Comments:
 Install a new three phase primary circuit from our substation along HWY 10 to the new Southwest Grain Elevator, southeast of New Salem. MDU has a overhead single phase line approximately 500FT and a overhead three phase line approximately 1000ft from the new elevator. MDU will be coming out of the substation with underground, them going overhead until we get past the railroad tracks, which at that point we will go back to underground to feed into the new Grain Elevator. Southwest Grain has requested permanent power in the spring of 2012, but may need temporary this fall.
