Dear Ms. Ploetz:

Re: Enbridge's Grenora Expansion Project

The North Dakota Game and Fish Department has received notification of Enbridge Pipelines proposal to expand its existing Grenora Pumping Station. The proposed construction would consist of a new 40,000 barrel tank, an 8 truck unloading unit, and installation of 10-inch diameter pipe from the pumping station to the Lease Automatic Custody Transfer Area. The proposed expansion is planned in the NE1/4 of Section 14 and in the SE1/4 of Section 15, Township 159 North, Range 103 West in Williams County, North Dakota.

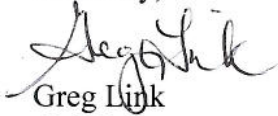

The Department reviewed your proposal for Species of Conservation Priority and for the presence of PLOTS lands. From the information you provided us, it appears the project will not directly impact any Species of Conservation Priority or impact any PLOTS lands. However, the project site could potential impact some wetlands and a significant linear drainage. It's important to maintain the existing drainage patterns to reduce impacts both upstream and downstream of the site.

A primary component of low impact development is the promotion of the natural processes which can be achieved through inclusion of "on site" wetlands, grassed swales, natural vegetation, detention ponds, bioretention and infiltration devices. These methods if applied correctly can be effective in reducing runoff volumes, reducing erosion in tributaries, increasing infiltration, and minimizing the off-site transport of pollutants. Additionally, these features can be aesthetically pleasing, improve wildlife habitat, and reduce site development costs.

The Department recommends planning around wetlands when possible; however, when these areas cannot be avoided, we suggest contacting the Corps of Engineers' North Dakota Regulatory Office or the Natural Resource Conservation Service due to probable impacts to wetland acres. The

Department recommends a mitigation plan be submitted with any necessary permit applications to facilitate the review process. We also request that the potential for sedimentation entering the receiving water body during the construction be minimized with the use of erosion control measures.

Sincerely,

A handwritten signature in black ink, appearing to read "Greg Link". The signature is written in a cursive style with a large initial "G".

Greg Link

Re: Enbridge Pipelines (North Dakota) LLC: Grenora Expansion Project , Williams County, ND

Ms. Ploetz,

The North Dakota Parks and Recreation Department (the Department) has reviewed the above referenced proposal from Enbridge Pipelines to expand its existing Grenora Pumping Station in Williams County, North Dakota.

Our agency scope of authority and expertise covers recreation and biological resources (in particular rare plants and ecological communities). The project as defined does not affect state park lands that we manage or Land and Water Conservation Fund recreation projects that we coordinate.

The North Dakota Natural Heritage biological conservation database has been reviewed to determine if any plant or animal species of concern or other significant ecological communities are known to occur within an approximate one-mile radius of the project area. Based on this review, there are no documented occurrences in our database within or adjacent to project area. Because this information is not based on a comprehensive inventory, there may be species of concern or otherwise significant ecological communities in the area that are not represented in the database. The lack of data for any project area cannot be construed to mean that no significant features are present. The absence of data may indicate that the project area has not been surveyed, rather than confirm that the area lacks natural heritage resources.

The Department recommends that the project be accomplished with minimal impacts and that all efforts be made to ensure that critical habitats not be disturbed in the project area to help secure rare species conservation in North Dakota. Regarding any reclamation efforts, we recommend that any impacted areas be revegetated with species native to the project area.

We appreciate your commitment to rare plant, animal and ecological community conservation, management and inter-agency cooperation to date. For additional information please contact me at (701-328-5370 or [kgduttonhefner@nd.gov](mailto:kgduttonhefner@nd.gov)). Thank you for the opportunity to comment on this proposed project.

Sincerely,

*Kathy Duttonhefner*

Hello,

I am sending a pdf map of the wellhead protection area and the shapefile. The shapefile is referenced to GCS North America 1983. If you need any more info, please let me know.

Shannon,

I'm working on a PSC application for a project that is in the vicinity of Grenora, ND. Based on the ND GIS Hub, there is a surface aquifer (named the "Grenora aquifer") that intersects a portion of the project area. Would you be able to tell me if Grenora has a WHPA and provide a shapefile of the WHPA boundary (if applicable)?

Thank you for your time,

Angie Ronayne
