RE: Parcel ID No. 02-1392-00010-000

Gentlemen/ Ladies:

As part of the North Dakota Department of Transportation (“ND DOT”) Main Avenue/ US Highway 10 road expansion project (“Highway Project”), the ND DOT has asked Magellan Pipeline Company, L.P. (“Magellan”), to relocate a portion of its existing petroleum products pipeline facilities (“Facilities”) to an area located outside of the ND DOT’s Highway Project work area. To accommodate the ND DOT Highway Project, Magellan is proposing to relocate a portion of its Facilities to the location shown on the attached site map.

Under North Dakota law (North Dakota Century Code § 49-22-05.1 and North Dakota Administrative Code § 69-06-08-02), certain geographical areas have been designated as “avoidance areas” by the North Dakota Public Service Commission and are to be avoided when selecting a route for a transmission facility, such as a pipeline, unless there is no reasonable alternative. One such avoidance area is the area within five hundred (500) feet of a residence or business.

As depicted on the enclosed site map, Magellan’s relocated Facilities will be located within five hundred (500) feet of your property, which is located at **Lot 1, Block 1, Meadowridge 12th Addition, Cass County, ND**. By signing below, you confirm that you have no objection to the installation of Magellan’s Facilities within five hundred (500) feet of your business, and voluntarily waive the avoidance area setback criteria. **Please return this signed letter in the enclosed self-addressed, stamped envelope to Cynthia Pierce or directly to me on or before February 17, 2012.**

If you have any questions, please feel free to contact me at **612-991-0141**. Your timely response and cordial cooperation is much appreciated.

Sincerely,  
  
Don Jensen

RE: Parcel ID No. 02-0704-00040-000

Dear GFB Realty LTD/ Mr. Greg Butler:

As part of the North Dakota Department of Transportation ("ND DOT") Main Avenue/ US Highway 10 road expansion project ("Highway Project"), the ND DOT has asked Magellan Pipeline Company, L.P. ("Magellan"), to relocate a portion of its existing petroleum products pipeline facilities ("Facilities") to an area located outside of the ND DOT's Highway Project work area. To accommodate the ND DOT Highway Project, Magellan is proposing to relocate a portion of its Facilities to the location shown on the attached site map.

Under North Dakota law (North Dakota Century Code § 49-22-05.1 and North Dakota Administrative Code § 69-06-08-02), certain geographical areas have been designated as "avoidance areas" by the North Dakota Public Service Commission and are to be avoided when selecting a route for a transmission facility, such as a pipeline, unless there is no reasonable alternative. One such avoidance area is the area within five hundred (500) feet of a residence or business.

As depicted on the enclosed site map, Magellan's relocated Facilities will be located within five hundred (500) feet of your business, which is located at **Lot 4, Block 1, Geller's 2<sup>nd</sup> Addition, Cass County, ND**. By signing below, you confirm that you have no objection to the installation of Magellan's Facilities within five hundred (500) feet of your business, and voluntarily waive the avoidance area setback criteria. **Please return this signed letter in the enclosed self-addressed, stamped envelope to Cynthia Pierce or directly to me on or before February 17, 2012.**

If you have any questions, please feel free to contact me at **612-991-0141**. Your timely response and cordial cooperation is much appreciated.

Sincerely,

RE: Brookwood Mobile Home Park

Dear Mr. Block:

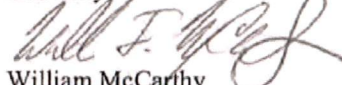

As part of the North Dakota Department of Transportation ("ND DOT") Main Avenue/ US Highway 10 road expansion project ("Highway Project"), the ND DOT has asked Magellan Pipeline Company, L.P. ("Magellan"), to relocate a portion of its existing petroleum products pipeline facilities ("Facilities") to an area located outside of the ND DOT's Highway Project work area. To accommodate the ND DOT Highway Project, Magellan is proposing to relocate a portion of its Facilities to the location shown on the attached site map.

Under North Dakota law (North Dakota Century Code § 49-22-05.1 and North Dakota Administrative Code § 69-06-08-02), certain geographical areas have been designated as "avoidance areas" by the North Dakota Public Service Commission and are to be avoided when selecting a route for a transmission facility, such as a pipeline, unless there is no reasonable alternative. One such avoidance area is the area within five hundred (500) feet of a residence or business.

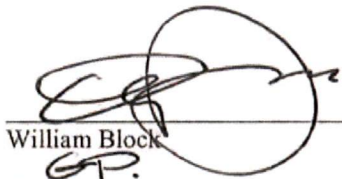

As depicted on the enclosed site map, Magellan's relocated Facilities will be located within five hundred (500) feet of your residence or business, which is located at **Brookwood Mobile Home Park**. By signing below, you confirm that you have no objection to the installation of Magellan's Facilities within five hundred (500) feet of your residence or business, and voluntarily waive the avoidance area setback criteria. **Please return this signed letter in the enclosed self-addressed, stamped envelope on or before February 17, 2012.**

To help facilitate and secure the approvals, Magellan has engaged the services of E3 Environmental, LLC. If you have any questions, please feel free to contact me at (651) 282-0650. Your timely response and cordial cooperation is much appreciated.

Sincerely,

  
William McCarthy  
E3 Environmental, LLC

RE: Parcel ID No. 02-1386-00050-000

Dear Mr. and Mrs. Tritchler:

As part of the North Dakota Department of Transportation ("ND DOT") Main Avenue/ US Highway 10 road expansion project ("Highway Project"), the ND DOT has asked Magellan Pipeline Company, L.P. ("Magellan"), to relocate a portion of its existing petroleum products pipeline facilities ("Facilities") to an area located outside of the ND DOT's Highway Project work area. To accommodate the ND DOT Highway Project, Magellan is proposing to relocate a portion of its Facilities to the location shown on the attached site map.

Under North Dakota law (North Dakota Century Code § 49-22-05.1 and North Dakota Administrative Code § 69-06-08-02), certain geographical areas have been designated as "avoidance areas" by the North Dakota Public Service Commission and are to be avoided when selecting a route for a transmission facility, such as a pipeline, unless there is no reasonable alternative. One such avoidance area is the area within five hundred (500) feet of a residence or business.

As depicted on the enclosed site map, Magellan's relocated Facilities will be located within five hundred (500) feet of your residence or business, which is located at **02-1386-00050-000**. By signing below, you confirm that you have no objection to the installation of Magellan's Facilities within five hundred (500) feet of your residence or business, and voluntarily waive the avoidance area setback criteria. **Please return this signed letter in the enclosed self-addressed, stamped envelope on or before April 6, 2012.**

If you have any questions, please feel free to contact me at **701- 793-8377**. Your timely response and cordial cooperation is much appreciated.

Sincerely,

Paul Klabunde  
Magellan Pipeline L.P.

If you have any questions, please feel free to contact me at **701- 793-8377**. Your timely response and cordial cooperation is much appreciated.

Sincerely,

Paul Klabunde  
Magellan Pipeline L.P.

w/enc.

  
Terri L. Greene

  
Date

**Whooping crane:** Published studies indicate that whooping cranes utilize a variety of habitats during migration including cultivated croplands and generally roost in small marshy wetlands. Suitable whooping crane habitat was not observed within the study area.

**Gray Wolf:** The gray wolf uses a variety of habitats to support a large prey base, typically preferring forested habitats. Furthermore, wolves are wary of exposure to humans and the normal behavior of this species leads it to avoid interactions with humans. Suitable gray wolf habitat was not observed within the study area.

Due to the lack of preferred habitat within the study area for these species, E3 has concluded the pipeline relocation will have no effect on either the whooping crane or the gray wolf.

### **2.3 TREE, SAPLING AND SHRUB SURVEY**

A field study of the study area conducted on January 7, 2012 included an inventory of trees, saplings and shrubs. This survey confirmed the presence of 59 trees, saplings, and shrubs within 50 feet of the proposed centerline.

---

### **SECTION 3: CONCLUSION**

Survey results support the following conclusions.

- 1) No wetlands were recorded within the surveyed area.
- 2) No waterbodies were recorded within the surveyed area.
- 3) No evidence of Bald or Golden Eagles was recorded within 0.5 miles of the project centerline.
- 4) No evidence of Bald or Golden Eagle habitat was recorded within 0.5 miles of the project centerline.
- 5) No evidence of whooping crane habitat was recorded within the surveyed area and therefore the project will have no effect on this species.
- 6) No evidence of gray wolf habitat was recorded within the surveyed area and therefore the project will have no effect on this species.
- 7) 59 trees, saplings or shrubs were recorded within 50 feet of the proposed centerline.
- 8) Twelve (12) trees will be impacted by the proposed Project.

## **SECTION 2: ROUTE ANALYSIS AND FINDINGS**

### **2.1 PIPELINE ROUTE**

The proposed Route was developed based upon a thorough analysis of the proposed Corridor (a 1-mile wide corridor centered upon the proposed Route, *i.e.*, one-half mile on either side of the proposed Route), as discussed in the application for a Certificate of Corridor Compatibility. This broad-based analysis confirmed that the proposed pipeline Corridor was suitable and that it would cause minimal environmental impacts, thus conforming to the Commission's siting criteria.

Once the Corridor was established, Magellan studied routing alternatives and developed the proposed pipeline alignment (Route), which satisfies the Project's objectives while also conforming to the Commission's siting requirements for a transmission route. In support of Magellan's Route selection, the analytical studies from the Corridor were refined and augmented with field studies. Natural resource field studies were conducted along the entire length of the Project by a certified wildlife biologist. The environmental survey corridor was a 250-foot wide corridor centered upon the proposed pipeline Route. The purpose of these field studies was to inventory any potential resource issues (*e.g.*, wetlands, waterbodies, protected species or critical habitats) that may intersect the proposed pipeline alignment and to collect the baseline field data necessary to prescribe alternative routing or mitigation to minimize environmental impacts. The results of these field surveys are discussed in the following sections. A full Natural Resources and Wetland Determination Report (Natural Resource Survey Report) is provided in Appendix D, and the Class I Cultural Resource Inventory Report is provided in Appendix E.

### **2.2 ENVIRONMENTAL SURVEY**

All field surveys were conducted based upon a minimum 250-foot wide survey corridor, centered upon the proposed pipeline Route. The surveys conducted for the Project covered the entire construction right-of-way, as well as temporary extra workspace.

#### **2.2.1 TREE/SAPLING/SHRUB SURVEY**

The survey of the Route was conducted on January 7, 2012. The natural resource surveys included a tree/shrub inventory. This inventory recorded the pre-construction status of this resource and shall form a baseline for restoration and mitigation reconciliation. The inventory found 59 trees, saplings, or shrubs within the Project corridor, of which 12 would be impacted by the Project. Please see Appendix D for the complete survey report.

#### **2.2.2 WETLAND AND WATERBODIES SURVEY**

The proposed alignment was inventoried for wetland and waterbody features. Protocol dictated that relevant features be identified, characterized as wetland or waterbody, and feature boundaries recorded relative to the proposed centerline.

## SECTION 4: MITIGATIVE MEASURES

### 4.1 LOCATION

The location of the proposed Route is a function of the location of other existing Magellan assets in the area. Magellan commissioned field surveys of the proposed Route to inventory the resources present along the Route, define the location and boundaries of resources that intersect the proposed Route, identify potential impacts to natural resources and identify avoidance or other mitigation opportunities to further minimize the impacts of the Project.

**Trees and shrubs:** Magellan shall comply with the Commission's tree and shrub mitigation specifications. Field surveys included a pre-construction tree and shrub inventory. Twelve (12) trees, shrubs or woody vegetation will be impacted by the Project.

**Wetlands and waterbodies:** No natural wetlands or waterbodies were identified during field surveys and as such, no wetlands or waterbodies will be impacted by the proposed Route. The retention pond located south of the construction corridor is a man-made feature, and will not be impacted by the Project. Magellan will implement best management practices (BMPs) to prevent secondary impacts to the pond, installing sediment barriers along the edge of the construction work area where the retention pond is adjacent to the construction right-of-way and the ground surface slopes toward the depression.

**Migratory Bird Treaty Act:** A response from the USFWS with respect to the Migratory Bird Treaty Act is pending. Magellan will continue to engage the USFWS to complete consultations in this regard.

**Cultural Resources:** On February 2, 2012, SHPO concurred with Magellan's findings that cultural resource sites in the project area will not be affected by the Project.

32CS5122: This is a newly recorded site identified during the supplemental portion of the Class I Cultural Resource Inventory of the project area. This portion of U.S. Highway 10 is part of a historic alignment known as the Red Trail or the National Parks Highway. Due to road maintenance, upgrades, erosion, and a high volume of vehicle traffic, the segment of the road that falls within the project area does not show any evidence of the construction, design or materials of the original alignment. For this reason, SWCA recommends that this road segment is a non-contributing portion of site 32CS5122, and as such, no further work is recommended. In addition, Magellan plans to bore under the site, avoiding it altogether. The Project will not impact this site.

32CS5123: This is a newly recorded site identified during the supplemental portion of the Class I Cultural Resource Inventory of the project area. The site is a buried pipeline first constructed in 1946. This site is recommended not eligible for nomination to the NRHP; therefore, no further work is necessary.
