# **Belfield-Rhame Transmission Project**

## **Summary of Cultural Sites in Corridor Areas A, B, and C**

### Introduction

Metcalfe Archaeological Consultants, Inc. conducted the files search for the proposed Belfield-Rhame Transmission project from August 20<sup>th</sup> to September 24<sup>th</sup>, 2007. The work was done using the site and manuscript files at the State Historical Society of North Dakota in Bismarck. Bill Christensen gathered and tabulated data about all previously recorded cultural resources and previous cultural resource surveys within Files Search Corridors A, B, and C. Patrick O'Brien digitized the locations of all cultural resources and surveys that had accompanying maps of sufficient quality. Once digitized, the resources and surveys were displayed on maps provided to ENSR, showing their locations relative to the file search corridor boundaries and to the proposed transmission line routes.

### Corridor A

There are 165 sites in Corridor A. The majority (n=89) are architectural sites, including 38 recorded structures in the Town of Rhame. Many of the architectural sites are farmsteads, homesteads, or ranches (n=28); but the architectural sites also include several bridges, schoolhouses, churches, and cemeteries, as well as other types of structures. Historic archaeological sites in Corridor A (n=21) include cultural material scatters, dumps, depressions and foundations, and mines. Of the 55 prehistoric sites in Corridor A, most (n=39) are lithic scatters, but there are also 12 open camps, three quarry sites, and one unidentified rock feature.

### Corridor B

There are 26 sites in Corridor B. Fourteen of these sites are architectural, including five farmsteads, five houses, two bridges, a schoolhouse, and a church/cemetery. Only two historic archaeological sites are known to date in Corridor B; both are cultural material scatters. Of the 10 prehistoric sites in Corridor B, six are lithic scatters and four are open camps.

### Corridor C

There are also 26 sites in Corridor C and, like Corridor B, 14 are architectural. These sites include eight farmsteads, three houses, two schoolhouses, and one church/cemetery. Historic archaeological sites in Corridor C include one cairn and three cultural material scatters. Prehistoric sites in Corridor C include two lithic scatters, one quarry, and five stone circle sites.

RE: ENSR International on behalf of Basin Electric Power Cooperative  
Belfield to Rhame Transmission Line

ENSR International on behalf of Basin Electric Power Cooperative requested an archival search of the General Land Office (GLO) maps as they pertain to the BR Transmission Line in Bowman and Slope Counties, North Dakota. Between November 30 and December 3, 2007 Damita Hiemstra of Metcalf Archaeological Consultants, Inc. conducted a search of the GLO map online database on North Dakota's geographic information system (GIS) hub for the project area. The search revealed the project corridor crosses several trails and nears two homesteads.

The trails crossed by the project corridor were likely wagon trails, signified during the time of their use, by shallow to deep ruts. These trails historically are ephemeral and were created for short-term use. A few trails historically were developed and utilized more often and can still be seen today. Agricultural practices, erosion, and sedimentation are a few forces at work eradicating the few trails still visible on the landscape in modern times. Such is the case for the project area. The majority of the project corridor is vegetated in CRP or currently in cultivation. No trail systems were visible crossing the corridor and no historic debris (sometimes associated with such trail systems) was discovered.

Two historic homesteads were near the project corridor. The first homestead, was owned by Alfred White, is located in Section 17, T136N, R98W in Bowman County, North Dakota, approximately 1.25 miles east of the project corridor. Little information about Mr. White is available. He was born in 1857 and passed in 1943 (NDBI) and originally homesteaded in a different area as a rancher. The Section 17 property may have been one of his many ranches alluded to in the *Slope Saga* (1976:1117). While the residential buildings associated with this homestead are well removed from the project area, a large fenced area is visible on the GLO map of the area produced between 1881 and 1900. The fenced area on the western margin lies less than one-half mile from the project corridor. The fenced areas are unusual in such barren, open territory and reflect the partitioning of

once-open rangeland. Fencing with barbed wire was technology developed in the early 1880's (White 1994:264). This division of the open range created highly volatile situations between homesteaders and ranchers trying to move cattle over vast areas. As can be seen on the GLO map of this area, a trail stretches along the northern margin of the fenced area, no doubt an alternate route due to the inaccessible trails within the fenced area.

The second homestead was owned by Peter Yauch and is located on the Cannonball River approximately one mile south-southwest of the White ranch in Section 19. The only written documentation for Mr. Yauch comes from the *Slope Saga* (1976:1118). No birth date was available for Mr. Yauch but he passed on November 11, 1907. His brother and partner, Bartle Yauch received the Section 19 property upon his death, who quit the property sometime prior to the end of 1908. Bernard Wilson ran the farmstead until 1923 when he went into partnership with the Luger Furniture Company who purchased the property. No sign of this farmstead was encountered during the survey.

The GLO search, while informative on the general area surrounding the transmission line, resulted in no property of historic significance directly crossed by the line. A finding of *No Historic Properties Affected* is recommended for this undertaking upon the basis of the historic document search.
