Reference: Scale Test Report for Avery Weigh-Tronix BridgeMont Truck Scale, 70ft L x 10ft W installed at the above address, serial number 8745; 120,000 lbs capacity.

Dear Mr. Crockford:

This is the addendum to the letter previously written to request a variance regarding the North Dakota Code Section 69-10-02-12 of our scale at the above address and requested information per telephone conversation on 2/12/18 with Tracy.

The scale deck is 70 ft long and 10 ft wide. The trucks currently being weighed on the scale are our own company trucks which are a tractor trailer combo and measure 68 ft to 69.5 feet long. As stated in the prior letter the drivers can see the scale operator through the window provide. We then ensure that the front tires of the tractor are at the front of the scale which is visible through the window where the scale monitor and printer are set. The trucks are not longer than the scale when the front tires of the truck are right at the front of the scale; therefore ensuring we are getting an accurate weight of the truck every time.

Please let me know if you have any questions, concerns or are in need of anything else.

Respectfully,

Jon Peek
