Patrick,

I'm contacting you regarding the construction inspection report prepared by Carlson McCain (November 20, 2017) for the Vantage West Spur Pipeline Project. This report indicated that various permits necessary for construction of the project were not filed with the ND PSC. Vantage would like to be proactive and follow-up on this item and fulfill the PSC requirements. Our review indicates that road crossing permits for Divide and Williams Counties were not provided to the PSC. If required, Vantage would like to file this information and would like to know the format and number of copies required.

The Carlson McCain report also identified the need for ongoing monitoring and control of noxious weeds along the ROW. Vantage acknowledges these requirements and is actively implementing post construction monitoring and maintenance to address landowner corrections and deficiencies related to reclamation of the ROW.

Best Regards

David Cameron
