Commissioners,

My apologies for not following up on this right away... However, just wanted to let you know that the Foxtail ADLS was fairly quickly restored to service soon after I sent the below notification last Friday. It appears the radar was affected by a power fluctuation or surge (add that to the list of potential events that can affect light activation 😊), that is presumed to be related to some heavy icing experienced that day which affected line voltage across the facility. TERMA was able to diagnose the issue and reboot the system.

Thanks.

Commissioners, Staff,

Just wanted to notify you that the Foxtail Energy Center ADLS radar is currently offline. A troubleshoot and investigation from the system manufacturer TERMA is in progress. It appears that the system actually went down late Wednesday evening (2/3/21).

There has been some icing events and downed transmission lines in the area over the past few days, however the unit is still receiving power. We will consider a possible notification to area landowners if the system outage warrants. I will update you once more information is known.

Thank you.
