

- Existing Row Boundary defined by location of existing 6-inch pipeline Right of Way (ROW) to the east
- Because pipeline spacing varies due to construction requirements at the time of installation, the distance between the existing 6-inch pipeline and new 8-inch pipeline loop may vary between 0 and 35 feet with desired location as close to the existing 6-inch line as possible.
- New additional ROW requirements will vary along the proposed route and will depend on the location of Belle Fourche's existing line and the existing ROW boundary..
- Temporary workspace adjacent to new additional ROW may be required at certain points to install the pipeline. Typically 50' in width and the length of the ROW will be rented from landowners. Additional temporary workspace at civil and environmental crossings of up to 75' in width and up to 300' in length on each side of the crossing will be rented as necessary
