**Re: Letter of Reference – Keitu Engineers & Consultants, Inc.**

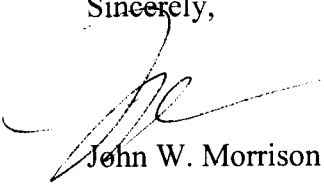

At their request, I am pleased to provide a letter of reference for Keitu Engineers & Consultants, Inc. of Mandan, ND.

This Mandan based firm has been selected by several clients of our law firm to conduct pre-permitting field studies and provide technical support data for utility permitting projects. Their firm took the lead role in 2007 to obtain the necessary permits for Belle Fourche Pipeline, LLC to loop their Alexander to Bowline Junction crude line. They were also selected by the company to oversee and certify that the construction of the pipeline on US Forest Service land was completed in compliance with US DOT regulations and US Forest Service permit parameters. The firm was selected to repeat its performance, being selected to spearhead route selection and permit applications associated with Bridger Pipeline's crude pipeline project currently under development for Billings, Dunn and McKenzie County.

It is my understanding that the Belle Fourche Pipeline Alexander crude oil loop project was the first project ever to exclusively use GIS technology to document all field botany, wildlife, wetland and cultural resource data, as well as record is proposed and as-built route. From start to finish, the necessary permitting activity including field studies and development of permit applications was completed in less than 3½ months. The accelerated project timeline speaks volumes to their organizational skills and their effort to prepare complete submissions for regulatory review.

I have recommended Keitu Engineers & Consultants, Inc to several of my clients, and am pleased to recommend them to you. If you have any questions or wish to discuss this matter, please feel free to contact me at your convenience.

Sincerely,

John W. Morrison
