Re: Minnkota Power Center to Grand Forks 345kV

Mr. Fasteen,

The University of North Dakota has been happy to lend our views and concerns with the proposed power line planned for south and west of the Grand Forks airport (GFK). As we discussed we have a few concerns with our specific operations concerning visibility of the proposed line, and have been actively working with Kadrmas, Lee & Jackson (KLJ) about these concerns.

As of this time, we are comfortable that the proposed line will not pose a threat to our operations so long as high visibility devices are to be used on the lines in the area immediately south of the Grand Forks Airport. We appreciate the invitation to add to the discussion and look forward to further meetings about the topic as Minnkota Power moves ahead with their plans.

Sincerely,

Max Kahlhamer
