Kinder Morgan Cochin Pipeline
Carrington Terminal
Carrington ND

ND Public Service Commission:

Per your request this letter is to express our confidence in calibration of the unidirectional meter prover at the Carrington terminal. Meter Engineers of Maize, KS, completes this calibration every three years; the last calibration was completed on June 19, 2013. Calibration records from Meter Engineers are on site from 1999 to 2013. This site has no reason to question the integrity of the calibrations that have been completed by Meter Engineers.

We did check with Meter engineers and their vessels are certified by NIST and their devices are NIST traceable.

As of July of 2014, Cochin Pipeline no longer transports propane. At the present time the terminal does store propane and this product is to be removed before April of 2016. At that time the Carrington terminal will be sold or closed.

Thank You

A handwritten signature in blue ink that reads "Eugene M Drewlow".
