Addendum #1 to  
Consolidated Application of Vantage Pipeline US LP  
for Certificate of Corridor Compatibility and Route Permit

The Vantage pipeline alignment will cross seven single row shelterbelts. Clearing of trees and other woody shrubs would be temporary within the construction right-of-way. The 30 foot wide permanent right-of-way would be kept clear of trees following construction to allow for inspection and maintenance activities. Vantage will evaluate options to neck down the construction and permanent right-of-way in areas where the alignment intersects a shelterbelt. Vantage is also committed to a 2:1 replacement ratio for any impacts to woody vegetation removed from within the permanent and construction right-of-way. All cleared areas within the construction right-of-way would be replanted and planting outside of the permanent right-of-way would mitigate impacts to the permanent right-of-way.
