NORTH DAKOTA PUBLIC SERVICE COMMISSION
CENTER-GRAND FORKS 345KV TRANSMISSION LINE INSPECTION
DATE: 6-12-2014

PRELIMINARY INSPECTION REPORT

DATES OF INSPECTION: AUGUST 4 THRU AUG 6, 2014
INSPECTOR: KEVIN J. BERRETH, MBN ENGINEERING, INC.

Houston Engineering, Inc. and MBN Engineering were contractually hired by the North Dakota Public Service Commission to complete the construction inspection activities, as part of the Minnkota Power Cooperative Center-Grand Forks 345kV transmission line construction project(PU-09-670). The following is a summary of the work completed to date by MBN Engineering.

On August 4-6, 2014, Kevin Berreth of MBN Engineering started at the west end of this transmission line just east of the Milton R. Young Generating Station and continued east toward Grand Forks, ND. Due to time and budget constraints, and due to limited access, not all structures were inspected.

SOVEREIGN LAND PERMIT NO. S-1755 - Permit to construct transmission line across the Missouri River in Oliver and Burleigh Counties. Poles 68 and 69 were inspected on the west side of the river. Construction activities were complete in this area. See picture "STR 69 BASE LOOKING EAST MISSOURI RIVER.JPG". It appears that all material excavated for the drilled pier foundations has been removed from the site. The drilled piers were backfilled by rip-rap just above normal grade, and the area seems to be graded uniformly. See picture "STR 70 LOOKING EAST ACROSS MISSOURI RIVER.JPG". Marker balls were installed on the shield wires. It appears spacers were installed on the conductors. Plan and profile drawing state that they are maintaining 30' of clearance over the river above the 100 year flood elevation. This could not be verified as would require extensive survey. The west side of the river appears to be in compliance with the sovereign land permit No. S-1755. The east side of the river was not inspected at close range due to access.

SOVEREIGN LAND PERMIT NO. S-1758 - Permit to cross the Sheyenne River in Griggs County. Did not inspect this river crossing at close range as Houston Engineering had already done so. See Status Summary Report #2 from Houston Engineering.

SOVEREIGN LAND PERMIT NO. S-1756 - Permit to cross the James River in Wells County: Poles 501-503 were inspected and did not identify anything that would be out of compliance with this permit.

SOVEREIGN LAND PERMIT NO. S-1757 - Permit to cross the James River in Eddy County: Poles 740-741 were inspected and did not identify anything that would be out of compliance with this permit.

Special Use Permit 12-LM-60-1076: Permit to cross the Mcklusky Canal

The permit granted permission to cross the canal in two locations. These are between Str #220-221 and #352-353.

Item 3 of the "Special Conditions" states that the overhead wires across the canal ROW shall have a minimum clearance of 40' above ground at 120 deg F. This could not be field verified without additional survey. However, between Str 220-221, the plan and profile drawings show about 36' of clearance on the south side of the canal and about 40' of ground clearance on the north side with conductors plotted at what I believe to be 212 deg F. The clearance over the water in the canal at time of survey appears to be about 48' with conductors at 212 deg F. At crossing between #352-353, the plan and profile scales at about 40' of ground clearance over both high sides of the canal. Also, there appears to be about 80+ feet of clearance over the water in the canal.

Item 4 of "Special Conditions" states that MPC shall install and maintain fence grounding. Verified that fence is grounded by structure #220. At structure #221, the fence posts were installed but no wires were installed hence no need for fence grounding until wires installed. At Str #352, it was verified that the fence is grounded on both sides of a new gate that was probably installed for construction purposes.

Item 5 of "Special Conditions" states that "Overhead warning signs must be installed facing traffic that show the clearance and electrical line voltage". I DID NOT SEE ANY SUCH SIGNS AT BOTH CROSSINGS

Item 6 of "Special Conditions" states that electrical lines shall cross perpendicular to the centerline of the canal. Both crossings verified that they are crossing perpendicular, or very close to perpendicular, to the canal.

Item 7 of "Special Conditions" states that avian avoidance and visibility enhancement devices are to be installed. Verified that bird flight diverters were installed on the shield wires guessing about every 150-200' but no avian avoidance devices were installed on any of the conductors.

Item 8 of "Special Conditions" states that disturbed areas are to be repaired and seeded. It appeared that all areas within the transmission right of way were in good condition.

STRUCTURE #256: See picture "STR 256 JUST NORTH OF-CONSTR MATTING LOOK E.JPG". Just north of structure #256 on the east west minimum maintenance road, construction matting is still layed out in the low areas of the road and some is stacked up along side the road.

STRUCTURE #753; See picture "STR 753 LOOK E CONSTR MATTING.JPG"; On both sides of the road in the ditches, there still remains construction matting.

GENERAL INSPECTION NOTES: A lot of other structures were inspected along this entire route. General clearances to ground, other power lines, and other aerial obstacles was inspected(not measured) and appear to be in compliance with National Electrical Safety Code. In order to verify that the entire line is in compliance with NESC it would require extensive survey. I can elaborate on the structures that were visited at close range, or from a distance, in the final report if required.

FURTHER INSPECTION; Another field inspection is required to verify compliance with the FAA permits around the Grand Forks Airport. This inspection is planned for the week of Aug 18. Will provide field report after inspection.
