**Memorandum to the North Dakota Public Service Commission**

This memorandum is intended to provide the North Dakota Public Service Commission (“PSC”) with an update regarding the Aircraft Detection and Lighting System (“ADLS”) for the Aurora Wind Project owned by Aurora Wind Project, LLC and the Lindahl Wind Project owned by Lindahl Wind Project, LLC<sup>1</sup> (“Lindahl”, and collectively with Aurora, the “Projects”).

The Enel ADLS Task Force continues to inspect, troubleshoot and work to repair the ADLS hardware and software inside the wind turbines and other project infrastructure. Effective September 6, 2025, we have confirmed the restoration (with visual inspections) of ADLS functionality for **100%** of the turbines at Aurora, as detailed below, resulting in no turbines operating in fail safe mode at the Projects:

	Aurora	Lindahl
Total Turbines Equipped with FAA Lights	71	47
Restored Turbines	71	47
Remaining	0	0
% Restored	100%	100%

As detailed in previous Memorandums to the PSC and the Informal Hearing held on August 7, 2025, the Task Force has shifted its focus from resolving turbines operating in failsafe mode to troubleshoot and repair turbines that are experiencing various minor firmware communication and maintenance issues, which we remain dedicated to correcting.

Enel remains committed to maintaining the ADLS system in accordance with its intended functionality moving forward, and to providing the PSC with updates of its progress.

<sup>1</sup> Enel sold its interests in Lindahl to Gulf Plains Wind, LLC on October, 1, 2025.
