR. HOBERG: Thank you. So you're offering 34?

MR. PEARCE: I'll offer 34 as well.

MR. HOBERG: Any objection, Mr. Binek?

MR. BINEK: No.

MR. HOBERG: 34 and 36 are admitted. Any further questions then, Mr. Pearce?

MR. PEARCE: Did I formally offer the written testimony, Exhibit 24? I don't show that yet. I'll offer that at this time.

MR. HOBERG: Any objection to the formal written rebuttal testimony of Dr. Gaske?

MR. BINEK: No.

MR. HOBERG: Exhibit 24-54 is admitted. You have no further questions?

MR. PEARCE: No.

MR. HOBERG: Mr. Binek, do you have a number of questions?

MR. BINEK: It might be a good time to take a little bit of a break and we may be able to shorten our questions.

MR. HOBERG: I think all of the witnesses, next witnesses and the questions regarding all the next witnesses maybe you want to look at to see.

I'm assuming we're going to get done at 5:00. If that's the goal, then we're going to have to look at ways to do that. So let's take five minutes right here.

(Recess was taken.)

MR. HOBERG: We are back from recess and completed the direct of the rebuttal of Mr. Gaske. Mr. Binek, do you have any questions on cross-examination?

MR. BINEK: Yes, I do have a few. Been able to eliminate a number.

MR. HOBERG: Good.

CROSS-EXAMINATION

BY MR. BINEK:

Q. First of all, referring to your exhibits, how many of these exhibits could have been introduced with your rebuttal testimony?

A. All of these exhibits were prepared last night or subsequent to the filing of my rebuttal. Except for maybe one, all of them were prepared last night in response to various things that Mr. King had to say yesterday.

Q. Based on the record here, they could have been prepared prior to that?

A. Some of them could have been, but the ones

that could have been really reflect information that was available in the record. Some --

Q. Okay. It doesn't matter that much, anyway.

A. There really wouldn't have been any reason to introduce them until I heard Mr. King's rebuttal or surrebuttal yesterday where he discussed a number of things that were in my rebuttal testimony.

Q. Okay. Your Exhibit 31 assumes a market-to-book ratio of 1; isn't that correct?

A. Yes.

Q. Do any of either yours or Mr. King's comparable companies have a market-to-book ratio of 1 or less?

A. No.

Q. In fact, don't all of these companies have market-to-book ratios higher than 1?

A. The same principle that's shown in there still applies but, yes. Yes, their market-to-book ratios would go down if they were to issue common stock, and so the value of their other assets would go down.

Q. When a company sells new stock at a market value greater than book, what does that do to the book value of the existing stocks?

A. It increases the book value of the stocks.

The book value for original cost of the plant, if it puts it in utility plant, will be equal to the proceeds, and the market value, as I show there, will go down.

Q. Now, going to Exhibit 32, if you round WGL Holdings percentage gas distribution to the nearest percentage point, what do you get?

A. 75 percent.

Q. Okay. Had you included WGL in -- what is it -- pages 1 and 2 of Schedule 1 of JSG-4, what would it have done to the 11.8 percent you show?

A. It would have made it approximately 11.6.

Q. So it would have reduced it?

A. Yes, if you included it.

Q. Where does Mr. King say he places weight on his historical DCF returns? Perhaps if you look at page 22 of his testimony at the bottom.

A. I'm at page 22.

Q. Well, in fact, doesn't he say exactly what you've said about historical results on pages 23 and 24 -- or 22 and 23?

A. He says -- yes, he says that in general.

Q. Okay. Thank you.

A. Well, actually we can handle that on brief, because I can't find the passage right now that

would answer your original question.

Q. Okay. I'd like to have you turn to page 23 of Mr. King's testimony. Are Mr. King's book value growth results always higher than the classic returns?

A. No.

Q. Did Mr. King use book value growth as a ceiling in all cases? We're referring to table 10.

A. In some cases, yes. Some cases, no. Actually, you shouldn't say that. On table 10 it's not really entirely clear where those numbers come from. They are really his subjective decisions, and earlier in his testimony he says why he considers it to be a ceiling.

Q. But the question was, did he use book value growth as a ceiling?

A. Some of those numbers are higher than the book value growth rate for its individual companies, yes.

Q. Do you recall Mr. King testifying as to the number of customers AGL has, and do you know how many they have?

A. Now, it depends on which part of their operation. He said that AGL has 11, but, in fact, obviously Atlanta Gas Light has, I would guess, more

than a million.

Q. You're certain of that? Do you know who it markets to?

A. Now, are you asking how many customers the utility has or how many gas marketing customers they have?

Q. It's one and the same.

A. Actually, that's not true.

Q. Well, how many gas marketing customers does it have?

A. Well, yesterday he said that they had 11, but it's a gas distributor that serves, you know, people all over the Atlanta area.

MR. BINEK: No further questions.

MR. HOBERG: Thank you, Mr. Binek. Commissioner Wefald, do you have any questions?

COMMISSIONER WEFALD: No, I have none.

COMMISSIONER CLARK: I have none. Thank you.

MR. HOBERG: Mr. Diller, no questions? Any additional questions, Mr. Pearce?

MR. PEARCE: No.

MR. HOBERG: Nothing further then of Dr. Gaske. Thank you, Dr. Gaske. Next witness, Mr. Pearce.

MR. PEARCE: Call Rita Mulkern.

MR. HOBERG: Ms. Mulkern, you, too, testified yesterday so I just need to remind you that you are still under oath.

THE WITNESS: Yes.

RITA A. MULKERN,

having been previously duly sworn, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. PEARCE:

Q. Ms. Mulkern, you have prepared and had prefiled in this case written rebuttal testimony, have you not?

A. Yes, I have.

Q. Is that Exhibit 25? You don't have it there. It's been marked as Exhibit 25.

MR. PEARCE: I will offer that at this time.

Q. (MR. PEARCE CONTINUING) And ask Ms. Mulkern if she could please summarize her testimony.

MR. HOBERG: Any objection to Exhibit 25 -- actually 25-55?

MR. BINEK: No.

MR. HOBERG: No objection. Exhibit 25 is

459

admitted.

THE WITNESS: I'll summarize my testimony. What I would like to do is to address certain adjustments proposed by Mr. Majoros; namely, the amortization period for rate case expense, the adjustment to other operating and maintenance expenses for inflation, a statement he made concerning the increase requested, and the price of natural gas. And a statement concerning the reasonableness of the increase in the operation and maintenance expenses.

On page 15, line 18 of his testimony, Mr. Majoros proposes a five-year amortization of rate case expense, rather than the three-year amortization proposed by the company. And the sole rationale he uses for setting a five-year is the time period between rate cases. And I presume he's referring to the fact that it has been eight years since the last rate case.

However, just because it's been eight years since the last rate case does not mean it's going to be another five years before the next rate case. We were able to refrain from filing during that time period because we took action to increase our operating efficiency and reduce costs rather than

460

coming in and seeking a rate increase. And Mr. Fox testified yesterday and specifically talked about some of these measures that we took. He also talked about how we'll continue to strive for operating efficiency and cost reduction, but it is not anticipated that we can replicate our past performance and stay out for -- refrain from filing for another five years. We believe that a three-year amortization provides the best time frame for rate case expense.

Alternatively, if the Commission decides that a five-year amortization is appropriate, then the unamortized portion of the balance of that rate case expense should be included as a rate base addition. And the reason for this is that we're spending the money on this rate case. The cash is going out the door today, 2002. With a five-year amortization, the cost will not be fully recovered until the end of 2007 and, therefore, rate base additions will compensate for that time value of not recovering it -- excuse me -- putting in a rate base will give us a return on that component to compensate it for the length of time it takes to recover the cost.

On page 16 of his testimony Mr. Majoros

461

proposes to eliminate the inflation amounts from the other operating and maintenance expenses. And he gives his reasons not to allow these because they have not been previously allowed and because he recommends that we not be starting now. Mr. Majoros appears to be missing the point of this adjustment.

In this case we're using a projected 2003 test period. And in projecting out costs for 2002 and 2003, costs were broken down into major categories and these major categories are listed on -- I believe the statements are Exhibit 2, Statement N, page 14. And there we list those items adjusted individually. And those items were labor, benefits, insurance, advertising, and rate case expense. Those adjustments made up 71 percent of the total operating and maintenance expenses for North Dakota gas operations. The remaining 29 percent of costs are real costs incurred by the company and they're not likely to remain flat just because they weren't adjusted individually. This category includes such items as materials, postage, vehicle and work equipment expense, uncollectible accounts and some others. And to adjust these upward, we used a three-year average of the Consumer Price Index.

462

The last time this Commission addressed inflation factor in our case was in July of 1991, which was over 11 years ago. Now it is time to recognize that these costs are real costs. They are subject to inflationary pressures, just as the costs we adjusted individually were. For example, we know that postage expense went up July 1, 2002 and overall the increase in our postage expense was about 7 1/2 percent. This postage expense was included in that inflation adjustment, so, if anything, our inflation adjustment could be understated because of that. So the proposed inflation adjustment should be allowed.

And now I'd like to just address a couple statements Mr. Majoros made. First, was on page 2, lines 11 and 12 of his testimony, he made the comment that proposed increases will be superimposed on those already resulting from spikes in the market price of gas. Now, that's a very general, broad statement, and is not supported by the evidence. Montana-Dakota's gas cost has been very stable over the long term, with the exception of the winter of 2000-2001 where there was a large spike in gas costs, not only here in North Dakota, but it was seen nationwide.

Exhibit No. 26 -- or 25 is a graph. Excuse me.

MR. PEARCE: RAM-2, Exhibit 25.

THE WITNESS: 25 is a graph showing the history of gas costs for North Dakota's gas customers, the amount included in their rates through the monthly purchased gas cost adjustment, and this graph is shown for the period of January of 1999 through October of 2002. Now, you can look at the graph and you can see that gas costs, with the exception of that 2000-2001 time period have been very stable and, in fact, they have been slightly lower in 2002 than in previous years. So there have been no spiking gas costs, other than one winter here.

In addition, Mr. Majoros seems to be implying that in reviewing a rate case application, one should take into account the cost of gas when looking at that case. But the cost of gas is not what this case is about. As Mr. Fox stated in his testimony, this case is about the distribution portion of our rates, not the gas costs. Those are separate -- done separately through the purchased gas cost adjustment, which we file with this Commission each month under our rate purchased gas

cost rate tariff 88.

Then on page 5 of his testimony, Mr. Majoros states that a 5.7 percent expense growth rate is not reasonable for the period 2000, 2003. Again, this is a broad, general statement and it's not supported by the evidence. It's unsubstantiated and was made without looking to see why those costs went up. There are certain items that were identified in my direct testimony that increased significantly in 2002 from the 2001 levels. For example, the pension and post-retirement expenses both increased in the 10- to 15-percent range due to the market performance and lower interest rates. Insurance expense also increased significantly in 2002 and that was an event that has been experienced nationwide. There's no evidence to back up his statements and, thus, given the current cost levels, a 5.7 increase is entirely reasonable, it's explainable and it's supported by the evidence.

In fact, if anything, the 2003 levels are too low. Recently, we received the actuarial report for pension and post-retirement costs for 2003. The results show that the amounts we have in our projected 2003 case are significantly understated. And the reason that these pension costs are too low

is because of the returns experienced on the investment in 2001 and 2002. The updated expense for these items will result in an increase in our North Dakota gas operating expenses of $150,000 for pension and $90,000 for post-retirement expenses, above what we included in the case. This is a higher level. It's known. It will be -- start recording on the books effective January 2003 and should be recognized.

I might note that pension expense -- I talked about significant increases. It's a negative expense. It's a credit to expense. In other words, it lowers -- still lowers the cost of service because it is still a negative expense even with the increases we've seen.

In addition, the medical costs for 2003 have also increased from the levels projected. And we're projecting now for 2003 it will be $124,000 over the amount that was filed in our rate case.

That completes my rebuttal testimony.

MR. HOBERG: Any additional questions, Mr. Pearce?

MR. PEARCE: No. I have nothing else.

MR. HOBERG: Mr. Binek, any questions of Ms. Mulkern?

CROSS-EXAMINATION

BY MR. BINEK:

Q. A question that got passed on to you. What capital structure did the company use in its rate-of-return testimony in the electric case earlier this year?

A. I don't recall.

Q. On pages 1 and 2 of your rebuttal testimony -- I guess, let me go back to this other question. Would you accept, subject to check, that the capital structure that was used was based on a year-end 2000?

A. That may be, subject to check. However, this is an entirely different case. The electric --

Q. I realize that. That was just my question, what was used there.

MR. PEARCE: She's simply answering the question. I suggest we let her answer.

MR. HOBERG: Why don't you go ahead.

THE WITNESS: The electric rate case you are referring to is an entirely different situation. That was initiated by a staff complaint. It was not a general rate case filed by the company. I believe if you look at past rate cases filed by the company, going back as far as 1986, we have filed projected

test years and the Commission has used them.
Q. (MR. BINEK CONTINUING) On pages 1 and 2 of your rebuttal testimony, you object to the rate case cost recovery that Mr. Majoros has recommended. I believe you heard the testimony of Mr. Jeter that -- about the company preparing a new depreciation study that will be completed by the end of the year?
A. Yes, I heard that.
Q. If this study shows that MDU's depreciation rates should be changed, would the company be filing a new rate case?
A. I guess at this point I can't answer what we will or won't, whether or not we file a rate case.
Q. Okay. If the company did, this would result in two rate cases in the space of one year, wouldn't it?
A. Well, there are several options. As Mr. Jeter mentioned, one option would be a very limited scope, look purely at the depreciation study, and that would be different than a full-blown rate case like this where we are looking at many different issues.
Q. If MDU had completed the depreciation study in time for this case, we'd only have one case; is

that correct?
A. I guess I really can't answer that.
Q. On page 3 of your testimony you state your disagreement with Mr. Majoros' proposal to allow inflation increase and other expenses. Mr. Majoros says he declined to increase these costs for inflation because such inflation has not previously been allowed. Is he correct?
A. Last time this Commission reviewed it was in 1991 and at that time they did not approve it. However, I stated this is 2002. These rates go into 2003, and it is time to recognize that these costs are real and they do -- are subject to inflationary pressures.
Q. I'd like to have you turn to page 13 of Statement N.
MR. HOBERG: Page 13?
MR. BINEK: Yes.
Q. (MR. BINEK CONTINUING) Do you have that?
A. I have it here.
Q. Okay. Does that page show the principal categories of cost to which you have applied the inflation factor?
A. It shows the cost by function.
Q. What is the largest category of expense

shown on page 13?
A. Largest function is administrative and general expenses.
Q. What's the next largest?
A. Next largest is customer accounts.
Q. Okay. And this category of uncollectible accounts -- or that category would consist primarily of uncollectible accounts, wouldn't it?
A. That would be one of the factors in there. Not the sole factor.
Q. Why would uncollectible accounts increase with inflation?
COMMISSIONER WEFALD: Excuse me. What page are we on?
MR. HOBERG: Page 13 of Statement N.
COMMISSIONER WEFALD: Thank you.
THE WITNESS: Uncollectible accounts are a function of various things. I don't know that I can tie inflation to it specifically or tie it to inflation specifically.
Q. (MR. BINEK CONTINUING) Wouldn't uncollectible accounts be more correlated with the overall size of your revenue?
A. It would be revenue. It would also be the ability of customers to pay. Maybe if, you know,

the economy isn't doing well, customers might have more problems paying their bills. That could be indirectly associated with inflation. There are other factors other than the revenue.
Q. Does page 1 of Statement N show that you predict that overall revenue declined dramatically between 2001 and 2002 and will remain virtually flat between 2002 and 2003?
A. What we do in a rate case is, we tie our revenues and cost of gas together at a certain point in time in order to -- because we are looking, really, at what the distribution margin is. So the revenue number of 67 million -- this is in thousands, 944 for 2002 is not our projection of what actually revenue would be. It's our projection of what volumes will be for 2004 at the revenues at a certain point in time. In this case it was the revenues in effect for March of 2002. So this number is not representative of a calendar-year revenue that we would expect to see.
Q. Okay. And on page 13 of Statement N, is there any recognition that uncollectible accounts will change between 2001, 2002, corresponding with the decline in operating revenues between those two years?

A. We did not tie the uncollectible accounts to the revenue.

Q. At the bottom of page 4 and the top of page 5 you cite a number of items that you expect will increase, including pension and post-retirement expenses and medical costs. Has Mr. Majoros recommended disallowing your quantification of the 2003 amounts for any of those items?

A. Can you repeat the items he mentioned again?

Q. It was pension and post-retirement expenses and medical costs.

A. I believe he was in agreement with those.

Q. Now, I'd like to have you turn to page 2 of your rebuttal testimony, specifically line 4, and please read -- on page 2, line 4, would you read the statement there down to the end of line 10?

MR. HOBERG: It's part of the record. Can we save time by asking a question about it?

MR. BINEK: No. We'd like to have that read because there will be some followup questions.

MR. HOBERG: Does she have to read it out loud?

MR. BINEK: I would prefer that.

MR. HOBERG: Okay. Ms. Mulkern.

THE WITNESS: The part starting with Montana-Dakota?

Q. (MR. BINEK CONTINUING) Yes.

A. Montana-Dakota was able to refrain from filing for a rate increase during that time because it took action to increase efficiency and reduce costs using new technologies where possible, rather than seeking an increase in rates, all addressed by Mr. Fox in his direct testimony. Montana-Dakota will continue to strive for operating efficiencies and cost reductions, but it is not anticipated that it can replicate past performance and refrain from filing for another five years.

Q. Is it a fact that you did not project past efficiencies and cost reductions in your 2003 test year costs?

A. All past efficiencies were included in the 2001 base period and, therefore, were included in our 2002 and 2003 projected test periods.

Q. Where do we find that?

A. Well, these efficiency measures have taken place over time, over a period of years. And what's happened is Mr. Fox mentioned that we're serving more customers per employee and that's taken place over time. Basically, our employees have remained

flat. I think maybe even declining. So what you see in 2001 is the effect of all of that. So that's implicit. In our base period those things are -- had already happened.

Q. Do we see further declines in 2002 and 2003?

A. No. Because, as Mr. Fox mentioned, and I think I mentioned, we will continue to strive, you know, continue to look everywhere we can to be more cost efficient and reduce costs, but we've looked at all those opportunities. Right now, while we'll continue to look, our option is to file for a rate increase, which is why we are here.

Q. Now, turning to page 3 and lines 7 to 9, is it true that the Commission should not rely on its 11-year-old decisions?

A. I think what I'm saying there is that 11 years ago was the last time they looked at it and it's time to take a look at it again because things have changed over 11 years. I think our point is that these costs are real costs. This isn't a game we're playing with these costs. They exist, and they are subject to inflationary pressures. So we do believe the Commission should look at it again and realize it is time to acknowledge that and

include an inflation adjustment in our cost of services.

Q. Should the Commission rely on the Company's study and data that are 11 years old?

A. It depends what you're looking at. As regards the inflation adjustment, I would say no, because I can't make a blanket statement that any time period is exactly the same for everything.

MR. BINEK: No further questions.

MR. HOBERG: Thank you, Mr. Binek. Commissioner Wefald, any questions of Ms. Mulkern?

COMMISSIONER WEFALD: Yes.

EXAMINATION

BY COMMISSIONER WEFALD:

Q. What if the Commission were to pick a different number than 2.81 percent, higher or lower, how would the company react to that?

A. I think we would want to see some recognition of inflationary pressures, and if the Commission would choose a different realistic number, we would accept that.

Q. How would you define "realistic number"?

A. Well, I guess we defined it as a three-year average of the inflation adjustment. If the Commission might pick a slightly different period, a

two-year instead of a three-year average or some other measure that -- you know, that would acknowledge it, we would be content with that.

Q. I suppose you can't speculate on what the Commission's thoughts were in not giving an inflation adjustment, but I can perhaps speculate that they wanted to give an incentive to the company to practice savings and to find ways to have savings in those costs while moving forward with their business.

If the Commission chose to give a less than 2.81 percent with that same idea of giving incentive to the company to try to achieve savings in those areas, what would you think of that?

A. Well, I think the company -- we've looked for efficiencies. Our incentive is to -- one of our incentives is to not come in and file for a rate increase, so we are constantly looking for efficiencies so as not to let our costs go up to our customers. If the Commission -- you know, as you said, I can't speculate on why the Commission in 1991, precisely why they did not accept it, but I think we already have the incentive to reduce our costs right now.

COMMISSIONER WEFALD: Thank you.

MR. HOBERG: Thank you, Commissioner Wefald. Commissioner Clark, any questions?

COMMISSIONER CLARK: I do have just a few.

EXAMINATION

BY COMMISSIONER CLARK:

Q. Some of them are related again to that depreciation study. I know Mr. Keller deferred a couple questions to you. And the reason I keep coming back to this is because I do have some significant concerns in that this is a rate case being brought by MDU and this has become a huge portion of the rate case. But it's like we're arguing about something that could be moot in just a very short amount of time. And I want to point out the scenarios that could happen here.

But are you familiar with when the contract was signed and when this depreciation study was supposed to be done? Is it a date that was originally supposed to be done for this rate case, or was it kind of always anticipated that it would be done shortly after when you entered into the contract with the consulting firm?

A. First of all, I'll say I'm generally aware of the time frame for this. And, initially -- and I think Mr. Keller explained it very well. It was

difficult to find a consultant. We did hire a consultant and that person had to complete a depreciation study for Great Plains before they could start working on Montana-Dakota's study and that took more time than anticipated.

Our intent was to have a depreciation study, I believe, around October 1st. Because of various factors, we weren't able to have one by October 1st.

Q. Well, if it were to be done by October 1st, that wouldn't leave a whole lot of time for the staff depreciation expert to delve into it, would it?

A. No. I'm just kind of referring to the general time frame of this depreciation study.

Q. When, about, did you learn that it wouldn't be done on the October 1st time frame?

A. I guess I really can't recall when I heard. I said I'm generally aware, but I wasn't specifically involved in the contract.

Q. Are you aware of the other pending cases that you have in your other jurisdictions, will that study be able to be used in those jurisdictions?

A. We have filed so far two other rate cases in generally about the same time. There was a study

filed -- or not a study. A rate case filed in Montana that there will not be a depreciation study by the time that the Commission holds the hearing. We also filed a rate case in Wyoming. They have until June of 2003 to make a decision. I don't know yet what the status would be of the depreciation study in that case.

Q. And you haven't filed in South Dakota yet?

A. We have not yet filed in South Dakota.

Q. Do Montana or Wyoming require periodic depreciation studies to be filed like some states do on a semi-annual basis?

A. None of the four states that Montana-Dakota serves natural gas or electricity in requires a depreciation study.

Q. Was there any consideration during -- that you're aware of during the last few months that MDU considered delaying this rate case until the Commission could consider it as a whole as opposed to potentially having to do a couple of different rate cases?

A. Could you repeat that?

Q. Are you aware of any discussions at MDU -- have you considered at all kind of holding off on this once you became aware that you may not have a

large portion of your -- the evidence that you should have for a rate case available?

A. Well, we filed this rate case in April of this year. There are no statutory or legal requirements to file a depreciation study. So our filing is in compliance, if I understand, with the legal and statutory requirements. So I don't think that we were remiss in filing a rate case without a depreciation study because it is not required. I think you had another part to that question.

Q. Well, maybe just following up on that, I guess I wasn't implying that there was any legal requirement. It's just my own thought is that, potentially, MDU, being that this is their case and the burden of proof is on them, would want the best information available, but maybe -- I'm just going to close up here quick.

You had mentioned that there may be a number of scenarios that could happen as this plays out. Let's assume that the Commission decides a number of issues that are outside of the depreciation part of this case. I think that has to be done in about a month or so. Is that in November, I think? I can't remember what the exact time frame is that we have to have our decision out.

But -- and then do what MDU is suggesting, which is just kind of put aside the depreciation portion of this.

How does that then play out on December 31st beginning next year when you have a new depreciation study? What are the scenarios that could happen here?

A. Well, I think part of that is maybe off a little bit. Everyone seems to be presuming in this case that there will be -- that, one, the depreciation rates are going to go down when we do a depreciation study. And I don't think that's a presumption that we can make now. We've provided in this case a 1991 study, a fully detailed study, and we still at this point still stand on that study. We believe that it's still a good study and that is what we filed our case on and it's a good, detailed study based on many years, details going back many years, a lot of data, a very complete study.

Q. Okay. So let's go through the scenarios again. If it's the same and it shows the same as the 1991 study and if we accept that as part of this rate case, then nothing would change. If the depreciation changes so that it becomes, in effect, a rate decrease, then do you file updated tariffs

just decreasing their rates, decreasing the tariff rates?

A. I think I'm getting into an area that I think might be, as far as a legal area, as far as what the Commission -- you know, as far as issuing an order and after that. So I think that's really a legal issue and I don't feel that I can properly address that.

Q. Okay. But MDU could consider filing another rate increase if the depreciation schedules indicated that was appropriate, right?

A. Yes.

COMMISSIONER CLARK: Okay. That's all I've got then.

MR. HOBERG: Thank you, Commissioner Clark. Mr. Diller?

EXAMINATION

BY MR. DILLER:

Q. Ms. Mulkern, isn't it true that adjustments for inflation cause inflation? That's a question that Mr. Myer Shark used to ask all the time and I felt like we needed to get his name in the record.

And so isn't it true that -- would you agree that adjustments for inflation causes inflation?

A. I would not agree with that statement.

Q. Could you explain that, please? That's all right. I withdraw the question. I just wanted to have some fun. Let's see if I have a real question here.

I think based on the exchange I heard between you and Mr. Binek, if I could maybe characterize your response to him as there's not been any correlation between CPI and these other O&M expenses that haven't been inflated individually in the past, but you feel like CPI will be a fair indicator of what you can expect with these other O&M costs in the future; would that be a fair characterization?

A. I think that CPI recognizes that these costs are going to increase with time, with inflation.

Q. Now, have you done any long-term comparison between CPI and these other O&M expenses that are being talked about here, any long-term correlations to -- you know, I mean, certainly some years it will be because of efficiencies and this and that the company beats the inflation indicator, but have you done any long-term comparison to see if there's any long-term correlation between CPI and these other

O&M expenses?
A. Well, I'm not sure what constitutes long term, but I did look back to 1994, since the last rate case, at all these other items, and the increase is greater than inflation for the same time period.
Q. Greater than the CPI?
A. Yes.
Q. That's surprising. But we don't have any -- that's not on the record anywhere?
A. No. That was just something that I did on my own.
Q. Is that something that's available for providing to the Commission, or is that just something that you kind of did ad hoc and didn't really --
A. I have a workpaper on that.
Q. Would you mind providing that as a late-filed exhibit?
A. I can provide it.
Q. I mean, it's not really that long term, but it might be interesting to look at.
MR. HOBERG: That would be Late-Filed 5, Mr. Pearce.
MR. PEARCE: Yes.

MR. DILLER: That's all the questions I have.
MR. HOBERG: Thank you, Mr. Diller. Any further questions of Ms. Mulkern?
COMMISSIONER WEFALD: I might have one here. Just a minute.

FURTHER EXAMINATION

BY COMMISSIONER WEFALD:

Q. Go through with me again what expenses are covered under these other expenses where you have this list of them. Which exhibit is that?
A. Well, the one on the exhibit is Statement N, page 14.
Q. Page?
A. Statement N in the statement book. I think it's Exhibit 2.
MR. HOBERG: It's a big book, Statements A through O.
Q. (COMMISSIONER WEFALD CONTINUING) Yep. Statement N?
A. Page 14.
Q. Statement N, page -- like in no?
A. Like no.
Q. Page 14 of 23?
A. Yes.

Q. All right. So I'm seeing on this just cost of gas?
A. These are the items that we did adjust individually. These are the items that make up 71 percent of total operating maintenance expense.
Q. All right. What are the ones that are not?
A. The ones that are not are the ones in the last column that are left over after you adjust all the others separately and that's the one -- that contains such items as postage expense.
Q. Now, are you looking under all other O&M?
A. That's the one.
Q. But it doesn't have anything broken out as to what those include, so you are going to give me a list right now?
A. There are many items in this list. These are the ones that make up the 29 percent -- those five items make up 71 percent of all of the O&M, operating and maintenance expenses. All other items make up 29 percent.
Q. How do we know which ones are administrative and general of four-million-ninety and there's a separate list of ones that aren't covered? There's some under administrative and general that are covered and then there's some that

are not, $1,617,000?
A. Right. We started with our operating expenses in total for North Dakota gas by what we call function, distribution, customer accounting. And from that we deducted in the same by function, the labor expense.
Q. Do you determine which ones are not covered by this or did the Commission in its last case?
A. No. We looked at what -- kind of the major cost items, the ones that make up the majority of the costs. Five items make up 71 percent. So we looked at those five items specifically. Or I should say some we looked at for other reasons, like rate case expense, but we looked at those five items individually and adjusted those individually.
Q. I'm not following you at all. Are they -- rate case expense has --
A. Rate case expense is included in the administrative and general costs area and --
Q. One underneath that?
A. One. And that one we adjusted individually because we were looking at the cost of this rate case proceeding, rate case expense. So since we were adjusting that separately, we took it out.
Q. You've had other gas cases during this

time. I don't understand this chart. So maybe I should just visit with my staff, but I just don't understand the chart at all.

A. If I can explain, if you want me to answer.

Q. Keep going.

A. If you look in the left-hand column and it says "per books," those were the operation and maintenance expenses for 2001.

Q. All right.

A. And it shows it by function. For instance, the distribution, it covers all the costs in operating and maintaining the distribution system. Customer accounting is for all the billing related and, you know, accounting for the customer for that, and so on.

Q. The first one is a total of the other columns; is that correct?

A. No. The first column is a starting point.

Q. All right.

A. From there we were going to -- for instance, for costs of gas for projected 2000 and 2003 we calculated that so we adjusted it individually so we deducted it from the total because we're doing that someplace else, we don't want it in this adjustment. Next, we looked at

labor and, again, we're going to adjust that separately, so we're going to deduct all the labor costs from this total per books amount. And labor goes into all the functions also.

We went down, continued with benefits, which is all charged to an administrative and general account because we adjusted the items and benefits separately. And then insurance we looked at separately. And rate case expense and advertising. So we started with the total per books, we adjusted everything we were going to look at separately, and what's left over is that 29 percent I referred to and this is what we applied inflation to, these costs that were remaining after we adjusted certain items individually.

Q. So the cost of gas is $76,000. Is that one of them then?

A. That was -- yeah. That's what we had in 2001 for gas costs.

Q. $7,988 of labor, is that another one, or am I wrong?

A. No. That was labor expense for 2001.

Q. I don't get the chart, but I'll work on it later. Thank you. I don't understand it. But thank you very much for trying.

MR. HOBERG: Any further questions of Ms. Mulkern? Thank you, Ms. Mulkern. You have three witnesses left?

MR. PEARCE: Yes.

MR. HOBERG: And a short time to do them in. Next one is Ms. Aberle.

MR. PEARCE: Call Tamie Aberle. And I have one -- I have a one-page exhibit.

(Exhibit 37 was marked for identification.)

MR. HOBERG: Ms. Aberle, you also testified yesterday. I just need to remind you, you are still considered to be under oath. Mr. Pearce. Her rebuttal is Exhibit --

MR. PEARCE: 26.

MR. HOBERG: -- 26-52.

TAMIE A. ABERLE,

having been previously sworn, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. PEARCE:

Q. Ms. Aberle, you prepared for this case, did you not, a prefiled written rebuttal testimony?

A. Yes, I did.

MR. PEARCE: And that's been marked Exhibit 26. I'll offer that.

Q. (MR. PEARCE CONTINUING) And ask you to summarize your testimony briefly.

MR. HOBERG: Any objection to 26?

MR. BINEK: No.

MR. HOBERG: 26 is admitted.

MR. BINEK: Has this been marked as an exhibit?

MR. PEARCE: It's marked 37.

MR. HOBERG: He hasn't offered it yet.

THE WITNESS: I will begin with why I do not agree with Mr. King's position regarding the allocation of mains and the class costs of service study. The company has proposed an allocation of mains based on a customer and demand component. Mr. King advocates that it is not correct to allocate a portion of mains on the customer component. We believe it is appropriate to do so and it is a practice that is used in the gas industry and is supported in a report prepared by the NARUC staff subcommittee on gas. And I've included some references in my rebuttal testimony, Exhibit 26. We did prepare a study that indicates that approximately 36 percent of the mains investment should be allocated to the customer component.

Also, Mr. King suggests in his testimony that main additions are only made at the very edges of the system to provide service to new developments. In our system, main additions are also required for purposes of enhancing system integrity and maintaining pressure requirements throughout the system as customers are added. Main additions -- main investment is not a variable cost that increases or decreases as more or less gas is used. Also, the concept of value of service is not appropriate for allocating embedded costs as Mr. King advocates. The value of the heating content of gas does not represent the company's embodied costs or the causation of that cost.

Secondly, with regard to the allocation of mains, the allocator used by Mr. King includes total throughput for the energy, which results in excessive amounts of mains being allocated to the interruptible customers who are not utilizing the distribution mains in order to receive natural gas service. We have a number of customers that are connected directly to the transmission system and there are no mains associated with serving those customers.

I have prepared a study reflecting 50

percent allocation based on throughput at distribution level and 50 percent at the peak day used for the firm customers, and those returns are reported in my testimony. The results are that -- results in higher returns for the Air Force and the interruptible classes, which are those classes that have a larger percentage of customers connected directly to the transmission system.

I also do not agree with Mr. King's allocation of the rate increase, based on either the company's class cost to service study or a class study based on Mr. King's proposed allocation as modified and as set forth in my Exhibit TAA-4. An increase to the Air Force small interruptible or large interruptible class is not warranted. The subsidization provided by the interruptible classes should not be increased by allocating another increase to those customer classes that are already providing a return on rate base higher than the overall return. The increase -- any increase in revenues to this class is also at risk given the flexible rate provision applicable to the interruptible customers. Presently, approximately 20 percent of the small interruptible class and 80 percent of the large interruptible volumes are

transported under discounted rates.

Finally, the Commission did authorize allocating the entire increase to the firm customers in the last rate case.

Now, I'd like to address customer impact discussed by Mr. King yesterday in his testimony. I think it's best to focus on the dollar value impact, rather than the percentage increases. And, also, the rate proposal must be looked at in its entirety to talk about customer impact. I'd like you to take a look at the exhibit that was just handed out marked as Exhibit 37, or TAA-6. This is the same exhibit that is in my direct testimony as Exhibit TAA-2. I've simply added two lines that I think help to portray better what the impact of the rate proposal has on the residential customers.

COMMISSIONER WEFALD: This is TAA --

THE WITNESS: Dash 6. The one that was just handed out --

MR. HOBERG: It's a single sheet.

THE WITNESS: -- to you as a single sheet. This is a representation of a customer's bill under current rates and under the proposed rates as filed. And this is a typical, average residential customer using 110 decatherms. And it is meant to represent

how that gas is used throughout the year. If you look at the line that I've added, base rate as percentage of total, it's indicating that under the proposed rates, our basic service charge or our fixed component of our rate would collect about 28 percent of the total customer's bill versus 16 percent under the present rate. So as shown there, it's not in the high percentages I believe were discussed yesterday.

Also, corresponding with the increase in the basic delivery charge is a decrease in the distribution delivery charge or the commodity, the variable part of the rate. And I've shown on that second line that the non-gas commodity portion of this customer's bill would decrease by $37 under this example or approximately 44 percent.

A couple of other items I'd also like to point out. The increase to the customers, as we've noted to a residential average customer would be approximately $24. As shown in the amount of increase column, the highest increase would be in the summer ones when they are using less gas, but that increase would only be $4 in those months.

And as shown in my rebuttal testimony, Exhibit TAA-5, there's another bill comparison,

which just shows varying levels of consumption, because, as we know, there's customers above and below this. As shown in that Exhibit TAA-5, if a customer used zero volumes through the entire year, their increase per month would still be only $5.20.

MR. HOBERG: That's the last page of your --

THE WITNESS: Last page of my prefiled testimony, rebuttal testimony.

This rate form also provides customers -- or still provides customers with an incentive to conserve natural gas because each decatherm of gas that they conserve, there's still a reduction of $3.33 associated with that less gas use. And that is the combination of the distribution delivery charge and the cost of gas. So they're showing that still the majority of the customer's bill is still a variable component.

What the proposed price structure will do is provide relief to customers during the winter months when their heating requirements result in higher gas use by lowering the amount collected on the volumetric basis and sending an accurate price signal by accurately reflecting fixed costs in the fixed cost component.

Just a couple comments with regard to the distribution delivery stabilization charge that was presented in -- by direct testimony. The company has proposed to implement such a mechanism if the proposed base rate levels are not approved. And I also just wanted to comment that the deferral-type mechanism will not result in significant impact as suggested by Mr. King. As shown on Exhibit No. 8 in Mr. Feingold's testimony, based on -- where we did an example based on historic results, the amount charged per bill will be minimal and significantly less than most PCA changes. In that example, over the four-year period reviewed, a residential customer would see a monthly bill change ranging from a negative 20 cents to a positive 84 cents. And that was a bill change, not an amount per decatherm.

And, finally, I wanted to just comment on the company's proposal to build a basic service change on a daily basis versus a monthly charge as done today. And the only reason for proposing this change was to provide better information to those customers that are cutting in and out of service and are receiving bills for less than a normal billing period. The proposal will not affect our meter

reading or billing schedules.

That's all I have for my summary.

MR. HOBERG: Are you offering Exhibit 37?

MR. PEARCE: I'm offering Exhibit 37. I have no other questions.

MR. BINEK: No objection.

MR. HOBERG: Okay. Exhibit 37 is admitted. Thank you, Mr. Pearce. Mr. Binek, do you have any questions of Ms. Aberle?

MR. BINEK: Yes.

CROSS-EXAMINATION

BY MR. BINEK:

Q. Mr. King has proposed increases in customer charges, hasn't he?

A. Yes, he has.

Q. Specifically, he proposes that even if rates are decreased, the volumetric rates should be flattened and the initial block revenue be recovered through increases in the customer charges; is that correct?

A. Yes.

Q. Do you agree with that recommendation?

A. Yes. At a minimum I believe that should be done.

Q. Mr. King also recommended that if rates are

increased, the increase in customer charge should be twice that of the volumetric rate.

Do you agree with that?

A. I agree if the proposal is -- the rate increase is approved as provided, that our base rates would be approved.

Q. Okay. Well, it isn't nearly as much of a customer charge increase as you propose. Would you agree that Mr. King's proposal moves in the direction of the rate design changes the company is seeking in this case?

A. I would agree that it moves in the direction.

Q. Are the proposed movements toward the company's preferred rate design sufficient to permit the company to withdraw its DDSM proposal?

A. I could not answer that at this time.

MR. BINEK: I have no further questions.

MR. HOBERG: Thank you, Mr. Binek. Commissioner Wefald, please.

EXAMINATION

BY COMMISSIONER WEFALD:

Q. Yes. I'd like to ask a few more questions about this monthly charge divided into a daily charge. Tell me about the people. You say these in

and out accounts. I would like to have a little information about that on the record.

A. The accounts we're talking about are people -- you know, in the fall college students. We get a lot of people in and out. They may move in in the middle of the month versus the beginning of the month.

Q. So what happens at this point --

A. If you are less -- excuse me.

Q. -- if I would move in on the 15th?

A. We have a normal billing cycle, which is 28 to 32 days. If you're outside of that normal billing cycle, your bill is prorated. So that if you're only in service today for -- in service under today's rates for 10 days, you'll receive 10/30ths of the customer charge on your bill. But that bill -- the way that is presented on the bill, because of the way -- it's a proration. Our customer charge is a monthly charge. So it's a combined number on the bill. It shows -- it's combined with the amount of customer charge and usage at that premise for that time period.

And the daily charge would simply allow customers to see the number of days in the bill cycle, which is presented on the bill today, and

multiply that by the charge that's in effect, the daily charge that's on the tariff sheet, if approved, and be able to calculate that amount. It's simply an informational item. The real crux of our proposal is the amount of the increase and not so much whether it's billed or presented on a daily basis versus the current monthly charge. It really will not impact the revenues we collect or the amount customers pay. It's really an informational item.

Q. I understand that. So if you're giving these people who only are using service less than a month and they are already receiving a different amount than the total amount on their bill, then we can just figure that those people are taken care of already?

A. Mm-hmm.

Q. So --

A. It's just information for those people.

Q. So don't you think -- well, so you don't really care whether or not -- you're telling the Commission you don't really care whether we do this on a daily basis or on a monthly basis, as long as the costs come out the same for customers throughout the year?

A. I would rather have the increase on the base, the fixed charge, the monthly amount. And the other was just a move toward trying to provide more information.

COMMISSIONER WEFALD: Thank you.

MR. HOBERG: Thank you, Commissioner Wefald. Commissioner Clark.

COMMISSIONER CLARK: I have no questions.

MR. HOBERG: Thank you. Any further questions of Ms. Aberle? No questions. Thank you, Ms. Aberle.

I think perhaps we should just take -- for the court reporter's benefit take a short break right here. A strict five minutes.

(Recess was taken.)

MR. HOBERG: We are back from a short recess. Your next witness, Mr. Pearce.

MR. PEARCE: I call Mr. Spratt.

MR. HOBERG: Mr. Spratt, I don't think you've been sworn in.

THE WITNESS: No, I haven't.

MR. HOBERG: Were you here earlier when I gave the admonition in regard to perjury today?

THE WITNESS: Yes, I was.

MR. HOBERG: Being advised of the penalty

for perjury, do you promise to tell the truth in that matter being heard? If so, answer I do.

THE WITNESS: I do.

MR. HOBERG: Thank you. Mr. Pearce.

RICHARD D. SPRATT,

being first duly sworn, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. PEARCE:

Q. Mr. Spratt, you have prepared written rebuttal testimony that's been filed in this case, have you not?

A. Yes, I have.

Q. I'll ask you to just briefly state your name and business address and what your position is with the company, and then if you could summarize the important points in your written rebuttal testimony.

A. Okay. It's Richard D. Spratt. My business address is 400 North Fourth Street, Bismarck 58501. I'm vice-president of human resources for Montana-Dakota Utilities, which is a division of Montana-Dakota Resources Group, Inc. My responsibilities include benefits and compensation, staffing, organizational development, behavior, labor and

503

employee relations.

Q. Thank you. Would you summarize your written testimony then?

A. Yes, I will. And I basically would like to make just a couple points. I'm here basically to refute Mr. Majoros' -- am I saying that right? -- his sort of unsubstantiated statement that we should eliminate bonuses and hold 2003 labor costs equal to 2002.

Let me start with the bonuses. Basically, we have bonuses as part of a total compensation program, which includes not only bonuses, but it also includes your base salary and your benefits and a certain portion of that salary is what we call at-risk. And we do that in varying degrees with different employees based on what's competitive. And that's my first point is that, you know, we see this to use in a competitive way. It makes us competitive and attracts and retains employees for us and so that's, A, why we have a bonus. Now, B, another reason why we do is it sort of focuses employees in on those areas that we need them to focus in on, particularly in recessionary times, to try to save costs and/or at least reduce costs and have it more efficient. So that's my first one,

504

bonuses.

Second one, compensation, where he says that we basically should hold the 2003 labor costs equal to 2002 level. A couple of things there. First of all, again, we use as part of a total compensation package a base is a portion of that total compensation package and to be competitive and to attract and retain employees, we need to have competitive wages and salaries. And right now -- along with that, we do what we call a compa-ratio analysis to see just how competitive we are. We also use about 11 different surveys that will show us degrees of competitiveness in various areas, including our engineering and our IT staff and our administrative staff. And the compa-ratio analysis that we've done shows that we're really behind competitively, not only in our industry but in general industry in terms of what we've done. So I think in -- to go back a little bit, in 1996 when we started on this -- really started tightening down and started trying cost efficiencies and, you know, looking at costs and one of the things that we did is we started holding our labor costs down quite a bit. And we've gotten behind over the years because of that.

505

To say that we should not increase or we shouldn't grant, I guess, an increase in labor costs is tantamount to making us fall back another probably -- in one case, in the executive case it would be somewhere in the neighborhood of going from 11 to 15 percent behind. And then in the office and administrative it would be about 9 percent behind. So in those two areas, you know, I think we need to -- it's our belief we need to continue to do what we're doing primarily to get the efficiencies.

Another way we can do this, though, is we could -- particularly with bonuses, is we could build that into our base structure, which basically would cost more money then and that wouldn't be very good for our customers because that has to be passed along as well.

The last thing I'll say is that it's my understanding that the Commission ordered Case No. PU-399-01-186 has allowed these kind of costs and expenses before. With that, questions?

Q. (MR. PEARCE CONTINUING) Just one question, Mr. Spratt, to clarify. Why would it cost more to package all of the compensation into wages or salary rather than bonuses?

A. Right now we have a certain -- in the

506

beginning I said we had a certain portion of our salaries that are at risk and that -- it's dependent on how we perform against financial goals, as well as -- excuse me -- goals that are personal goals that are set up, cost goals, usually. And that's to make us perform better and to be more efficient. But if we just took those and that's at risk, and if we don't -- if we don't achieve those goals, then we don't get paid that portion of it. So if we just rolled it in, that would obviously make the cost of our payroll go up.

MR. PEARCE: Okay. I'll offer Exhibit 27. I have no other questions.

MR. BINEK: No objection.

MR. HOBERG: Exhibit 27-56 is admitted.

COMMISSIONER WEFALD: Where is 27?

MR. HOBERG: 27 is the rebuttal testimony of Richard D. Spratt. Mr. Binek, do you have any questions of Mr. Spratt?

MR. BINEK: Yes.

CROSS-EXAMINATION

BY MR. BINEK:

Q. Mr. Spratt, what was the total amount of bonuses and commissions awarded last year?

A. Dollar?

Q. Yes.
A. I don't know.
Q. Would you accept $518,000 as the amount, subject to check?
A. I honestly don't know.
Q. Okay. Do you know how much of the -- of the amount was commissions and how much was bonuses? I assume since you don't know the amount, you probably don't know that, either.
A. No.
Q. Would you be able to tell us what the percentage split would be between commissions and bonuses?
A. No. In fact, that commission kind of throws me. I'm not sure -- I know I saw it in here. I think when we're talking about commission, we're talking about incentive and bonuses, period. We don't really have anybody on commission, that I'm aware of. So this would be, in fact, 100 percent bonus.
Q. Okay. And then on page 4 you state 60 percent of hourly employees, 75 percent of salary employees and 90 percent of management employees are eligible to receive bonus. What determines these percentages?

A. Well, those were done -- those are basically surveys that we've done, that we're a part of and that shows that these are the percentage splits that are partaking in bonuses.
Q. Surveys taken of whom?
A. Various companies, including our own, the utility industry.
Q. But these percentages apply to MDU, not to other companies, right?
A. No. No. These percentages apply to other companies. If you took the total of the companies in our surveys, if you go back to -- refer back to in my testimony the back page there, you can see if you go down to utility and energy section and you just take the 20 -- on the left-hand side you'll have industry sectors, utility and energy. What they're showing there is in the utility and energy sector -- well, it shows all -- a number of sectors, but particularly in the utility and energy sector, they're saying that there's an average. If you're in the 30 to $39,000 range, there's a 62.7 percent of those companies are offering bonuses. For 40,000 or more it's 75 percent.
MR. HOBERG: Just for the record, you're at RDS-1, page 1 of 3, on the back?

THE WITNESS: Yes. There's no page number on it.
MR. HOBERG: It's up at the top, RDS-1, page 1 of 3, right-hand corner.
THE WITNESS: Oh, yes. Yes, that's it. That's RDS-1. And then RDS-2, if you go over, they'll show that the utility and energy sector and it gives a number of responses up at the top and the sample was 1,149 companies, of which 76 were utility and energy and 91.2 percent of those offered. So these numbers are industry numbers. They're not our numbers. Our numbers are a little different.
Q. (MR. BINEK CONTINUING) Okay. So what percentage of hourly employees at MDU receive those bonuses, commissions, whatever they are?
A. 100 percent.
Q. Okay. And salary employees?
A. As well, 100 percent.
Q. And management employees?
A. 100 percent.
Q. So all employees are eligible to receive?
A. All employees are eligible, correct.
Q. Within each category that's eligible to receive bonuses, what proportion typically receives them in each year?

A. I'm not sure. I can tell you approximate percentage, but I'm not sure how many.
Q. Give us the approximate percentage.
A. Well, to give you an example, two years ago 75 percent of -- 75 percent of our total employee population eligible for the BETA received a 7 percent bonus. And then last year it was about -- overall it was about six-tenths of a percent that they received.
Q. Okay. Again, 75 percent of the -- is it 75 percent of all employees --
A. Yes.
Q. -- received these bonuses?
A. That's correct.
Q. And it was 7 percent, and what was the figure last year?
A. Last year was six-tenths of 1 percent.
Q. Okay. Does the total amount of bonuses awarded each year typically remain the same, or does it vary from year to year?
A. The number of bonuses?
Q. Total amount of bonuses.
A. The total amount. It would vary some year to year, depending on how we did against our financial goals and how we did against our personal

goals.
Q. Does the total amount of bonuses vary among the three categories of employees, the hourly, salaried and management?
A. Yes, it would.
Q. Do the same employees typically receive bonuses each year?
A. Overall I would say, yes. I mean, 100 percent of our employees are eligible for bonuses and so, I mean, there are some that will -- particularly, if we meet our financial goals, everybody shares in that one, but if they don't hit their personal goals, they wouldn't share in that portion of it.
Q. At the top of page 7 you state that the annual wage increases each year have averaged 3.7 percent over the last five years. According to our calculation, that would mean that over the total five-year period MDU has increased wages by 20 percent. Would you agree?
A. Yes, approximately.
Q. Have bonuses increased proportionately?
A. No. Bonuses have been up and down. I mean, one year -- like I said, last year it was very low. The year before that it was fairly high.

Q. During the past five years has MDU received any increase in its gas rates?
A. I'm not aware of that.
Q. In fact, in 1998 the company agreed to a gas reduction; isn't that true?
A. I don't know. I've only been here for about a year and a half.
Q. So you wouldn't know when the last gas rate increase was?
A. That's right.
Q. Okay. Would you accept, subject to check, that the last case was decided on November 23, 1993?
A. Would I accept that?
Q. Yes.
A. Certainly, yes.
Q. Has the company increased wages each year since 1993?
A. No, I don't think they have. Actually, we had a freeze, I know, for a while and, again, that's -- I'd have to defer that. We had a freeze on wages there for a while, I know.
Q. But over the last five years you did agree that the increases have averaged 3.7 percent each year?
A. Yes.

Q. Okay. How has the company been able to hold retail rates level and, in fact, reduce them while increasing wages each year?
A. Part of that, I think, goes to the fact that we've just become much more efficient. If you look at our population, we've decreased over the years. And, you know, we've asked our employees actually to do more and then technology has also helped us out in that respect.
Q. In other words, you've been able to improve labor productivity over these past years sufficient each year to offset the annual increases in wages, salaries and bonuses; is that correct?
A. I don't know if it completely offsets it, but, yes, essentially, you're correct. We've increased our labor productivity.
Q. Where in this case do we see a forecast of the productivity offset to the wage and salary increases you predict for the year 2003?
A. Where?
Q. Yes.
A. Say that again, please.
Q. Where in this case is there a forecast of a productivity offset to the wage and salary increases you predict for the year 2003?

A. There isn't one per se. We have goals and objectives, however, that -- in fact, we're formulating those right now -- that will hopefully get us some of that offset.
MR. BINEK: Thank you. I have no further questions.
MR. HOBERG: Thank you, Mr. Binek. Commissioner Wefald, do you have any questions of Mr. Spratt?
COMMISSIONER WEFALD: Yes.

EXAMINATION

BY COMMISSIONER WEFALD:

Q. Where is the data on labor costs and bonuses in this case?
A. Where's the data?
Q. Mm-hmm.
A. I'm not sure. We can get that data, if you need it.
MR. HOBERG: Mr. Pearce?
MR. PEARCE: I imagine it's in the statements.
MR. HOBERG: Statements A through O?
MR. PEARCE: Somewhere in there. I think Ms. Mulkern testified to it and that would identify which of the statements or schedules it's in.

THE WITNESS: Are you talking about the numbers themselves?

Q. (COMMISSIONER WEFALD CONTINUING) Yes. For 2000, 2001, 2002, 2003.

A. Okay.

Q. Where would I find the breakout of the numbers of labor and bonuses in this case?

MR. PEARCE: Perhaps we can have Ms. Mulkern point us to that. Perhaps we can find it here. It's certainly in these statements of the expense items. I'll see if we can find it. It's just been pointed out to me from both sides. In Statement N, page 7 of 23 and --

COMMISSIONER WEFALD: Statement N, page 7 of 23.

MR. PEARCE: I don't know if the witness has the exhibit up there. I'll give him this copy.

Q. (COMMISSIONER WEFALD CONTINUING) So am I correct then that the labor expense in 2001 includes bonuses as well? Bonuses as well as other labor expense?

A. Reflects average -- yes, 3.15 increase reflecting average 2002 bonus. Footnote 1 there.

Q. Well, it doesn't tell me the exact amount that was paid out in bonuses during that time, does

it?

A. 3.15 percent, but it doesn't give you the dollar number, you're correct.

Q. But it says that that reflects an average 2000, 2002 bonus?

A. Yes. What was your question?

Q. My question was, does this chart tell me how much was paid in labor and how much was paid in bonuses in the year 2001?

A. Year 2001, it does not, it appears. I'm sorry. No, it does. It's 2001, 2002, but it just gives you the average of the increase. It doesn't break out bonus and dollar.

MR. PEARCE: I think if I may interject, it's -- labor expense isn't broken out, I don't think, anywhere in those statements. That would have to be extracted from the company records. I guess it could be done.

MR. HOBERG: Is that something you'd like to see?

COMMISSIONER WEFALD: Well, I think it would be helpful because the company -- the staff is arguing that we should eliminate bonuses and they have a number. They're saying that it's half of the increase or something that's projected -- I saw that

number someplace. Just a moment. In Mr. Majoros', on page 15 it says, it is unreasonable to be granting bonuses which, in fact, amount to roughly half of the company's overall requested increase when the company is proposing a rate increase to begin with. So I'd like to know what those numbers are so that I can understand better when he talks about it's roughly half of the company's overall requested increase. I'm assuming in labor costs.

MR. HOBERG: Mr. Pearce, can you provide that?

MR. PEARCE: I assume we can. We'll certainly try to provide that number. That would be 6, I think.

MR. HOBERG: Late-Filed Exhibit 6.

Q. (COMMISSIONER WEFALD CONTINUING) So perhaps it would be helpful to have the actual numbers for 2000 and 2001. We don't -- do you know what the numbers are yet for 2002, because we are not at the time end of the year?

A. No, we don't know that now. We wouldn't have the actual until after --

MR. HOBERG: Could you project those out, though, on --

THE WITNESS: We could, yes. It's not

looking good for this year.

Q. (COMMISSIONER WEFALD CONTINUING) And then if you'll explain to me what MDU is doing here. Are you -- in your calculation on page 7 of 23, Statement N, explain to me how you're doing this.

A. Give me that cite.

Q. That same page that we were looking at.

A. Seven.

Q. Okay. So you're just taking from $7,988,000 for labor costs in 2001, you're putting in place a 3.15 percent increase for year 2002 and then you're projecting a 3 percent increase for January 1st, 2003?

A. That's correct.

COMMISSIONER WEFALD: Okay. Thank you.

MR. HOBERG: Commissioner Clark, any questions?

COMMISSIONER CLARK: Just a couple.

EXAMINATION

BY COMMISSIONER CLARK:

Q. When calculating the C ratio compa-ratio, is the term "market value," is that the same as market average? In other words, when you say 91 percent of the market value, is that saying you're 90 percent of the market average for a given

519

position or wages?
A. Essentially, that's correct. We're at midpoint market average or market value. It's the midpoint of that.
Q. Okay.
A. We're 91 percent of that.
Q. Got it. And that's companywide, it's across the board?
A. That's right.
Q. Would that follow that individual positions are typically at about that or are there certain areas of --
A. Lower and higher. And more lower than higher, though. Because if you took 100 percent, that would mean that everybody was right at the midpoint of their salary range or that market value of their salary range.
Q. Do you have any particular area of expertise that tends to be more of a problem where you are at with midpoint than others?
A. Well, if you read further, you'll see that the managers are actually lower paid, I think. That's probably where we have more of a problem.
Q. Do the C ratios or compa-ratios, include bonuses, or is that just salary?

520

A. No, that's just salary.
Q. Is there any way to get a handle on what the bonuses, kind of where that brings it? Because it would seem like if the company has a policy which is trying to move more toward bonuses, which in a lot of ways make sense because it's more incentive based and it has some tax advantages or some savings advantages, when you add those in, where do salaries fall?
A. Well, if you take the total compensation package, you know, and you look competitively, you'll see that in various classifications, they'll have different bonus amounts. Overall for mid managers, what we call mid managers -- executives are a little different -- mid managers, but we use about a 15 percent average and that's based on, again, study from Towers Perrin and --
Q. So explain, a 15-percent average means 15 percent of their total compensation package?
A. 15 percent of their base salaries.
Q. 15 percent of their base salaries is?
A. And that's really at risk. I mean, that's -- you know, they have to perform to get any of that.
Q. Okay. I think you're going to have to

521

explain this 15 percent again. It's 15 percent of their base salary?
A. Base salary, right. That's what they're eligible to receive.
Q. In bonus?
A. Up to 15 percent of their base salary and that's for the middle management.
Q. And you said that rate is comparable to other industry peers?
A. That's -- yeah. That's -- in fact, it's probably a little bit low. If you look at the study, they're going to come in somewhere between 17 and 22 percent.
COMMISSIONER CLARK: That's all I've got. Thanks.
MR. HOBERG: Thank you, Commissioner Clark. Commissioner Wefald.

FURTHER EXAMINATION

BY COMMISSIONER WEFALD:

Q. So if I'm to assume that in 2001 on this same page 7 of 23, Statement N, that a certain amount of dollars are already in 2001 for bonuses?
A. 2001?
Q. Mm-hmm.
A. Those are actuals, I think, aren't they?

522

Q. Those are actuals in 2001. The actual bonuses that were given in 2001.
A. Right. I'm assuming that's what they are. I didn't make this chart, but since that's past.
Q. So each year you're projecting to give more bonuses, if you put in the increase of the 3.15 percent, is that correct? In the first year to 2002 and 2003 you would be giving each year a greater amount -- have the potential to have a greater number of dollar bonuses in those three years?
A. Let me see if I can clear this up.
Q. Let's say there's $500,000 of bonuses in the first year.
A. Let's start with $1,000. It's easier for me to calculate. Let's say we have a $1,000 worth of -- well, first of all, let's say we have $2,000 worth of salary, period, and we give a 3 percent increase across the board to those $2,000, so that would be $60. So now we have $2,060. Now, if you assume -- you've got the 3 percent of 2,000 would be 60, 3 percent of 2,060 would be something a little more than that. So you're right in assuming that if you give increases, that providing -- and there's nothing guaranteed about these bonuses. If you hit your maximum, then your bonuses would also increase.

Q. But if Mr. -- is it Mr. Majoros who was discussing this in his testimony? Is it your understanding that he's recommending eliminating the entire dollar amount of bonuses out of 2001, or is he just recommending that there not be an increase in the dollar amount of bonuses that's included in 2001?

A. I'm not sure. 2001 is by us so now --

Q. Yes, last year. And your chart here is based on 2001 and then you're making an adjustment, reflects an average of 3.15 percent increase.

A. Over the actuals paid in 2001.

Q. Reflects average 3.15 percent increase reflecting average 2000, 2002 bonus.

MR. PEARCE: I think we may be getting stuck here. Perhaps Ms. Mulkern could come back because she's the one that prepared --

COMMISSIONER WEFALD: Okay. That would be good.

MR. PEARCE: Maybe you can get through this a little faster.

MR. HOBERG: Ms. Mulkern, do you want to come back up? Let's do it right now while we're on the subject. If you could stand up there by the mike, please.

MS. MULKERN: Can I describe maybe how we developed that labor increase?

COMMISSIONER WEFALD: Sure.

MS. MULKERN: Okay. We started with 2001 actual -- in developing a labor adjustment, we started with the actual gas utility labor expense, total company gas utility for 2001, and that contained the payroll over time, these commissions and bonuses, and we use that title. It really isn't bonuses. It kind of carries over from previous years. And looked at 2001, and then we looked at 2002, what was in the budget. And in 2001 we had a higher bonus payout and so if we stayed with the 2001 amount and increased that, really, we would be overstating. So we included a three-year average of bonuses and used a three-year average of bonuses for 2002, 2001, and 2000 and included that as the bonuses for 2002.

So the 3.1 percent -- 3.15 percent increase reflects a three-year average of bonuses in it. So the bonus level for 2000, indirectly 2002 that's embedded in that is less than was actual in 2001 because instead of using the actual bonuses, we restated it to a three-year average.

COMMISSIONER WEFALD: So there is money in

2001 here for bonuses and 2002 you altered the amount of bonus dollars in these and then you also figured a 3.5 percent increase, not only on the bonuses, but on all labor costs?

MS. MULKERN: The 3.15 increase for 2003 is net of the bonus. It's not on top of it. It's net of the change in bonus. So that's the overall increase in all labor and reflecting a three-year average.

COMMISSIONER WEFALD: All right. And then what happens in 2003?

MS. MULKERN: And then in 2003 we adjusted everything up by 3 percent. And that makes sense because everyone's wages are going up and so, generally, the bonus is based on the percent of base salary. So that base goes up and the bonus will go up. If I got, say, a .5 percent bonus in 2002 based on my 2002 salary and, hopefully, I would get a wage increase in 2003 and I got the identical percentage bonus, it would be higher cost because my wage has gone up. So it is appropriate to increase the bonus rate 3 percent, because the overall wages are going up, therefore, the bonus would go up also.

COMMISSIONER WEFALD: All right. I understand it. Thank you.

MR. HOBERG: Thank you, Ms. Mulkern. Any further questions then of Mr. Spratt? Mr. Diller.

MR. DILLER: I see it's after 5:00, but I do have a question.

EXAMINATION

BY MR. DILLER:

Q. Is it true, Mr. Spratt, that wage increases are a cause of inflation?

A. No.

MR. DILLER: I withdraw the question.

MR. HOBERG: Any further questions of Mr. Spratt? Thank you, Mr. Spratt. You've got one witness left?

MR. PEARCE: Call Richard Espeland. Should be very short, I think.

MR. HOBERG: Mr. Espeland, I just need to remind you also that you're still considered to be under oath from yesterday.

THE WITNESS: That's correct, yes.

MR. HOBERG: Mr. Pearce, please.

RICHARD A. ESPELAND,

having been previously sworn, was examined and testified as follows:

DIRECT EXAMINATION

BY MR. PEARCE:

Q. Mr. Espeland, for this case you prepared written prefiled rebuttal testimony, did you not?

A. Yes, I have.

MR. PEARCE: And that's been marked as Exhibit 28, I believe. I'll offer that exhibit and I have no further questions.

Q. (MR. PEARCE CONTINUING) Would you please give a summary of your testimony?

MR. HOBERG: Before you do, any objection to Exhibit 28?

MR. BINEK: No.

MR. HOBERG: Exhibit 28-55 is admitted.

Mr. Espeland, please.

THE WITNESS: Thank you. In my written testimony -- and I'll very briefly summarize and refer mainly to the attachments, which provides us supporting information, because I know in making rate case decisions what common practice is, sometimes needs to be supported. If you look at the Exhibit RAE-2, I provided two survey sources to support the common approach using a SERP or a supplemental income security plan for senior management.

If you look at page 2 of 3 of Exhibit RAE-2 you notice from the Hay survey under the left-hand column under non-qualified plans, it says, 74 percent of plan sponsors have some form of non-qualified retirement plan. So three-fourths of the employers have these types of plans. They're very common. Also, if you look at the right-hand column of the survey highlights, the second bullet from the bottom says, target retirement ratios fall into the 50 percent to 70 percent range, and so that a 50 to 70 percent replacement ratio for retirement income is very common.

On page 3 of 3 is another survey of another survey of another consulting company, Clark/Bardes Consulting. They also, if you look at the plan prevalence, have shown that in 2001 on the left-hand bar, 75 percent of the companies surveyed also have these type of plans. If you look up at the top introduction, the last -- on the right-hand column, about halfway through that paragraph, it says, the primary reason for adopting a SERP is the Omnibus Budget Reconciliation Act of 1993, which lowered calculations to 150,000. And at the time prior to that the index was 225,000. So they reduced by over a third the amount of compensation that could be

considered in a defined benefit pension plan. That was in part what caused these plans to be added.

If you then turn to RAE-3, the next page, which is a graph that shows the percent retirement replacement income, I've shown there on the top ones that qualified plans as to what percent replacement income they provide, and you can see 30,000 is 84 percent, and at the top level it's 20 percent, well below the 50 to 70 percent that is common.

So that's why we have our SISP program and that's why it's appropriate to include in the rates as a common practice as part of the total compensation program. And the bottom graph reflects how it changes when you add SISP. I believe the prior testimony said that we have an inverse relationship with our SISP where the lower level gets a smaller percentage replacement income under SISP and the higher level gets a higher percentage, and that's correct, but that's only a small part of the total picture. You've got to keep things in context.

There are four major parts to our retirement plan. Social Security, and you'll see the inverse relationship there where 40 percent out of the $30,000 level is provided by Social Security,

but only about 3 percent at the top level comes from Social Security. And same with the other plans. Our 401(k) plan has 20 percent provided at the lower income levels, and 8 percent at the higher level. Twenty-four percent comes from the defined benefit pension plan on the lower level and only 9 percent at the top level. That's why we have the SISP, to be fair and competitive and have a reasonable amount of replacement income at the 50 percent level at the top end, which is at the low end of the range of common practice.

Again, I want to emphasize as Mr. Spratt has commented, that we approach compensation in a total compensation approach. We can deliver $1,000 in a lot of different ways. We choose to offer base salary. We choose to have incentive pay so it's not a fixed cost, but it's only given if performance is there. And we choose to have benefits and other programs that provide for economic security. It's the most cost-effective way of doing -- delivering value to the executives and to the employees at all levels. And we could easily pay them all in base salary, all in base rate. It would not be the most cost-effective or the most incentivizing for good customer service.

That concludes my remarks.
MR. PEARCE: I'll offer Exhibit 28. I don't think I did before.
MR. HOBERG: You did.
MR. PEARCE: I didn't mark it. I have no further questions.
MR. HOBERG: Mr. Binek, any questions?
MR. BINEK: This has been covered pretty thoroughly, I think, and I'm going to resist the temptation of asking any questions. So I have no questions.
MR. HOBERG: Thank you. Commissioner Wefald, any questions?
COMMISSIONER WEFALD: I have no questions of this witness.
MR. HOBERG: Commissioner Clark, any questions?
COMMISSIONER CLARK: None. Thank you.
MR. HOBERG: Thank you, Commissioner. Mr. Diller, no questions? No one else has any questions of Mr. Espeland? Thank you, Mr. Espeland.
COMMISSIONER WEFALD: I have one for Mr. Spratt.
MR. HOBERG: Mr. Spratt, Commissioner Wefald would like to ask a question of you.

COMMISSIONER WEFALD: One more.
THE WITNESS: Am I still under oath?
MR. HOBERG: Yes, you are.

FURTHER EXAMINATION

BY COMMISSIONER WEFALD:

Q. Why should the Commission consider 2002 in an average for bonuses when you haven't even completed the whole year?

A. Because we started out last year and told our employees that there was going to be a bonus program. And in that bonus program we have objectives that they're meeting and there are certain financial objectives that we have to meet, as well as personal objectives. So in order for us to be able to keep our promise to our employees, I would like the Commission to do that.

Q. Well, we're not going to be approving anything that would go into effect for 2002. Our earliest date of the order would be --

A. 2003.

Q. Isn't that the year that we're looking at?

A. Yes.

Q. So it wouldn't make any difference what the Commission did for 2002. So we have to make our decision before the end of 2002 and you have to make

projections of what people are going to be getting, but how do we know you are actually going to be giving those bonuses or that people will actually meet the requirements by the end of the year? What I'm wondering is why we shouldn't just use the average of maybe 1999, 2000, and 2001, or maybe just 2000 and 2001, instead of -- if we are even considering adding bonuses and why we would even look at numbers from 2002 when they're not actuals?
MR. PEARCE: I think this is really Ms. Mulkern's area again. Probably she should address it.
MR. HOBERG: Ms. Mulkern, come back up again.
COMMISSIONER CLARK: We want you to sing Stairway to Heaven this time.
MS. MULKERN: We used an average of 2002, 2001 and 2000 because when we were preparing this case in March of 2002, the bonuses are generally paid out in February of each year. So when we prepared this case in March, we had the actual amount of bonuses that had been paid for 2002.
COMMISSIONER WEFALD: Okay. Thank you. That answers that question.
MR. HOBERG: Any additional questions of

Mr. Spratt? Thank you, Mr. Spratt. Is there anything else to bring to the attention of the Commission in regard to evidence in this matter? Mr. Pearce?
MR. PEARCE: Just, I guess, in the way of a general statement. There has been a lot of discussion on the depreciation study that's currently underway and, of course, it's our position that that may or may not have some effect in the future on rates, but really isn't critical for this case because we are operating now under a Commission-approved depreciation study from 1991 that we think is the appropriate one to be used. So that ongoing depreciation study certainly isn't critical. Now, it may or may not have any effect on rates in the future.
Also, I think it's appropriate to renew our motion. It's been taken under advisement, I think, that this proceeding is not the proper one to implement FAS 143 for ratemaking purposes.
MR. HOBERG: That's been taken under advisement, yes. Are you going to be providing the late-filed exhibits shortly?
MR. PEARCE: What sort of time frame? I think those can be done rather quickly.

MR. HOBERG: Probably within the next 15 days?
MR. PEARCE: Certainly, I would think. Even 10 or 15. Fifteen is fine.
MR. HOBERG: That would be appropriate, I believe. There's been some discussion about how to close this out and it's my understanding that both of the -- the staff and you want to file proposed findings of fact, conclusions of law and post hearing briefs?
MR. PEARCE: Yes.
MR. HOBERG: Mr. Binek; is that correct?
MR BINEK: Yes.
MR. HOBERG: Okay. We can do that within 30 days; is that correct?
MR. BINEK: When will the transcript be prepared?
MR. HOBERG: Are we preparing a transcript?
MR. PEARCE: Yes. And I think we should go off the record because the reporter indicated to me she prefers not to be pushed on the record as to the time.
MR. HOBERG: Let's go off the record.
(Discussion off the record.)
MR. HOBERG: Let's go back on the record.

MR. PEARCE: Maybe something like -- talking about the last week of October then, maybe.
MR. HOBERG: The Commission has until the 12th of December to issue a decision.
MR. BINEK: I was going to suggest possibly November 15 as a date for proposed findings and briefs.
MR. PEARCE: That's fine. Sure.
MR. HOBERG: That would give the Commission 30 days.
MR. BINEK: Just about 30 days.
MR. HOBERG: Okay. So you have them to the Commission by the 15th, not mailed or anything, to them by the 15th.
MR. PEARCE: Right, in their hands.
MR. BINEK: I can get them in their hands.
MR. HOBERG: You can do that.
MR. PEARCE: We have messengers. I can do that, too.
MR. HOBERG: Okay. So proposed findings of fact, conclusion of law and briefs to the Commission by November 15. Late-filed exhibits within 15 days. Is there anything else that needs attention at this time? Mr. Pearce?
MR. PEARCE: Nothing for me.

MR. HOBERG: Mr. Binek?
MR. BINEK: No.
MR. HOBERG: Thank you. Commissioner Wefald, did you have any closing statements to make?
COMMISSIONER WEFALD: Thank you for a good hearing.
MR. HOBERG: Thank you. Commissioner Clark?
COMMISSIONER CLARK: Thank you.
MR. HOBERG: Let's close this hearing. It's approximately 5:30.
(Concluded at 5:30 p.m., the same day.)

CERTIFICATE OF COURT REPORTER

I, Linda L. Gingery, a Registered Professional Reporter,
DO HEREBY CERTIFY that I recorded in shorthand the foregoing proceedings had and made of record at the time and place hereinbefore indicated.
I DO HEREBY FURTHER CERTIFY that the foregoing typewritten pages contain an accurate transcript of my shorthand notes then and there taken.
Dated at Bismarck, North Dakota, this 21st day of October, 2002.

Linda L. Gingery
Registered Professional Reporter

Natural Gas Furnaces

Gas heating is preferred 4 to 1 over electric

It is probably no surprise that the largest part of your energy bill comes from heating your home. But what you may not realize is that you can save up to 40% on your utility bills by converting to a high efficiency natural gas heating system. Whether you have forced-air, baseboards or radiators, natural gas has a system for you.

Things to Consider When Working with Your Contractor:

- Decide what type of natural gas system is best for your home. Your choices include hydronic heating, a forced air system, and combo-heaters.
- Determine the appropriate size unit your home requires.
- Determine the appropriate venting option.
- Compare purchase price and operating costs of different systems.
- Compare warranties on both the equipment and the installation.
- Look for design-certified models that are tested to national standards by a nationally recognized laboratory.

Email or call 703-941-HEAT or toll-free 888-941-HEAT, Monday through Friday, 8am to 8pm, for more information. You also can obtain the name of a Washington Gas-approved trade associate (heating and

Why Natural Gas?

Why Natural Gas?

Natural Gas Helps Make Your New House a Home.

Lots of things make the four walls of a house into a home for your family. Time. Memories. Special events. And, right from day one, the warm, comfortable feeling you get from natural gas heating and fireplaces. Plus, you can enjoy all of the benefits of natural gas today, and take comfort in knowing you'll have a home that future homebuyers will prefer.

It's The Peoples Choice.

Natural gas is the overwhelming fuel of choice for homes throughout the Washington area because it simply works better. It's no wonder that 9 out of 10 new homes in the metropolitan area are heated with natural gas.

Gas Cooking is Preferred **2 to 1**	Gas Water Heating is Preferred **3 to 1**	Gas Heating is Preferred **4 to 1**

For The Comfort and Convenience.

Once people experience the comfort and convenience of natural gas in their homes, they prefer it over other energy sources. For example, cooking is easier on a natural gas range because temperature control is instant and precise. Natural gas fireplaces light with the flick of a switch. Clothes spun in a natural gas dryer come out fluffier and softer. Natural gas barbecues never run out of fuel.

Discover the real benefits of natural gas for:

Heating Your Home

Relaxing By The Fireplace

Heating Your Water

Cooking Your Food

Drying Your Clothes

Enjoying The Outdoors

It's Your Best Energy Value.

Natural gas is energy-efficient, clean-burning and dependable. It's a natural source of energy, unlike electricity, which has to be created using another form of energy. And because natural gas burns clean, there's less pollution. That's better for you and the environment.

Why Natural Gas?

Natural Gas Heating System

Heating Your Home

NATURAL GAS HEATING SYSTEMS

- 9 out of 10 new homes in the metropolitan area are heated with natural gas.
- Keep your family comfortable with warm air, hot water or steam.

Want to try to squeeze a little warmth out of a heat pump?

An electric heat pump just can't warm you like a natural gas heating system can. That's because regardless of the temperature outside, a heat pump blows cold air. And cold air never helped anyone stay warm.

High-efficiency natural gas heating systems keep you warm and comfortable on the chilliest days. It's the heating system most people choose, because it works.

A home's heating system can be the largest energy user, so it's important to have an efficient, economical and reliable system. That's why natural gas heating systems are preferred 4 to 1 over electric heat pumps. They're up to 97 percent efficient and can save you up to 40 percent on utility bills compared to some older models.

Montana-Dakota Utilities Company
Summary of Exhibit___(MJM-7)
Amounts in thousands

	12 Months Ended Dec. 31, 2001	Projected Year 2003			
		Majoros Recommended			
	Average Plant	Annual Depreciation	Annual Depreciation	Annual Salvage	Net Depreciation
	(a) Exh. MJM-7 Page 2 of 3	(b) Exh. MJM-7 Page 2 of 3	(c) Exh. MJM-7 Page 3 of 3	(d) Note 1.	(e)
Distribution	$ 54,507	$ 1,291	$ 1,378	-	
General	6,832	330	111		
	61,338	1,621	1,489	289	1,200
Common, including intangibles-Note 2.	7,150	451	440	559	(119)
Subtotal	68,489	2,073	1,929	848	1,081
Amortization, other	299	7	8	-	8
	68,787	2,080	1,937	848	1,089

Notes:

1. The salvage amounts are from Exhibit___(MJM-6) and were allocated as follows:

Natural gas salvage equals $1,444,452 thousand divided by 5 years	$288.890
Common plant salvage equals $2,795.6 thousand divided by 5 years	559.120
Total	848.010

2. The Common plant and depreciation amounts were summarized as follows:

	Plant	2001 Deprec.	2003 Deprec.
Total common less intangible	5381.300	270.831	211.000
Common intangible	1768.983	180.613	229.000
	7150.283	451.444	440.000

MONTANA-DAKOTA UTILITIES CO.
FIRST DATA REQUESTS
CHARLES KING ON BEHALF OF THE NORTH DAKOTA
PUBLIC SERVICE COMMISSION STAFF
DATED JULY 25, 2002
CASE NO. PU-399-02-183

Request No. 21 Reference: Statements A-F, G-L, N-O.

Please provide annual North Dakota gas utility gross salvage and cost of removal by plant account beginning 1986 through 2003.

Response:

Please see Attachment A. For the years 1986 through 1994, the information is available for the total company only. The years 1995 through 2001 show both total company and as allocated to North Dakota. Please see Statement O, pages 5 and 6 for the salvage and removal costs for projected 2002 and 2003.

C King data request no. 21

by Public Service Commission
Exhibit # 21
10/07/2002 CC: Comm Legal Illona, Pat, Jerry Mike .
