RE: Alexander Station Lateral Crude Oil Pipeline – McKenzie County

Hiland Crude, LLC (Hiland) constructed a 4.5-mile-long crude oil pipeline in McKenzie County between approximately December 2013 and April 2014.

Due to the continuing demand for additional crude oil pipeline services, Hiland intends to expand the system's capacity. One pumping station is proposed to be added to boost capacity. This station may include a truck terminal, a 50,000 gallon tank, and pump equipment. Additional surface facilities installed will be limited to pipeline markers, rectifiers, "pig" launchers, receivers, and block valves. The North Dakota Public Service Commission Utility permit is required to provide the needed capacity to transport the increased production of crude oil from the Bakken and Three Forks formations.

Keitu Engineers and Consultants, Inc. (Keitu) provides the following description of Hiland's pipeline route.

- The pipeline originates five miles north-northeast of Alexander, North Dakota at a connection with Hiland's Market Center Pipeline system and runs 4.5 miles to the north, terminating at Hiland's Alexander Station, approximately 9.4 miles north of Alexander, North Dakota.
- The pipeline runs through the following legal descriptions:
 - T151N R101W Sections 6 and 7
 - T152N R101W Sections 30 and 31
 - T152W R102W Sections 24, 25, and 36

Keitu is contracted by Hiland to conduct the biological assessment of the 4.5-mile project corridor (1 mile wide) to be completed in June of 2014.

Enclosed is a map of the entire length of the pipeline route intended for the US Army Corps of Engineers to review. The North Dakota Public Service Commission, requires applicants to contact agencies for comment. We respectfully request that any specific species of concern known in the area is brought to our attention to ensure we focus on those items.

As always, Keitu appreciates the opportunity to assist our client and the regulatory agencies with compliance. I will serve as the primary Keitu contact and can be reached at (701) 667-1800 or via email at kbecker@keitu.com.

Subject: Alexander Station Lateral Pipeline Route Application
Date: Wednesday, July 09, 2014 8:30:43 AM
Attachments: [ATF Letter Map.pdf](#)

Good morning,

The ND PSC added a criteria for utility projects to check for siting within certain distance of missile sites or associated facilities.

Hiland Crude, LLC is siting a crude oil pipeline in McKenzie County. I need to verify that the pipeline is not within one thousand two hundred feet of the geographic center of an intercontinental ballistic missile (ICBM) launch or launch control facility and not within thirty feet on either side of a direct line between intercontinental ballistic missile (ICBM) launch or launch control facilities to avoid microwave interference.

I have attached a general location map of the project. I can also send ArcGIS Shapefiles upon request.

We respectfully request that any specific concerns known in the area is brought to our attention to ensure we focus on those items.

Thank you,

Karine Becker

Re: Alexander Station Lateral Crude Oil Pipeline
McKenzie County

Dear Ms. Becker:

This department has reviewed the information concerning the above-referenced project submitted under date of September 30, 2014, with respect to possible environmental impacts.

This department believes that environmental impacts from the proposed construction will be minor and can be controlled by proper construction methods. With respect to construction, we have the following comments:

1. All necessary measures must be taken to minimize fugitive dust emissions created during construction activities. Any complaints that may arise are to be dealt with in an efficient and effective manner.
2. Care is to be taken during construction activity near any water of the state to minimize adverse effects on a water body. This includes minimal disturbance of stream beds and banks to prevent excess siltation, and the replacement and revegetation of any disturbed area as soon as possible after work has been completed. Caution must also be taken to prevent spills of oil and grease that may reach the receiving water from equipment maintenance, and/or the handling of fuels on the site. Guidelines for minimizing degradation to waterways during construction are attached.
3. Projects disturbing one or more acres are required to have a permit to discharge storm water runoff until the site is stabilized by the reestablishment of vegetation or other permanent cover. Further information on the storm water permit may be obtained from the Department's website or by calling the Division of Water Quality (701-328-5210). Also, cities may impose additional requirements and/or specific best management practices for construction affecting their storm drainage system. Check with the local officials to be sure any local storm water management considerations are addressed.
4. Noise from construction activities may have adverse effects on persons who live near the construction area. Noise levels can be minimized by ensuring that construction equipment is equipped with a

Environmental Health
Section Chief's Office

Division of
Waste Management
701.328.5166

Division of
Water Quality
701.328.5210

recommended muffler in good working order. Noise effects can also be minimized by ensuring that construction activities are not conducted during early morning or late evening hours.

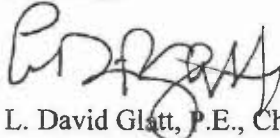

5. The proposed project appears to have the potential to be a source of emissions to the air capable of causing or contributing to air pollution and may be required to have an Air Pollution Control Permit to Construct/Operate as required by Chapter 33-15-14 of the North Dakota Air Pollution Control Rules. The applicant should contact the Department's Air Pollution Control Program at 701-328-5188 prior to commencing construction.
6. Projects that involve construction of pipelines should select locations that minimize the potential for environmental damage during construction and in the event of a spill, restrict fluids from reaching surface waters. Well placement should avoid close proximity to drainage areas and steep slopes. Environmental damage can be reduced by developing a spill response plan that emphasizes rapid deployment of prepositioned assets necessary to contain spills and subsequent cleanup. Proper surveillance and monitoring of pipelines is necessary for the early detection of leaks.

The department owns no land in or adjacent to the proposed improvements, nor does it have any projects scheduled in the area. In addition, we believe the proposed activities are consistent with the State Implementation Plan for the Control of Air Pollution for the State of North Dakota.

These comments are based on the information provided about the project in the above-referenced submittal. The U.S. Army Corps of Engineers may require a water quality certification from this department for the project if the project is subject to their Section 404 permitting process. Any additional information which may be required by the U.S. Army Corps of Engineers under the process will be considered by this department in our determination regarding the issuance of such a certification.

If you have any questions regarding our comments, please feel free to contact this office.

Sincerely,

L. David Glatt, P.E., Chief
Environmental Health Section

LDG:cc
Attach.

Construction and Environmental Disturbance Requirements

These represent the minimum requirements of the North Dakota Department of Health. They ensure that minimal environmental degradation occurs as a result of construction or related work which has the potential to affect the waters of the State of North Dakota. All projects will be designed and implemented to restrict the losses or disturbances of soil, vegetative cover, and pollutants (chemical or biological) from a site.

Soils

Prevent the erosion of exposed soil surfaces and trapping sediments being transported. Examples include, but are not restricted to, sediment dams or berms, diversion dikes, hay bales as erosion checks, riprap, mesh or burlap blankets to hold soil during construction, and immediately establishing vegetative cover on disturbed areas after construction is completed. Fragile and sensitive areas such as wetlands, riparian zones, delicate flora, or land resources will be protected against compaction, vegetation loss, and unnecessary damage.

Surface Waters

All construction which directly or indirectly impacts aquatic systems will be managed to minimize impacts. All attempts will be made to prevent the contamination of water at construction sites from fuel spillage, lubricants, and chemicals, by following safe storage and handling procedures. Stream bank and stream bed disturbances will be controlled to minimize and/or prevent silt movement, nutrient upsurges, plant dislocation, and any physical, chemical, or biological disruption. The use of pesticides or herbicides in or near these systems is forbidden without approval from this Department.

Fill Material

Any fill material placed below the high water mark must be free of top soils, decomposable materials, and persistent synthetic organic compounds (in toxic concentrations). This includes, but is not limited to, asphalt, tires, treated lumber, and construction debris. The Department may require testing of fill materials. All temporary fills must be removed. Debris and solid wastes will be removed from the site and the impacted areas restored as nearly as possible to the original condition.

Enclosure: Pipeline Route

September 30, 2014

District 5 – Dickinson
North Dakota Department of Transportation
1700 Third Avenue West, Suite 101
Dickinson, ND 58601-3009

RE: Alexander Station Lateral Crude Oil Pipeline – McKenzie County

Hiland Crude, LLC (Hiland) is proposing to construct a 4.5-mile-long crude oil pipeline in McKenzie County beginning spring 2015.

Due to the continuing demand for additional crude oil pipeline services, Hiland intends to expand the system's capacity. One pumping station is proposed to be added to boost capacity. This station may include a truck terminal, a 50,000 gallon tank, and pump equipment. Additional surface facilities installed will be limited to pipeline markers, rectifiers, "pig" launchers, receivers, and block valves. The North Dakota Public Service Commission Utility permit is required to provide the needed capacity to transport the increased production of crude oil from the Bakken and Three Forks formations.

Keitu Engineers & Consultants, Inc. (Keitu) provides the following description of Hiland's pipeline route.

- The pipeline originates five miles north-northeast of Alexander, North Dakota at a connection with Hiland's Market Center Pipeline system and runs 4.5 miles to the north, terminating at Hiland's Alexander Station, approximately 9.4 miles north of Alexander, North Dakota.
- The pipeline runs through the following legal descriptions:
 - T151N R101W Sections 6 and 7
 - T152N R101W Sections 30 and 31
 - T152W R102W Sections 24, 25, and 36

Keitu is contracted by Hiland to conduct the biological assessment of the 4.5-mile project corridor (1 mile wide) to be completed in June of 2014.

Enclosed is a map of the entire length of the pipeline route intended for the North Dakota Department of Transportation to review. The North Dakota Public Service Commission, requires applicants to contact agencies for comment. We respectfully request that any specific species of concern known in the area is brought to our attention to ensure we focus on those items.

As always, Keitu appreciates the opportunity to assist our client and the regulatory agencies with compliance. I will serve as the primary Keitu contact and can be reached at (701) 667-1800 or via email at kbecker@keitu.com.

Karine,

Thank you for your inquiry. The change from Gathering Lines to Transmission Lines by Hiland Crude, LLC will require a Conditional Use Permit with the County. I would recommend that you or a representative come into the Planning office so we can go through the Development Checklist with you prior to you starting the application.

Jim
