RE: Keystone Pipeline

Dear Public Service Commissioners:

I have been a landowner for 50 plus years. As Public Service representatives for the state and residents of North Dakota I have one question for you. Why would you allow TransCanada to tell you where they want the Keystone Pipeline route to be established? They have one route in mind and only one.

There will be a leak sooner or later, question is when and where. Then there goes our water. Which do we need more OIL or WATER?

We have a Walsh Water Line going into the City of Lankin that has been in for many years. There have been 3 line breaks already this winter and its not over yet. This happens every year. Why would an oil line be any different? Or do you believe what Keystone is telling you? As with any business, they are able to sugarcoat what they tell you. Pollution, leaks , actually what does it take to be a leak in their eyes?

Landowners bought this land to make a living and to preserve and take care of it for the future generations. Now a foreign company comes in and will make Billions of dollars more than the landowners could ever dream of. Would you allow it if it was your land or lot and you had nothing to say about it?

You have the option and opportunity to choose a safer route or no route at all. You will be letting the state, public and landowners down by not choosing the safest route. It is your duty and job.

Sincerely

John Capp
