RE: Sunflower Wind Project Class III Archaeological Surveys – Late File Exhibit

Sunflower Wind Project, LLC contracted Beaver Creek Archaeology, Inc. (BCA) to complete a Class III Cultural Resource Inventory for the proposed Sunflower Wind Project in the fall of 2013. The scope of the surveys completed by BCA included evaluations of 1) a 5 acre pad associated with each wind turbine location, 2) the project substation location, and 3) 250 foot survey corridors along all of the preliminary collection and access road routes. Attachment 1 includes a map that identifies the locations that were surveyed in the fall of 2013.

BCA is currently completing in amended survey for those areas that were not evaluated in the fall surveys.

Attachment 1 – Sunflower Archaeological Survey Corridors
