Case No. PU-17-97

ORDER ON TREE AND SHRUB MITIGATION SPECIFICATIONS

September 1, 2021

Preliminary Statement

The Commission's March 14, 2018 Findings of Fact, Conclusions of Law and Order (Order) issued Certificate of Corridor Compatibility No. 202 and Route Permit No. 212 to Cenex Pipeline, LLC for 149.7 miles of 10-inch diameter refined petroleum products pipeline in Williams, Mountrail, and Ward Counties, North Dakota. Attached to the Order was the Tree and Shrub Mitigation Specifications for the Project.

On March 13, 2019, the Commission revised its Tree and Shrub Mitigation Specifications to update the process for mitigation reporting.

On December 16, 2020, the Commission approved the Tree and Shrub Mitigation Plan filed by Cenex. On May 5, 2021, the Commission approved a one-year extension in the Tree and Shrub Mitigation Plan based on drought conditions.

On June 22, 2021, Commission Staff sent a letter to Cenex suggesting that Cenex may wish to consider complying instead with the March 13, 2019, version of the Tree and Shrub Mitigation Specifications.

On July 30, 2021, Cenex responded to the June 22, 2021 Commission Staff letter.

Discussion

The Tree and Shrub Mitigation Specifications (Specifications) attached to and made part of the Commission's March 14, 2018 Order required that two trees be planted for every one tree removed, and that two shrubs be planted for one shrub removed. The Specifications required that tree and shrub replacements be inspected annually, in September, for three years, with the first annual inspection at least one year from the anniversary date of the original plantings. The Specifications further required that a report of each annual inspection be submitted to the Commission by October 1 of each year, documenting the condition of plantings and any woodlands work completed as of September of each year.

As a result of Project construction, 3,288 trees and shrubs were removed.

The Commission's March 13, 2019 Specifications were conceived to be goal or purpose oriented to create sustainable plantings, appropriate for the local soil and growing conditions that will provide long-term benefits to landowners, farmers and ranchers, the community, wildlife and the environment. In lieu of annual reporting for three years, the Commission's March 13, 2019 Specifications requires one final report filed by the company after two years that details the company's tree and shrub mitigation efforts and describes how the company's mitigation achieved the purpose stated above.

Since trees and shrubs may not have been planted to date or may have been planted very recently, Commission Staff suggested that Cenex consider complying instead with the March 13, 2019 version of the Tree and Shrub Mitigation Specifications.

Cenex has indicated a desire to comply with the March 13, 2019 version of the Tree and Shrub Mitigation Specifications instead of the March 14, 2018 Tree and Shrub Mitigation Specifications.

Having considered this matter, the Commission issues the following:

Order

The Commission Orders that its March 14, 2018 Order in Case No. PU-17-97 is amended to replace the Tree and Shrub Mitigation Specifications adopted in that Order with the March 13, 2019 version of the Tree and Shrub Mitigation Specifications, attached to and made part of this Order.

Case No. PU-17-97

Tree and Shrub Mitigation Specifications

Inventory

Prior to cutting or clearing trees or shrubs for construction:

- All trees one-inch or greater in diameter at breast height must be inventoried to record the location, number, and species.
- All shrubs and all coniferous trees of any diameter must be inventoried to record the location, number, and species.

Clearing

The maximum width of tree and shrub removal is 50 feet, unless otherwise approved by the Commission.

Replacement

1. Landowners must be given the option to have trees and shrubs that are removed from their property replaced on their property. The landowner may waive this option in writing. If the landowner waives this option, the company shall plant replacement trees and shrubs in an alternate location in the same region, if practical.
2. Trees and shrubs must be replaced on a minimum two-to-one basis. The company shall develop a Tree and Shrub Mitigation Plan (Plan) in consultation with landowners who are seeking replacement trees and shrubs and in accordance with USDA-NRCS-North Dakota Field Office Technical Guide: Windbreak and Woodland Tree Care and Management. The guidelines outlined in the Technical Guide shall be followed until filing of the Plan summary outlined in number 5 below.
3. The purpose of the company's Tree and Shrub Mitigation Plan is to create sustainable plantings, appropriate for the local soil and growing conditions that will provide long-term benefit to landowners, farmers and ranchers, the community, wildlife and the environment.
4. The Plan, including the proposed number, variety, type, location, and approximate date for plantings, shall be filed with and approved by the Commission.

5. Two years after completion of the plan, the company must file a summary documenting how the plan achieved the purpose outlined in number 3 above. The summary must also report the number of surviving replacement trees and shrubs.
6. The Commission will consider, on a limited basis as conditions warrant, mitigation plans that provide long-term wildlife habitat and conservation benefits but do not involve the replanting of trees and shrubs.
