ALLETE (Minnesota Power)	ALE	MN	Fuel and Purch Energy Adj			Conservation Program Adj.	Rewable Resource Rider	AREA Rider (Arrowhead Reg Emission Abatement); Boswell Unit 4 Emission Reduction,	Transmission Cost recovery, Franchise fees, CARE Rider (uncollectibles/arrearage program)
Superior Water, Light and Power Company	ALE	WI	Power Cost Adj. Clause						
Black Hills Colorado Electric Utility Company, LP	BKH	CO	Energy Cost Adj, Purch Capacity Cost Adj,		Clean Air Clean Jobs Act (Capital costs of LM6000 Plant)	DSM Adj	Renewable Energy Standard Adj		Tax/Fee Adj, Transmission Cost Adj, BHEAP (low Income),
Black Hills Power, Inc.	BKH	SD	Fuel and PPA Adj	Partial - EE Solutions Adj (recovers lost revenues)	Transmission Facility Adj (new or modified transmission facilities)	EE Solutions Adj		Env Improvement Adj.; Fuel PPA recovers cost of chemical reagents,	Transmission Cost Adj,
Black Hills Power, Inc.	BKH	WY	Energy Cost Adj.						
Cheyenne Light, Fuel and Power Company	BKH	WY	Power Cost Adj. Clause	Partial - DSM Adj allows for margin recovery		DSM			Franchise Fee
El Paso Electric Company	EE	NM	FPPCAC			EUERF			Taxes & Fees
El Paso Electric Company	EE	TX	Fixed Fuel Factor			EECRF			Military Base discount recovery; Taxes; University discount rider; Rate Case Expense;
Hawaii Electric Light Company, Inc.	HE	HI	Energy Cost Adj. Clause; Purchase Power Adj. Clause	Full - Rate Adj. Mechanism	*Cost of Service Recovery Mechanism (not in tariff)	Public Benefits Surcharge; IRP/DSM Cost Recovery	Green Infrastructure Fee (collects funds for state agency to secure and repay gonds issued under Green Energy Market Securitization program)		IRP/ DSM Cost Recovery
Hawaiian Electric Company, Inc.	HE	HI	Energy Cost Adj. Clause; Purchase Power Adj. Clause	Full - Rate Adj. Mechanism	*Cost of Service Recovery Mechanism (not in tariff)	Public Benefits Surcharge; IRP/DSM Cost Recovery	Renewable Energy Infrastructure Cost Recovery; Green Infrastructure Fee		IRP/ DSM Cost Recovery
Maui Electric Company, Limited	HE	HI	Energy Cost Adj. Clause; Purchase Power Adj. Clause	Full - Rate Adj. Mechanism	Major Project Interim Recovery Mechanism; Cost of Service Recovery Mechanism	Public Benefits Surcharge; IRP/DSM Cost Recovery	Renewable Energy Infrastructure Cost Recovery; Green Infrastructure Fee		IRP/ DSM Cost Recovery
Idaho Power Co.	IDA	ID	Power Cost Adj. Clause	Full - Fixed Cost Recovery Rate		EE Rider			Municipal Franchise Fees
Idaho Power Co.	IDA	OR	Power Cost Adj. Mechanism			EE Rider	Solar PV Rider (pilot)	Boardman Plant (coal) shutdown cost recovery	Municipal Franchise Fees
Interstate Power and Light Company	LNT	IA	Energy Adj. Clause			EECR	Rider AEP (Alt Energy Prod)	Energy Adj. Clause (recovers allowance costs)	Tax Adj; RTO/Regional Transmission Service;
Wisconsin Power and Light Company	LNT	WI	Fuel Adjustment Clause						
NorthWestern Corporation	NWE	MT	Electric Supply Service ESS-1;			Universal System Benefits Charge			Electric Supply Service ESS-1 (transmission); USBC (low Income); Taxes; Transition Costs (CTC)
NorthWestern Corporation	NWE	SD	Adjustment Clause			EE		Adj Clause recovers chemical reagent costs	Ad Valorem Taxes (Electric Adj Clause); Tax Adj. Clause; Transmission Costs; Muni Taxes/Franchise Fees
Oklahoma Gas and Electric Company	OGE	AR	Energy Cost Recovery Rider	Partial - EE Cost Recovery Rider recovers LCFC	Formula Rate Plan recovers incremental CapEx	EE Cost Recovery Rider		Environmental Compliance Plan	

Oklahoma Gas and Electric Company	OGE	OK	Fuel Cost Adj.	Partial - DPR includes recovery of LCFC		Demand Program Rider;			Public Utility Assessment (OCC Charge); Storm Cost Recovery; SPP Cost Recovery (Transmission); Public Utility Assessment
Public Service Company of New Mexico	PNM	NM	FPPCAC			EE Rider	Renewable Energy Rider (RPS compliance costs)		Municipal Undergrounding costs
Texas New Mexico Power	PNM	TX			TCRF (transmission capital investment); Rider AMS (AMI meters)	Rider EECRF; Rider SBF (Funds low-income EE)			TCRF (transmission cost recovery), Municipal Franchise Fee Adj; Rider SBF (low-income)
Otter Tail Power Company	OTTR	ND	Energy Adj. Rider		Transmission Cost Recovery Rider (transmission capital investment)		Renewable Resource Cost Recovery	Environmental Cost Recovery Rider	Economic Development Cost Removal Rider; Energy Adj. Rider (MISO transmission charges);

Good day, and welcome to the ALLETE First Quarter 2018 Financial Results Call. Today's call is being recorded. Certain statements contained in this conference call are not descriptions of historical facts are forward-looking statements, such as terms defined in the Private Securities Litigation Reform Act of 1995, because such statements can include risks and uncertainties, actual results may differ materially from those expressed or implied by such forward-looking statements.

Factors that could cause results to differ materially from those expressed or implied by such forward-looking statements include, but are not limited to those discussed in filings made by the company with the Securities and Exchange Commission. Many of the factors that will determine the company's future results are beyond the ability of management to control or predict. Listeners should not place undue reliance on forward-looking statements, which reflect management views only as of the date hereof. The company undertakes no obligation to revise or update any forward-looking statements or to make any other forward-looking statements, whether as a result of new information, future events or otherwise.

For opening remarks and introductions, I'd now like to turn the conference over to ALLETE President and Chief Executive Officer, Alan Hodnik. Please go ahead.

Alan R. Hodnik
Chairman, President & CEO

Good morning, everyone, and thanks for joining us today. With me are ALLETE's Senior Vice President and Chief Financial Officer, Bob Adams; and ALLETE's Vice President, Controller and Chief Accounting Officer, Steve Morris.

Today we reported first quarter 2018 financial results of $0.99 per share, a net income of $51 million. The results for the quarter were consistent with our expectations, and demonstrate the benefit of our differentiated growth strategy.

Before Steve and Bob go through the details from the quarter, I would like to highlight several areas of interest. We take great pride in delivering value to our shareholders with ALLETE's differentiated strategy. A balanced strategy built upon a foundation of long-standing commitment to environmental, social and strong governance values. We strongly believe in the importance of how we deliver value to our shareholders with annual earnings growth and dividends underpinned by our culture that incorporates a longer view and sustainability in all of our strategies. Building upon our strategic positioning, we expect to see the benefits of our differentiated strategy throughout the remainder of this year and into the foreseeable future.

Minnesota Power's Energy Forward strategy includes plans for generation sourced from the Nemadji Trail Energy Center or NTEC. A new natural gas facility that supports additional renewable generation and grid stability as well as the Great Northern Transmission Line to be completed in 2020, which will move carbon-free hydro energy from Canada. Both of these initiatives provide new opportunities for sustainable investments that further add to our history of environmental stewardship. Regarding the Minnesota Power rate review status, Minnesota Power filed for a reconsideration in early April, and Steve will provide you more details in a moment.

Minnesota Power fully intends to earn its allowed ROE and has already made some difficult decisions, which include workforce reductions and other expense management efforts, while still meeting its obligations to provide safe and reliable services to its customers. The combination of an allowed ROE that is lower than industry average and disallowance of certain expenses, transmission revenue and the inequitable treatment of prepaid pension as part of the commission's order are somewhat challenging, but Minnesota Power is working diligently to earn its allowed ROE, while balancing various stakeholder interests.

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

We are pleased that Minnesota Power's taconite customers are operating at near full production. We anticipate continued strength supported by an improving economy, and actions by the Trump administration to reduce excessive imports that damage our country's steel industry. As mentioned last quarter, we are excited to see taconite customers making new long-term investments in their mining operations. There has also been constructive progress in the permitting process for Minnesota Power's new potential non-service mining customer. These industries are important to our region and to Minnesota Power, and we believe they are well-positioned to benefit along with other stakeholders as our country pursues infrastructure upgrades along with a clean energy economy. ALLETE Clean Energy is making significant progress with its already announced initiatives to refurbish 385 turbines at several of its wind energy facilities, as well as construction startup on several renewable projects for others. In addition, ALLETE Clean Energy continues to evaluate a robust pipeline of potential projects with its strategic investment in wind turbines, already qualified for federal production tax credit safe harbor provisions. 2018 is a foundational year for ALLETE, as we expect improved positioning and growing returns from our business segments.

I will provide additional comments in my closing remarks, but first I will ask Steve and Bob to go through the first quarter financial details. Steve?

Steven Wayne Morris
VP, Controller & Chief Accounting Officer

Thanks, Al, and good morning, everyone. I would like to remind you that we filed our 10-Q this morning, and encourage you to refer to it for more details on the first quarter results. For the first quarter of 2018, ALLETE reported net income of $51 million or $0.99 per share compared to $49 million or $0.97 per share for the same period in 2017.

Our 2018 results reflect approximately $600,000 after tax of severance-related expenses. Earnings were diluted by $0.02 due to additional shares of common stock outstanding as of March 31, 2018. ALLETE's Regulated Operations segment, which includes Minnesota Power, Superior Water, Light and Power and the company's investment in the American Transmission Company, recorded net income of $43.9 million, an increase of $400,000 compared to the same quarter last year. Net income at Minnesota Power was slightly lower than 2017 results, primarily due to the timing of reserves recorded for an interim rate refund, discounts provided to EITE customers, a lower transmission revenue and higher property tax expense. These decreases were mostly offset by lower depreciation expense due to the timing of the Minnesota Public Utilities Commission's decision to modify the depreciable lives at the Boswell Energy Center, as well as lower operating and maintenance expense, higher sales to industrial customers due to the start-up of United States Steel Keewatin Taconite plants in March 2017, and higher sales to residential customers due to favorable weather conditions.

If you recall, we recorded the full year impact in the fourth quarter of 2017 of interim rate refund reserves and lower depreciation expense as a result of the January 18, 2018, commission's decision in our 2016 rate review. We will continue to see these timing impacts throughout the remaining quarters of 2018. Net income at Superior Water, Light and Power was higher due to a full quarter of new rates this year, which were implemented in August 2017 and colder weather in the first quarter of 2018 compared to last year.

A few additional comments on Minnesota Power's rate review status. On April 2, 2018, Minnesota Power filed a petition for reconsideration at the Minnesota Public Utilities Commission requesting reconsideration of certain decisions in the commission's order dated March 12, 2018, representing approximately $20 million to $25 million in additional annual revenue. Minnesota Power requested reconsideration for certain items, which included the allowed return on common equity, recovery of the prepaid pension asset and rate base, certain disallowed expenses, and certain transmission revenue adjustments. The Minnesota Department of Commerce filed a separate request for reconsideration, proposing to reduce the depreciable lives of Boswell Unit 3, Unit 4 and common facilities to 2035, and use the benefits of tax reform to offset the resulting increase in customer rates.

On April 12, 2018, Minnesota Power responded to the Department of Commerce request for reconsideration, and stated that with modification in conditions, the commission should generally accept the Department of Commerce proposal. We expect a decision on reconsideration by mid-2018.

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

A couple of updates on the open dockets related to tax reform for our Regulated Operations. In December of 2017, the Minnesota Public Utilities Commission opened a docket to review the effects of tax reform in Minnesota. Minnesota Power submitted an initial filing to the commission, in which it proposed to use the net tax benefits to offset other regulated costs to the extent the company is able to earn its allowed return on equity, and for the remainder of the benefits to customers through a new tax cost recovery rider. And as I noted, Minnesota Power responded to the Department of Commerce proposal that the commission generally accept with modifications and conditions the Department of Commerce proposal to shorten the lives of our Boswell Unit 3, Unit 4 and common facilities to 2035, while utilizing the benefits of tax reform. We anticipate a commission hearing and decision on this proposal in the second half of this year.

In February of 2018, Superior Water, Light and Power filed comments with the Public Service Commission of Wisconsin and proposed deferring the benefits of tax reforms and incorporating any impacts into its next general rate review. Superior Water, Light and Power expects to file a rate review later this year.

Next, a few details from our other business segments. Net income at ALLETE Clean Energy increased $1.4 million or 21% from 2017. Net income in 2018 was higher by $1.2 million, due to a lower federal income tax rate as a result of tax reform, and $600,000 after tax due to additional production tax credits as ALLETE Clean Energy continues to execute on its refurbishment strategy. These increases were partially offset by higher operating and maintenance expenses. U.S. Water Services net loss increased $1.1 million from 2017. The net loss in 2018 includes higher operating expense, partially offset by increased revenue, primarily resulting from the September 2017 acquisition of Tonka Water.

And the first quarter of 2018 was also impacted -- negatively impacted by the timing of equipment sales and colder weather conditions, which reduced chemical sales. The net loss in 2018 included $300,000 of after-tax expense related to purchase accounting impacts. ALLETE's effective tax rate for the first quarter was a 7.8% benefit compared to 21.1% expense in 2017. The decrease from 2017 was primarily due to the reduction of the federal income tax rate from 35% to 21% and lower pretax income. ALLETE's financial position is supported by increased cash flow and a strong balance sheet. Cash from operating activities was $121.3 million year-to-date and our debt to capital ratio was 42% as of March 31, 2018.

I'll now hand it off to Bob to review our earnings guidance and positioning for 2018. Bob?

Robert J. Adams
Senior VP & CFO

Thanks, Steve, and good morning, everyone. Today we reaffirmed our 2018 earnings guidance at a range of $3.20 to $3.50 per share, on net income of $165 million to $185 million. This guidance range is comprised of Regulated Operations segment, earnings within a range of $2.45 to $2.65 per share and energy infrastructure and related services businesses, which includes ALLETE Clean Energy and U.S. Water Services and corporate and other earnings within a range of $0.75 to $0.85 per share. Our differentiated growth outlook anticipates average annual long-term earnings growth of 5% to 7%. This includes growth from the Regulated Operations segment of approximately 3% to 4%, and approximately 15% average annual growth from our energy infrastructure and related services businesses over the long term.

We expect improving financial performance over time for Minnesota Power as it continues on its path to earn its authorized ROE in 2019, through a combination of expense management, small coal plant closures, potential rate review reconsideration, and legislative and other regulatory outcomes. Our rating agencies are closely monitoring the status of Minnesota Powers reconsideration filing and the outcome as an indication of the regulatory environment and the company's ability to earn its allowed return on equity. Consistent with all of the ALLETE businesses, earning our cost of capital is a priority for the long-term sustainability of our company.

As you know, ALLETE Clean Energy focuses on developing, acquiring and operating clean and renewable energy projects. ALLETE Clean Energy currently owns and operates approximately 535 megawatts of wind energy generation that is contracted under power sales agreements of various durations. In mid-March, we were pleased to announce ALLETE Clean Energy's newest project to build, own and operate an 80 megawatt wind energy facility pursuant to a 15-year power sales agreement with NorthWestern Corporation. Construction is expected to be completed in 2019. Upon completion of this project along with

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

the previously announced project to build, own and operate a wind energy facility for Northern States Power, ALLETE Clean Energy will have over 700 megawatts of carbon-free, renewable wind generation in its portfolio.

For this robust project development backlog of approximately 465 megawatts, which includes the Clean Energy 1 project, the South Peak project, and the refurbishment projects yet to complete, ALLETE Clean Energy has proposed and bid approximately 900 megawatts of additional PTC projects and is evaluating more than a dozen potential existing renewable facility acquisitions.

U.S. Water Services quarterly financial results reflect selling certain products that are seasonal in nature with higher demand typically realized in warmer months. So it is not unusual to experience weaker financial results in the first quarter. I remain excited about the prospects for all of our businesses at ALLETE and look forward to updating you throughout the year with our differentiated multifaceted growth platform.

We are well on our way with a new and exciting chapter at ALLETE. Al?

Alan R. Hodnik
Chairman, President & CEO

Well, thank you for the financial update, Steve and Bob. ALLETE is an energy company with a differentiated strategy. We recognize that the impacts from human activity including climate change are real, complex and interrelated. And we have thoughtfully positioned the company to do more than just operate, but to be a recognized leader to address these issues through our family of businesses. Our strategy is intentionally designed to provide cleaner energy solutions through initiatives at our regulated utility businesses, and also at our complementary and growing Energy Infrastructure and Related Services businesses. As we have shared previously, Minnesota Power's Energy Forward Strategy includes a proposal to further balance and diversify its energy sources with the Nemadji Trail Energy Center natural gas facility. In 2017, the Minnesota Public Utilities Commission directed that the related natural gas energy power purchase agreement be decided through an administrative law judge process. Recently the Minnesota Department of Commerce weighted favorably relative to the role of and the need for the NTEC initiative. The administrative law judge is expected to provide a recommendation by July of 2018, and the company anticipates a commission decision in the second half of 2018. The Minnesota Public Utilities Commission did not take any action regarding the tandem or complementary wind and solar energy power purchase agreements, which will be refiled separately, but still parallel to the natural gas initiative. Minnesota Power believes the optimal generation mix that best balances the sustainability, reliability and affordability interest of our nation and Minnesota Power's customers is a combination of 2/3 renewable and renewable enabling natural gas, and 1/3 environmentally compliant coal generation. Also in progress as part of our energy forward initiative is the ongoing construction of the Great Northern Transmission Line. The GNTL is designed to deliver carbon-free hydroelectric power from Northern Manitoba by 2020. Minnesota experienced a more traditional winter, which supported more efficient construction activity on the frozen swamps and bogs of Northern Minnesota. Minnesota Power expects to spend approximately $100 million on construction this year, with an estimated total investment of $330 million upon completion of the transmission line.

Superior Water, Light and Power continues to invest in growth initiatives to enhance the quality and reliability of electric, gas and water services provided to its customers. In support of these initiatives, the company anticipates capital investment of approximately $20 million in 2018, and anticipates filing for a rate review later this year. On the new customer front, PolyMet's proposed copper, nickel and precious metal mining operation in Northeastern Minnesota, continues to make progress on major permitting milestones.

In January of this year, the Minnesota Department of Natural Resources and the Minnesota Pollution Control Agency released PolyMet's draft permit to mines and also its air and water discharge permits. The last required public hearings for these permits were held in the first quarter of this year. The U.S. Forest Service has previously authorized a land exchange with PolyMet and continues to work with the company on the final title transfer. Upon completion, this will result in PolyMet obtaining surface rights to land needed to develop its mining operation. The final environmental impact statement also requires records

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

of decision by federal agencies, which are expected in 2018. Minnesota Power could supply between 45 to 50 megawatts of new load under a 10-year power supply contract that would begin upon start-up of the mining operations.

And now a few comments on ALLETE's Energy Infrastructure and Related Services businesses. ALLETE Clean Energy is making significant progress with its construction activities to refurbish wind turbines located at 3 wind farms in Minnesota and Iowa. ACE and its project teams are on schedule to complete these refurbishment initiatives in the planned 2020 time frame. These initiatives will improve performance and availability of these facilities, while generating federal production tax credits, as they resume generating carbon free energy for their customers.

We believe the long-term operational benefits and resulting economics from these refurbished facilities will benefit the renewal of power sales agreements, further contributing to ALLETE Clean Energy's long-term financial performance. ALLETE Clean Energy is about to ramp up construction activity on an energy facility, it will sell to Montana-Dakota Utilities upon completion. Construction is on schedule and the project is expected to be completed in the second half of 2018. With its strategic investment in production tax credit -- tax qualified Safe Harbor turbines, ALLETE Clean Energy is an attractive partner as it evaluates additional renewable projects and formally bids into a nationwide pipeline of renewable RFPs. The next several years will be transforming to earnings growth, to larger scale, and to project construction activity for ALLETE Clean Energy, as it moves forward with its multifaceted growth strategy.
Lastly, we believe U.S. Water Services is well-positioned for growth, as it captures revenue streams in the emerging integrated water management industry. With our first quarter financial results behind us, we are confident that our differentiated strategy is positioned to provide growth and earnings as well as dividends. We believe ALLETE's family of businesses will continue to benefit from investment growth opportunities, primarily driven by demands for cleaner energy and water conservation, along with our nation's renewed focus on infrastructure upgrades and expansion. Thank you for your time and for your investment in ALLETE. And at this time, I will ask the operator to open up the line for your questions.

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

Question and Answer

Operator

[Operator Instructions] And our first question comes from Paul Ridzon from KeyBanc.

Paul Thomas Ridzon
KeyBanc Capital Markets Inc., Research Division

This request for reconsideration, you said $20 million to $25 million, that could really move the needle? Could that by any chance be retroactive depending on what comes out of it?

Steven Wayne Morris
VP, Controller & Chief Accounting Officer

Yes, hi Paul, Steve Morris. It would be as of most likely January 1, 2017 that's when we started to implement our interim rate refund reserve, or that's what the effective date would be. So we would go back and adjust that through that period of time up through today.

Paul Thomas Ridzon
KeyBanc Capital Markets Inc., Research Division

Thank you, and when do you expect that to be decided?

Steven Wayne Morris
VP, Controller & Chief Accounting Officer

Well, tentatively there's a hearing this month, so we would, and that could get changed, but we would expect that to be heard and decided in the second quarter, so by the time we have our second quarter results.

Paul Thomas Ridzon
KeyBanc Capital Markets Inc., Research Division

And then just some clarification. The department made their proposal regarding Boswell and tax reform, is that going to be consolidated with your proposal to hit your ROE and then start getting back? Or -- what's the procedural schedule on those?

Steven Wayne Morris
VP, Controller & Chief Accounting Officer

Yes, I think they are 2 separate things. So one of our proposals was in response to the Department of Commerce proposal to go back now and shorten the lives to 2035 for Boswell was that would be heard in conjunction with our tax filing and not part of a rate case. And so that's really a cash issue, it's not an ROE issue.

Paul Thomas Ridzon
KeyBanc Capital Markets Inc., Research Division

The department's proposal, and your proposal to hit your authorized return before you give back would be the same proceeding?

Steven Wayne Morris
VP, Controller & Chief Accounting Officer

Well, our tax proposal was exactly that, it was in any sense, to earn our allowed ROE. That's in our tax filing, and the Department of Commerce in their reconsideration for a rate case also asked for a shorter life for Boswell. In addition, in the tax filing that their response was the shorter life of Boswell. So we think it's appropriate that the life of Boswell be taking -- taken up with our tax filing and not part of the rate case, because that's a tax reform issue.

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

Paul Thomas Ridzon
KeyBanc Capital Markets Inc., Research Division

And then also at ACE you mentioned that you're looking at 12 potential acquisitions. Should we think about these as kind of PTC's that are expired, kind of like your prior acquisitions? You made, some remaining contract life and is there any opportunity for refurbishments of these potential targets?

Robert J. Adams
Senior VP & CFO

Yes, hi Paul, this is Bob. Yes, In terms of the profile of those acquisitions they would be very similar to the acquisition that we've done historically. So they could have PTC life left in them, several years typically, but coming to the end of the 10-year life, we would certainly look for refurbishment opportunities, in fact some of the ones that we're looking at currently have that opportunity. And so yes, and in terms of returns, you didn't ask about returns, but returns are expected to be very consistent with the types of deals we've done in the past.

Paul Thomas Ridzon
KeyBanc Capital Markets Inc., Research Division

Do you have an inventory of refurbishment eligible parts or are those already earmarked for the 3 projects you're doing?

Robert J. Adams
Senior VP & CFO

They're earmarked for the existing projects we're doing.

Paul Thomas Ridzon
KeyBanc Capital Markets Inc., Research Division

But you would still secure more [MDLs] though for the 80% tax credit, correct?

Robert J. Adams
Senior VP & CFO

That's correct. Yes.

Steven Wayne Morris
VP, Controller & Chief Accounting Officer

Yes, Paul, ACE has turbine supply arrangements with a couple of providers. So there is that opportunity going forward.

Operator

And our next question comes from Chris Ellinghaus from Williams Capital.

Christopher Ronald Ellinghaus
The Williams Capital Group, L.P., Research Division

The discussion on acquisitions seems little bit new. Is -- are you seeing more activity or are you just telling us more at this point?

Robert J. Adams
Senior VP & CFO

So Chris, this is Bob. No it's very much 1 of the 4 planks of our strategy that we talked about, in addition to of course, the PTC strategy that we have. We've been looking at acquisitions, and with a dozen projects there is quite a bit of activity there, so.

Christopher Ronald Ellinghaus
The Williams Capital Group, L.P., Research Division

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

I guess, what I'm really saying, has there been an increase in activity or have you really been sort of at this level for a while?

Robert J. Adams
Senior VP & CFO

We've been at this level for a while.

Christopher Ronald Ellinghaus
The Williams Capital Group, L.P., Research Division

Okay. I think Steve was talking about equipment sales timing at U.S. Water. Is that something that you expect to sort of rationalize over the rest of the year?

Robert J. Adams
Senior VP & CFO

Yes, we do.

Christopher Ronald Ellinghaus
The Williams Capital Group, L.P., Research Division

And when you have the weather effect -- at U.S. Water is that something that also, sort of, winds its way through the rest of the seasons?

Robert J. Adams
Senior VP & CFO

Well, yes, of course. This business does better with warmer weather, generally speaking. And so to the extent that warm weather patterns continue, as they have over the last couple of years, we would expect that that would create some potential upside for the company and all things considered, weather would be on plan, so to speak.

Christopher Ronald Ellinghaus
The Williams Capital Group, L.P., Research Division

Okay. And one more thing about the ACE acquisition potential. Are you seeing, because of the winding down of PTC timing that there is a greater pipeline of sellers at this point?

Robert J. Adams
Senior VP & CFO

Not necessarily so. But I would expect that that would be the case as the years unfold here 2019 and 2020.

Christopher Ronald Ellinghaus
The Williams Capital Group, L.P., Research Division

Right. And as far as the necessary equipment, you see more than adequate supply where you shouldn't have any trouble acquiring equipment. Should you make some acquisition?

Robert J. Adams
Senior VP & CFO

Yes, no concerns there.

Operator

And our final question comes from Elizabeth Guynn from Mizuho Investments.

Elizabeth Roi Guynn
Mizuho Securities USA LLC, Research Division

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

I just have a quick question. Do you guys expect more equity dilution in 2018?

Robert J. Adams
Senior VP & CFO

So Liz, this is Bob. Let me give you a bit of a picture, but actually both in '18 and '19, where we have a DRIP program, which is our dividend reinvestment program. And typically in a given year, we are issuing between $15 million and $20 million a year. So that's going to be the limit of any equity in '18 and then again in '19 except for the case where we do additional projects at ALLETE Clean Energy or an acquisition at U.S. Water, a larger one.

Elizabeth Roi Guynn
Mizuho Securities USA LLC, Research Division

Okay, great. And then as ACE and the U.S. Water business continue to grow, how do you intend to keep your current regulated and non-regulated business mix, sort of at the equilibrium that it is at right now?

Robert J. Adams
Senior VP & CFO

Well, we've got -- some significant headroom left with regard to our ability to grow the nonreg, we believe. Of course, as you know we -- the ratings -- our credit ratings are important to us, maintaining a strong investment grade rating is important. So we've got some headroom for that growth. And as I stated over time to the extent that there is more growth in the nonreg than regulated and that mix starts to become higher than we like. We will be searching for other regulated opportunities to grow earnings there as well.

Operator

And we do have another question in the queue it's from Kevin Fallon from Citadel.

Kevin Fallon

I just wanted to ask what's baked in guidance for 2018 for Minnesota Power's earned ROE. It looks like from Analyst Day that you guys were expecting an 8.25% ROE is that correct?

Robert J. Adams
Senior VP & CFO

Yes, that is correct, Kevin.

Kevin Fallon

And just make sure, yes, the math is that $20 million pretax added to that would get you to earning a 9.25% at Minnesota Power in 2019?

Robert J. Adams
Senior VP & CFO

That's correct.

Kevin Fallon

And is there any difference between the regulatory ROE and financial ROE? Are there unrecovered costs or something?

Robert J. Adams
Senior VP & CFO

Yes, there is a little bit of unrecovered costs, but it's not significant.

Kevin Fallon

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

Like less than 10 basis points not significant or how so?

Robert J. Adams
Senior VP & CFO

Yes, yes, I think that's about right.

Operator

And we do have another question from Paul Ridzon from KeyBanc.

Paul Thomas Ridzon
KeyBanc Capital Markets Inc., Research Division

Just a clarification on Kevin's question. Is that 8.25% consolidated utility or just Minnesota Power?

Robert J. Adams
Senior VP & CFO

It's just Minnesota Power.

Operator

And we have no further questions at this time. So I'll turn the call over to Mr. Hodnik for closing remarks.

Alan R. Hodnik
Chairman, President & CEO

Well, Steve, Bob, and I thank you once again for being with us this morning. Thanks for your investment in ALLETE, and we'll see you all on the road as we get out here in the spring, summer and fall. Thank you very much and have a good day.

Operator
And this concludes today's conference call. You may now disconnect.

Presentation

Operator

Good day, ladies and gentlemen, and welcome to the Black Hills Corporation First Quarter 2018 Earnings Conference Call. My name is Brian, and I will be your coordinator for today. [Operator Instructions] As a reminder, this conference call is being recorded for replay purposes.

I would now like to turn the presentation over to Mr. Dave Soderquist, Investor Relations now of Black Hills Corporation. Please proceed, sir.

Dave Soderquist

Good morning. Welcome to Black Hills Corporation's First Quarter 2018 Earnings Conference Call. Leading our quarterly earnings discussion today are David Emery, Chairman and Chief Executive Officer; and Rich Kinzley, Senior Vice President and Chief Financial Officer.

Before we begin today, we would like to note that Black Hills will be attending the American Gas Association Financial Forum starting May 20 in Phoenix, Arizona.

Our presentation materials and webcast information will be posted on our website at www.blackhillscorp.com, under the Investor Relations heading.

During our earnings discussion today, some of the comments we make may contain forward-looking statements as defined by the Securities and Exchange Commission, and there are a number of uncertainties inherent in such comments. Although we believe that our expectations and beliefs are based on reasonable assumptions, actual results may differ materially.

We direct you to our earnings release, Slide 2 of the investor presentation on our website and our most recent Form 10-K and Form 10-Q filed with the Securities and Exchange Commission for a list of some of the factors that could cause future results to differ materially from our expectations.

I will now turn the call over to David Emery.

David R. Emery
Chairman & CEO

Thank you, Dave, and good morning, everyone. I will be starting my comments on Slide 3 of the webcast deck for those of you following along. We'll have a format similar to past quarters. I will give a quick update on the quarter. Rich Kinzley, our CFO, will give the financial update for the quarter. I'll cover forward strategy, and then we'll address questions.

You may have noticed, or will notice as we go through the process this morning, that we've made a few changes to our presentation format. Notably, we've added some more detail to our forecasted capital spending, which should improve some visibility into our future earnings growth. We expect to further enhance those disclosures as the year progresses.

Moving on to Slide 5, first quarter 2018 highlights for our utilities. On the 25th of April, our Colorado Electric utility received approval from the PUC in Colorado to contract with our own IPP subsidiary, Black Hills Generation, to purchase 60 megawatts of wind energy through a 25-year power purchase agreement. That agreement will provide the final amount of renewable resource we need to meet the state's renewable energy standard of 30% by the year 2020.

On April 26, Rocky Mountain Natural Gas, which is our intrastate gas pipeline in Colorado, received a recommended decision from the Colorado Administrative Law Judge, approving a settlement for the rate review it filed in October of last year. That settlement, which is subject to final approval from the Colorado PUC, includes: a $1.1 million increase in annual revenue; importantly, an extension of our safety, system and integrity rider to cover investments that will be made this year through 2021; it includes an

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

authorized return on equity of 9.9%; and a capital structure that's 46.6% equity. We expect new rates to be effective June 1, again, pending final approval from the commission.

Moving on to Slide 6, continuing with utilities highlights. During the quarter, our South Dakota Electric utility commenced construction on a $70 million, 175-mile transmission line from Rapid City, South Dakota, to Stegall, Nebraska. That project will be constructed in 2 segments. The first should be placed in service by the end of this year and the second segment by the end of 2019.

Also during the quarter, we continued our efforts to simplify our utility organizational structure by restructuring several of the legal entities that we acquired in 2016 through the SourceGas acquisition. That restructuring resulted in a $49 million tax benefit associated with goodwill that is now amortizable for tax purposes.

Highlights for our Power Generation segment for the quarter. I already noted on April 25, our electric generation subsidiary was selected to provide 60 megawatts of wind to our Colorado Electric utility. That $71 million Busch Ranch II wind project should be constructed and in service prior to the end of 2019.

Moving on to Slide 7, corporate highlights for the quarter. On April 23, our board declared a quarterly dividend of $0.475 a share, which is equivalent to an annual dividend rate of $1.90 per share. That $1.90 per share equivalent rate represents our 48th consecutive annual dividend increase.

On March 8, S&P affirmed its corporate credit rating for Black Hills Corporation at BBB flat, but revised its outlook to positive from stable, which we found encouraging.

Finally, related to discontinued operations, which is our Oil and Gas segment. As of yesterday, we'd executed agreements to sell -- or had closed on sales transactions for about 96% of our oil and gas properties, as measured by gross well count. Now we expect to sell our remaining assets prior to the end of the quarter.

Slide 8 provides a reconciliation of first quarter, net income from continuing operations as adjusted compared to the first quarter of 2017. The most notable change being improved performance at our Gas Utilities. Rich will provide more detail in his financial update, which I'll turn it over to Rich to cover financials.

Richard W. Kinzley
Senior VP & CFO

Very good. Thanks, Dave, and good morning, everyone. As Dave touched on, we delivered solid first quarter financial performance. With help from favorable weather, year-over-year, our natural gas utilities delivered strong financial results in Q1, demonstrating the benefits of our diversified utility portfolio and the 2016 SourceGas acquisition.

I'll jump in on Slide 10, where we reconciled GAAP earnings to earnings as adjusted, a non-GAAP measure. We do this to isolate special items and communicate earnings to better represent our ongoing performance. This slide displays the last 5 quarters and trailing 12 months as of March 31, 2018 and 2017.

As detailed on the slide, we experienced special items not reflective of our ongoing performance in each of the past 5 quarters. The first special item is acquisition-related expenses associated with the SourceGas acquisition and integration. We completed our integration work in 2017 and don't have that adjustment in 2018 or forward.

The second special item relates to income taxes and is predominantly the result of federal income tax reform. The corporate tax rate change from 35% to 21% beginning in 2018 required a revaluation of our deferred asset -- deferred tax assets and liabilities on December 31, 2017, resulting in a $0.21 EPS benefit in the fourth quarter of 2017. Given additional information in Q1, certain estimates impacting the revaluation have been updated, resulting in a Q1 charge of $2.3 million or $0.04 of EPS.

The largest special item in Q1 2018, also related to income taxes. As Dave noted, as part of our effort to simplify our legal organization, in Q1, we restructured certain entities as part of the 2016 SourceGas

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

acquisition. The restructuring increased goodwill that is amortizable for tax purposes, resulting in an associated deferred tax benefit of $49 million or $0.91 of EPS. These items are not indicative of our ongoing performance and, accordingly, we reflect them on an as-adjusted basis.

Our first quarter as-adjusted EPS was $1.63 compared to $1.44 for the first quarter last year. The earnings uplift comparing Q1 this year to Q1 last year was primarily driven by a colder winter heating season at our Gas and Electric Utilities compared to a mild winter last year. We estimate mild weather last year, as compared to normal, negatively impacted Q1 2017 EPS by $0.09. This year, we estimate that colder weather, compared to normal, positively impacted Q1 2018 EPS by $0.05.

Slide 11 is a new slide we've added to our investor materials to provide additional transparency related to year-over-year comparisons. The waterfall chart illustrates major drivers that comprise the differences from Q1 2017 to Q1 2018. All amounts on the chart are net of tax. Again, you'll note weather was a large positive driver year-over-year, especially at the Gas Utilities. We recorded a revenue reserve in Q1 2018 at the Gas and Electric Utilities due to tax reform as we expect to pass the benefit of the lower corporate tax rate on to customers through reduced bills. However, this has no impact on net earnings due to the lower income tax rate as a result of tax reform. Dave will touch on this more in a bit, but in short, we continue to work with our regulators in each of our states to pass the tax benefit from tax reform to our utility customers. You can also see we did a good job managing O&M on a consolidated basis, with limited O&M increases year-over-year.

Slide 12 displays our first quarter income statement. Gross margin was flat year-over-year despite the revenue reduction related to tax reform that I noted a moment ago. Operating expenses and DD&A increased modestly comparing Q1 2018 to Q1 2017, primarily due to typical operating expense increases and incremental plant investments. Operating income was down for the quarter compared to the prior year, again, mainly due to revenue reserves related to tax reform, which is offset by reduced income tax expense below the operating income line.

Moving below the operating income line. Interest expense increased slightly year-over-year due to higher interest rates on our variable-rate short-term debt. The most significant change, comparing Q1 2018 to Q1 2017, is on the income tax line. You'll note the $26 million income tax benefit recorded in Q1 2018 despite $113 million of pretax income. This resulted from the legal reorganization we mentioned already.

The effective tax rate, after adjusting out the special items I noted on Slide 10, is 18.9% in Q1 2018 compared to 29.6% in Q1 2017. The lower effective rate this year was driven by tax reforms corporate rate reduction.

Moving to the as-adjusted income from continuing operations line, we generated $88 million for the quarter compared to $79 million for the same quarter last year, a 12% increase. You'll note our Q1 2018 diluted share count decreased compared to Q1 2017. This was due to the application of the treasury stock method related to the unit mandatory securities we issued in late 2015 to help fund the SourceGas acquisition. Until these securities convert to equity in November of this year, we're required to apply the treasury method of accounting, whereby we include a portion of the shares in our diluted share count.

The number of shares we include is based on the average daily closing price of our stock during the reporting period. Our average share price was lower in Q1 2018 compared to Q1 2017.

So in Q1 2018, we added approximately 700,000 shares to our diluted share count, compared to approximately 1.6 million additional shares in Q1 2017.

As I noted in our year-end earnings call on February 2, we're assuming approximately 56 million weighted average shares in our full year 2018 guidance, as we will have approximately 60 million diluted shares beginning November 1, after the conversion occurs. Considering the increase in as-adjusted net income and reduced share count, as-adjusted EPS grew $0.19 or 13% from the same quarter last year.

I'll now discuss each business segment. Slide 13 compares our Electric and Gas Utility segment's Q1 2018 gross margin and operating income compared to Q1 2017. Our Electric Utilities operating income decreased $7.3 million in the first quarter of 2018 compared to first quarter 2017.

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

Electric Utilities gross margin decreased $1.4 million quarter-over-quarter, driven by a $6.1 million revenue reserve related to tax reform, partially offset by higher margins from investments in transmission, favorable weather and higher non-energy revenues.

Operating expenses, including depreciation, were $5.9 million higher for the first quarter of 2018 compared to the first quarter of 2017, as a result of increased vegetation management and outage-related expenses as well as increased property taxes and depreciation associated with rate base investments.

Moving to the right slide of Slide 13. Our Gas Utilities reported an increase of $3.4 million in operating income comparing Q1 2018 to Q1 2017. Gross margins were favorable by $4.2 million quarter-over-quarter, as cold weather added $9 million of incremental margin year-over-year. Heating degree days were 2% higher than normal in Q1 2018 compared to 13% below normal for Q1 2017. Customer growth and capital recovery rider mechanisms added approximately $4 million to margins year-over-year. These increases were partially offset by tax reform-related revenue reserves of $9 million.

Operating expenses were nominally higher compared to the prior year, reflecting strong cost management of the Gas Utilities. As I noted earlier, the unfavorable impact of operating income -- to operating income from tax reform at both the Electric and Gas Utilities is offset by lower income tax expense and is earnings neutral.

On Slide 14, you see that Power Generation operating income increased $400,000 comparing Q1 2018 to Q1 2017, primarily from reduced sales volume under our power purchase agreements. The Power Generation segment continued to realize strong contract availability from its generating units and continued its strong earnings and cash flow contributions. Also on Slide 14, you'll see in the first quarter of 2018, our Mining segment had a $1 million operating income increase compared to first quarter 2017.

For the quarter, revenue was $600,000 higher, primarily from higher tons sold in 2018. On the O&M side, we decreased cost by $400,000. Our mine continues to perform at a high level, with sales almost entirely to on-site [9-mile plants] and roughly half our sales based on a cost-plus pricing methodology.

Slide 15 shows our capitalization. At March 31, our net debt-to-capitalization ratio was 64.1%, a decrease of 190 basis points from year-end. This reduction was driven by the increase in retained earnings due to our solid first quarter earnings as well as by strong first quarter cash flows that allowed us to reduce our total debt from year-end. Our $299 million of unit mandatory securities are reflected as debt on our balance sheet until the units convert to equity on November 1 this year. After conversion, we expect our debt -- net debt-to-capitalization ratio to decline below 60%. While we may need to increase our short-term borrowings from time-to-time over the course of 2018 and 2019 to fund our currently forecasted capital expenditures, we don't anticipate the need to issue any equity to fund these activities. If additional capital investment opportunities emerge, we have our At-the-Market equity program available if the need to issue any equity arises.

Slide 16 shows our debt maturity schedule. The unit mandatories require us to remarket the debt noted as a 2028 maturity on the schedule, which we will do during the second half of this year. We're also evaluating options for the 2019 and 2020 maturities.

Slide 17 shows our investment-grade credit rating. As Dave noted, during the first quarter, S&P affirmed our BBB credit rating and upgraded the outlook to positive. We're committed to maintaining our strong investment-grade credit ratings, and our forward forecasted metrics support those ratings.

On Slide 18, we're reaffirming our 2018 earnings guidance of $3.30 to $3.50 per share based on the assumptions previously provided on February 2, 2018.

I'll turn it back to Dave now for his strategic overview.

David R. Emery
Chairman & CEO

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

All right. Thank you, Rich. Moving on to Slide 20. We group our strategic goals into 4 major categories: profitable growth, valued service, better every day and great workplace, with the overall objective of being an industry leader in all we do.

On Slide 21. From a strategy execution perspective, we're focused on delivering strong long-term total shareholder returns. We plan to accomplish that by achieving a long-term EPS growth rate that's above the industry average, targeting a 50% to 60% dividend payout ratio, while still retaining the flexibility to increase that dividend during periods of slower EPS growth and continuing our track record of 48 consecutive annual dividend increases.

On Slide 22. We're currently in the process of transitioning our earnings growth drivers, from a largely acquisition- and integration-focused strategy over the last year or so with the SourceGas acquisition, back to a more traditional utility growth approach. In the near term, this year and next year, we expect slower earnings growth since we're entering test years in preparation for rate review filings or actually commencing those rate review filings in some of our jurisdictions. We do have 3 active rate review processes currently in process right now.

Over the long term, starting in 2020 and beyond, we expect higher earnings growth expectations, driven by strong capital investments to meet our customer needs, continued focus on standardization and efficiency improvements and back to more regular rate review filings.

Slide 23. As we focus on delivering long-term shareholder value, our fuel and service territory diversity reduces our business risk and drives more predictable earnings.

Slide 24. Our utility acquisitions over the years have created a much larger transmission and distribution system network, both on the electric and the gas side of the business. With that increase in size comes increased opportunity for investment to serve a much larger customer base.

Moving on to Slide 25. Strong capital spending has in the past and will continue to drive much of our earnings growth. We plan to invest almost $2.3 billion over the next 5 years to better serve our 1.25 million utility customers. And that level of investment far exceeds depreciation contributing to earnings growth.

Slide 26, which is a new look, provides a detailed capital spending forecast for our Gas Utilities, including breakouts by state, investment type and recovery mechanisms for a full 5 years compared to the 3 years that we previously disclosed.

Slide 27 provides a similar capital spending detail for our Electric Utilities.

Moving on to Slide 28. This slide provides a regulatory update for our utilities, highlighting the status of our active rate review filings and our federal income tax reform dockets by state. You'll notice that we've completed the process of determining customer benefits for federal income tax reform in both Iowa and Kansas, and either have started to reflect those changes on customer bills, as is the case in Iowa, or are planning to beginning in -- or Kansas, I'm sorry, and then planning to do that beginning in July for the state of Iowa.

I've already noted the other key regulatory updates, with one exception. And that is on April 30, we received an order from the Denver District Court regarding our appeal of the Colorado Public Utility Commission's prior decision on our 2016 rate review for Colorado Electric. There are several issues addressed in the ruling, some positive and some negative for Black Hills. Most notably, we're very disappointed that the court affirmed the commission's decision related to the rate treatment of the new gas turbine generator we constructed in Colorado. The PUC in that 2016 rate decision assigned a lower return on investment for that turbine than for any of our other utility assets in Colorado. The turbine was built in response to the Colorado Clean Air-Clean Jobs Act, a law passed in Colorado that was intended to provide an incentive to utilities to retire their coal fire generation before the end of its useful life and replace it with cleaner, more modern generation. Now for the commission to assign a lower return on investment for the new generation, after we built it in good faith and in compliance with the Clean Air-Clean Jobs Act, this is very troubling, and the fact that the court upheld that is even more troubling. And frankly, we feel it's contrary to the intent of the Colorado Clean Air-Clean Jobs Act. We're currently

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

evaluating the impacts of the court order on our business and considering our next steps in the legal process.

Moving on to Slide 29. Now we're extremely proud of our track record of annual dividend increases that I mentioned earlier, including stronger increases the past several years, reflecting our confidence in strong future earnings growth and cash flows.

As I noted earlier, we have the flexibility to use larger dividend increases during periods of slower earnings growth to help deliver solid total shareholder returns. Even after relatively strong dividend increases during the past few years, we're still well within our targeted 50% to 60% dividend payout ratio range.

Moving on to Slide 30. Now we focus every day on operational excellence. We continue to make great progress, improving our safety performance, and also continued to consistently demonstrate our power plant availabilities, which are among some of the best in the industry.

On Slide 31, we note that we've created a new corporate responsibility report, which is available on our website. We encourage you to check that out.

And finally, on Slide 32. This is our scorecard for 2018. This is our way of holding ourselves accountable to you, our shareholders, for our accomplishments in our key strategic objectives.
Now that concludes our remarks. We'd be happy to entertain any questions.

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

Question and Answer

Operator

[Operator Instructions] And our first question will come from the line of Julien Dumoulin-Smith with Bank of America Merrill Lynch.

Julien Patrick Dumoulin-Smith
BofA Merrill Lynch, Research Division

So perhaps, just to come back to a few things you said. First off, on the wind award. Just curious, how do you think about earnings profile of that asset, specifically on the latest one? But more broadly, do you anticipate participating perhaps even outside of your service territory for these kinds of projects more strategically, i.e., more contract? And I suppose this is the latest example, so I'd just be curious.

David R. Emery
Chairman & CEO

Yes. I would categorize this one. Obviously, this is an investment from our IPP subsidiary. I would categorize the earnings from that as probably consistent with how you would look at an IPP project, that is, it's financed with a little more debt than you would expect from a utility capital structure. And then also, the returns would be consistent with an IPP-like return. As far as whether we would do this outside of our existing service territories, they're not -- I would say, the answer is yes, but on a limited basis. I think there would have to be a very compelling strategic reason for us to do so, whether that's a relationship with an existing wholesale customer or something like that. We don't have any aspirations of running out and being a full-blown competitor in the IPP business. That's not our strength. But I do think there are certain circumstances where it may make sense for us to do this to for others. They will be fairly few and far between, however.

Julien Patrick Dumoulin-Smith
BofA Merrill Lynch, Research Division

All right. And just on -- in terms of, like, the net income profile of the latest wind investment, would you characterize it as a premium or discount to the traditional utility returns?

David R. Emery
Chairman & CEO

Well, I think the return would be probably comparable, but the capital structure's significantly different with less equity, right? And then as -- consistent with wind projects and other renewable projects, a lot of the earnings are really driven by production tax credits, so they show up below the operating income line.

Richard W. Kinzley
Senior VP & CFO

And I'd add one thing to that, Julien. That was a competitive process, and there were a lot of bids. It was vigorously competitive so we did have to be aggressive to win that bid.

Julien Patrick Dumoulin-Smith
BofA Merrill Lynch, Research Division

Got it. All right. Understood. And actually, let me turn back to you, real quickly here, Rich. In terms of the comments you made on the call around capital spend and the potential need for equity, just can you frame that a little bit in terms of what sort of -- under what circumstances you would see that at this point in time? And then secondly, I suppose related to that, you provided a little bit more of an extensive view on your CapEx here out to '22. Can you talk about some of the other big puts and takes that might materialize here in your forecast given now that we've got the wind one out?

David R. Emery

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

Chairman & CEO

Yes. From Q1 to Q2, you can see the difference in our CapEx schedule is the additional wind project. We added $11 million to this year's capital and $60 million the next year. We're still comfortable that after the convert, we're going to be well below 60%. When that converts, that'll get our debt-to-total cap down below 60%, and our cash flow should keep us there through the end of 2019. And then if you look post 2019 at that CapEx schedule, we should remain comfortably there. If additional large projects come up, we may need to issue some equity. That's where I'd leave that, Julien.

Richard W. Kinzley
Senior VP & CFO

Yes. And I'd say that story is consistent with what we've talked about in the past, Julien. We've said we have fairly aggressive capital spending outlook going forward, but we expect to finance that with internal cash flows and debt, absent any big special projects that might get added. And that is why we have kept our At-the-Market equity issuance program active, just in case we may have one of those projects. But we would only use that in the event that we'd have some additional CapEx that is not on our current schedule.

Julien Patrick Dumoulin-Smith
BofA Merrill Lynch, Research Division

But is there any other large capital project, whether in procurement now or bidding, et cetera, that we should be paying attention to? It doesn't sound like it.

David R. Emery
Chairman & CEO

Well, there are several in the works, but not mature enough to the point that we're ready to talk about specific projects. I mean, we're always looking at some renewable projects for our Electric Utilities, pipelines for our Gas Utilities, transmission lines we've talked about, things like that. And we have several of those that we're looking at and studying and, potentially, would integrate into our forward plans, just not mature enough to actually file a certificate of public convenience in necessity or something that would say we're really ready to propose yet.

Operator

And our next question will come from the line of Michael Weinstein with Crédit Suisse.

Michael Weinstein
Crédit Suisse AG, Research Division

I may have missed this, but in light of the court decision now, I mean, can you still file for rehearing? I think you can, right? I mean, they should I'd think the -- and from my understanding, that this -- the commission had suspended the rehearing or canceled it, waiting for the court decision, right? So is it possible that they might take it back up again anyway?

David R. Emery
Chairman & CEO

Yes. We've got several options and we're evaluating all those. One is, of course, another level of appeal, which we certainly could do. The other one is we could basically elect to either go back and ask the commission to rehear that or frankly, include it in another rate case. All those options are on the table. And frankly, having just received that ruling earlier this week, we're still in the process of discussing what those options are and which ones would be the best to pursue at this point in time. But they're all on the table.

Michael Weinstein
Crédit Suisse AG, Research Division

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

Yes. I guess -- I mean, my other interest there is that in light of the approval for Busch Ranch and also the Rocky Mountain gas pipeline ALJ recommendation, those decisions, do you think they bode well for a possible rehearing despite the court decision?

David R. Emery
Chairman & CEO

It's really hard to say and hard to speculate. I think we've been pleased working in relationship with the commission recently and we hope that continues.

Michael Weinstein
Crédit Suisse AG, Research Division

Okay. Can you give any color on the other discussions on the pass back of tax savings beyond Iowa and Kansas?

Richard W. Kinzley
Senior VP & CFO

Well, they're all in various states of process. So the Colorado Rocky Mountain Natural Gas pipeline, that settlement includes the impacts of tax reform. Our active rate reviews in Northwest Wyoming and in Arkansas, when they get completed, will include the results of tax reform. And then all of the others are at various stages in the process, from very early to well underway. Our tact in most of those -- and it's going to be a commission-dependent decision state-by-state, but we've taken the position that we think it's best for customers to go back to their most recent rate case and just compute the difference on the tax rate and start collecting -- or stop collecting that difference from customers going forward and, of course, refund it back to the effective date of the tax rate change. That's not going to happen in every state, we don't think. Some of them are asking us to look at what's the current impact rather than the impact back to the most previous rate case. But all are progressing, and we're comfortable and happy, frankly, with the progress we're making. Some will be a little slower, though.

Operator

[Operator Instructions] And I'm showing no further questions over the phone lines. Mr. David Emery, please proceed with closing remarks.

David R. Emery
Chairman & CEO

All right. Thank you. Well, thanks for your time and attention this morning, everyone. We appreciate you attending our Q1 earnings call. And for those of you who are going to be at the AGA Financial Forum, we look forward to visiting with you there. Have a great day and a great weekend. Thank you.

Operator
Ladies and gentlemen, thank you for your participation on today's conference. This concludes the presentation. You may now disconnect. Good day.

Presentation

Operator

Good day, and welcome to the Hawaiian Electric Industries, Inc. First Quarter 2018 Earnings Conference Call. [Operator Instructions] Please note, this event is being recorded. I would now like to turn the conference over to Julie Smolinski, Manager, Investor Relations. Please go ahead.

Julie Smolinski
investor relations contact

Thank you, and welcome to Hawaiian Electric Industries' First Quarter 2018 Earnings Conference Call.

Joining me this morning are Connie Lau, HEI President and Chief Executive Officer, and Chairman of the Board of Hawaiian Electric Company and American Savings Bank; Greg Hazelton, HEI Executive Vice President and Chief Financial Officer; Alan Oshima, Hawaiian Electric Company President and Chief Executive Officer; and Rich Wacker, American Savings Bank President and Chief Executive Officer; as well as other members of senior management.

Connie will provide an overview, followed by Greg, who will update you on Hawaii's economy, our results for the first quarter and our outlook for the remainder of the year. Then, we will conclude with questions-and-answers.

During today's call, we'll be using non-GAAP financial measures to describe our operating performance. Our press release and webcast presentation are posted on HEI's Investor Relations website, and contain reconciliations of these measures to the equivalent GAAP measures.

Forward-looking statements will also be made on today's call. Factors that could cause actual results to differ materially from expectations can be found on our webcast slides, our filings with the SEC and on the HEI website.

I'll now ask our CEO, Connie Lau, to begin with an overview.

Constance Hee Lau
President, CEO & Director

Thank you, Julie, and aloha to everyone. As we get started today, I'd like to provide an update on the lava and related seismic activity on the island of Hawaii. Our thoughts are with those who have lost their homes and with those who have had to evacuate. Our utility on Hawaii Island has been working with authorities to ensure public safety and sufficient power supply, and our teams from Oahu and Maui County have been providing assistance as well. I want to acknowledge the hard work of our teams, and we thank them for their dedication and support of one another and of our customers.

While this is still a developing situation, at this time, we expect that the lava and seismic activity will not have a material impact on our company. The affected area is about 10 square miles on the southeastern part of Hawaii Island, and while several hundred residents have evacuated and some have indeed lost their homes, significant utility infrastructure has not been destroyed. We are also assessing earthquake impacts to facilities and have not found widespread damage to date.

On the bank side, total loan exposure in the lava-affected area is limited. The area is not densely populated and American ceased making new loans in that area after lava activity in 2014.

Now turning to the results for the first quarter. We are pleased to report solid earnings from both our bank and utility, in line with our expectations for the year and resulting in consolidated net income of $40 million and consolidated earnings per share of $0.37. This includes American's highest ever quarterly earnings. Greg will walk through our results in more detail in a few minutes.

With respect to the utility, in the first quarter, we've made progress on a number of important initiatives. As we complete our return to a triannual rate case cycle for our 3 utilities, we are providing the net

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

benefits of tax reform to our utility customers. These benefits are reflected in adjusted interim rates for our Oahu and Hawaii Island customers that began this spring. And our Maui County utility has filed a reduced 2018 RAM adjustment mechanism request and also reduced its 2018 rate case request to reflect tax reform, with an interim decision expected in August.

We filed our electrification of transportation road map in March, driving near and long-term actions to create a clean energy future and reduce dependence on imported fuel oil for both transportation and electricity. Transportation accounts for nearly 2/3 of fossil fuel brought to Hawaii, so addressing the transportation sector is essential to reducing Hawaii's carbon footprint and increasing our island state's energy security. At our current pace, we're on track to meet or exceed our state's next renewable milestone of 30% by 2020.

We've recently seen the groundbreaking of several large solar projects, including our own 20-megawatt photovoltaic project at Joint Base Pearl Harbor-Hickam. Through our renewable generation RFPs, we are providing a platform for third party development of approximately 300 megawatts of additional renewables. And last week, we filed applications to add 2 good-scale batteries on Oahu, to help integrate more renewables while improving resilience and [indiscernible]

Finally, as many of you know, last month, our commission opened a proceeding and our Governor signed into law a legislation to evaluate and implement performance-based regulation, or PBR. We have advocated for this PBR for some time and already have some elements of it in place such as decoupling and performance incentives for reliability, customer service, renewable energy procurement and demand response. In its docket, the commission indicated it seeks to build on the existing regulatory framework rather than make wholesale changes.

We see PBR as an opportunity for our company as incentives may be approved to provide revenue opportunities without completely changing cost of service regulation. The recently established performance incentives for our renewable generation RFPs are a good example of this, providing the potential for the utility to earn by successfully adding competitively priced contracted renewables under our new PPA framework.

With the Commission's acceptance of our power supply improvement plan last year and approval of our grid modernization strategy earlier this year, and now our recently filed electrification of transportation road map, we now have in place comprehensive plans for reaching our 100% clean energy goal and the framework for measuring performance as we move forward. We believe the commission has outlined a collaborative, deliberative approach for developing PBR elements to advance Hawaii's goals while maintaining a financially stable utility and a safe, reliable and resilient grid, and we look forward to participating in the process over the next 2 years.

Turning to the bank. As I mentioned, American had the highest quarterly net income in its history, delivering well on fundamentals like net interest margin and deposit and loan growth, while benefiting from lower tax rates due to tax reform. The lower tax expense also allowed American to meaningfully increase wage rates for its employees at entry-level and lower wage positions starting this year.

American's new Honolulu campus remains a key focus for the bank and construction is well underway. Our bank team looks forward to consolidating its core management and operations teams into a single, new innovative space later this year, resulting in greater efficiencies for the bank and its customers.

Moving to Pacific Current. In the first quarter, our new subsidiary announced its second investment, a solar plus storage project that will provide 8.6 megawatts of solar capacity and 42.3-megawatt hours of storage capacity on the islands of Maui and Oahu at 5 University of Hawaii campuses. The facilities are in construction phase and are expected to be operational in 2019. We expect this project to be accretive to earnings in its first full year of operation.

This project is a great example of Pacific Current's approach of partnering with others and helping bring together Hawaii-based resources to advance our state's clean energy and sustainability goals. Our initial project, Hamakua Energy, is helping to fund Pacific Current's startup cost, and we are focused on building out Pacific Current's organization and management team.

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

I'll now ask Greg to cover Hawaii's economy, our first quarter financial results and company outlook for 2018. Greg?

Gregory C. Hazelton
Executive VP & CFO

Thanks, Connie. The overall health of Hawaii economy has remained sound as expansion continues, with ongoing strength in tourism and real estate and the labor force near full employment. Unemployment remains very low, below 3% since mid-2016. At 2.1% in March, it is now the lowest on record for the state and continues to be below the national rate. The increasingly tight labor market could begin to spur wage growth, which consistent with the rest of the country, has lagged unemployment levels.

A key area of employment growth has been the tourism industry, which continued a lengthy expansion that began in 2010. The industry has built on its record-setting 2017 results, seeing visitor arrivals and spending continue to rise.

The outlook is positive. At current rates, we are heading toward another record year for arrivals approaching 10 million visitors. Airlines have increased scheduled air seats to Hawaii, particularly from the western U.S. And Southwest is entering the market with service from the mainland as well as interisland.

Hawaii real estate has remained strong. Year-to-date April, both sales volume and prices continued to rise due to high demand. As of April, the median sales price for single-family homes rose 4.6% from the prior year to $774,000, and condos were up 7.5% to $425,000. Overall, the Hawaii economy is performing well with local and international conditions supporting the positive outlook.

Turning to our financial results, as shown on Slide 6. First quarter earnings per share were $0.37 per share, compared to $0.31 per share for the first quarter of 2017. We realized earnings improvement at both the utility and bank, offset in part by higher holding company losses, which were expected due to lower tax benefits on expenses and from a reduced federal tax rate and increased interest expense.

The holding company segment currently includes -- also includes Pacific Current, currently with 2 investments, Hamakua Energy, which has operated well and according to plan and contributed positively to earnings. However, our UH investment in February incurred transaction costs, which offset in part the earnings contributions at Hamakua.

Turning to Slide 7. HEI's consolidated ROE for the last 12 months was 8.2%, with contributions of 6.9% from the utility and 11.8% from the bank. Excluding the onetime impacts of tax reform recorded in the fourth quarter of 2017, HEI's core consolidated ROE for the last 12 months was 8.9% and the utility core ROE was 7.4%.

Utility results for the March 2018 LTM period reflect the impact of the 2017 expiry of the RAM settlement agreement as well as our ongoing transition back to a triannual rate case cycle and reset of base rates after no base rate increases for 6 years.

The March 2018 LTM results include 7 months of interim rates at Hawaii Electric Light and 1.5 months of interim rates at Hawaiian Electric, our largest utility. We expect ROE improvement from continuation of these interim rates throughout the year -- throughout the rest of the year as well as the upcoming interim decision on a Maui Electric rate case in August.

At the bank, we realized an increase in ROEs for the last 12 months, primarily driven by tax reform, continued low-cost funding and strengthening yield on earning assets. We expect further ROE expansion as we progress through the year. The bank's annualized ROE for Q1 2018 was 12.58%.

On Slide 8, utility earnings were $27.5 million in the first quarter of 2018 compared to $21.5 million in the first quarter of 2017. The most significant net income drivers were as follows: $11 million higher RAM revenues in 2018, primarily due to lower revenues in the first quarter of 2017 because of the return in 2017 to reporting Oahu RAM revenues for accounting purposes on a lagged basis beginning June 1, 2017 instead of on a calendar year basis due to the expiration of a 2013 settlement agreement; $5 million of interim rate relief for Hawaiian Electric's 2017 year interim rates effective mid-February and a full year of

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

benefits from Hawaiian Electric Light 2016 test year interim rates, which became effective in August 2017; and $1 million higher allowance for funds used during construction mainly from the Schofield Generating Station to be completed in the second quarter.

These amounts were partially offset by $7 million higher O&M expenses compared to 2017, primarily due to the reset of pension costs as part of rate case interim decisions, higher overhaul costs for generation, a write-off of certain smart grid costs that were incurred before the approval of a revised grid modernization strategy and a onetime expense -- rent expense adjustment for an existing substation land lease, partially offset by an additional reserve for environmental costs in 2017. Also, $2 million higher depreciation expense for increasing investments in integration of more renewable energy, improved customer reliability and greater system efficiency, and $2 million lower net income, primarily representing the difference between first quarter 2018 accrued tax reform net benefits to customers and our first quarter tax savings.

Turning to the bank on Slide 9. In the first quarter of 2018, American saw its highest quarterly net income ever at $19 million, $3 million -- $3.1 million higher than the first quarter of 2017 and $2.1 million higher than the fourth or linked quarter. Compared to the linked quarter, the increase was primarily driven by higher net interest income, which was mainly due to higher yields on green assets and strong deposit growth that funded increases in the investment and retail portfolios.

The first quarter also included $3 million in benefits from lower federal tax rates compared to the onetime tax benefit of $1.7 million recognized in the linked quarter.

In the linked quarter, American awarded $1 million to its employees through a $1,000 cash bonus. American's wage rate increase for entry-level and lower-wage positions beginning in 2018 increased compensations cost for the quarter and the year.

Compared to the first quarter of 2017, the $3.1 million higher net income was primarily driven by higher net interest income, partially offset by lower noninterest income.

Noninterest expense in the first quarter of 2018 was higher than the same period in 2017 due to higher compensation expense and benefit expense, reflecting the wage increases mentioned a moment ago, along with higher performance-based incentives and annual merit increases, substantially offset by the impact of lower taxes.

On Slide 10, we see American's solid profitability reflected in increases in both its return on assets and net interest margin. We achieved a return on assets of 112 basis points, exceeding our 2018 annual target of over 110 basis points.

Our net interest margin was 3.76%, within our guidance range of 3.7% to 3.8%. Our strong interest -- net interest margin is primarily due to higher yields on interest-earning assets and strong low-cost deposit growth that funded earning asset growth in the investment and retail portfolio.

On Slide 11, our net interest margin of 3.76% in the first quarter of 2018 was 8 basis points higher than the linked quarter. Our interest-earning asset yield increased 10 basis points from the linked quarter, primarily due to increases in yields in the investment and loan portfolios. And our liability costs at 23 -- remained low at 23 basis points although it increased by 2 basis points compared to the linked quarter as deposit costs have increased in the rising interest rate environment, primarily due to term certificates.

On Slide 12, net interest income was approximately 3% higher compared to the linked quarter, driven by low-cost deposit growth that funded our investment growth as well as higher yields on loans.

Noninterest income of $13.4 million was lower than linked quarter, mainly due to lower net debit charge -- interchange fee income, resulting primarily from a reclassification of expenses due to a new accounting standard.

Total loans as of the quarter end increased by $71 million at a 6.1% annualized growth rate, primarily driven by increases in commercial and commercial real estate loans of $63 million. We expect to meet our target of low to mid-single-digit earning asset growth for the year.

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

Our deposit growth in the first quarter was 12.8% annualized, including approximately $100 million in repurchase agreements that were transferred into deposit accounts. Excluding such transfers, deposit growth was 6%.

Credit quality remains sound due to prudent risk management and a healthy local economy. Our residential portfolio remains very clean, consumer unsecured credit quality is in line with expectations, and the commercial and commercial real estate portfolios are stable with improving trends.

First quarter 2018 provision for loan losses included reserves for loan growth. Additional reserves for the consumer loan portfolio were partially offset by the release of reserves for the commercial loan portfolio due to a recovery on a previously charged-off commercial loan and improved credit quality.

Our net charge-off ratio was 28 basis points for the quarter of -- first quarter of 2018 compared to 26 basis points in the linked quarter.

Nonaccrual loans as a percentage of total loans receivable held for investment was 0.53% compared to 0.51% at the end of the linked quarter. The allowance for loan losses of $54 million was 1.14% of outstanding loans at the quarter end compared to 1.15% in the linked quarter and 1.19% as of the prior year -- prior quarter.

Slide 14 illustrates American's continued attractive asset and funding mix relative to our peer banks. American's March 31, 2018 balance sheet is compared to the last available data for our peers from the fourth quarter. 100% of our loan portfolio was funded with low-cost core deposits versus the aggregate of our peer banks at 88%. In the first quarter, total deposits increased by $188 million, while we maintained a very low cost of funds of 23 basis points, 36 basis points lower than our peer median.

American paid $11 million in dividends to HEI in the first quarter and remains well capitalized at March 31, with a leverage ratio of 8.6%, a tangible common equity to tangible asset ratio of 7.7% and total risk-based capital ratio of 14%.

On Slide 15, we are reaffirming HEI's 2018 earnings guidance in the range of $1.80 to $2 per share. There are no changes to the guidance ranges for the utility and the bank at this time.

I'll turn it over to Connie to make her closing remarks.

Constance Hee Lau
President, CEO & Director

Thanks, Greg. In summary, our companies continue to focus on our enterprise-wide mission of being a catalyst for a better Hawaii. At the utility, we are providing tax reforms, net benefits to customers and are on course to meet or exceed the state's 2020 target of 30% renewable energy. We look forward to participating alongside other stakeholders in the PUC's PBR docket as we work together to achieve our state's goals.

We are focused on our role in creating resilient, sustainable communities through technology, smart use of resources and building partnerships and providing more value to customers. At the bank, we look to build on its record earnings and profitability as we continue our work to make banking easier, deepen customer relationships, strengthen efficiency and enhance asset quality while growing the asset portfolio. And we very much look forward to the new campus opening later this year.

At Pacific Current, we are pleased to have 2 great projects in place and are prudently investing in the build-out of the organization.

Finally, our board yesterday maintained our quarterly dividend of $0.31 per share, continuing our history of uninterrupted dividend since 1901. The dividend yield continues to be attractive at 3.7% as of yesterday's market close. As always, our companies will continue to focus on providing long-term value for our customers, communities, employees and shareholders.
And now we look forward to hearing your questions.

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

Question and Answer

Operator

[Operator Instructions] The first question comes from Julien Dumoulin-Smith of Bank of America Merrill Lynch.

Kim Zeng
BofA Merrill Lynch, Research Division

This is [Claire] for Julian. I wanted to first talk about Pacific Current. So I was hoping you could give a little more color beyond what you've provided so far, particularly earnings contribution, earnings cadence. And second, to follow up, if you can give a little more color on the strategic view for Pacific Current and the competitive dynamics for solar plus storage in the state.

Constance Hee Lau
President, CEO & Director

Sure. Thanks for your question, Claire. Frankly, Pacific Current is in a nascent stage right now, and as we indicated, we're really building that out. So we may have more of those specifics for you later in the year, but frankly, at this time, we're not in a position to provide those to you. However, we see that there are great opportunities within the state for us to help advance clean energy, and that's frankly why we started the Pacific Current strategy, is that when you have a state that has a very aggressive goal of 100% clean energy, and now we're also starting to work on the transportation side, we actually see that there's lots of opportunities to do things that frankly haven't been done in other places. And that's the reason why we needed another vehicle besides the utility and the bank to try to fill those gaps in our community. We actually have a number of folks in Hawaii that are very excited about clean energy and coming up with lots of different innovative proposals, and new companies, some of which you've seen transfer into the California market, like a Stem that has been involved in storage. And so we think that having this additional vehicle can allow us to support some of those efforts and work together in ways in Hawaii that you may never have seen elsewhere as we collaborate with everyone to do some pretty innovative things in energy. So stay tuned later this year.

Kim Zeng
BofA Merrill Lynch, Research Division

Great. That's really helpful. And just to quickly follow up, if there's any more color you can provide on the University of Hawaii project?

Constance Hee Lau
President, CEO & Director

Sure. I'm going to turn that over to Greg, who was involved in negotiating that transaction with UH and also our partner there, Johnson Controls.

Gregory C. Hazelton
Executive VP & CFO

Yes, Claire, so I can provide a little bit of additional color. We are -- the project now has been -- is in a notice to proceed stage, develop -- the final development, permits, transmission, interconnects and processes underway. JCI, who was the developer and also our EPC contractor, is proceeding with its work plan, which should deliver the project by mid-2019. I would caution that there are actually 5 different campuses, and frankly, each campus kind of has its own timeline. They're moving forward as quickly as they can on those, but we expect the vast majority of them to be online or COD by 2019, plus or minus a few months. We -- as I've mentioned previously, the contract with JCI is on a fixed price and strong performance guarantees backed by JCI, so we are funding -- currently funding the project and the construction phase, but we're not taking a construction risk. So you'll see us continue to fund that throughout the period of time until it reaches COD and is recapitalized at that point in time. Beyond

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

that, things are progressing according to plan with good coordination among all the parties between us, University of Hawaii and JCI.

Constance Hee Lau
President, CEO & Director

Yes, so Claire, just to add, so we have typical construction financing in place through the banking market, but not American Savings Bank. As Rich would say, geez, how come? But through another banking consortium here in Hawaii. And then on COD, there will be nonrecourse financing that takes that out, typical project financing. But here is an example of what I was talking about. Because in Hawaii, it's not only the power sector that has great desires to go green and renewable. The University of Hawaii itself has a goal to be net 0 by 2035. And so this is part of their plan that they've actually been working on for quite a while to get their campuses to that net 0 stage. And we're very happy to be able to partner and be a catalyst, which is our mission for Hawaii, to be a catalyst to help get the University of Hawaii to their mandated 2035 net 0 goal.

Kim Zeng
BofA Merrill Lynch, Research Division

Excellent. That's really helpful color. And lastly, just a -- I know you've already given great detail on the PBR docket. If you can give a little more detail on what exactly needs to be in place by 2020 or at least what you can provide at this time.

Alan M. Oshima
President, CEO & Director of Hawaiian Electric Company Inc.

Let me just -- this is Alan. We have Joe Viola here, our VP of Regulatory, if we need more detail. But in general, it's broken down into 2 phases, and by the end of 2020, we expect to have a PUC road map for PBR. PUC opened the docket -- has been working on it for quite a while. We've been advocating for PBR for decades. So I think what we have is a rational docket with all stakeholders that will be around the table, going through a very complex regulatory mechanism. And by the end of the 2-year period, we should have a road map that is rational and, we hope, continues to live by preserving the financial integrity of the utility, and PUC has mentioned in its order opening the docket.

Operator

The next question comes from Paul Patterson with Glenrock Associates.

Paul Patterson
Glenrock Associates LLC

Just if we can get a little bit more clarity on SB 2939 and how it relates to the PBR docket? I mean, how are they different, I guess? Or how should we think of SB 2939 in the context of the docket at the PUC currently and outside of it?

Alan M. Oshima
President, CEO & Director of Hawaiian Electric Company Inc.

Well, I think you can think of it as the PUC's order actually predated the signing of 2939, and in the order, it covered most of the relevant, substantive matters discussed in 2939 and it even adopted a schedule that seemed to comply with the intent of 2939. But the PUC was very careful in its media release and in the order to say that this is not a wholesale change to the regulatory environment. We already have performance incentive mechanisms, but PUC is moving in that direction. We have filed testimony in our rate cases on PBR. We have suggested certain kinds of actions. And I think the PUC was very careful to say that Hawaii is unique, and there will not be a wholesale adoption of other areas' PBR mechanisms to the very unique circumstances in Hawaii. I think they comply. And even in the docket itself, some of the parties who were advocating for 2939 have recognized that the PUC's process seems to comply with the intent of 2939.

Paul Patterson

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

Glenrock Associates LLC

Okay. There were some reports that you guys weren't supportive of 2939. Were your concerns resolved during the legislative process? Or are there any concerns that you guys have now?

Alan M. Oshima
President, CEO & Director of Hawaiian Electric Company Inc.

Our concerns are the unintended consequences and a rush to judgment. We have strongly advocated for the notion of PBR. We want a rational process with all stakeholders around the table, not just some. And I think the IPP community, for example, has already filed letters with the Governor, saying that the unintended consequence, if you destroy or greatly impact the utility's financial integrity is their ability to access reasonable financing as we move forward with our 100% RPS. We have a 300-megawatt RFP out there right now, and people have indicated interest in it. They have to access financing based upon our ability to pay as their customer. So these are some of the unintended consequences if PBR is not done rationally, and they've registered their concerns about it. But I think the PUC understands that.

Paul Patterson
Glenrock Associates LLC

Okay. Let me tell you where it's a little confusing to me, and that is, first of all, as you mentioned, this PUC order came out just before it seemed the Governor signing the bill or within days before. And I don't know if that was a coincidence or not. And I guess what I'm sort of wondering is -- I mean, I understand that you think that the PUC is complying with 2939, but I guess what I'm wondering is if the PUC was doing this, et cetera, why was 2939 necessary? And what drove that? Could you help us out a little bit on that?

Alan M. Oshima
President, CEO & Director of Hawaiian Electric Company Inc.

I won't speculate as to why it's necessary. We have made our positions clear. I will say that the PUC order was not done in a week. It's been in the process for months. And while the bill was being processed, the PUC had continued its quarterly deliberations to issue an order. So the timing may be coincidence or the timing may be as a result of the bill arriving on the Governor's desk, I cannot say. We are pleased that the PUC took the action it took.

Constance Hee Lau
President, CEO & Director

Paul, I think what you have to understand about Hawaii is that it's kind of like what I was saying about the University of Hawaii, is that across our communities, it is no longer just about the utility and just about moving clean energy forward through the utility process. As you know, with distributed energy resources, there are so many parties that need to come together to work through regulatory frameworks, rational frameworks that can actually best advance the state's goals to get to the ultimate goal line. And another example of that is on the transportation side, we have our 4 county mayors who have said that they want all ground transportation to be nonfossil as well. So like I say, we've got our whole community moving, and our position is that frankly, the Public Utilities Commission process, similar to what we went through in doing the grid modernization strategy when we -- where we were able to bring in and the PUC was able to bring in all relevant parties in our community to work through something that would work best for everyone and for the state, that's the nature of this PBR docket. But there are -- the good thing is there's a lot of people in our community who want to see that happen sooner, rather than later. And that's what you see in the intent of 2939 is that desire within the community to move all of these things forward as quickly as possible.

Alan M. Oshima
President, CEO & Director of Hawaiian Electric Company Inc.

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

But I will put a side note on that. 2939 does a lot -- require the PUC to implement it. It's not the legislature that's going to implement this. They set the policy, but PUC will implement. As I mentioned earlier, the PUC had already been working on this for months. It was not as a result of 2939.

Paul Patterson
Glenrock Associates LLC

No, I'm aware of that. I guess what surprises me, I guess, is that there's this PUC process underway. I assume that the legislature was informed of that, and yet they moved ahead with their own legislation, which my understanding was you guys weren't supportive of. So I guess what I'm wondering -- I mean, I guess, and I don't want to belabor this topic. So I mean, I guess what my question sort of is, is what is it that 2939 does that the PUC wasn't doing or that -- I guess, what was the purpose of 2939 policy-wise? If there's a short answer to that, I don't mean to -- do you follow what I'm saying? It's a little confusing that you had this process underway that you guys think is basically compliant with...

Alan M. Oshima
President, CEO & Director of Hawaiian Electric Company Inc.

Thank you, Paul. We understand your question. We have the same question, frankly, and we advocated to allow the PUC to do its job in our testimony as is the consumer advocate. So why it was passed and why the Governor moved to it is really speculation on our part. It's there, but we are very, very comfortable that the PUC will implement it in a rational way.

Paul Patterson
Glenrock Associates LLC

Awesome. Okay. And then, I'm going to now ask a bank question. The debit card interest -- the interchange fee and the change in accounting, could you just elaborate a little bit? I apologize if I forgot what that is, [and generally] where that now shows up or how that's -- if you could just elaborate a little more on that.

Richard F. Wacker
President, CEO & Director of American Savings Bank FSB

Yes. This is Rich. Thanks for the question, Paul. So there's 2 pieces in the income statement that come from our customers using their debit card. One is in the noninterest income. When they swipe, we get a fee on the transactions governed by the caps on Durbin, as we've talked to you in the past. And that comes through, and there's the volume-related component. The more swipes, the more income we get. Within other expense, we've had the charges that come with it, right? So there is a similar -- under the card agreement and the association agreements, there's a similar charge that comes through. And so they've just been in 2 pieces. What this does is it brings them together so that within noninterest income, you see the net of debit card income, net of the expenses associated with those swipes.

Paul Patterson
Glenrock Associates LLC

Okay. And what's changed?

Richard F. Wacker
President, CEO & Director of American Savings Bank FSB

Geography. So no bottom line impact. It's bringing them that expense up from the noninterest expense line and other expense to noninterest income, where you're offsetting some of the debit card interchange income.

Operator

The next question comes from Rose-Lynn Armstrong with UBS.

Rose-Lynn Perry Armstrong
UBS Investment Bank, Research Division

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

Just 2 more process-related questions on the PBR docket and the legislation. Did I hear you correctly that the PBR docket, the 2 phases would be completed by the end of 2020?

Alan M. Oshima
President, CEO & Director of Hawaiian Electric Company Inc.

Roughly, yes. And it's left up to some allowance for some slippage or advancement. The docket has just been opened. Intervenors have filed for intervention. There's going to be a convening of all the parties, we think, in a few months or so. So we'll know more once that's done.

Rose-Lynn Perry Armstrong
UBS Investment Bank, Research Division

Okay. So then how does that work in with the timeline for the legislation, which I believe calls for implementation by January 1, 2020? And then secondly, who will decide if the PUC outcome on PBR implementation complies with the intent of the legislation?

Joe Viola
Vice President of Regulatory

This is Joe Viola from Hawaiian Electric Regulatory. Actually, the PUC schedule.

Constance Hee Lau
President, CEO & Director

Can you all hear Joe?

Rose-Lynn Perry Armstrong
UBS Investment Bank, Research Division

Yes.

Constance Hee Lau
President, CEO & Director

Okay. All right.

Joe Viola
Vice President of Regulatory

As for the PUC schedule, it largely complies with the statute. It's not at the end of 2020. The PUC schedule actually completes these 2 basically in the first months of 2020. The bill called for implementation of PBR by January of 2020, so it's pretty much aligned right there. As far as who will judge it, I mean, we can't speculate on that, but again, as Alan said earlier, we think the process that the commission set out satisfies the intent of the statute.

Operator

The next question comes from Jonathan Reeder with Wells Fargo.

Jonathan Garrett Reeder
Wells Fargo Securities, LLC, Research Division

Just to follow up again on the legislation. I think part of the language [said] it is to break the direct link between the allowed revenues and investment levels, so CapEx, rate base. Like how do you envision, I guess, complying with that aspect of it without, I guess, kind of turning the current rate base models on its head?

Alan M. Oshima
President, CEO & Director of Hawaiian Electric Company Inc.

We don't -- the statute says that. The PUC order does not say that. The PUC was charged with implementing. The newspapers, within days of the signing, called for amendments to the law. We don't

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

know if that's going to happen to give the PUC more flexibility in this very complex area and to avoid unintended consequences. The road has been -- I mean, the goal has been set. The PUC has been working on it for a while. We'll see how this develops. There are changes that may come about as people understand the complexities of moving to PBR.

Constance Hee Lau
President, CEO & Director

And Jonathan, I'd add that if you look at the PUC order, an example of what you're talking about is that they specifically say that they want to make it neutral between capital expenditures and also services that are provided because that is what's happening in the energy landscape is you're starting to see lots of other products and services that customers want. And if you look at the recent incentive that was provided to us on renewable procurement, there's an example of potential revenues and incentives that can come from us not making a capital investment but instead procuring competitively priced purchase power, right? So there's where we could potentially have a 20% of the savings against to target benchmarks of procurement.

Alan M. Oshima
President, CEO & Director of Hawaiian Electric Company Inc.

Which we already do, but we don't have the incentive built into the regulation.

Constance Hee Lau
President, CEO & Director

Right.

Jonathan Garrett Reeder
Wells Fargo Securities, LLC, Research Division

Right. So I mean, I guess, in your view that, I guess, sharing of the savings breaks the direct link between kind of revenues and investment levels? I mean, even if it's in, say, the utility favor, so to speak, but you still have the underlying kind of rate base model, and then you layer on perhaps that kind of service component as well as checking the boxes, plus or minus on certain performance metric achievements, and you kind of get to this new framework that's being contemplated?

Constance Hee Lau
President, CEO & Director

Yes, exactly.

Alan M. Oshima
President, CEO & Director of Hawaiian Electric Company Inc.

You said it well. You want to testify in the docket?

Jonathan Garrett Reeder
Wells Fargo Securities, LLC, Research Division

No, I don't think I'd do that. I think I'll pass. But maybe I'll come out and visit and listen to some of the hearings and enjoy the beach.

Constance Hee Lau
President, CEO & Director

Yes, you may want to do that because, frankly, Hawaii is leading the nation in lots of these new frameworks that will lead us to clean -- 100% clean energy.

Operator

The next question comes from Charles Fishman with Morningstar Research.

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

Charles J. Fishman
Morningstar Inc., Research Division

I think my question is going to be directed to Greg. Greg, is there anything in the electrification of transportation road map? Is there anything in 2939? Is there anything in the ongoing commission docket with respect to PBR that gets you more excited about the opportunities for Pacific Current? Or does any of those things make it harder for Pacific Current? If you could comment on that.

Gregory C. Hazelton
Executive VP & CFO

Yes. Thanks, Charles. No, I think Connie said it well in that Pacific Current was created to help move the state forward on its renewable energy goals. A lot of the investment that will get us there is going to be made in the competitive market, not just purely through the utility. And consequently, being a local player, our ability to partner with local developers, local teams that are pursuing renewable energy, we create a good platform for capital formation in partnering with those parties. Tax reform was clearly a benefit to Pacific Current if you think about after-tax cash flows from a nonregulated enterprise. So I see that as a benefit. But I'm not concerned about any of the regulatory dynamics overall at the utility. Those will progress on pace. We'll be focused on other activities and other opportunities working locally with other partners.

Charles J. Fishman
Morningstar Inc., Research Division

Like on the UH project, you are the equity behind that, not the university, not Johnson Controls?

Gregory C. Hazelton
Executive VP & CFO

Yes, we're the ones that funded -- that are funding that project, and we're the ones that provided the lowest cost to the university relative to a large number of competitors that were looking at that same project. So our involvement resulted in a very -- a lower cost than otherwise would have been obtained by the university. And so we're proud of our involvement there, and we're proud to have brought together a local team to accomplish that.

Charles J. Fishman
Morningstar Inc., Research Division

So I mean, really what drives the Pacific Current opportunities are more of the RPS, the aggressive RPS goals of Hawaii rather than this PBR noise?

Constance Hee Lau
President, CEO & Director

Charles, it's not just the RPS but it's all the other things that I was talking about. All those policy moves like on the transportation side, for example, the net 0 for the University itself. So that's what I was trying to describe earlier. We've got our entire community here in Hawaii moving towards cleaning -- clean energy. And if you remember back to one of the principles of the Hawaii Clean Energy Initiative back in 2008, it's because our entire state is very dependent on imported fossil fuel. So we're an island. We don't -- back then with the technologies, you might have indigenous resources like the sun and the wind, but the technology is really not in the money, so to speak. So oil was the least expensive way to generate power here, and also to provide gasoline for the cars and the jet fuel for the airplane. That made Hawaii really dependent on oil. And then when you had the oil price shock flare in April of 2008, you started seeing oil prices climb, and then, boy, when you had Fukushima occur, that just jacked up all of the oil prices in the whole Asia Pacific region. The Hawaii economy really took a hit from the standpoint of that oil expense going through the roof, and that was just not power generation. That was across the board.

Operator

The next question comes from Jackie Bohlen with KBW.

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

Jacquelynne Chimera Bohlen
Keefe, Bruyette, & Woods, Inc., Research Division

I'll switch it over. I'm giving Rich a little bit of air time here, for my usual. I guess focusing first on the net interest margin. I know it's within the range that you had spoken about it. It certainly came in above my expectations. Just if you could talk about how you're thinking about asset repricing and deposit repricing in light of March's increase and then if we were to get any additional increases later this year.

Richard F. Wacker
President, CEO & Director of American Savings Bank FSB

Yes, we're expecting one more increase this year. That's kind of our plan. And as we -- I think you've observed, we're fighting pretty hard to control the cost on the funding side, and we've been able to do that pretty well. A lot of it is through the approaches that we're taking, particularly in the retail network on our relationship banking. So we want to keep pushing that. We are seeing pressure in the market, particularly on the commercial side, where the pricing is getting more competitive. And so we were up a couple of basis points in the quarter. We're trying to keep it at that level and control the upward pressure there. On the asset side, again, commercial pricing is competitive as is residential because there's just no movement on the volume in the market on residential, with refis flat and limited inventory on that side. So those are going to remain fairly competitive. But in the investment portfolio, we're getting nice movement on the yields there as we reprice.

Jacquelynne Chimera Bohlen
Keefe, Bruyette, & Woods, Inc., Research Division

And do you know -- do you happen to know what the reinvestment differential is on where the portfolio stands versus what you're purchasing?

Richard F. Wacker
President, CEO & Director of American Savings Bank FSB

It's -- right now, we're plus 80 basis points.

Jacquelynne Chimera Bohlen
Keefe, Bruyette, & Woods, Inc., Research Division

Okay. And that was as of 1Q? Or is that current?

Richard F. Wacker
President, CEO & Director of American Savings Bank FSB

Yes, that's as of 1Q.

Jacquelynne Chimera Bohlen
Keefe, Bruyette, & Woods, Inc., Research Division

Okay. And then if you wouldn't mind providing an update on where you stand in terms of intended portfolio runoff and how much more you expect to come this year and kind of where you're seeing most of your growth in terms of new generation.

Richard F. Wacker
President, CEO & Director of American Savings Bank FSB

So the new generation has been pretty good. Last year was challenging for us on the commercial side as we were repositioning that book on some of the leverage lending and national credit. And we got through that in the fourth quarter, so you saw us get the growth started up again as we came into the first quarter. We were -- loan growth was at about 6, and we want to keep playing in that mid-single-digit range on loan growth. And then obviously, the investment portfolio will depend on deposit growth.

Jacquelynne Chimera Bohlen
Keefe, Bruyette, & Woods, Inc., Research Division

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

Okay, fair enough. And then just one last one. If you could provide an update on your expectations for the timing and perhaps the amount on any costs you're going to have associated with the capitalization of the new campus.

Richard F. Wacker
President, CEO & Director of American Savings Bank FSB

So the campus, we would expect to be completed with the investment on that this year. We're hoping to get the building in the early fourth quarter to fit it out with furniture and everything and then be able to start moving in towards the end of the year and the first part of next year. So we're excited about that. As Connie mentioned that earlier on, we're moving from 5 different locations for people who are in the branches to one, and we think that helps us a lot on a go-forward basis in terms of how efficiently and nimbly we can operate. So we're looking forward to that. We'll probably have on the order of $1 million of costs -- sort of project-related costs associated with moving in and beginning to exit those other properties. That will come through this year and you'll see that in the noninterest income line. And about -- that will come -- noninterest expense line, sorry.

Jacquelynne Chimera Bohlen
Keefe, Bruyette, & Woods, Inc., Research Division

And what about any future capitalized cost that might be depreciating, when would that start?

Richard F. Wacker
President, CEO & Director of American Savings Bank FSB

Depreciation would probably start either December fourth quarter or first quarter next year, depending on the completion of the construction.

Jacquelynne Chimera Bohlen
Keefe, Bruyette, & Woods, Inc., Research Division

Okay. And I would guess there will likely be some offsetting benefits just from consolidating from other areas?

Richard F. Wacker
President, CEO & Director of American Savings Bank FSB

Yes, and we've got a couple of the properties that we're in that we own that we would expect to see sales at positive -- with positive effect on the income statement. We should see gains on the properties that we sell. Timing, hard to call.

Operator

This concludes the question-and-answer session. I would like to turn the conference back over to Julie Smolinski for any closing remarks.

Julie Smolinski
investor relations contact

Thank you, Gary. Thank you, everyone, for participating in today's call. Have a good rest of the week.

Operator
The conference has now concluded. Thank you for attending today's presentation. You may now disconnect.

Presentation

Operator

Good day, ladies and gentlemen, and welcome to the OGE Energy's First Quarter 2018 Earnings Conference Call. [Operator Instructions] As a reminder, this conference call is being recorded.

I would now like to introduce your host for today's conference, Todd Tidwell, please go ahead.

Todd Tidwell
Director of Investor Relations

Thank you, Abigail. Good morning, everyone, and welcome to OGE Energy Corp's First Quarter 2018 Earnings Call. I'm Todd Tidwell, Director of Investor Relations. And with me today I have Sean Trauschke, Chairman, President and CEO of OGE Energy Corp.; and Steve Merrill, CFO of OGE Energy Corp.

In terms of the call today, we will first hear from Sean, followed by an explanation from Steve of first quarter results and finally, as always, we will answer your questions. I would like to remind you that this conference is being webcast and you may follow along on our website at oge.com. In addition, the conference call and accompanying slides will be archived following the call on that same website.

Before we begin the presentation, I would like to direct your attention to the safe harbor statement regarding forward-looking statements. This is an SEC requirement for financial statements and simply states that we cannot guarantee forward-looking financial results, but this is our best estimate to date.

I would also like to remind you that there is a Regulation G reconciliation for gross margin in the Appendix.

I will now turn the call over to Sean for his opening comments. Sean?

Robert Sean Trauschke
Chairman, President & CEO

Thank you, Todd, and good morning, everyone, and thank you for joining us on today's call. Well, it is May in Oklahoma and that usually means storms and extreme weather. And yesterday and through the night our service territory expands tornadoes and rain, hail, high winds just the full complement. But our crews did a great job, as usual, working through the night and I'm happy to report all customers will be back in service this morning.

So turning to the quarter. Earlier this morning, we reported first quarter consolidated earnings of $0.27 per share. And both businesses performed well and accomplished a great deal. So we're off to a great start and certainly on plan for the year.

At the utility, revenues benefited from positive whether and the impact of rate design from last year's Oklahoma rate award. Steve will discuss the details in a moment. But right now, I want to highlight our first quarter achievements. Our new state-of-the-art Mustang Energy Center is in operation serving our customers. We're proud to usher in a new era of generation technology at a location that's been powering our communities and facilitating a critical role in the region's growth and economic development. The Mustang Energy Center is more efficient, more sustainable and more responsive, and it maintains its legacy of providing affordable and reliable power to our communities. The new units with their staggered market availability dates have already seen close to 500 starts and produced more megawatts through the first four months of this year than the legacy units did all of last year. From an emission standpoint with the new units, we are experiencing a 62% decrease in our NOx emission rates. This further validates their importance in the SPP footprint. This was a project of substantial scale that required numerous contractors, hundreds of workers and more than 1.4 million work hours. As testament to the hard work and commitment, the project was executed on time, under budget and incident and injury free. It doesn't get any better than this.

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

Our service territory continues to grow with 7,200 new customers over the last year. And we are growing near our historical average of 1%. I should note, quarter-over-quarter, we experienced a 4% increase in oilfield sales and a 5% increase in industrial sales. The latest economic statistics put Oklahoma's unemployment rate at 4.1%, which is on par with the national average. Our largest load center, Oklahoma City, is below the national average, all signifying an improving economic outlook.

On the operations front, the start of 2018 has continued our success. Our combined cycle and call units have had their best availability to the market this quarter since we entered the SPP integrated market in 2014. This is important because it demonstrates that we've been flexible, reliable and adaptable to both market and commodity changes, and how our units are utilized in the market. [Safety] for the quarter saw 20% improvement over the first quarter of 2017. Our Covington solar farm is in service. The Sooner Scrubbers project is 82% complete, on time and on budget. And we're currently setting record performance in safety results, going 209 days without an incident, excellent performance.

I have to be honest, it feels good to have the first quarter behind us with a positive benefit from weather. Albeit small, it's the first time in a number of years that we have begun the year with positive weather. Further to that point, it had been 5 years since we've had benefit from favorable weather. I say that only to make the point that weather changes and it is not something you control. What does not change is our execution and focus on getting better. Another quarter of solid execution by everyone here at the company.

This year, we will restart our focus on grid modernization. We plan to begin significant deployment in Arkansas with Oklahoma following in 2019. Grid modernization is the next step in our smart grid deployment, this initiative will focus on improving, replacing existing distribution infrastructure, as well as upgrading systems that allow us to respond to outages more quickly and seamlessly connect with new energy technologies in the future. We'll be able to improve the reliability and resiliency of our grid as well as reduce cost for our customers and more efficient response in operation. As we move forward, we will optimize ideas and applications across our service territory that improve reliability and provide the most benefit to our system and to our customers. This will enable us to meet customer demands and to position our infrastructure for the future.

Turning to regulatory. As you know, we filed a general rate review with the Oklahoma Commission in January. The primary purpose of that filing is recovery of the Mustang Energy Center. And we'll make her first Arkansas Formula Rate filing in October. We will then file another case in Oklahoma at the end of 2018 for the recovery of the Sooner Scrubbers. We anticipate the first scrubber to be in service in June, and in fact, the work to tie in that first scrubber is currently underway. Finally, last week a ruling was issued against the OCC, finding they did not have the authority to grant preapproval of our scrubbers at Sooner under the statue used. This does not change the intent or the unanimous approval of the commission to the reasonableness of our plan, and we'll work with the commission to resolve this in our filing later this year.

Moving on to Enable. On their call yesterday, they reported strong results for the first quarter. They reported all-time high quarterly natural gas gathered volumes and processed volumes, supported by strong rig activity in the Ark-La-Tex and Anadarko basins. As you know, volumes are the key to this business. Quarter-over-quarter, natural gas gathered volumes increased 30% and processed volumes increased nearly 19%. Year-to-date, they have contracted or re-contracted multiple transportation agreements with over 375,000 dekatherms a day of capacity. They've also updated their outlook to reflect an even stronger 2018. So as a sponsor of Enable, we continue to be pleased with their performance and what the Enable team is building. Last, but not least, the Enable Board approved a quarterly distribution this week of $35 -- of which $35 million will be distributed to OGE. This will make distributions received by OGE since the formation of Enable totaling more than $800 million. This unencumbered cash has kept us out of the equity markets and supported our CapEx and dividend growth.

In closing, I want to reiterate how pleased I am with the performance of both businesses. We have a long-term utility growth rate of 4% to 6% and continue to grow our dividend at an industry-leading rate of 10% a year through 2019. As a management team, we're committed to executing on our strategy to continue

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

growing our business, growing our communities and creating long-term shareholder value for all of our shareholders.

Thank you, and I'll now turn the call over to Steve to review our financial results for the quarter. Steve?

Stephen E. Merrill
Chief Financial Officer

Thank you, Sean, and good morning. For the first quarter, we reported net income of $55 million or $0.27 per share as compared to net income of $36 million or $0.18 per share in 2017. The contribution by business unit on a comparative basis is listed on the slide. At OG&E, net income for the quarter was $31 million or $0.16 per share as compared to net income of $16 million or $0.08 per share in 2017. First quarter gross margin at the utility increased approximately $35 million, which I will discuss on the next slide. Looking at other key drivers, first quarter O&M expense decreased $5 million, primarily due to the timing of plant maintenance. O&M expense for the year is on plan. Depreciation increased $24 million. The primary driver for the variance is timing related to last March's Oklahoma rate order.

As you will recall, we booked 6 months of 2016's depreciation adjustment, approximately $20 million, in the first quarter of 2017. Interest expense increased approximately $4 million due to the additional long-term debt issued in March and August of 2017. Income tax expense decreased $4 million due to the reduction of the corporate federal tax rate and an increase in state tax credits generated, partially offset by higher pretax income.

Turning to the first quarter gross margin. Utility margins increased approximately $35 million in the first quarter of 2018 compared to 2017. There are 2 main drivers for the increase. First is the impact of the Oklahoma rate order. You'll recall that we implemented new rates in May of 2017, therefore, margins in the first quarter of 2017 were under the old rates. Under the new rate design methodology, more revenue was shifted into the first quarter. Another way to say this is the small smoothing of our annual revenue curve. This change accounted for $19 million of margin or $0.07 per share.

The other main driver was weather. 80 degree days were 36% above last year and this accounted for $14.6 million of margin or $0.05 per share as well. There have been impacts from the 2017 rate order for the comparative periods, but the bottom line is that we anticipated this and we're on plan for the year.

Turning to our investment in Enable. For the first quarter of 2018, Enable made cash distributions of approximately $35 million, the same amount received in the first quarter of 2017. Enable also contributed earnings of $24 million or $0.11 per share, compared to $20 million or $0.10 per share in 2017. Enable had a solid first quarter and their financial metrics are strong. Enable set all-time quarterly records for gathering and processing volumes. Adjusted EBITDA increased by $36 million and DCF increased $25 million compared to the first quarter of 2017. They ended the quarter with a distribution coverage ratio of 1.4x. Enable increased their guidance for the year, which points to continued execution of the business in recovery and commodities. Enable remains focused on controlling costs and deploying capital effectively.

Turning to 2018 outlook. As you know, the majority of utility earnings occur in the second and third quarters and assuming normal weather, we're comfortable with our current guidance. In the Appendix, we have updated the guidance assumptions for this year following the revenue recognition and pension accounting changes. These are income statement reclassifications and do not affect our initial guidance ranges.
This concludes our prepared remarks, and we'll now answer your questions.

Question and Answer

Operator

[Operator Instructions] Our first question comes from the line of Josephine Moore with Bank of America Merrill Lynch.

Josephine Moore
BofA Merrill Lynch, Research Division

I just -- you mentioned strong sales growth on the industrial side. I was just curious, is that temporary? Or could we see that continue?

Robert Sean Trauschke
Chairman, President & CEO

I think this is a good inflection point for an improving economic outlook here in our service territory. We saw an increase in oilfield sales, Todd and Steve both mentioned about the rig count at Enable. They have a lot of pipeline assets in our service territory. And we have mentioned for a number of quarters the -- some of the new businesses have been relocating to our service territory. Just last Friday, we commissioned and had the groundbreaking for a new steel company that relocated who is manufacturing rebar in the southern part of our service territory. So we're hopeful that there'll be more to come. But I think this is a very good inflection point for an improving economy.

Josephine Moore
BofA Merrill Lynch, Research Division

Great. I mean with that, the strong weather in the first quarter and then Enable's strong guidance for the last quarter, do you feel comfortable coming in maybe towards the high-end of the guidance?

Robert Sean Trauschke
Chairman, President & CEO

Yes, as Steve mentioned, the majority of our earnings, specifically at the utility, come in the second and third quarter. And while the weather benefit was favorable in the first quarter, it was still pretty small. And -- where the weather benefit will really occur to the extent that it is favorable will be in the second and third quarter. So we'll get through those quarters before we make any pronouncements about guidance. But we feel very confident that we're on plan.

Josephine Moore
BofA Merrill Lynch, Research Division

And then just 1 last question. On the rate case underway in Oklahoma, any updates you can give us there?

Robert Sean Trauschke
Chairman, President & CEO

Really no updates at this point. The intervenor testimony was due last night, so we will certainly go through that and evaluate that and proceed accordingly.

Operator

Our next question comes from the line of Paul Ridzon with KeyBanc.

Paul Thomas Ridzon
KeyBanc Capital Markets Inc., Research Division

What was the impact of -- I think last year you were booking interim rates for '16, what was the impact of that rolling off?

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

Stephen E. Merrill
Chief Financial Officer

In the first quarter, we booked about $0.06 related to 2016 and 2017. So that all kind of pretty much flushed through the first quarter.

Paul Thomas Ridzon
KeyBanc Capital Markets Inc., Research Division

And it looks as though one of the things you called out was lower taxes -- but are you reserved against that? Is that -- if I read the queue properly?

Stephen E. Merrill
Chief Financial Officer

Well, we certainly have to refund currently because we're in the middle of a rate case, we're over-collecting from where tax rates are now. So we're reserving that over-collection to begin to give that back once we get an order from the commission. We don't have a mechanism to do that until they give an order to do so.

Paul Thomas Ridzon
KeyBanc Capital Markets Inc., Research Division

But you did not benefit from lower taxes in the quarter because you reserved against it?

Stephen E. Merrill
Chief Financial Officer

That's correct. That's correct.

Robert Sean Trauschke
Chairman, President & CEO

There's no P&L impact for us.

Operator

Our next question comes from the line of Shar Pourreza with Guggenheim Partners.

Shahriar Pourreza
Guggenheim Securities, LLC, Research Division

Can you hear me?

Stephen E. Merrill
Chief Financial Officer

Yes.

Shahriar Pourreza
Guggenheim Securities, LLC, Research Division

Sorry about that, it's -- this was [addressed], there're a couple of calls going on this morning. Just on sort of your grid mod filings. Can you just remind us -- it's a big piece of, sort of, your CapEx when you think about '19 and beyond. What sort of the podium as far as how you're thinking about recovery? Is it within the FRP that's, sort of, happening in Arkansas? Would it necessitate another filing in Oklahoma. And sort of, I guess, more importantly, how's the educational process going on, especially on grid mod in Oklahoma?

Robert Sean Trauschke
Chairman, President & CEO

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

So a really good question. And I think you kind of laid out our game plan. In Arkansas, we will use the FRP. We'll be making those filings on an annual basis and so that's how we'll recover that. And we'll begin as we restart this program. Remember, we, kind of, delayed it as we were going through this environmental compliance plan because of the federal requirement. But -- and we'll begin this in Arkansas, we'll pick this up after the Mustang and Sooner projects are complete in Oklahoma. And you're exactly right, we will probably have a lot of dialogue and discussion with the Oklahoma commissioners and staff to make sure that they recognize the full benefits of that. And then see if we can't develop a constructive pathway to see that recovery, whether that includes a rider, whether that includes formal rate-making process, we'll cross that bridge when we get there. But I think your point is exactly right. It's our job to make sure that we educate them beforehand.

Shahriar Pourreza
Guggenheim Securities, LLC, Research Division

Got it, that's helpful. And then just on Oklahoma's, sort of, construct, right. Is there any sort of updates on how the focus groups and everything is going as far as looking in and potentially revisiting how the Oklahoma or the OCC sort of accounts for their regulatory proceedings? Is there any status there? And then just looking at the rate case that we have with interim rates that are -- should be, I guess, implemented sometime in the middle of this year. What is sort of your viewpoint as far as a potential settlement?

Robert Sean Trauschke
Chairman, President & CEO

Sure. So good question. So as it relates to the task force that was initiated by the Governor last year, I know they're conducting interviews and I think the plan is they're going to release the interim report this summer and then, I think, their final report is due the 8th-or-so of November after the elections. And so we'll see where that comes out at. So I think that process is proceeding. As far as this case we have before us on Mustang, you're right, I guess you're referring to the 180-day timeframe that we could implement rates this summer, that's exactly right. I would be hopeful that we would not get to that point. As you recall, we delayed the filing of this Mustang case to incorporate the benefits of tax reform. There is going to be no impact for this investment to our residential or industrial customers. And so we think this is teed up very nicely to get resolved. And I'm hopeful that it can get done before we have to implement rates.

Shahriar Pourreza
Guggenheim Securities, LLC, Research Division

And that just leads me to just 1 last question. On the upcoming rate filing as far as the -- from the Scrubbers and the conversion, is there -- do you have any indication preliminary of what the impact could be from a retail rate perspective there?

Robert Sean Trauschke
Chairman, President & CEO

You're talking about on the Scrubbers?

Shahriar Pourreza
Guggenheim Securities, LLC, Research Division

Correct.

Robert Sean Trauschke
Chairman, President & CEO

So we're working through that right now. And it's probably a bit premature to, kind of, put that number out there too soon. But I do not view that as a large impact.

Operator

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

And your next question comes from the line of Greg Gordon with Evercore ISI.

Unknown Analyst

This is actually [indiscernible] on for Greg. So my questions on the rate case you guys have already answered. Just on the dividend, so target is 10% through '19. Is that -- when does that get reviewed?

Stephen E. Merrill
Chief Financial Officer

I mean, we're already taking a look at that, but we certainly want to get through the Mustang filing, have some early indications on Sooner and then it would be something we would address sometime next year.

Unknown Analyst

Perfect. And then just on the -- so you guys increased your CapEx in the last call. Just wanted to get an understanding at a high level, where does that put you in terms of either CFO-to-debt metric? And what are you targeting? So I'm trying to get to how much excess balance sheet capacity you may have now that you've increased your CapEx?

Stephen E. Merrill
Chief Financial Officer

Sure. I think what you'd see with that CapEx is our FFO-to-debt staying in line with where we've been historically, strong investment rate. We would look to that not to have any impact on our credit metrics and that's kind of how we manage the company to -- keep a strong FFO to debt consistent with where we've been. Yes, obviously, north of 20%. Last year was kind of our highest CapEx, so that put a little stress on our FFO-to-debt, and we'll be working through that as we start to get recovery for these assets we've put in service.

Unknown Analyst

It goes north of 20%?

Stephen E. Merrill
Chief Financial Officer

Yes.

Unknown Analyst

And that's through your CapEx forecast period? Or through 2020?

Stephen E. Merrill
Chief Financial Officer

No, through the CapEx forecast period.

Operator

Our next question comes from the line of Joe Zhou with Avon Capital Advisers.

Andrew Levi
Caris & Company, Inc., Research Division

It's Andy Levi. Just two questions. Just on Enable and CenterPoint's bid -- not bid, but the acquisition of Vectren. Just any thoughts on how that may or may not affect Enable? And also your thinking on Enable?

Robert Sean Trauschke
Chairman, President & CEO

Well, it doesn't change our thinking on Enable. We are very comfortable with Enable, we like that business, we understand that business, so it doesn't change our thinking on Enable. I think in fairness, Andy, I do

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

agree with you. It probably does bring back to the forefront the exposure to CenterPoint's process with regard to the Enable units. But as far as what actually happens there, you need to ask CenterPoint. That's their decision, and it's their responsibility to communicate that.

Andrew Levi
Caris & Company, Inc., Research Division

Okay. And then just on the current rate case, so you said last night intervenor testimony was filed, does that include staff as well or just intervenor?

Robert Sean Trauschke
Chairman, President & CEO

Yes, yes, so it was all -- as soon as it's made public, we'll go through it all and figure out what happens, what everyone said. But yes, that was the deadline was late yesterday afternoon and so I think they're loading it and putting it on the system right now.

Andrew Levi
Caris & Company, Inc., Research Division

Okay, and that again -- that includes the staff?

Robert Sean Trauschke
Chairman, President & CEO

Yes, yes, it does.

Andrew Levi
Caris & Company, Inc., Research Division

And so just to understand the process from here, I guess settlement conference takes place in the first week of June or something like that?

Robert Sean Trauschke
Chairman, President & CEO

That's correct. It's set for June 8. But Andy that's the procedural schedule, that doesn't -- we'll evaluate where everything comes in at and to the extent that there is an opportunity to have productive discussions, we will.

Andrew Levi
Caris & Company, Inc., Research Division

Before June 7, you're talking?

Robert Sean Trauschke
Chairman, President & CEO

Yes.

Andrew Levi
Caris & Company, Inc., Research Division

I understand, that makes sense. Okay, so basically now since the testimony has been filed and everyone knows each other's positions for no better way to put it, it's a good time if the parties want to, to sit down and talk, is that fair?

Robert Sean Trauschke
Chairman, President & CEO

Yes.

Andrew Levi

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

Caris & Company, Inc., Research Division

Okay. And I guess we're fairly optimistic hopefully that you guys will settle something.

Robert Sean Trauschke
Chairman, President & CEO

No, no, I agree, keep going.

Operator

And we have a follow-up from the line of Paul Ridzon with KeyBanc.

Paul Thomas Ridzon
KeyBanc Capital Markets Inc., Research Division

Just wanted to go back to the interim rates. So does that imply that we really saw the $0.07 you mentioned plus the $0.06 of rate design shifting throughout the year?

Stephen E. Merrill
Chief Financial Officer

Well, the $0.06 was in the first quarter of 2017. You did see the impact of rate design in this current quarter.

Paul Thomas Ridzon
KeyBanc Capital Markets Inc., Research Division

I got it. This is a normal quarter and last year was [indiscernible].

Stephen E. Merrill
Chief Financial Officer

Yes, that's right, that's exactly right.

Paul Thomas Ridzon
KeyBanc Capital Markets Inc., Research Division

Okay, okay, got it. And how do you see that $0.07 kind of reversing out over the course of the year?

Stephen E. Merrill
Chief Financial Officer

I mean it really will be -- AFUDC will kind of play out through the year. But you really wouldn't need to adjust probably what you have for second, third and fourth quarters, this is just a slight shifting into the first quarter.

Paul Thomas Ridzon
KeyBanc Capital Markets Inc., Research Division

Okay, so a couple of pennies each quarter?

Stephen E. Merrill
Chief Financial Officer

That's probably not too far off, yes.

Operator

[Operator Instructions] We have a follow-up from the line of Josephine Moore with Bank of America Merrill Lynch.

Josephine Moore
BofA Merrill Lynch, Research Division

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

Just one very quick follow-up on here. On a run rate basis, your O&M seems to come in pretty -- or your total OpEx comes in below guidance. Are we expecting a meaningful uptick there in the later quarters or...?

Stephen E. Merrill
Chief Financial Officer

Yes, it's really just a timing issue. We're actually on plan with what we put out for guidance, it's really just timing of expenditures, particularly plant maintenance. Your outages tend to occur in the summer months and in the fall.

Josephine Moore
BofA Merrill Lynch, Research Division

Got it. And then Sooner coming online too, is that also a driver there?

Stephen E. Merrill
Chief Financial Officer

Sure. Yes, absolutely.

Robert Sean Trauschke
Chairman, President & CEO

There will be some OpEx associated with that.

Operator

At this time, I'm showing no further questions. I would like to turn the call back to Sean Trauschke for closing remarks.

Robert Sean Trauschke
Chairman, President & CEO

Thank you, Abigail. And thank you all for your interest in OGE Energy Corp. and for being on the call today. Have a great day.

Operator
Ladies and gentlemen, thank you for your participation in today's conference. This concludes the program and you may now disconnect. Have a great day.

Presentation

Operator

Good morning, and welcome to the PNM Resources First Quarter Conference Call. [Operator Instructions] Please note that this event is being recorded. I would now like to turn the conference over to Jimmie Blotter, Director of Investor Relations. Please go ahead.

Jimmie Blotter
Director of Investor Relations and Shareholder Services

Thank you, Cole, and thank you, everyone, for joining us this morning for the PNM Resources' First Quarter 2018 Earnings Conference Call. Please note that the presentation for this conference call and other supporting documents are available on our website at pnmresources.com.

Joining me today are PNM Resources' Chairman, President and CEO, Pat Vincent-Collawn; and Chuck Eldred, our Executive Vice President and Chief Financial Officer; as well as several other members of our executive management team.

Before I turn the call over to Pat, I need to remind you that some of the information provided this morning should be considered forward-looking statements pursuant to the Private Securities Litigation Reform Act of 1995. We caution you that all of the forward-looking statements are based upon current expectations and estimates and that PNM Resources assumes no obligation to update this information. For a detailed discussion of factors affecting PNM Resources' results, please refer to our current and future annual reports on Form 10-K, quarterly reports on Form 10-Q as well as reports on Form 8-K filed with the SEC.

And with that, I will turn the call over to Pat.

Patricia K. Vincent-Collawn
Chairman, President & CEO

Thank you, Jimmie. Good morning, everyone. And yes, it is another beautiful sunny Friday in New Mexico, and it's also Arbor Day, so Happy Arbor Day. Thank you for joining us today for our first quarterly earnings call of 2018.

Let's start on Slide 4, with the financial results and some company updates. Our GAAP earnings per share in the first quarter of 2018 were $0.19. Ongoing earnings per share were consistent with the quarterly expectation of guidance at $0.21 compared to $0.28 in the first quarter of last year. We are also affirming guidance for both 2018 and 2019. I'll turn it over to Chuck to go through the details of these results in just a few minutes.

As we work our way through 2018, we are expecting a straightforward year. At PNM, our general rate settlement is now behind us and our retail customers are already benefiting from tax reform savings. The phase and approach from our rate case creates a transitional year in 2018 and the full implementation in 2019 supports our 2-year plan.

We weren't surprised this month that the commission did not move forward with our proposal for smart meters in New Mexico. In a state where the economy continues to [light] the nation, no one likes the prospect of job losses. We are encouraged, however, by the commission's inclusion of our proposal for a pilot program in our next energy efficiency filing. This demonstrates the desire to integrate this type of technology in New Mexico in the future. We continue to await a decision from the New Mexico Supreme Court on the appeal of certain items disallowed from our September 2016 general rate case order. This could be issued any day.

We announced our plan to transition out of coal generation last year, and we are moving forward with those plans. We issued an All Source RFP, and we'll consider a variety of resource possibilities to facilitate our goal to achieve a cleaner generation portfolio. It will take some time to thoroughly vet and evaluate the proposal before making an abandonment file next year.

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

As a condition to the BART settlement, we will make a compliance filing later this year on our intentions for the retirement of San Juan, but it's too early to look at the details for replacement power.

At TNMP, January TCOS filing was approved in March and rates were implemented March 27. The filing reflected an annual increase of 600,000, which updates our transmission rates for investments that were made through December and for the impact of lowering the income tax rate on all our transmission investments.

We are still on track to file our general rate case in May, and we'll have more information for you once we make the filing. We continue to expect new rates to be implemented in January of 2019 and to return to our to typical twice annual TCOS filings in 2019.

With that, I'll turn it over to Chuck for a detailed look at the numbers.

Charles N. Eldred
Executive VP & CFO

Thank you, Pat, and good morning, everyone. And thank you for joining us today. Let's start with a review of the load on Slide 6.

Beginning the discussion with New Mexico. Economic conditions continue to be stable. The 12-month rolling average employment growth has been consistent for nearly a year now, although it remains lower than the national average. We continue to see economic activity such as the construction work at the Facebook data center. They announced last year that their site will grow from 2 buildings to 6 and have anywhere from 800 to 1,000 workers on site each day due to the construction work.

We also see commercial expansion from restaurants, retail and other activities such as a 200-room hotel scheduled to open at the Santa Ana Casino in July and the construction of 3 new projects to support new apartments, a hotel and retail shops, bringing more than 11,000 -- 1,100 construction jobs and 425 permanent jobs to Albuquerque.

Along with this activity, we're seeing customer growth at 0.7% for the first quarter 2018. This is a slight increase over the level we saw last year.

While PNM's weather-normalized load is consistent with our expectations, the first quarter has a smaller impact on earnings because of the seasonality in our business and, therefore, has less of an impact on the load forecast for the year. As a result, we continue to believe that we will achieve our annual forecast of flat to down 0.7% at PNM.

Economic growth in Texas continues to outpace the rest of the country. We also see strong demand in our service territories, particularly with interconnection requests in our West Texas region. We have started the year strong for both the volumetric and demand-base load, exceeding the forecasted range. But as I mentioned with PNM, given that it's the first quarter, we continue to hold through our annual forecast for TNMP load as well.

Now turning to Slide 7 for the first quarter earnings. As Pat indicated, ongoing earnings per share were in line with our expectations at $0.21. Throughout 2018, our results will reflect the final implementation of the 2015 BART settlement, which were included in the rate case final order that became effective earlier this year. This reflects both the shutdown of San Juan Unit 2 and 3 and Palo Verde Unit 3 serving retail customers. As you're aware, the final order also reflects the giveback of tax reform to our customers. While these are sizable items in our earnings drivers, they are largely offsetting each other.

Other elements that caused changes to PNM's earnings include expected items such as the outage of Four Corners to install the SCR equipment, depreciation and property tax from our capital investments and load. We've talked for some time now that if Palo Verde 3 becomes a jurisdictional resource that we would also move our nuclear decommissioning trust to a heavier weighting of fixed income assets now that it's tied to assets funded by rate payers. Partially offsetting these items are weather that was closer to normal and transmission margins.

TNMP is up $0.03 due largely to load and the revenue from TCOS filings implemented last year.

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

Finally, Corporate and Other was down $0.02 for interest expense and other items.

Our March 9, we issued $300 million of fixed-rate notes. This result in the holding company now having little exposure to variable rates.

Now let's turn to Slide 8. The 2018 guidance continues to be $1.82 to $1.92, and the first quarter results were in line with our expectations. 2019 remains at $2.04 to $2.16. Our guidance ranges provide the basis to achieve the 6% earnings growth target that we have for 2018 to 2021. We also expect our dividend to grow at a comparable rate to earnings.

The chart at the bottom of this slide has an updated quarterly distribution charge for 2018. San Juan Unit 1 had a failure in its coal silo that has the unit offline at this time. As a result, we moved up the maintenance outage that was expected to occur this fall so that we don't have to take that unit down later.

We have also shifted expenses between the second and fourth quarters. The outage schedule that is in the appendix has been updated as well.

Before I wrap up my comments, I want to mention that when we file the TNMP rate review towards the end of May, we will issue a press release with the details.

Now I'll turn it back over to Pat.

Patricia K. Vincent-Collawn
Chairman, President & CEO

Thanks, Chuck. As we wrap up today and look ahead to the second quarter and our general rate case at TNMP, I want to acknowledge that TNMP was recently honored as an ENERGY STAR partner of the year for 2017 for recognition of the sustained excellence of its energy efficiency programs. This is not the first time TNMP has been awarded this honor, so I want to congratulate our team in Texas for achieving this recognition once again.

Along with that, I said earlier that today is Arbor Day, but I didn't mention that our TNMP employees are commemorating the day again this year by planting trees.

April is also National Volunteer Month, and our employees in New Mexico and Texas are some of the best volunteers I've seen, and I'm not the only one taking notice. Earlier this month, the mayor of Albuquerque recognized the PNM Community Crew as the 2018 Corporate Volunteer Group of the Year.

As I've said before, it's truly an honor working alongside so many individuals that are committed to making our communities better.
Thank you again for joining us today. With that, I'll ask our operator, Cole, to open it up for questions.

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

Question and Answer

Operator

[Operator Instructions] And the first question comes from Nick Campanella from Bank of America.

Nicholas Joseph Campanella
BofA Merrill Lynch, Research Division

Can you remind us when you're filing for AMI again? I'm sorry if I missed that.

Patricia K. Vincent-Collawn
Chairman, President & CEO

It's in the next energy efficiency filing that we make.

Nicholas Joseph Campanella
BofA Merrill Lynch, Research Division

Got it. And then keeping with the Arbor Day theme here, just looking at replacement power for San Juan. What are you guys thinking of in terms of fuel mix? I know that your thoughts there can be changing based on cost efficiencies.

Charles N. Eldred
Executive VP & CFO

Yes, Nick, the current capital budget reflects gas units, 2 large frame units of 374 megawatts and 82 megawatts of reciprocating engines. But as Pat pointed out, we have an RFP process going on now that would fine-tune exactly what we view to be the right mix of generations, so it's likely to include some energy storage as a possibility and maybe some renewables along with some peaking units. So that we really won't know the detail to that until probably around the mid-part of 2019.

Nicholas Joseph Campanella
BofA Merrill Lynch, Research Division

Got it. And then just in terms of recovery for that spend. Your peers in New Mexico recently had an order in which new generation they had to operate as merchant initially. Can you just kind of talk about the recovery path there? Obviously, there's a lot of company-specific factors that come into play with these proceedings, but I'm just trying to get an idea of how that all plays out.

Patricia K. Vincent-Collawn
Chairman, President & CEO

Nick, you said about SPS, and I think that you said the keywords there, the company-specific factors. SPS files under historical test year. We file under a future test year. And so I think they wanted to recovery some of that lag there before they got it into their rate base. Anything we do is under a future test year, so theoretically, we don't have that lag. And Nick, the other thing is our next energy efficiency filling is in the spring of 2020. I forgot to tell you that.

Operator

And the next question comes from Ali Agha from SunTrust.

Ali Agha
SunTrust Robinson Humphrey, Inc., Research Division

First, Chuck, can you just remind us, I recall the tax reform impact has been phased in over the 2 years. Specifically, what's the impact to earnings in '18 and '19? I'm assuming by '19, it's neutral, but can you just remind us the tax reform earnings impact?

Charles N. Eldred

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

Executive VP & CFO

Yes, Ali. If you look in the appendix of the slide, I think it's on Page 12, in the actual -- not appendix but in the presentation, we show the tax reform to be about $0.04 in 2018 for the first.

Ali Agha
SunTrust Robinson Humphrey, Inc., Research Division

Yes, that was for the -- for the first quarter, right?

Charles N. Eldred
Executive VP & CFO

For the first quarter. And then for the year, you'd have to actually go back to look at some of the fourth quarter earnings review and get the details, which we show you the amount of tax reform for the full year of '18 over '17 is $0.25. And that's -- if you go back to the materials that we posted previously in the fourth quarter on Page 23.

Ali Agha
SunTrust Robinson Humphrey, Inc., Research Division

Yes, yes, got it. Secondly, Pat or Chuck, again, what is the cause for this difference between your customer growth in New Mexico and the load, which continues to be negative? What's the persistent disconnect between the two of them right now?

Charles N. Eldred
Executive VP & CFO

Well, really, the growth is not -- at 0.7%, it's still not substantive enough to impact the load to be positive, so to speak, because of the offset of energy efficiency and distributed generation. So it just kind of at a point where we still see it relatively flat to a slight increase, but just down enough on the customer side to really see a significant positive and/or benefit offsetting energy efficiency in BG.

Ali Agha
SunTrust Robinson Humphrey, Inc., Research Division

I see. And then I believe it's 3, but a bunch of commission seats are up for election this November. Any sense or any expectation of a change to the commission composition post the November election?

Patricia K. Vincent-Collawn
Chairman, President & CEO

Ali, I think it's too soon to tell. Commissioner Lyons is obviously term limited out, so we know we will have a new commissioner there. Commissioner Jones and Commissioner Lovejoy both have challengers in their primaries. But the campaigns are just getting started here. They really kind of start in earnest maybe in the middle of May. So we could have up to 3 new seats or we could have just one. But whoever it is, we look forward to working with them.

Ali Agha
SunTrust Robinson Humphrey, Inc., Research Division

Right. Last question, you talked about the 6% CAGR you are targeting '18 through '21. But when you look at the profile, you have that big jump in '19, so '19 through '21, we're looking at slightly more flattish or smaller growth of earnings. How are you looking at sort of the longer-term picture once we get the full year impact in '19 behind us?

Charles N. Eldred
Executive VP & CFO

We're really -- we're going to focus on the 6% from '18 through '21. And then beyond that really is going to depend on outcome relative to the replacement power of San Juan. So even though it's in the capital budget and we have it in our projections, currently until we fine-tune exactly what that replacement power

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

mix is and the recoverability of those costs, we really don't want to speculate on growth beyond 2021. But I feel encouraged by the opportunities we have, so don't take that message as we're concerned. We're just not wanting to speculate on information till we get a little further along as to the details of what that replacement power looks like.

Operator

And the next question comes from Greg Gordon from Evercore ISI.

Durgesh Chopra
Evercore ISI, Research Division

It's actually Durgesh on for Greg. Two quick questions. One, first for you, Pat. The Supreme Court deal, I missed the earlier part of the call. Did you guys discuss what a timeline might be? I know there's no statutory timeline, but is there an expectation on when you could potentially get a decision, whether it's this year or next year?

Patricia K. Vincent-Collawn
Chairman, President & CEO

Well, I think I said we're waiting. We're waiting anxiously. The court had said last year that anything that was in before October, they'd hope to get out by March. And they did do that with the Supreme Court appeal of the BART case, which the court ruled in our favor. And that came out in the beginning of March. This case is complicated. The court doesn't have a lot of utility cases. So literally, I think it's every Monday and Wednesday when the -- excuse me -- Monday and Thursday when the dockets come out. So the team is checking every day. So we're hopeful that we'll be soon, but as you said, there's no time to frame.

Durgesh Chopra
Evercore ISI, Research Division

Okay. And then just on the like the low growth in Texas. I think Ali was asking -- asked you a question on New Mexico. The Texas load growth seems very robust. I just was wondering if with the growth that you're experiencing, is there potential upside into your CapEx? What I mean there is -- could you -- I don't know what -- if you could articulate what assumptions are built -- have you built into your Texas CapEx plan? And that CapEx plan could be higher if you keep seeing a level of growth that you're seeing in Texas.

Charles N. Eldred
Executive VP & CFO

Yes, it's still -- we've actually contributed more to the capital budget to reflect a significant growth in the Permian Basin area even though all of the areas that we cover in Texas are seeing strong growth. The Permian Basin is still a very robust area. So at this point, we update our annual budget in December in that time frame, so it's too early to tell whether or not we see a continued growth. But if we see opportunities, we'll certainly wanting to contribute more capital to support the growth in Texas. But it's just too early at this point, Durgesh, to comment any more other than we are contributing significant amount of capital to support the growth that we see today.

Operator

And the next question comes from Paul Fremont from Mizuho.

Paul Basch Michael Fremont
Mizuho Securities USA LLC, Research Division

Can you discuss at all the Facebook data center power needs and whether they're going to be coming out with some additional RFPs for generation?

Charles N. Eldred
Executive VP & CFO

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

Yes. They've already -- we start out with 50 megawatts, which PNM is providing a build on that. In addition to that, the commission approved 3 other different sources of renewables that are pursuing -- being pursued right now, one of which is 50 megawatts of what's referred to a Casa Mesa, which is a wind PPA. Another 166 megawatts of wind, which is another PPA supported by Avangrid. And then there's a 50 megawatts of solar PPA from NextEra. And they're currently looking at some additional solar, anywhere from 50 to 100 megawatts. It's not clear exactly what that will be. And we're actively involved with that discussion to look at the possibility of serving that from PNM's build opportunity.

Paul Basch Michael Fremont
Mizuho Securities USA LLC, Research Division

And would you be doing that on your own or would you be doing that in partnership with somebody?

Charles N. Eldred
Executive VP & CFO

We'll look at it both ways, but certainly, we would look at the JV we have with AAP to support that as well.

Paul Basch Michael Fremont
Mizuho Securities USA LLC, Research Division

And then, can you also just update us on sort of the current outstanding under the Westmoreland note and when that is expected to pay off?

Charles N. Eldred
Executive VP & CFO

Yes. The note itself is around $50 million outstanding, but we do have a $10 million reserve in the San Juan coal company structure that could be applied to that in the event that we need to pay that down further. The note itself, I think, comes due in 2020, '21.

Patricia K. Vincent-Collawn
Chairman, President & CEO

'21.

Charles N. Eldred
Executive VP & CFO

And so we're on track. They're making their payments. As we've said before, the San Juan coal company is bankruptcy remote and [indiscernible] and very secure to how we capture the cash flows and waterfall the excess cash to pay down the debt. So it's been right on schedule, right on plan. And I know they're going through restructuring, so there's a possibility they may decide to pay off that debt, which is fine, too, if they end up in that decision, but that's where it is right now.

Operator

[Operator Instructions] And the next question comes from Lasan Johong from Auvila Research Consulting.

Lasan A. Johong
Auvila Research Consulting LLC

I'm a little confused. Why would the outage for the scrubber installation be considered a normal part of operations? I mean, it sounds like you guys are going to do a scrubber installation every year, is that right?

Patricia K. Vincent-Collawn
Chairman, President & CEO

I think what we're trying to say, Lasan, is that an outage is normal course of business, so we just moved it around and moved it up from the fall into the spring, okay. It's not atypical when you -- when something happens at a plant to move an outage up. I think that the scrubber outage is at Four Corners, we were

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

talking about at San Juan because we have the issue with the coal mill. We moved that outage up to the spring.

Lasan A. Johong
Auvila Research Consulting LLC

Okay. So the outage is not impact -- I thought -- I forgot who said that, but I thought the inbound impact on PNM's financial -- first quarter financials was due to the scrubber installation. I think that's what you said in the call.

Charles N. Eldred
Executive VP & CFO

Yes. Last year, we did it. This is the outage we have for the first quarter to reflect the Four Corners installation of the SCRs. So it happened in first quarter last year. So that's that [indiscernible].

Lasan A. Johong
Auvila Research Consulting LLC

Okay. That was last year. I was wondering what was the [indiscernible]

Charles N. Eldred
Executive VP & CFO

Yes.

Patricia K. Vincent-Collawn
Chairman, President & CEO

And then the outage that we moved up, and Chuck said normal course of businesses, is the San Juan outage. Sorry, too many coal plants up in the Four Corners area.

Lasan A. Johong
Auvila Research Consulting LLC

I apologize I missed. I thought it was [indiscernible]

Charles N. Eldred
Executive VP & CFO

It's okay.

Patricia K. Vincent-Collawn
Chairman, President & CEO

No problem.

Charles N. Eldred
Executive VP & CFO

That's all right. No problem.

Lasan A. Johong
Auvila Research Consulting LLC

Okay. Second, right now, natural gas prices are still kind of -- shall we say, on the weaker side, and there's no kind of expectations for anything dramatically to the upside for a very, very long time. So are you feeling any pressure to say, abandon building new topline facilities in this billion sub market and buying power to replace San Juan? So cheap.

Patricia K. Vincent-Collawn
Chairman, President & CEO

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

No. I think if you look at that, the San Juan replacement isn't until '21 and 2022. You always buy a little bit of the market. But the market is tight in the west as people retire their coal plants. And some of the natural gas capacity we need is for peaking and for quick-start resources to follow all of that solar generation. And quite frankly, the cheap natural gas prices are what is driving the shutdown of San Juan because the economics for natural gas and renewables are compelling. So we haven't seen that here yet.

Lasan A. Johong
Auvila Research Consulting LLC

Don't get me wrong. I would love to see you guys build a couple of big CCGTs. But I'm just wondering how feasible that might be in the current environment. Third, I know this is kind of a weird question, but when do you expect -- when does New Mexico expect that load growth will turn back towards that positive number again? There a lot of the other utilities saying the effects of energy efficiency have kind of substantially waned, but apparently that's not the case in New Mexico. So I'm kind of wondering when the catch-up will occur.

Patricia K. Vincent-Collawn
Chairman, President & CEO

Well, that's a great question, Lasan. And I think there's a couple of things going on. As Chuck mentioned, we're seeing a lot of small commercial and other growth. There are some nice things in the economic development pipeline, which obviously we can't talk about. But I think if you look at New Mexico, there is a real culture towards the environment and energy efficiency. We are, for example, in Albuquerque, the #1 market in the United States for green-built homes, and so things are built pretty tightly here. And energy efficiency is a good thing. We're in the midst of a proceeding to talk about some sort of a loss revenue adjustment or decoupling that came out of the rate case to give us a volume true-up mechanism because if customers use less energy, it's good for the environment. And if we're held for that, it's okay for us and shareholders. So we hope our economy does pick up, and we see a lot of good things going on. The trick, I think, is just to come up with an energy efficiency disincentive mechanism that works.

Charles N. Eldred
Executive VP & CFO

And Lasan, just to add to that. We do see in 2019 the potential to begin to see a positive growth up to 0.5% in the load forecast for PNM. So again, it could be slightly negative but beginning to see inching into some positive load growth in 2019 as a potential.

Lasan A. Johong
Auvila Research Consulting LLC

Okay. That answer was a fantastic answer because you set me up for my next question. When do you expect or -- well, maybe I shouldn't say when, but in the past, revenue decoupling was really not a priority. But it sounds like that's kind of changing for PNM. And if that's the case, kind of how much of earnings do you see in this? And when do you expect to make any kind of filings to get that done?

Patricia K. Vincent-Collawn
Chairman, President & CEO

We had actually filed in the last rate case for a decoupling mechanism. We were asked to move it out of the rate case into a separate proceeding, which we did. And on March 2, we filed for an approval of a disincentive mechanism with the PRC. And on April 25 of this year, the hearing examiner issued a procedural schedule. So there will be a technical conference and testimony and then there's going to be a hearing on October 31 of this year. So that got moved outside of the rate case, which I think is a good place for it to be outside of the rate case.

Lasan A. Johong
Auvila Research Consulting LLC

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

I agree, I agree with what you said. Is there any kind of resistance, or is there a lot of people saying that this is free money to utility, don't do it? How are you doing this? Or how do you position this with the regulators? And do you see resistance, a lot of it?

Patricia K. Vincent-Collawn
Chairman, President & CEO

No. I think the discussion is over what mechanism is appropriate. There's a lot of different opinions on what kind of a mechanism makes sense. Is it a full decoupling? Is it a lost revenue, a true-up? And with the fact that we have a forward test year, right, we true up our volumes every couple of years. So I think most -- everybody realizes that energy efficiency can cause load growth, that we're a high fixed cost business. And obviously, somebody that says we shouldn't have a mechanism, but I think most of the discussion is going to be around what's the appropriate mechanism.

Lasan A. Johong
Auvila Research Consulting LLC

Okay. So it's a matter of if -- a matter of how, not if?

Patricia K. Vincent-Collawn
Chairman, President & CEO

I think so.

Charles N. Eldred
Executive VP & CFO

Yes. Well, I think that one of the hearing examiners that addressed in the last rate case literally laid out the steps of the framework, the methodology that Pat refers to. And we filed our information to reflect that. So we think we're off to a good discussion and to get input, and it's probably more about the methodology than it is whether it's justified.

Lasan A. Johong
Auvila Research Consulting LLC

That's great. Last question is, Chuck, you had mentioned rolling out some potentially new power generation facilities. I would assume, correct me if I'm wrong, that the approval of those facilities will also coincide with the recovery for -- a revenue mechanism recovery for those power plants, correct?

Patricia K. Vincent-Collawn
Chairman, President & CEO

Well, there's 2 parts of this. When we shut down San Juan, we said we make a filing this year, a compliance filing, that reaffirms our intent to shut down San Juan. And then next year, we will make a formal filing for the abandonment of San Juan. And for a CCN, for the new generation, so then we will ask for what recovery mechanism in that CCN filing, but that's next year.

Lasan A. Johong
Auvila Research Consulting LLC

And so that -- and that should guarantee -- there should be no question about what your rate of return will be on these plants going forward?

Charles N. Eldred
Executive VP & CFO

Yes, I mean, it's just more of a question of this is what we feel is -- makes the most sense to address reliability and the changes to the system to integrating with the additional renewables that we're getting onto the system, and it's a question of what that right mix is, whether we own or there's PPAs or whatever the circumstances are. But we feel very comfortable that, to address reliability, particularly on peaking units, you need to have control of those resources.

Copyright © 2018 S&P Global Market Intelligence, a division of S&P Global Inc. All Rights reserved.

Lasan A. Johong
Auvila Research Consulting LLC

Absolutely. I'd just leave it with that. Just wondering if the revenue recovery mechanism and the amounts would be preapproved so that there's no question to the investors that the IRR that you will be receiving on these power plants are fixed and according to the regulated authorized rates.

Charles N. Eldred
Executive VP & CFO

Well, the CCN will address what the resources are that's agreed and approved by the commission, and then we will just file that in our next rate case, which would remove any uncertainty. It's a question at that point of getting that into our rates after the CCN is approved. So it does remove the uncertainty, yes.

Operator

And that concludes our question-and-answer session. I would like to turn the conference back to Pat Vincent-Collawn for any closing remarks.

Patricia K. Vincent-Collawn
Chairman, President & CEO

Thank you, Cole. Thank you all again for joining us this morning. Please have a happy Arbor Day. And if you plant any trees, please remember to take care of your backs. And we will talk to you all again soon. Thank you.

Operator
The conference has now concluded. Thank you for attending today's presentation. You may now disconnect.

BUSINESS: ALLETE, Inc. is the parent of Minnesota Power, which supplies electricity to 146,000 customers in northeastern MN, & Superior Water, Light & Power in northwestern WI. Electric rev. breakdown: taconite mining/processing, 26%; paper/wood products, 9%; other industrial, 8%; residential, 12%; commercial, 13%; wholesale, 16% other, 16%. ALLETE Clean Energy owns renewable energy projects. Acq'd U.S. Water Services 2/15. Has real estate operation in FL. Generating sources: coal & lignite, 41%; wind, 12%; other, 6%; purchased, 41%. Fuel costs: 28% of revs. '17 deprec. rate: 3.2%. Has 2,000 employees. Chairman, President & CEO: Alan R. Hodnik. Inc.: MN. Address: 30 West Superior St., Duluth, MN 55802-2093. Tel.: 218-279-5000. Internet: www.allete.com.

ALLETE's main utility subsidiary received a disappointing rate decision. Minnesota Power had sought a rate increase of $55 million (8.6%), based on a 10.25% return on a 53.8% common-equity ratio. The state commission (through a verbal order) granted a hike of $13 million (2.0%), based on a 9.25% return on the same common-equity ratio. Minnesota Power expected to receive a written order shortly after our report went to press, and plans to decide what steps it will take once management reviews the order.

We think earnings will advance solidly in 2018. Minnesota Power should benefit from healthy industrial demand for power. The utility is also earning a return on the construction work in progress for a transmission line that is scheduled for completion in 2020. ALLETE's wind-energy subsidiary should benefit from increased production and the construction and sale of a 50-megawatt project to a utility in North Dakota. U.S. Water Services is seeing rising demand for its water-treatment services and a full year of revenues from an acquisition it made last September. Our 2018 share-earnings estimate is within ALLETE's targeted range of $3.20-$3.50. Note that the company's profits in the fourth quarter of 2017 benefited from the revaluation of deferred taxes due to the new federal tax law. This added $0.25 a share to the bottom line, which we excluded as a nonrecurring item.

We forecast solid profit growth next year. The factors that are likely to help earnings in 2018 should be present in 2019, as well. We look for a 6% increase in share net, which is within ALLETE's annual growth goal of 5%-7%.

The board of directors raised the dividend in the first quarter. The annual increase was $0.10 a share (4.7%), a greater hike than in recent years. The accelerated growth rate is in line with the company's expectation of faster profit growth. ALLETE is targeting a payout ratio of 60%-65%.

This stock's dividend yield is close to the average for electric utility equities. With the recent quotation above the midpoint of our 3- to 5-year Target Price Range, total return potential is unappealing.

BUSINESS: Alliant Energy Corp., formerly named Interstate Energy, is a holding company formed through the merger of WPL Holdings, IES Industries, and Interstate Power. Supplies electricity, gas, and other services in Wisconsin, Iowa, and Minnesota. Elect. revs. by state: WI, 38%; IA, 61%; MN, 1%. Elect. rev.: residential, 36%; commercial, 24%; industrial, 30%; wholesale, 8%; other, 2%. Fuel sources, 2017: coal, 40%; gas, 17%; other, 43%. Fuel costs: 45% of revs. 2017 depreciation rate: 5.5%. Estimated plant age: 15 years. Has approximately 3,989 employees. Chairman & Chief Executive Officer: Patricia L. Kampling. Incorporated: Wisconsin. Address: 4902 N. Biltmore Lane, Madison, Wisconsin 53718. Telephone: 608-458-3311. Internet: www.alliantenergy.com.

Alliant Energy's largest utility subsidiary has reached a settlement of its rate case. Under the agreement, electric rates for Interstate Power and Light Company (IPL) would rise $130 million (7.8%) in 2018. That is down from the original $176 million (11.6%) request, but within our range of estimates. The Iowa Utilities Board also approved a return on common equity of 9.6% and said that temporary rates, which have been in effect since April 2017, would remain until the board reviews and approves tariff filings to be made by Alliant. The company said it would use the funds to upgrade power grids and improve facilities like the Marshalltown natural gas generating station.

Earnings should advance in 2018 and 2019. Each year, the utility is expected to benefit from electric and gas rate increases at IPL and Wisconsin Power and Light Company (WPL). Our 2018 profit estimate is near the midpoint of management's guidance range of $2.04-$2.18 a share, while our 2019 estimate calls for 7% year-on-year growth. It should be noted that tax reform is not forecasted to have a material impact on earnings. This is because much of the anticipated savings will be returned to customers through fewer/lower rate increases over time.

Wind energy remains an area of focus for Alliant. In December, the utility agreed to purchase English Farms Wind Farm for an undisclosed sum. The 170-megawatt, Iowa-based project is expected to power approximately 75,000 homes upon completion. Alliant is aiming to generate at least one-third of its Iowa energy mix from wind starting in 2020.

The board raised the dividend in the first quarter of 2018. This is the usual timing of the annual increase. The directors boosted the yearly disbursement by $0.08 a share (6.3%), the same increase as in each of the past four years. Alliant is targeting a payout ratio of 60%-70%.

This good-quality stock is well ranked for year-ahead relative price performance. The dividend yield is slightly below the median for a utility. Appreciation potential, while improved since our December report, is still well below the *Value Line* median. Accordingly, we advise long-term investors to wait on the sidelines.

Daniel Henigson *March 16, 2018*

BUSINESS: Ameren Corporation is a holding company formed through the merger of Union Electric and CIPSCO. Acq'd CILCORP 1/03; Illinois Power 10/04. Has 1.2 mill. electric and 127,000 gas customers in Missouri; 1.2 mill. electric and 813,000 gas customers in Illinois. Discontinued nonregulated power-generation operation in '13. Electric rev. breakdown: residential, 46%; commercial, 35%; industrial, 8%; other, 11%. Generating sources: coal, 71%; nuclear, 19%; hydro & other, 4%; purchased, 6%. Fuel costs: 27% of revs. '17 reported deprec. rates: 3%-4%. Has 8,600 employees. Chairman, President & CEO: Warner L. Baxter. Inc.: MO. Address: One Ameren Plaza, 1901 Chouteau Ave., P.O. Box 66149, St. Louis, MO 63166-6149. Tel.: 314-621-3222. Internet: www.ameren.com.

We think Ameren's earnings will exceed the $3.00-a-share level in 2018. The company will benefit from a full year's effect of the rate increase that took effect in Missouri at the start of April of 2017. A return to normal weather patterns would help after unfavorable weather was a drag on profits last year. The Callaway nuclear facility will not have a refueling outage this year. The refinancing of debt will boost earnings. Our earnings estimate is at the midpoint of Ameren's targeted range of $2.95-$3.15 a share. Note that the 2017 tally was depressed by the revaluation of deferred taxes, which stemmed from the new federal tax law. This forced Ameren to take a nonrecurring charge of $0.63 a share in the fourth quarter.

We forecast further profit growth in 2019. One factor that boosts Ameren's earning power annually is the utility's investment in electric transmission. There is still uncertainty about what the allowed return on equity will be—the Federal Energy Regulatory Commission must still issue a ruling on this—but this will still exceed the allowed ROEs in Missouri and Illinois. Our 2019 earnings estimate indicates profit growth of 7%, which is within management's annual goal of 5%-7%.

Will 2018 be the year in which a regulatory law is passed in Missouri? Utilities in the state have been hurt by regulatory lag because Missouri uses a historical test year and doesn't use a lot of mechanisms that allow for concurrent recovery of certain kinds of capital spending or expenses. The state senate has passed a bill that would be beneficial for utilities in this regard. If the bill is enacted into law, Ameren will boost its capital spending in the state, with an estimated $1 billion for grid modernization through 2023.

Ameren filed a gas rate application in Illinois. The utility requested a $49 million increase, based on a 10.3% return on a 50% common-equity ratio. A ruling is expected in late 2018, with new tariffs taking effect in January of 2019.

This timely stock has a dividend yield that is about average, by utility standards. Like many utility equities, the recent quotation is within our 3- to 5-year Target Price Range. Accordingly, total return potential over that time frame is low.

BUSINESS: American Electric Power Company, Inc. (AEP), through 10 operating utilities, serves 5.4 mill. customers in Arkansas, Kentucky, Indiana, Louisiana, Michigan, Ohio, Oklahoma, Tennessee, Texas, Virginia, & West Virginia. Electric revenue breakdown: residential, 40%; commercial, 23%; industrial, 19%; wholesale, 15%; other, 3%. Sold SEEBOARD (British utility) '02; Houston Pipeline '05; commercial barge operation in '15. Generating sources not available. Fuel costs: 34% of revenues. '17 reported depreciation rates (utility): 1.6%-9.2%. Has 17,700 employees. Chairman, President & CEO: Nicholas K. Akins. Incorporated: New York. Address: 1 Riverside Plaza, Columbus, Ohio 43215-2373. Telephone: 614-716-1000. Internet: www.aep.com.

American Electric Power's earnings will likely advance solidly in 2018 and 2019. The company's utilities are benefiting from rate relief. Public Service of Oklahoma received an $84 million rate increase (before passing through to customers the reduction in federal taxes), based on a 9.3% return on equity. Also this quarter, SWEPCo was granted a hike of $50 million, based on a 9.6% ROE. Indiana & Michigan has rate cases pending in each state. In Indiana, the utility reached a settlement (subject to approval by the state commission) for an increase of $97 million, based on a 9.95% ROE. New tariffs would take effect in mid-2018. In Michigan, I&M requested a $52 million hike, based on a 10.6% ROE. An order is expected in April. Heavy investment in electric transmission (some $3 billion annually) is also expanding the company's earning power. Our 2018 and 2019 share-earnings estimates are within AEP's targeted ranges of $3.75-$3.95 and $4.00-$4.20, respectively.

The company wants to build a large wind project to serve four states. The 2,000-megawatt facility would cost $4.5 billion and would be completed by the fourth quarter of 2020. This needs the approval of the state commissions in Oklahoma, Arkansas, Texas, and Louisiana. (Opposition to the project has emerged in Oklahoma.) Rulings on the proposals are expected by the end of April.

AEP no longer has exposure to the vagaries of the power markets. The company has sold or written off its non-regulated generating facilities. (This caused a large nonrecurring charge in 2016.) It is still seeking a buyer for its remaining generating assets.

Finances are solid. The fixed-charge coverage, common-equity ratio, and earned ROE are healthy. AEP's exit from merchant (uncontracted) power has lowered its business risk, too. The company's Financial Strength rating is A+.

The stock has a dividend yield that is somewhat above the utility average. This might well appeal to conservative investors, given the stock's Safety rank of 1 (Highest). Total return potential to 2021-2023 does not stand out among electric companies, however.

BUSINESS: Avista Corporation (formerly The Washington Water Power Company) supplies electricity & gas in eastern Washington & northern Idaho. Supplies electricity to part of Alaska & gas to part of Oregon. Customers: 392,000 electric, 340,000 gas. Acq'd Alaska Electric Light and Power 7/14. Sold Ecova energy-management sub. 6/14. Electric rev. breakdown: residential, 39%; commercial, 32%; industrial, 11%; wholesale, 8%; other, 10%. Generating sources: hydro, 33%; gas & coal, 28%; purch., 39%. Fuel costs: 36% of revs. '17 reported depr. rate (Avista Utilities): 3.1%. Has 2,000 employees. Chairman & CEO: Scott L. Morris. Pres.: Dennis Vermillion. Inc.: WA. Address: 1411 E. Mission Ave., Spokane, WA 99202-2600. Tel.: 509-489-0500. Internet: www.avistacorp.com.

The proposed acquisition of Avista has run into a snag. Hydro One, a Canadian company, has agreed to pay US$53 in cash for each share of Avista. The deal has been approved by shareholders and the Federal Energy Regulatory Commission. It still requires the approval of the regulatory commissions in five states: Washington, Idaho, Oregon, Alaska, and Montana. The companies have reached settlements with the commission's staff and intervenors in Washington, Idaho, and Alaska. However, in Oregon there is opposition to the transaction as currently constructed. However, this is not necessarily a fatal blow. The companies are in settlement talks with the staff and intervenors, and may adjust the structure of the deal to address their concerns. Avista is asking each state for a ruling by August, and expects the combination to be completed in the second half of 2018.

The uncertainty does not appear to be affecting the stock price. At the start of 2018, Avista shares were trading at a 3% discount to the value of Hydro One's offer, and this gap is now 2%. We continue to advise Avista holders to sell their stock on the open market. The Timeliness rank is suspended due to the buyout agreement.

A multiyear rate case is pending in Washington. Increases would take effect on May 1st each year. Avista is seeking electric increases of $54.4 million in 2018, $13.5 million in 2019, and $13.9 million in 2020. The utility is asking for gas hikes of $6.6 million in 2018, $3.7 million in 2019, and $3.8 million in 2020. The company's filing is based on a 9.9% return on a 50% common-equity ratio. The staff of the Washington commission is proposing total electric and gas increases of $33.2 million and $6.7 million, respectively, based on a 9.1% return on a 48.5% common-equity ratio. The commission's ruling was expected shortly after this report went to press. Note that recent rate orders in Washington have been unfavorable for the utility.

We estimate flat earnings in 2018. Rate hikes will help, but Avista is incurring merger-related costs. Tax reform is likely to hurt share net by $0.05-$0.06. If the stock is still trading in 2019, this means the deal fell through, so the absence of merger-related costs should lift profits.

BUSINESS: AVANGRID, Inc. (formerly Iberdrola USA, Inc.), is a diversified energy and utility company that serves 2.2 million electric customers in New York, Connecticut, and Maine and 1 million gas customers in New York, Connecticut, Massachusetts and Maine. Has a nonregulated generating subsidiary focused on wind power, with 7.1 gigawatts of capacity. Revenue breakdown by customer class not available. Generating sources not available. Fuel costs: 22% of revenues. '17 depreciation rate: 2.9%. Iberdrola owns 81.5% of stock. Has 6,600 employees. Chairman: José Ignacio Sanchez Galan. CEO: James P. Torgerson. Incorporated: New York. Address: 180 Marsh Hill Road, Orange, Connecticut 06477. Telephone: 207-629-1200. Internet: www.avangrid.com.

We estimate that AVANGRID's earnings will advance significantly in 2018 and 2019. The losses from the company's noncore assets that are being sold (see below) will be lower this year than in 2017, and will be eliminated next year. The utilities are benefiting from multiyear electric and gas rate hikes in New York and Connecticut. Additional rate relief should come next year from cases that Connecticut Natural Gas and Berkshire Gas are planning to file soon. The renewable-energy subsidiary is adding wind and solar projects — 590 megawatts in the first quarter of 2018. Our 2018 share-earnings estimate is within AVANGRID's targeted range (on a GAAP basis) of $2.16-$2.46.

AVANGRID has completed the sales of its two noncore units. The company's gas trading and storage businesses have been in the red, and didn't fit management's focus on gas and electric transmission and distribution and renewable energy. The two sales raised a total of $225 million, subject to closing adjustments.

The company has a potentially large electric transmission investment opportunity. Central Maine Power was chosen to construct a transmission line to import hydro power from Quebec after the previously selected project (proposed by Eversource Energy) failed to obtain siting approval in New Hampshire. This $950 million project requires various state and federal regulatory approvals, with construction beginning as early as next year. The line would be in service in 2022, and would be allowed a federally regulated return on equity. This is significant because federally regulated ROEs exceed those allowed by the state commissions in which AVANGRID's utilities operate.

Management has stated its expectation of a dividend hike this year. We look for a slight increase, to $0.44 a share quarterly, in the fourth quarter. We do not rule out a larger (or earlier) raise. Shareholders of AVANGRID (and its predecessor, UIL Holdings) have not seen an increase since the 20th century.

We believe this stock is expensively priced. The recent quotation is well within our 2021-2023 Target Price Range. For the year ahead, the dividend yield is only about average for a utility.

BUSINESS: Black Hills Corporation is a holding company for Black Hills Energy, which serves 209,000 electric customers in CO, SD, WY and MT, and 1 million gas customers in NE, IA, KS, CO, WY, and AR. Has coal mining sub. Acq'd Cheyenne Light 1/05; utility ops. from Aquila 7/08; SourceGas 2/16. Discont. telecom in '05; oil marketing in '06; gas marketing in '11; gas & oil E&P in '17. Electric rev. breakdown: res'l, 30%; comm'l, 37%; ind'l, 17%; other, 16%. Generating sources: coal, 32%; other, 8%; purch., 60%. Fuel costs: 34% of revs. '17 depr. rate: 3.5%. Has 2,700 employees. Chairman & CEO: David R. Emery. Pres. & COO: Linn Evans. Inc.: SD. Address: 7001 Mount Rushmore Rd., P.O. Box 1400, Rapid City, SD 57709-1400. Tel.: 605-721-1700. Internet: www.blackhillscorp.com.

Black Hills Corporation has discontinued its gas and oil exploration and production operation. This segment was once profitable, but fell into the red after commodity prices weakened a few years ago. Black Hills has sold or executed agreements to sell almost all of these assets, raising some $75 million in the process. Management expects to complete this process by midyear. The company retains some nonutility businesses, but is predominantly a regulated electric and gas utility. Black Hills posted a loss of $0.31 a share from discontinued operations last year, and additional deficits are possible in 2018.

The company's gas utility in Arkansas has a rate case pending, and other filings are upcoming. Black Hills filed for a tariff hike of $29.9 million, based on a return of 10.2% on a common-equity ratio of 54.7%. New tariffs are expected to take effect in the fourth quarter. Small gas requests (totaling about $3 million) are pending in Colorado and Wyoming, as well. These are the first three of 10 rate applications that Black Hills plans to put forth over a four-year period.

A legal appeal of a rate order in Colorado is pending. In December of 2016, the state commission granted Black Hills just $1.2 million of the $8.9 million electric rate hike the utility had sought. The regulators rejected the company's request for a rehearing, reargument, or reconsideration, so Black Hills took this matter to the courts.

We have trimmed our 2018 earnings estimate by $0.05 a share, to $3.45. This is in accordance with the company's reduction in its 2018 earnings guidance, from a range of $3.35-$3.55 to $3.30-$3.50. Interest expense is likely to be greater than previously expected due to rising short-term interest rates.

We forecast modest profit growth in 2019. Rate relief from the aforementioned rate cases should help. Our estimate of $3.55 a share would produce a 3% earnings increase.

Black Hills shares have a dividend yield that is average for a utility. Good dividend growth over the 3- to 5-year period should produce total returns that are better than those of most utility issues.

BUSINESS: CMS Energy Corporation is a holding company for Consumers Energy, which supplies electricity and gas to lower Michigan (excluding Detroit). Has 1.8 million electric, 1.8 million gas customers. Has 1,034 megawatts of nonregulated generating capacity. Sold Palisades nuclear plant in '07. Electric revenue breakdown: residential, 43%; commercial, 34%; industrial, 17%; other, 6%. Generating sources: coal, 28%; gas, 15%; other, 2%; purchased, 55%. Fuel costs: 43% of revenues. '17 reported deprec. rates: 3.9% electric, 2.9% gas, 10.0% other. Has 7,900 employees. Chairman: John G. Russell. President & CEO: Patricia K. Poppe. Incorporated: Michigan. Address: One Energy Plaza, Jackson, MI 49201. Tel.: 517-788-0550. Internet: www.cmsenergy.com.

CMS Energy's utility subsidiary should soon get an order in its electric rate case. Consumers Energy is seeking an increase of $173 million, based on a 10.5% return on equity. The utility self-implemented an increase of $130 million on October 1st. The staff of the Michigan Public Service Commission (MPSC) recommended an increase of $65 million, based on a 9.8% ROE, and an administrative law judge proposed a hike of $30 million, based on a 9.8% ROE. A decision from the MPSC is due by the end of the month.

Consumers Energy also has a gas rate pending. The utility filed for a hike of $178 million, based on a 10.5% ROE. Consumers also requested a regulatory mechanism that would allow concurrent recovery of certain capital expenditures, along with the decoupling of gas volume and revenues. A decision is due by the end of August.

We expect a solid bottom-line showing in 2018. Rate relief should help. A return to normal weather patterns would be positive for the utility. Management is controlling expenses effectively, too. Our estimate of $2.35 a share is slightly above the company's typically narrow guidance of $2.30-$2.34.

We forecast profit growth next year in line with CMS' annual target of 6%-8%. Again, rate relief and effective cost control ought to be key factors. A bit of kilowatt-hour sales growth should help, too.

The board of directors raised the dividend in the current quarter. The increase was $0.10 a share (7.5%) annually. We project dividend growth in a range of 6%-8% a year over the 3- to 5-year period. This is the same as CMS' target for profit growth.

Tax reform caused a nonrecurring charge of $0.53 a share in the fourth quarter of 2017. The new tax law will also make cash flow lower than it otherwise would have been in the near term.

This timely equity's dividend yield is only about average for a utility. Like many utility issues, the recent price is well within our 2021-2023 Target Price Range. Thus, total return potential over that time frame is unimpressive.

BUSINESS: CenterPoint Energy, Inc. is a holding company for Houston Electric, which serves 2.4 million customers in Houston and environs, and gas utilities with 3.4 million customers in Texas, Minnesota, Arkansas, Louisiana, and Oklahoma. Owns 54.1% of Enable Midstream Partners. Discontinued Texas Genco Holdings in '04. Electric revenue breakdown: residential, 52%; commercial, 31%; industrial, 15%; other, 2%. Does not own generating assets. Gas costs: 51% of revenues. '17 depreciation rate: 5.6%. Has 8,000 employees. Chairman: Milton Carroll. President & CEO: Scott M. Prochazka. Incorporated: Texas. Address: 1111 Louisiana, P.O. Box 4567, Houston, Texas 77210-4567. Telephone: 713-207-1111. Internet: www.centerpointenergy.com.

CenterPoint Energy wants to reduce its exposure to commodity prices, which stems from its ownership interest in Enable Midstream Partners. The goal is to sell its stake gradually over a multiyear period. Because the amount and timing of any sales cannot be predicted, our estimates and projections are based on CenterPoint's current 54.1% interest in the master limited partnership.

Tax reform is helping CenterPoint's earnings. The revaluation of deferred taxes, which was necessitated by the new federal tax law, added $2.56 a share to earnings in the fourth quarter of 2017. This was a noncash, nonrecurring item, but boosted the company's common-equity ratio. In 2018, the reduced federal tax rate should boost the bottom line by $0.10 a share thanks to the positive effect on CenterPoint's equity income from its stake in Enable. Finally, the company's forecasted rate base at yearend will be $300 million greater because deferred taxes (which offset rate base) will be lower. This will raise CenterPoint's earning power.

We forecast 6% profit growth in 2019. This is within CenterPoint's annual earnings growth goal of 5%-7%. We think the company will benefit from rate relief, increased electric deliveries, greater income from its interest in Enable, and a rise in profits as the company's energy services subsidiary grows. Note, though, that the energy services unit books mark-to-market gains or charges, which we *include* in our earnings presentation, so this adds an element of unpredictability to our estimates.

The board of directors raised the dividend. This move is usually made in early January every year, but the declaration was moved up to December of 2017. Thus, five dividends were declared last year, which is why the statistical array above shows a sharp rise in dividends declared in 2017. The quarterly increase was a cent a share (3.7%), the same hike as in each of the previous three years.

The dividend yield of CenterPoint stock is above the utility average. However, with the recent price above the midpoint of our 2021-2023 Target Price Range, the modest dividend growth we project over that period is unlikely to produce an above-average total return.

BUSINESS: Consolidated Edison, Inc. is a holding company for Consolidated Edison Company of New York, Inc. (CECONY), which sells electricity, gas, and steam in most of New York City and Westchester County. Also owns Orange and Rockland Utilities (O&R), which operates in New York and New Jersey. Has 3.7 million electric, 1.2 million gas customers. Pursues competitive energy opportunities through three wholly owned subsidiaries. Entered into midstream gas joint venture 6/16. Purchases most of its power. Fuel costs: 22% of revenues. '17 reported depreciation rates: 2.9%-3.1%. Has 15,000 employees. Chairman, President & CEO: John McAvoy. Inc.: New York. Address: 4 Irving Place, New York, New York 10003. Tel.: 212-460-4600. Internet: www.conedison.com.

We estimate that Consolidated Edison's earnings will rise 3%-4% this year and next. ConEd's largest subsidiary, Consolidated Edison Company of New York, is benefiting from rate relief. At the start of 2018, electric and gas tariffs were boosted by $155.3 million (2.0%) and $92.3 million (5.6%), respectively. Increases of $155.2 million (1.9%) for electricity and $89.4 million (5.1%) for gas will take effect at the beginning of 2019. Orange and Rockland Utilities might also obtain a rate increase next year (see below). Customer growth is another plus. And oil-heating users continue to convert to the use of gas heat. Our 2018 earnings estimate, which we raised by a nickel a share, is at the midpoint of the company's targeted range of $4.15-$4.35 a share. We lifted our 2019 estimate by $0.10 a share, to $4.40.

Orange and Rockland has a rate case pending. The utility is asking the New York State Public Service Commission for electric and gas increases of $22.5 million and $2.7 million, respectively, based on a return of 9.75% on a common-equity ratio of 48%. New rates should take effect at the start of 2019.

A natural gas pipeline project is under way, and another is being proposed. ConEd's 12.5% stake in the pipeline represents an investment of $400 million for the company. This is scheduled for completion by yearend. ConEd also has a 6.375% stake in a much-shorter pipeline proposal.

The company has some financing needs. The utilities plan to issue $1.3 billion-$1.8 billion of long-term debt this year. ConEd will issue up to $450 million of common equity, over and above what will be raised through the dividend reinvestment and other stock plans (perhaps $80 million).

ConEd's renewable-energy subsidiary continues to add projects. A 25-megawatt wind facility went into effect in the first quarter. The company has 1,561 mw of wind and solar projects in service or under construction.

High-quality ConEd stock has a dividend yield that is a bit above average for a utility. However, with the recent price well within our 2021-2023 Target Price Range, total return potential is low.

Paul E. Debbas, CFA *May 18, 2018*

BUSINESS: Dominion Energy, Inc. (formerly Dominion Resources) is a holding company for Virginia Power & North Carolina Power, which serve 2.6 mill. customers in VA & northeastern NC. Serves 2.3 mill. gas customers in OH, WV, & UT. Other ops. incl. independent power production. Owns 50.6% of Dominion Midstream Partners. Acq'd Questar 9/16. Elec. rev. breakdown: residential, 46%; commercial, 32%; industrial, 7%; other, 15%. Generating sources: nuclear, 32%; gas, 32%; coal, 17%; other, 5%; purch., 14%. Fuel costs: 24% of revs. '17 reported depr. rates: 2.2%-4.9%. Has 16,200 empls. Chairman, Pres. & CEO: Thomas F. Farrell II. Inc.: VA. Address: 120 Tredegar St., P.O. Box 26532, Richmond, VA 23261-6532. Tel.: 804-819-2000. Web: www.dominionenergy.com.

The stock of Dominion Energy has been the worst performer among electric utility issues so far in 2018. This year hasn't been good for equities in this industry, but Dominion Energy's price has plummeted 22%. The main reason was a Federal Energy Regulatory Commission ruling (in mid-March) about taxes that hurt gas pipeline master limited partnerships such as Dominion Midstream Partners, majority owned by Dominion Energy. Due to this ruling, Dominion Energy changed its plan to drop its Cove Point liquefied natural gas facility into its MLP affiliate this year.

The company is making some moves to strengthen its finances. Dominion Energy issued $500 million in common stock in the first quarter, and plans to sell another $1.5 billion over the remainder of 2018. The company has also cut a total of $1 billion from its capital budget for 2018 and 2019, and expanded its credit facilities. Finally, Dominion Energy is trying to sell some noncore assets, and would use the proceeds for debt reduction.

We have lowered our 2018 and 2019 earnings estimates. Virginia Power took a $215 million pretax charge in the first quarter (*included* in our earnings presentation) due to a new state law that will force the utility to give one-time rate credits to its customers. This is the main reason why we slashed our estimate by $0.45 a share, to $3.65. Another—and the explanation for our $0.15-a-share cut in 2019—is that average shares outstanding will be higher than we previously estimated.

Dominion Energy still hopes to acquire SCANA. The company would pay $6.0 billion in stock for the parent of South Carolina Electric & Gas, which canceled its nuclear construction project due to extensive delays and cost overruns. However, the proposal has received criticism in South Carolina, and Dominion will walk away if the regulators and/or legislature insist on concessions that would make the deal less attractive for the buyer.

This stock is appealing for income-oriented investors. The dividend yield is more than two percentage points above the mean for utilities, and healthy dividend growth potential to 2021-2023 should produce attractive long-term total returns.

BUSINESS: DTE Energy Company is a holding company for DTE Electric (formerly Detroit Edison), which supplies electricity in Detroit and a 7,600-square-mile area in southeastern Michigan, and DTE Gas (formerly Michigan Consolidated Gas). Customers: 2.1 mill. electric, 1.3 mill. gas. Has various nonutility operations. Electric revenue breakdown: residential, 46%; commercial, 35%; industrial, 13%; other, 6%. Generating sources: coal, 67%; nuclear, 17%; gas, 1%; purchased, 15%. Fuel costs: 57% of revenues. '17 reported deprec. rates: 3.6% electric, 2.7% gas. Has 10,200 employees. Chairman & CEO: Gerard M. Anderson. President & COO: Jerry Norcia. Inc.: MI. Address: One Energy Plaza, Detroit, MI 48226-1279. Tel.: 313-235-4000. Internet: www.dteenergy.com.

DTE Energy's electric utility subsidiary should get a rate order by the end of April. DTE Electric is seeking a tariff hike of $231 million, based on a 10.5% return on equity. The company self-implemented a $125 million increase at the start of November. The staff of the Michigan Public Service Commission (MPSC) recommended a $71 million, based on a 9.8% ROE. An administrative law judge proposed an increase of $12 million that is based on a 9.6% ROE.

Another regulatory ruling is expected next month. DTE Electric asked the MPSC for a certificate of need to build a 1,100-megawatt gas-fired plant at a cost of $989 million. This would replace the coal-fired capacity that DTE Electric plans to retire by 2022.

DTE Gas has a rate case pending. The utility filed for an increase of $85 million, based on a 10.5% ROE. It also wants to accelerate its gas main-replacement program from 25 years to 15 years. The MPSC's order is due by late September.

The new federal tax law is benefiting earnings. The revaluation of deferred taxes boosted share net by $0.59 in the fourth quarter of 2017, which is excluded from our presentation. This year, the lower tax rate will augment the income of DTE's nonutility operations, thereby lifting earnings by an estimated $0.10 a share. (This is why management raised its guidance from $5.48-$5.88 to $5.57-$5.99.) However, because the electric and gas utilities will pass their tax reductions through to customers, this will hurt cash flow. Accordingly, DTE Energy will issue an additional $300 million of common equity over the next three years.

We forecast solid earnings growth in 2019. The utilities will benefit from a full year's effect of the rate hikes obtained in 2018. The nonutility subsidiaries are expanding their pipeline capacity and adding projects (such as cogeneration facilities) with industrial customers. Our estimate of $6.20 a share would produce growth within the company's target of 5%-7%.

This timely stock has a dividend yield equal to the utility average. Like most utility stocks, the recent price is within our 2021-2023 Target Price Range. Thus, total return potential is unspectacular.

BUSINESS: Duke Energy Corporation is a holding company for utilities with 7.4 mill. elec. customers in NC, FL, IN, SC, Oh, & KY, and 1.5 mill. gas customers in OH, KY, NC, SC, and TN. Owns independent power plants & has 25% stake in National Methanol in Saudi Arabia. Acq'd Progress Energy 7/12; Piedmont Natural Gas 10/16; discontinued most int'l ops. in '16. Elec. rev. breakdown: residential, 41%; commercial, 29%; industrial, 14%; other, 16%. Generating sources: coal, 27%; nuclear, 27%; gas, 23%; other, 1%; purchased, 22%. Fuel costs: 30% of revs. '17 reported deprec. rate: 2.8%. Has 29,100 employees. Chairman, President & CEO: Lynn J. Good. Inc.: DE. Address: 550 South Tryon St., Charlotte, NC 28202-1803. Tel.: 704-382-3853. Internet: www.duke-energy.com.

Duke Energy has received rate increases in two states. The settlement for its Progress Energy unit was approved by the North Carolina regulators. Rates were raised by $193 million, based on a return of 9.9% on a common-equity ratio of 52%. However, certain costs were disallowed, including some associated with coal ash basin remediation. (Ongoing coal ash costs will be deferred, to be considered for recovery in the utility's next rate case.) This forced Duke to take a pretax charge of $100 million (*included* in our earnings presentation) in the first quarter. Separately, the utility was granted a tariff increase of $8.4 million in Kentucky, based on a return of 9.725% on a common-equity ratio of 49%.

Other regulatory matters are pending. Duke Energy Carolinas is seeking a hike of $647 million, based on a return of 10.75% on a common-equity ratio of 53%. New tariffs should take effect soon. In Ohio, Duke reached a settlement that would boost electric distribution rates by $19 million, based on a return of 9.84% on a common-equity ratio of 50.75%. The company is asking for new rates to take effect on June 1st.

Earnings are likely to advance significantly in 2018 and more modestly in 2019. The third-quarter comparison should be easy, as profits in that period of 2017 were hurt by mild weather patterns and some unusual (but not nonrecurring) costs. Our 2018 estimate of $4.80 a share is near the upper end of Duke's guidance of $4.55-$4.85 a share. Besides the easy comparison, rate relief should benefit the bottom line this year and next. We figure profits will advance 4%, to $5.00 a share, in 2019.

Duke executed a forward sale of common stock. The closing, by yearend, will raise more than $1.5 billion and will increase the share count by more than 21 million. The proceeds will be used for general corporate purposes.

This stock offers an attractive dividend yield. The yield is more than one percentage point above the utility mean. The respectable dividend growth we project over the 3- to 5-year period should produce total returns that are above average for a utility, as well.

BUSINESS: Eversource Energy (formerly Northeast Utilities) is the parent of utilities that have 3.1 mill. electric, 504,000 gas, 230,000 water customers. Supplies power to most of Connecticut and gas to part of Connecticut; supplies power to 3/4 of New Hampshire's population; supplies power to western Massachusetts and parts of eastern Massachusetts & gas to central & eastern Massachusetts; supplies water to CT, MA, & NH. Acq'd NSTAR 4/12; Aquarion 12/17. Electric rev. breakdown: residential, 51%; commercial, 36%; industrial, 5%; other, 8%. Fuel costs: 33% of revs. '17 reported deprec. rate: 3.0%. Has 8,100 empls. Chairman, Pres. & CEO: James J. Judge. Inc.: MA. Address: 300 Cadwell Drive, Springfield, MA 01104. Tel.: 413-785-5871. Internet: www.eversource.com.

Eversource Energy wants to expand its presence in the water utility business. The company, which acquired Aquarion in December of 2017, made a hostile takeover offer for Connecticut Water Service, which has agreed to be acquired by SJW Group, a water company in California. Eversource is offering $63.50 a share ($767 million), which shareholders may take in cash or stock, for the company, and is asking Connecticut Water stockholders to vote against the SJW deal. Connecticut Water would be a good geographic fit with Eversource's operations, but we aren't assuming that the hostile offer will turn friendly — or that regulators would approve the deal if it does turn friendly.

We estimate that earnings will climb at a mid-single-digit pace in 2018 and 2019. Eversource should benefit from rate relief in Massachusetts and Connecticut; spending on its electric transmission system, which provides an immediate return on its investment; expense-reduction measures; the addition of Aquarion; and conversions of oil-heating customers to natural gas. Our 2018 share-earnings estimate is at the midpoint of Eversource's targeted range of $3.20-$3.30. We look for profit growth in 2019 in line with management's annual goal of 5%-7%.

There is good and bad news concerning electric transmission. A few years ago, the Federal Energy Regulatory Commission (FERC) lowered the allowed return on equity for transmission owners in New England, following complaints that allowed ROEs were too generous. There is concern about additional cuts, but an administrative law judge for FERC ruled that the current allowed ROE (10.57% with an incentive cap of 11.74%) is not unjust or unreasonable. A decision from FERC is pending. On the other hand, a proposed transmission project to connect New England with Quebec failed to receive approval from the site evaluation committee in New Hampshire. Eversource has asked the committee for reconsideration, and might well appeal the matter to the state Supreme Court if this is denied.

This untimely stock has a dividend yield that is average, by utility standards. Total return potential to 2021-2023 is a cut above the mean for this industry.

Paul E. Debbas, CFA *May 18, 2018*

BUSINESS: Exelon Corporation is a holding company for Commonwealth Edison, PECO Energy, Baltimore Gas and Electric, Pepco, Delmarva Power, & Atlantic City Electric. Has 8.8 mill. elec., 1.3 mill. gas customers. Has nonregulated generating & energy-marketing ops. Acq'd Constellation Energy 3/12; Pepco Holdings 3/16. Elec. rev. breakdown: res'l, 53%; small comm'l & ind'l, 17%; large comm'l & ind'l, 15%; other, 15%. Generating sources: nuclear, 69%; other, 12%; purch., 19%. Fuel costs: 42% of revs. '17 depr. rates: 2.8%-7.0% elec., 2.1% gas. Has 34,600 empls. Chairman: Mayo A. Shattuck III. Pres. & CEO: Christopher M. Crane. Inc.: PA. Address: 10 S. Dearborn St., P.O. Box 805379, Chicago, IL 60680-5379. Tel.: 312-394-7398. Internet: www.exeloncorp.com.

Exelon's utilities are making progress in obtaining much-needed rate relief. When the company acquired Pepco Holdings in 2016, the utilities that came with the deal were not earning adequate returns on equity. So, they have filed multiple rate cases, and have completed or are on their second cycle of applications. Delmarva Power is seeking electric and gas increases totaling $16.5 million, based on a 10.1% return on equity. Rulings are expected in the second half of 2018. Pepco has reached settlements in Maryland and Washington, DC that would provide for rate decreases because the effects of tax reform outweigh the rate hikes that otherwise would occur. Besides these cases of the former Pepco Holdings, PECO is seeking an electric rate increase of $82 million, based on a 10.95% ROE. An order is expected in December.

The company's nonutility assets continue to face a challenging environment. The profitability of nonregulated nuclear assets has declined over the past several years due to low natural gas prices, subsidized renewable energy, and little growth in the demand for power. However, help has come in the way of subsidies for nuclear energy in Illinois and New York, in recognition that nuclear plants are carbon free and provide fuel diversity. Similar subsidies might be coming to New Jersey if the governor signs a bill that the legislature passed in April.

Our 2018 earnings estimate requires an explanation. We include things such as mark-to-market accounting items and gains or losses in the nuclear decommissioning trust because they are ongoing, even though Exelon excludes these from its earnings guidance of $2.90-$3.20 a share. Exelon's first-quarter "operating" earnings excludes $0.36 a share of costs that we included. This is why we estimate an earnings decline this year.

The board of directors raised the dividend. The annual increase was $0.07 a share (5.3%). We look for the same hike next year. Exelon's goal is 5% yearly dividend growth through 2020.

This stock has a dividend yield that is average for a utility. Total return potential to 2021-2023 is slightly above average for the industry.

BUSINESS: El Paso Electric Company (EPE) provides electric service to 417,000 customers in an area of approximately 10,000 square miles in the Rio Grande valley in western Texas (68% of revenues) and southern New Mexico (19% of revenues), including El Paso, Texas and Las Cruces, New Mexico. Wholesale is 13% of revenues. Electric revenue breakdown by customer class not available. Generating sources: nuclear, 49%; gas, 36%; purchased, 15%. Fuel costs: 27% of revenues. '17 reported depreciation rate: 2.3%. Has about 1,100 employees. Chairman: Charles A. Yamarone. President & CEO: Mary E. Kipp. Incorporated: Texas. Address: Stanton Tower, 100 North Stanton, El Paso, TX 79901. Tel.: 915-543-5711. Internet: www.epelectric.com.

We estimate that El Paso Electric Company's earnings will advance slightly this year. The utility will have a full year's worth of the rate increase in Texas that took effect in July of 2017. EPE is also benefiting from above-average customer growth that stems from the healthy economy in El Paso and environs. On the other hand, the weather was favorable for the company in 2017, and we assume normal weather this year. Our 2018 earnings estimate, which we lowered by $0.20 a share, is within management's guidance of $2.30-$2.65 a share. Next year, the utility will benefit from rate relief in Texas through transmission and distribution regulatory mechanisms. However . . .

Earnings have become less predictable. The company owns a 15.8% share of the Palo Verde nuclear station in Arizona. Like any utility that owns nuclear assets, EPE invests in a trust to provide funds for nuclear decommissioning. The gains or losses on the nuclear decommissioning trust are now being reflected in the income statement, instead of through Accumulated Other Comprehensive Income on the balance sheet. This will make earnings more volatile.

The utility is required to file a general rate case in New Mexico by July of 2019. EPE may file sooner; we note that the portion of Units 3 and 4 of a new gas-fired generating station that is allocated to New Mexico is not reflected in rates. However, the regulatory climate in New Mexico is difficult (not just for EPE), so the company might well wait until it is required to file before it puts forth its rate application.

We expect a dividend hike at the board meeting in May. This has been the pattern since the directors initiated a common dividend several years ago. We estimate an increase of $0.10 a share (7.5%) in the annual disbursement. EPE's goal is a payout ratio in a range of 55%-65%.

This stock has a dividend yield that is below the industry mean. Like many utility issues, the recent quotation is within our 2021-2023 Target Price Range. Accordingly, total return potential over that time frame is unspectacular, despite good dividend growth prospects.

BUSINESS: Edison International (formerly SCECorp) is a holding company for Southern California Edison Company (SCE), which supplies electricity to 5.1 mill. customers in a 50,000-sq.-mi. area in central, coastal, & southern CA (excl. Los Angeles & San Diego). Edison Energy is an energy svcs. co. Disc. Edison Mission Energy (independent power producer) in '12. Elec. rev. breakdown: residential, 37%; commercial, 44%; industrial, 6%; other, 13%. Generating sources: gas, 6%; nuclear, 6%; hydro, 5%; purchased, 83%. Fuel costs: 38% of revs. '17 reported depr. rate: 3.8%. Has 12,500 empls. Chairman: William P. Sullivan. Pres. & CEO: Pedro J. Pizzaro. Inc.: CA. Address: 2244 Walnut Grove Ave., P.O. Box 976, Rosemead, CA 91770. Tel.: 626-302-2222. Web: www.edison.com.

Investors remain concerned about the possible wildfire liability of Edison International's utility subsidiary. Southern California Edison's service area had wildfires in the fall of 2017. The cause of the wildfires has not yet been determined, but SCE has already been hit with some lawsuits alleging that its power lines were at fault. (It has $1 billion in liability insurance.) Under California's inverse condemnation law, a utility can be held liable if its power lines contributed to the wildfires, even if the utility followed accepted inspection and safety rules. If this occurs, there is no assurance that the utility will be allowed to pass these costs through to ratepayers. So, the company is pursuing a three-pronged strategy to address this risk, seeking legislative, regulatory, and judicial solutions to this problem.

SCE is awaiting an order on its general rate case. The utility has revised its request to pass through to customers the benefits of federal tax reform. SCE is asking for a reduction of $106 million in 2018 and increases of $431 million and $503 million at the start of 2019 and 2020, respectively. (The order will be retroactive to the beginning of 2018.) The utility's three-year capital spending plan calls for $1.4 billion for grid modernization, which is somewhat controversial because the California commission has not been asked to approve such spending in previous rate cases. An order is expected by yearend.

Tax reform is slightly negative for the company. Edison International has about $1.75 billion of long-term debt at the parent level, so corporate interest and other expenses will have a lower tax shield. This is also true for the company's nonutility energy-services subsidiary, Edison Energy, which is still in its start-up phase and is in the red. Management estimates that the corporate and nonutility drag on earnings will amount to $0.25-$0.30 a share this year. Note that the company is not providing earnings guidance as long as the general rate case is pending.

The wildfire risks hurt the stock last year, and the price has risen just slightly in 2018. The dividend yield and 3- to 5-year total return potential are above average for this industry.

BUSINESS: Entergy Corporation supplies electricity to 2.9 million customers through subsidiaries in Arkansas, Louisiana, Mississippi, Texas, and New Orleans (regulated separately from Louisiana). Distributes gas to 199,000 customers in Louisiana. Has a nonutility subsidiary that owns six nuclear units (two no longer operating). Electric revenue breakdown: residential, 36%; commercial, 27%; industrial, 28%; other, 9%. Generating sources: gas, 35%; nuclear, 31%; coal, 7%; purchased, 27%. Fuel costs: 31% of revenues. '17 reported depreciation rate: 3.0%. Has 13,500 employees. Chairman & CEO: Leo P. Denault. Incorporated: Delaware. Address: 639 Loyola Avenue, P.O. Box 61000, New Orleans, Louisiana 70161. Telephone: 504-576-4000. Internet: www.entergy.com.

Entergy's utilities have some significant capital projects in various stages of development. Entergy Louisiana is building two gas-fired plants: a 980-megawatt facility scheduled for completion next year at a cost of $869 million and a 994-mw plant scheduled for completion in 2020 at a cost of $872 million. Entergy Texas intends to construct a 993-mw plant scheduled for commercial operation in 2021 at a cost of $937 million. Finally, each of Entergy's regulatory jurisdictions has granted the utility permission to install an advanced metering system, which is expected to cost about $900 million.

These projects illustrate the healthy demand for electricity in the company's service area. Unlike many utilities, which are seeing little or no load growth, Entergy expects volume increases in a low single-digit range. Other strong points are the formula rate plans in a few states (Entergy Louisiana is trying to extend its plan), which provide the utility with annual rate relief.

The company is exiting the nonregulated power-generating business. Entergy plans to close its four nonutility nuclear units by 2022. This business has become less profitable as wholesale electricity prices have declined. These plants have also experienced cost increases and operating problems. Even so, the company expects this business' cash flow to be neutral to positive through 2022. Note that our earnings presentation *includes* all costs associated with these facilities, even though management excludes these from its definition of operating earnings.

Income tax items can make earnings more volatile from year to year. In 2017, a tax benefit lifted June-quarter share net by $2.07. On the other hand, the revaluation of deferred taxes (due to the new federal tax law) caused a nonrecurring charge of $2.91 a share in the fourth period. In 2018, Entergy expects to book a tax benefit (now estimated at $100 million) related to its nonutility subsidiary.

This stock has one of the highest dividend yields of any electric utility. This is about a percentage point above the industry average. However, total return potential to 2021-2023 does not stand out among utilities.

Paul E. Debbas, CFA *March 16, 2018*

BUSINESS: FirstEnergy Corp. is a holding company for Ohio Edison, Pennsylvania Power, Cleveland Electric, Toledo Edison, Metropolitan Edison, Penelec, Jersey Central Power & Light, West Penn Power, Potomac Edison, & Mon Power. Provides electric service to 6.1 million customers in OH, PA, NJ, WV, MD, & NY. Acq'd Allegheny Energy 2/11. Electric revenue breakdown by customer class not available. Generating sources: coal, 44%; nuclear, 26%; purchased, 30%. Fuel costs: 33% of revenues. '17 reported deprec. rate: 2.4%. Has 15,700 employees. Chairman: George M. Smart. President & CEO: Charles E. Jones. Incorporated: Ohio. Address: 76 South Main Street, Akron, Ohio 44308-1890. Telephone: 800-736-3402. Internet: www.firstenergycorp.com.

FirstEnergy has deconsolidated almost all of its nonregulated operations. These filed for Chapter 11 bankruptcy protection, and are now separate from FirstEnergy. Thus, its financial statements now reflect an almost entirely regulated company. The move resulted in a gain of $2.50 a share from discontinued operations in the first quarter of 2018.

The stock has been the top performer among electric utility issues so far in 2018. The price is up 9% in what has been a poor year for most equities in this industry. The market reacted favorably to the financing moves the company made in January, when it issued $850 million of common stock and $1.62 billion of preferred that is mandatorily convertible in 2019. The proceeds were used to reduce debt and contribute to the pension plan.

Our 2018 earnings estimate requires an explanation. The preferred stock that FirstEnergy issued in early 2018 was sold at a discount, and the difference is being amortized until the shares become convertible. This is why earnings were negligible in the first quarter, and might well fall into the red in the June period. Management's guidance for "operating" earnings this year is $2.25-$2.55 a share. Although earnings from continuing operations will almost certainly fall short of the dividend this year, the payout is not at risk of a cut.

The regulated businesses have some opportunities, but also a possible risk. The utilities in Ohio should soon receive a ruling from the state commission regarding a proposed three-year, $450 million electric system modernization plan. The company plans to spend $800 million-$1.2 billion on transmission annually through 2021. However, the company incurred $355 million of storm-related costs in the March quarter, $230 million of which were expenses. Of that, $220 million was deferred for future recovery. However, Jersey Central Power & Light was criticized in New Jersey for its performance following the storms, so the possibility of a write-off of some storm costs cannot be ruled out.

The yield of this untimely stock is above the utility average. However, the board hasn't raised the payout since that was cut in 2014, and dividend growth prospects are not well defined.

BUSINESS: Great Plains Energy Incorporated is a holding company for Kansas City Power & Light and two other subsidiaries, which supply electricity to 867,000 customers in western Missouri (71% of revenues) and eastern Kansas (29%). Acquired Aquila 7/08. Sold Strategic Energy (energy-marketing subsidiary) in '08. Electric revenue breakdown: residential, 40%; commercial, 41%; industrial, 9%; other, 10%. Generating sources: coal, 53%; nuclear, 16%; other, 2%; purchased, 29%. Fuel costs: 22% of revenues. '17 reported depreciation rate (utility): 3.0%. Has 2,700 employees. Chairman, President & CEO: Terry Bassham. Incorporated: Missouri. Address: 1200 Main St., Kansas City, Missouri 64105. Telephone: 816-556-2200. Internet: www.greatplainsenergy.com.

The proposed merger of Great Plains Energy and Westar Energy has made some progress. The deal calls for Great Plains stockholders to receive .5981 of a share of the combined company for each Great Plains share in a tax-free exchange. Shareholders and the Federal Energy Regulatory Commission have approved the transaction, and the companies have reached a settlement with the staffs of the Missouri and Kansas commissions. The regulators in each state must still rule on the merger. The companies expect the deal to be completed by mid-2018.

We think stockholders ought to retain their shares. The utilities of Great Plains and Westar are contiguous, and offer ample opportunities for merger-related cost reductions. The new company would aim to produce annual earnings growth of 6%-8% and a payout ratio of 60%-70%. The Timeliness rank of this stock remains suspended due to the pending merger.

The company's 2017 tally does not reflect its earning power. The red ink stemmed from merger-related expenses and the financing costs Great Plains incurred in anticipation of completing its original deal to acquire Westar. That transaction fell through when it failed to receive the approval of the Kansas commission (due in part to the debt needed to complete the purchase). As a result, the company incurred additional expenses as it unwound these financing moves. To top it all off, unfavorable weather conditions hurt the bottom line by $0.19 a share. Our estimates and projections are based on Great Plains as a stand-alone entity, and will include the merger-related costs that the company will book this year. The company expects to repurchase 60 million shares over a two-year span, and this is reflected in our figures.

Rate cases are pending in Missouri, and a filing in Kansas is expected in the next few weeks. Kansas City Power & Light and the Greater Missouri Operations asked for a total of $7.5 million (reflecting the pass-through of $67 million of federal taxes), based on a 9.85% return on equity. Orders are expected by late 2018. Similarly, KCP&L plans to file a petition in Kansas, with the same time frame for a regulatory decision.

BUSINESS: Hawaiian Electric Industries, Inc. is the parent company of Hawaiian Electric Company, Inc. (HECO), American Savings Bank (ASB), and Pacific Current. HECO & its subs., Maui Electric Co. (MECO) & Hawaii Electric Light Co. (HELCO), supply electricity to 462,000 customers on O'ahu, Maui, Molokai, Lanai, & Hawaii. Operating companies' systems are not interconnected. Elec. rev. breakdown: residential, 31%; commercial, 34%; lg. light & power, 34%; other, 1%. Generating sources: oil, 53%; purch., 47%. Fuel costs: 46% of revs. '17 reported depr. rate (util.): 3.2%. Has 3,900 employees. Chairman: Jeffrey N. Watanabe. Pres. & CEO: Constance H. Lau. Inc.: HI. Address: 1001 Bishop St., Suite 2900, Honolulu, HI 96808-0730. Tel.: 808-543-5662. Web: www.hei.com.

Hawaiian Electric Industries' earnings are likely to rise sharply this year. The company's largest utility subsidiary, Hawaiian Electric Company (HECO), is benefiting from an interim rate increase that took effect in mid-February. Maui Electric Company (MECO) should obtain a partial year of interim rate relief from its pending rate case (see below). American Savings Bank will retain the benefits of the new federal tax law. We have raised our 2018 earnings estimate by $0.10 a share, to $1.90. Our revised forecast is at the midpoint of HEI's targeted range of $1.80-$2.00.

We expect further profit growth in 2019. HECO and MECO will have a full year's effect of the interim tariff hikes from 2018. We expect continued growth from ASB, as well.

MECO has a rate case pending. The utility filed for a rate increase of $30.1 million (9.3%), based on a return of 10.6% on a common-equity ratio of 56.9%. An interim rate order is expected in late August. This is MECO's first rate application in six years, and is a step toward HEI's goal of reducing its utilities' gap between their allowed and earned ROEs. Note that the $30.1 million figure does not reflect the effects of the new federal tax law.

ASB is performing well. The bank's interest-rate spread and return on assets are improving. A favorable external environment helps. Interest rates are rising, and the state's economy is healthy. ASB has also expanded its consumer lending, which has higher interest rates.

A new subsidiary should make a small contribution to earnings this year. Pacific Current owns a 60-megawatt power plant, which sells electricity to Hawaii Electric Light Company under a long-term agreement, and was awarded a contract for solar power and battery storage at five college campuses. This subsidiary is expected to provide $0.03 a share to profits in 2018.

We do not recommend this stock. The subpar regulatory climate and lack of near-term dividend growth potential are negative factors. With the recent quotation near the upper end of our 2021-2023 Target Price Range, total return potential is minimal.

BUSINESS: IDACORP, Inc. is a holding company for Idaho Power Company, a regulated electric utility that serves 545,000 customers throughout a 24,000-square-mile area in southern Idaho and eastern Oregon (population: 1 million). Most of the company's revenues are derived from the Idaho portion of its service area. Revenue breakdown: residential, 41%; commercial, 24%; industrial, 14%; irrigation, 11%; other, 10%. Generating sources: hydro, 50%; coal, 18%; gas, 8%; purchased, 24%. Fuel costs: 33% of revenues. '17 reported depreciation rate: 2.9%. Has 2,000 employees. Chairman: Robert A. Tinstman. President & CEO: Darrel T. Anderson. Incorporated: Idaho. Address: 1221 W. Idaho St., Boise, Idaho 83702. Telephone: 208-388-2200. Internet: www.idacorpinc.com.

IDACORP's 10-year streak of earnings growth might well come to an end in 2018. This is despite the performance of the company's utility subsidiary, Idaho Power, which is faring well, is financially sound, and has good growth prospects. A year ago, IDACORP's income benefited from some tax adjustments. Favorable weather conditions, helped, as well. Our earnings estimate of $4.15 a share, which we trimmed by a nickel, is within the company's targeted range of $4.10-$4.25. Given that IDACORP earned $4.21 a share in 2017, another year of profit growth is hardly out of the question, based on the company's guidance.

We expect dividend growth to continue, even if earnings growth is interrupted. Management anticipates recommending to the board annual increases of at least 5%. The company is targeting a payout ratio in a range of 50%-60%.

Idaho Power is performing well. The economy of the company's service area is healthy. Customer growth was 2.0% last year, which is more than double the industry norm. Kilowatt-hour sales generally aren't rising as fast (the 2.6% increase in 2017 was driven in part by weather) due to the effects of energy efficiency. The utility's cost control has been effective, too.

We forecast a resumption of profit growth in 2019. We think IDACORP will benefit from the growth of Idaho Power. Our $4.35-a-share estimate would produce an increase of 5%.

The utility has a regulatory mechanism to supplement its income, if necessary. If Idaho Power's earned return on equity falls below 9.5% through 2019, the utility may use up to $25 million of accumulated deferred investment tax credits annually to bring its ROE to that level. (A proposed regulatory settlement would extend this mechanism indefinitely beyond next year.) Note that the ROEs shown in the statistical array are for IDACORP as a whole, not just its utility subsidiary.

This stock is timely, but is priced expensively. The dividend yield is below average for a utility. The recent quotation is near the upper end of our 2021-2023 Target Price Range. Accordingly, total return potential is negligible.

BUSINESS: MGE Energy, Inc. is a holding company for Madison Gas and Electric. It provides electric service to about 151,000 customers in Dane County and gas service to 158,000 customers in seven counties in Wisconsin. Electric revenue breakdown, '17: residential, 34%; commercial, 53%; industrial, 4%; public authorities, 9%. Generating sources, '17: coal, 53%; purchased power, 24%; natural gas and other, 23%. Fuel costs: 20% of rev. '17 depr. rate: 4.0%. Has 712 employees. Off. and dir. own less than 1% of common; The Vanguard Group, Inc., 9.2%; BlackRock, Inc., 6.3% (3/17 proxy). Chairman: Gary J. Wolter. Pres. & CEO: Jeffrey M. Keebler. Inc.: WI. Addr.: 133 South Blair St., Madison, WI 53788. Tel.: 608-252-7000. Web: www.mgeenergy.com.

Shares of MGE Energy have traded lower over the past three months. We believe the stock was particularly vulnerable due to its rich valuation. At the time of our December review, the equity had traded at a price-to-earnings multiple that was well in excess of its historical average. The company posted modest top-line growth for the December quarter. Share earnings of $0.42 matched the prior-year tally. Subscribers are advised that our bottom-line presentation excludes a nonrecurring tax benefit of $0.62 a share related to the U.S. Tax Cuts and Jobs Act.

Prospects for the coming years appear fairly bright. The company's utility operations should be able to capitalize on favorable demographics within its service territories. Healthy residential customer growth will probably further benefit performance here. Investment in operations should also pay off down the road. This includes the construction of a wind farm near Saratoga, Iowa. The 66-megawatt site would consist of 33 turbines. This project is expected to be completed by the end of the year at a cost of $108 million. MGE has also agreed to purchase a stake in the Forward Wind Energy Center. Assuming regulatory approval, this acquisition would provide access to renewable energy for an additional 15 years. Transmission investments and the expansion of the company's solar program will likely also benefit performance. Moreover, efforts by MGE to control operating expenses ought to bear fruit. All things considered, we anticipate healthy growth in revenues and earnings per share from 2018 onward.

This equity is neutrally ranked for year-ahead relative price performance. The shares do not stand out for long-term total return potential, either. The valuation remains on the high side, despite the aforementioned selloff. The dividend yield has improved somewhat over the past three months, though it is not particularly attractive for a utility. The risk profile does appear to be favorable here. MGE Energy earns good marks for Safety, Financial Strength, Price Stability, and Earnings Predictability. Volatility is subdued, as well. Nevertheless, investors can probably find better choices elsewhere at this time.

Michael Napoli, CFA *March 16, 2018*

BUSINESS: NextEra Energy, Inc. (formerly FPL Group, Inc.) is a holding company for Florida Power & Light Company (FPL), which provides electricity to 4.9 million customers in a 27,650-sq.-mi. area in eastern & southern Florida. NextEra Energy Resources is a non-regulated power generator with nuclear, gas, & wind ownership. Has a 79.9% stake in NextEra Energy Partners. Rev. breakdown: residential, 55%; commercial, 35%; industrial & other, 10%. Generating sources: gas, 71%; nuclear, 23%; coal, 4%; purchased, 2%. Fuel costs: 24% of revs. '17 reported depr. rate (utility): 3.7%. Has 13,900 employees. Chairman, President and CEO: James L. Robo. Inc.: Florida. Address: 700 Universe Blvd., Juno Beach, FL 33408. Tel.: 561-694-4000. Internet: www.nexteraenergy.com.

The utility and nonutility sides of NextEra Energy's business are each performing well. Florida Power & Light received a $211 million rate increase at the start of 2018, and will get additional rate relief in mid-2019 after a 1,750-mw gas-fired plant achieves commercial operation. Superior customer growth, helped by the healthy economy in the Sunshine State, is another positive factor. NextEra Energy Resources is adding renewable-energy projects and natural gas pipelines. Two pipeline projects were completed in 2017, and another is expected to begin operation by yearend. This subsidiary will also benefit from the reduced federal tax rate, which management expects will add $0.45 a share to corporate profits this year. All told, we estimate solid earnings growth in 2018 and 2019. Our estimates are within the company's targeted ranges of $7.45-$7.95 a share and $8.00-$8.50 a share, respectively. Note, however, that NextEra's guidance *excludes* gains or losses from mark-to-market accounting items, but we include these because they are ongoing. This boosted profits by $0.26 a share in the March quarter.

The company deconsolidated its NextEra Energy Partners (NEP) master limited partnership subsidiary. This happened due to changes in NEP's governance structure. NextEra recorded a nonrecurring, noncash gain of $6.26 a share in the first quarter due to the deconsolidation. The company also booked nonrecurring, noncash income of $0.96 a share in the same period, thanks to the effects of the new federal tax law.

NextEra Energy's board of directors extended the company's dividend policy through 2020. The expectation is for annual dividend growth of 12%-14% over this time frame. In the first quarter, the board raised the annual disbursement by $0.51 a share (13%).

This equity continues to be one of the top performers in this industry. This is in recognition of NextEra's good results and solid prospects. The price rose 31% last year, and is up slightly in 2018 — a year in which most stocks have lost value. Neither the dividend yield nor the 3- to 5-year total return potential stand out among utility issues, however.

BUSINESS: NorthWestern Corporation (doing business as NorthWestern Energy) supplies electricity & gas in the Upper Midwest and Northwest, serving 433,000 electric customers in Montana and South Dakota and 286,000 gas customers in Montana (87% of gross margin), South Dakota (12%), and Nebraska (1%). Electric revenue breakdown: residential, 40%; commercial, 51%; industrial, 5%; other, 4%. Generating sources: hydro, 36%; coal, 29%; wind, 6%; other, 4%; purchased, 25%. Fuel costs: 31% of revenues. '17 reported deprec. rate: 3.0%. Has 1,600 employees. Chairman: Stephen P. Adik. President & CEO: Robert C. Rowe. Inc.: Delaware. Address: 3010 West 69th Street, Sioux Falls, South Dakota 57108. Tel.: 605-978-2900. Internet: www.northwesternenergy.com.

We estimate that NorthWestern's earnings will advance moderately this year. In 2018, the company will benefit from a full year's effect of a $5.1 million gas rate hike that took effect in Montana last September. The refinancing of debt in the fourth quarter of 2017 is another plus. However, there will be some dilution from the equity issued in 2017 and 2018 via its at-the-market program. Our 2018 share-earnings estimate, which we trimmed by $0.05 a share, is within NorthWestern's targeted range of $3.35-$3.50.

An electric rate case is upcoming in Montana. The utility expects to file an application by September, with an order due by mid-2019. NorthWestern has some assets that are not reflected in rates. However, regulation in Montana has worsened in recent years, which is a cause for concern. Still, a partial year of rate relief would benefit earnings in 2019.

NorthWestern had a setback in the U.S. Court of Appeals. The utility appealed an unfavorable ruling from the Federal Energy Regulatory Commission, which ruled that just 4% of the cost of a gas-fired plant could be allocated to wholesale customers (versus the company's request for a 20% allocation). This forced NorthWestern to take a $0.12-a-share charge in 2012. Management is deciding whether pursuing this matter further is worthwhile.

Another legal matter is pending. The Montana commission disallowed recovery of certain costs associated with a plant outage in 2013. This forced NorthWestern to take a $0.13-a-share charge in the 2016. The utility is seeking relief in the Montana District Court. It expects a decision within the next 12 months.

The board of directors raised the dividend in the first quarter. The hike was $0.10 a share (4.8%) annually, the same as a year earlier. NorthWestern is targeting a payout ratio in a range of 60%-70%.

This stock has a dividend yield and 3- to 5-year total return potential that are above the utility average. This follows a price decline of more than 10% since the start of 2018. This has been a bad year for utility equities, but the falloff has been greater than most in this industry. There isn't a clear reason why.

BUSINESS: OGE Energy Corp. is a holding company for Oklahoma Gas and Electric Company (OG&E), which supplies electricity to 842,000 customers in Oklahoma (84% of electric revenues) and western Arkansas (8%); wholesale is (8%). Owns 25.7% of Enable Midstream Partners. Electric revenue breakdown: residential, 40%; commercial, 26%; industrial, 9%; oilfield, 7%; other, 18%. Generating sources: coal, 34%; gas, 25%; wind, 4%; purchased, 37%. Fuel costs: 40% of revenues. '17 reported depreciation rate (utility): 2.5%. Has 2,400 employees. Chairman, President and Chief Executive Officer: Sean Trauschke. Incorporated: Oklahoma. Address: 321 North Harvey, P.O. Box 321, Oklahoma City, Oklahoma 73101-0321. Telephone: 405-553-3000. Internet: www.oge.com.

OGE Energy's utility subsidiary has filed a general rate case in Oklahoma. Oklahoma Gas and Electric is asking the Oklahoma Corporation Commission (OCC) for an increase of $1.9 million, based on a return of 9.9% on a common-equity ratio of 53%. (The request would have been over $70 million were it not for the pass-through to customers of reduced federal taxes.) The utility is seeking to place in the rate base a $390 million project to modernize the 462-megawatt Mustang gas-fired plant; restore the depreciation rates to their level before the OCC cut these last year; and raise its allowed ROE from the current 9.5%. New tariffs are expected to take effect at the start of October. Note that in Arkansas, OG&E will recover its investment in Mustang through the state's formula rate plan.

The new federal tax law is benefiting earnings. The revaluation of deferred taxes produced a nonrecurring gain of $1.18 a share in the fourth quarter of 2017. This year, the lower tax rate applied to OGE Energy's income from its interest in Enable Midstream Partners will add $0.08 to share net.

Rate relief should benefit the company's profits this year and next. Our 2018 estimate of $2.05 a share is at the upper end of OGE Energy's targeted range of $1.90-$2.05. Also, we expect higher equity income from the stake in Enable as the master limited partnership's prospects improve.

Two environmental compliance projects are on track for completion by yearend. OG&E is adding scrubbers to two units at the Sooner coal-fired plant at a cost of $542 million. Another coal-fired unit is being converted to a gas-fired facility at cost of $76 million. The utility will file a rate application in Oklahoma in late 2018 in order to place these projects in the rate base.

The dividend yield of this stock is above the utility average. What's more, OGE Energy expects to hike the disbursement by 10% annually through next year. Even if the board doesn't maintain such a high growth rate beyond 2019, the increases we project should produce a respectable total return over the 3- to 5-year period.

BUSINESS: Otter Tail Corporation is the parent of Otter Tail Power Company, which supplies electricity to over 130,000 customers in Minnesota (53% of retail elec. revs.), North Dakota (38%), and South Dakota (9%). Electric rev. breakdown, '17: residential, 31%; commercial & farms, 35%; industrial, 32%; other, 2%. Fuel costs: 14.7% of revenues. Also has operations in manufacturing and plastics. 2017 depr. rate: 3.1%. Has 2,097 employees. Off. and dir. own 1.7% of common stock; The Vanguard Group, 9.2%; Cascade Investment, LLC, 8.7%; BlackRock, Inc., 6.5% (3/18 Proxy). Chairman: Nathan I. Partain. CEO: Charles S. MacFarlane. Inc.: MN. Address: 215 South Cascade St., P.O. Box 496, Fergus Falls, Minnesota 56538-0496. Tel.: 866-410-8780. Web: www.ottertail.com.

Shares of Otter Tail have traded lower in price since early December. The pullback followed a strong advance that began in the first quarter of 2016. We think the equity had just gotten a bit ahead of itself. The company posted moderate revenue growth for the December period. Share net increased nearly 14%, to $0.50. Our bottom-line presentation excludes a nonrecurring charge of $1.8 million ($0.05 a share) related to the U.S. Tax Cuts and Jobs Act. Including this charge, share earnings would have been $0.45.

The company is seeking higher rates in North Dakota. Last November, Otter Tail Power Company filed a rate case with the North Dakota Public Service Commission. It is seeking to increase base rates by roughly $13 million (8.7%). The commission granted an 8.6% interim rate increase (effective January 1, 2018), while it considers the overall request. A final determination is expected by the end of the current year.

We anticipate healthy performance going forward. Investment in renewable energy and natural gas generation projects ought to foster strong rate-base growth going forward. All told, Otter Tail Power Company plans to spend roughly $900 million on capital projects through 2022. The pace of capital expenditures should be fairly uneven during this time. Utility spending is expected to approximate $95 million for 2018 and over $380 million for 2019. Elsewhere, the plastics line will likely continue to perform well, and we envision further improvement at the company's manufacturing operations.

Short-term traders may want to take a closer look. This stock is ranked to outperform the broader market averages for the coming six to 12 months. Moreover, Otter Tail earns good marks for Safety, Financial Strength, and Price Stability. Volatility is subdued, as well.

But investors with a long time horizon may prefer to remain on the sidelines at this juncture. Despite the recent selloff, total return potential appears lackluster here. The shares presently trade near the low end of our Target Price Range. The dividend yield is respectable, though not especially compelling for a utility.

Michael Napoli, CFA *March 16, 2018*

BUSINESS: PG&E Corporation is a holding company for Pacific Gas and Electric Company and nonutility subsidiaries. Supplies electricity and gas to most of northern and central California (population 16 million). Has 5.4 million electric and 4.5 million gas customers. Electric revenue breakdown: residential, 41%; commercial, 39%; industrial, 12%; agricultural, 8%; other, less than 1%. Generating sources: nuclear, 27%; hydro, 17%; gas, 9%; purchased, 47%. Fuel costs: 30% of revenues. '17 reported depreciation rate (utility): 3.8%. Has 23,000 employees. Chairman: Richard C. Kelly. President & CEO: Geisha J. Williams. Incorporated: California. Address: 77 Beale Street, P.O. Box 770000, San Francisco, California 94177. Telephone: 415-973-1000. Internet: www.pgecorp.com.

Uncertainty about matters stemming from wildfires in northern California is weighing on the stock price of PG&E. Pacific Gas and Electric is facing the possibility of huge liabilities for damages from the wildfires in its service area last year. The cause of the fires has not yet been determined, but under California's inverse condemnation law, a utility may be liable for damages (and attorneys' fees) caused by its power lines, even if it followed accepted inspection and safety rules. What's more, there is no guarantee that the California Public Utilities Commission will grant permission for PG&E to pass these expenses through to its customers. Measures are being considered in California to address the inverse condemnation problem, but even if this happens, this might come too late to alleviate the risks from last year's fires. The price chart above shows that the quotation is sharply below its 2017 high.

The common and preferred dividends remain suspended. The move conserves cash and will reduce PG&E's equity needs. Management has said the board of directors will "revisit the issue as we get more clarity," and that a dividend reinstatement is possible if the company is "able to narrow the current broad range of potential exposure and uncertainty." It is hard to predict when (and at what level) this will happen. Although we are estimating restoration of a payout in 2019, we think this is the best-case scenario.

Our earnings presentation will *include* any expenses stemming from the wildfires. This is how we have been treating costs associated with a smaller wildfire from 2015, as well as those incurred for several years following a gas pipeline explosion in 2010. Wildfire-related expenses reduced earnings by $0.11 a share in the fourth quarter of 2017 and $0.16 for the full year. Thus, profits are more unpredictable than our Earnings Predictability index suggests.

We think the potential rewards aren't worth the risks. True, the stock price plummeted in response to the wildfire-related uncertainties, but any recovery might well be slow. Meanwhile, shareholders won't reap any dividend income while waiting for PG&E's prospects to improve.

Paul E. Debbas, CFA *April 27, 2018*

BUSINESS: PNM Resources, Inc. is a holding company with two regulated electric utilities. Public Service Company of New Mexico (PNM) serves 524,000 customers in north central New Mexico, incl. Albuquerque and Santa Fe. Texas-New Mexico Power Company (TNMP) transmits and distributes power to 250,000 customers in Texas. Electric rev. breakdown: residential, 39%; commercial, 37%; industrial, 5%; other, 19%. Generating sources: coal, 57%; nuclear, 30%; gas/oil, 12%; solar, 1%. Fuel costs: 28% of revenues. '17 reported deprec. rates: 2.5%-8.4%. Has 1,700 employees. Chairman, President & CEO: Patricia K. Collawn. Inc.: New Mexico. Address: 414 Silver Ave. SW, Albuquerque, NM 87102-3289. Tel.: 505-241-2700. Internet: www.pnmresources.com.

PNM Resources' earnings will probably decline in 2018. In late 2017, Public Service Company of New Mexico received a rate increase that will be phased in over a two-year period beginning this year. Because the utility isn't getting the entire raise right away, but higher expenses are already in effect, this will hurt the bottom line this year. PNM raised its earnings guidance from $1.70-$1.80 to $1.77-$1.87 to reflect the effects of tax reform. We boosted our estimate by $0.15 a share, to $1.85. Note that a regulatory disallowance in the rate case forced the company to take a $27 million pretax charge against fourth-quarter results, which we *excluded* from our earnings presentation as a nonrecurring item. We also excluded a $57.5 million charge associated with the remeasurement of deferred taxes following the new federal tax law.

Earnings should advance strongly in 2019. P.S. of New Mexico will receive the second phase of the aforementioned tariff hike. In addition, Texas-New Mexico Power Company plans to file a rate application in Texas next month. An order is expected in December, with new rates taking effect in January. Our 2019 profit forecast is at the midpoint of the company's targeted range of $2.04-$2.16 a share.

Dividend hikes have been strong over the past several years, but the growth rate is decelerating. Since 2012, this rate has been in a low double-digit range, on average. However, the company expects future dividend increases to mirror its long-term earnings growth rate, at approximately 6%. This pace is still slightly above the mean for the electric utility industry.

We believe more-attractive selections are available elsewhere. The company is facing some challenges. P.S. of New Mexico isn't seeing any load growth (on a weather-normalized basis). The regulatory climate in the state is difficult. (In fact, the utility's appeal of the rate order it received in 2015 is still pending before the New Mexico Supreme Court.) The dividend yield is below average for a utility. Total return potential over the 3- to 5-year period is low, given that the recent quotation is near the upper end of our 2021-2023 Target Price Range.

BUSINESS: Pinnacle West Capital Corporation is a holding company for Arizona Public Service Company (APS), which supplies electricity to 1.2 million customers in most of Arizona, except about half of the Phoenix metro area, the Tucson metro area, and Mohave County in northwestern Arizona. Discontinued SunCor real estate subsidiary in '10. Electric revenue breakdown: residential, 50%; commercial, 40%; industrial, 5%; other, 5%. Generating sources: nuclear, 29%; gas & other, 26%; coal, 22%; purchased, 23%. Fuel costs: 28% of revenues. '17 reported deprec. rate: 2.8%. Has 6,300 employees. Chairman, President & CEO: Donald E. Brandt. Inc.: AZ. Address: 400 North Fifth St., P.O. Box 53999, Phoenix, AZ 85072-3999. Tel.: 602-250-1000. Internet: www.pinnaclewest.com.

Pinnacle West's utility subsidiary has asked the Arizona Corporation Commission for a rate increase. Although the rate order last year for Arizona Public Service froze base tariffs mid-2020, the ruling also allowed APS to file for recovery of an environmental project at the Four Corners coal-fired station through a rider (surcharge) on customers' bills. The utility is seeking an increase of $65 million (about 2%), and no change in the allowed return on equity of 10%. A decision is expected in time for the rider to take effect at the start of 2019. The project should be completed soon at a cost of $390 million. The costs that the company will incur this year will be deferred for recovery beginning next year under the rider.

Another large capital project is under construction. APS is building five gas-fired units and retiring two at an estimated cost of $500 million. This will increase the utility's generating capacity by 290 megawatts. Costs associated with this project will be deferred until APS recovers these in its next base rate increase, presumably in mid-2020.

We estimate a modest earnings increase this year. Pinnacle West raised its 2018 earnings guidance by a dime a share, to $4.35-$4.55, due largely because the company raised its expectation for the Allowance for Funds Used During Construction, a noncash credit to income. Additional expense-management initiatives are another factor. We raised our estimate by $0.10 a share, to $4.50.

We forecast higher profit growth in 2019. The aforementioned rate rider should help. In addition, the utility's strong (and rising) customer growth rate is stimulating modest kilowatt-hour sales growth, despite the effects of energy efficiency. Our $4.70-a-share earnings estimate would produce an increase of 4%.

This untimely stock has a dividend yield and 3- to 5-year total return potential that are about average, by utility standards. Perhaps conservative investors will find this acceptable, given the equity's top-notch Safety rank and the company's high rating for Financial Strength. However, like most utility issues, the recent price is within our 2021-2023 Target Price Range.

BUSINESS: Portland General Electric Company (PGE) provides electricity to 875,000 customers in 52 cities in a 4,000-square-mile area of Oregon, including Portland and Salem. The company is in the process of decommissioning the Trojan nuclear plant, which it closed in 1993. Electric revenue breakdown: residential, 48%; commercial, 33%; industrial, 11%; other, 8%. Generating sources: gas, 28%; coal, 15%; wind, 8%; hydro, 8%; purchased, 41%. Fuel costs: 30% of revenues. '17 reported depreciation rate: 3.6%. Has 2,900 employees. Chairman: Jack E. Davis. President and Chief Executive Officer: Maria M. Pope. Incorporated: Oregon. Address: 121 S.W. Salmon Street, Portland, Oregon 97204. Telephone: 503-464-8000. Internet: www.portlandgeneral.com.

Portland General Electric has filed a rate case. The utility requested an increase of $89 million (4.8%), based on a return of 9.5% on a common-equity ratio of 50%. An order from the Oregon Public Utility Commission (OPUC) is expected in December, with new tariffs taking effect at the start of 2019.

Earnings are likely to decline this year. Favorable weather patterns helped the bottom line in 2017, but the weather in early 2018 turned the other way. In fact, the Portland area had its second-warmest January on record. We have lowered our earnings estimate by $0.20 a share, to $2.20. Our revised estimate is within PGE's guidance of $2.10-$2.25 a share.

There is a possible risk to earnings this year. PGE is going to ask the OPUC for permission to defer (for future recovery) costs in 2018 associated with the upgraded customer information system the company expects to complete soon. If the OPUC doesn't approve this request and the utility must incur these costs, this would reduce earnings by $0.10 a share this year.

Unrecovered costs associated with the Carty gas-fired plant continue to be a drag on earnings. The facility was completed in 2016, several months after PGE declared the contractor of the project in default of the construction agreement. However, $123 million of the plant's $637 million cost are not reflected in rates. PGE filed suit against the contractor's insurer, seeking to collect a $145.6 million performance bond, plus damages. The company expects resolution of this matter to take two to four years, but was citing the same time frame two years ago. Unrecovered costs and litigation expenses reduced earnings by $0.09 a share in 2017, and the loss will widen to an estimated $0.12 a share this year due to the lower tax shield from the reduced federal tax rate.

We forecast an earnings recovery in 2019. We assume normal weather conditions and reasonable treatment in the aforementioned rate case.

This untimely stock has a dividend yield and 3- to 5-year total return potential that are about average for a utility.

BUSINESS: Public Service Enterprise Group Incorporated is a holding company for Public Service Electric and Gas Company (PSE&G), which serves 2.2 million electric and 1.8 million gas customers in New Jersey, and PSEG Power LLC, a nonregulated power generator with nuclear, gas, and coal-fired plants in the Northeast. PSEG Energy Holdings is involved in renewable energy. The company no longer breaks out data on electric and gas operating statistics. Fuel costs: 31% of revenues. '17 reported depreciation rates (utility): 1.6%-2.5%. Has 12,900 employees. Chairman, President & Chief Executive Officer: Dr. Ralph Izzo. Inc.: New Jersey. Address: 80 Park Plaza, P.O. Box 1171, Newark, New Jersey 07101-1171. Telephone: 973-430-7000. Internet: www.pseg.com.

Public Service Enterprise Group's utility subsidiary has a general rate case pending. Public Service Electric and Gas is seeking slight (due to the effects of the new federal tax law) electric and gas tariff increases, based on a 10.3% return on a 54% common-equity ratio. The utility wants to recover costs that aren't recoverable through various regulatory mechanisms that provide for concurrent recovery; increase its depreciation rate; recoup storm-related costs that were deferred; and decouple electric revenues and volume. PSE&G is hoping for new rates and the decoupling mechanism to take effect at the start of October.

The utility has become the largest contributor to PSEG's profits. This is due to growth in PSE&G's income (helped by rising transmission investment) and a decline in margins at PSEG's primary nonutility subsidiary, PSEG Power, due to difficult conditions in the power markets. PSE&G expects its rate base to climb at an average annual rate of 7%-9% through 2022, and should reach the upper end of this range if the New Jersey Board of Public Utilities approves a settlement that would extend the utility's gas system modernization program for five years, beginning in 2019. Under this program, PSE&G would spend nearly $1.9 billion. All told, we expect a strong earnings increase in 2018 and a more modest rise next year.

PSEG Power's nuclear units in New Jersey might get some help from the state government. The company has indicated that without subsidies, market conditions might force the closing of these plants. So, the state legislature passed a law (which awaits the governor's approval) that would provide for "zero emission certificates" that recognize the benefits of nuclear energy because it has no carbon emissions and provides fuel diversity.

The board raised the dividend in February. The quarterly increase was two cents a share (4.7%). We project a similar dividend growth rate over the 3- to 5-year period.

This high-quality stock has a dividend yield that is about average for a utility. With the recent quotation well within our 2021-2023 Target Price Range, total return potential is unexciting.

BUSINESS: PPL Corporation (formerly PP&L Resources, Inc.) is a holding company for PPL Electric Utilities (formerly Pennsylvania Power & Light Company), which distributes electricity to 1.4 million customers in eastern & central PA. Acq'd Kentucky Utilities and Louisville Gas and Electric (1.2 million customers) 11/10. Has electric distribution sub. in U.K. (7.8 million customers). Sold gas distribution subsidiary in '08. Spun off power generating subsidiary in '15. The company no longer breaks out data on electric operating statistics. Fuel costs: 19% of revs. '17 reported deprec. rate: 2.7%. Has 12,500 employees. Chairman, President & CEO: William H. Spence. Inc.: PA. Address: Two North Ninth St., Allentown, PA 18101-1179. Tel.: 800-345-3085. Internet: www.pplweb.com.

Investors' concerns about PPL Corporation's utility operations in the United Kingdom are hurting the price of PPL's stock. The share price sank 12% in 2017—a good year for most utility equities—and has retreated another 11% so far this year. The regulatory commission in the U.K. is considering changes that would reduce the allowed return on equity for electric companies beginning in 2023. There is a separate worry that utilities in the U.K. will be nationalized if the Labour Party goes into power. And currency exchange rates are another source of uncertainty, although we note that PPL has hedged its exposure for 2018 and 2019 and half its exposure for 2020. The effects of these hedges reduced first-quarter earnings by $0.09 a share. We *included* this in our earnings presentation because these items are ongoing, even though management excludes them from its 2018 earnings guidance of $2.20-$2.40 a share.

The prospects for PPL's domestic utilities are less unclear. The utility in Pennsylvania is benefiting from increased income from electric transmission, and the utilities in Kentucky are benefiting from rate increases granted in mid-2017. The solid performance from these operations should help lift earnings modestly in 2019.

Dividend growth might be slowing. The board of directors raised the annual payout by $0.06 a share (3.8%) this year, effective with the April payment. However, PPL is no longer stating its expectation of 4% dividend growth through 2020—merely an expectation of dividend growth of some kind. We note that the new federal tax law will hurt cash flow and necessitated equity financing. PPL has executed a forward sale of 55 million common shares at $27.

The utilities in Kentucky are awaiting a ruling on their advanced metering proposal. If this is approved, they would spend $313 million to install 1.3 million meters over a three-year period. A decision is expected soon.

This untimely stock has one of the highest yields of any electric utility issue. We think the equity is attractive for income-oriented investors who are willing to bear with the risks surrounding the company's U.K. operations. Total return potential to 2021-2023 is respectable.

BUSINESS: SCANA Corporation is a holding company for South Carolina Electric & Gas Company, which supplies electricity to 723,000 customers in central, southern, and southwestern South Carolina. Supplies gas service to 1.4 million customers in North Carolina, South Carolina, and Georgia. Electric revenue breakdown: residential, 46%; commercial, 33%; industrial, 17%; other, 4%. Generating sources: coal, 38%; gas & oil, 27%; nuclear, 23%; hydro & other, 4%; purchased, 8%. Fuel costs: 40% of revenues. '17 reported depreciation rate: 2.6%. Has 5,200 employees. CEO: Jimmy Addison. Incorporated: South Carolina. Address: 100 SCANA Parkway, Cayce, South Carolina 29033. Telephone: 803-217-9000. Internet: www.scana.com.

Wall Street is not optimistic that the acquisition of SCANA by Dominion Energy will be completed. SCANA stockholders would receive .669 of a share of Dominion Energy (valued at $42.24) for each of their shares. The transaction requires the approval of SCANA's stockholders, the regulators in South Carolina and North Carolina, and the Federal Regulatory Commission. South Carolina Electric & Gas has been collecting money from its customers for a nuclear construction project that it canceled due to extensive delays and cost overruns. It believes it is entitled to keep these monies under the state's Base Load Review Act (BLRA), but customers and lawmakers disagree. Dominion Energy stated it would pay $1.3 billion to South Carolina Electric & Gas' electric customers and forgo recovery of $1.7 billion of nuclear costs, but will walk away from the deal if legislators and/or regulators in South Carolina insist on changes that would reduce its economic value. The recent price of SCANA stock is 17% below the value of the offer, so the stock is not trading on the basis of the buyout agreement.

The board of directors postponed a decision on the dividend. This stems from the significant uncertainties the company is facing. The board will make a decision closer to the record date of June 11th. We think the most likely outcome is suspension of the payout, so we are showing a split dividend at the top of the page. Accordingly, income-oriented investors should not be tempted by the seemingly attractive dividend yield.

SCANA is facing other concerns. The staff of the South Carolina commission has proposed a $445 million rate reduction. The state attorney general has questioned whether SCE&G complied with the terms of the BLRA. The cancelation prompted the company to take a $690 million after-tax writedown last year, and as of yearend 2017, $4 billion of unrecovered costs remained on the balance sheet. And the federal government has requested documents relating to the project.

We advise investors to avoid this stock. There is too much risk here. Note that we have lowered the company's Financial Strength rating from B+ to B.

BUSINESS: The Southern Company, through its subs., supplies electricity to 4.6 million customers in GA, AL, FL, and MS. Also has a competitive generation business. Acq'd AGL Resources (renamed Southern Company Gas, 4.5 mill. customers in GA, FL, NJ, IL, VA, & TN) 7/16. Electric rev. breakdown: residential, 37%; commercial, 31%; industrial, 18%; other, 14%. Retail revs. by state: GA, 49%; AL, 35%; FL, 9%; MS, 7%. Generating sources: gas & oil, 42%; coal, 27%; nuclear, 15%; other, 7%; purchased, 9%. Fuel costs: 32% of revs. '17 reported depr. rate (utility): 2.9%. Has 31,300 employees. Chairman, President and CEO: Thomas A. Fanning. Inc.: DE. Address: 30 Ivan Allen Jr. Blvd., N.W., Atlanta, GA 30308. Tel.: 404-506-0747. Internet: www.southerncompany.com.

Southern Company's Georgia Power subsidiary is building two units at the site of its Vogtle nuclear station. As of March 31st, the project was slightly more than halfway complete, with expected in-service dates of November of 2021 and 2022. After delays and cost overruns, the utility's 45.7% share of the project will cost an estimated $8.8 billion. Of this amount, $1.5 billion will be offset by a guarantee from Toshiba, the parent company of Westinghouse (the original contractor that filed for bankruptcy protection).

The company has significant equity needs. Southern estimates that it will require $7 billion over the next five years. Some of this will likely be offset by the proceeds from asset sales and, perhaps, the use of third-party tax-equity financing for renewable-energy projects. Partly because the share count will be higher than we estimated three months ago, we lowered our 2018 and 2019 share-earnings estimates by $0.10 each year. Management's share-net guidance for this year is for a decline to $2.80-$2.95, due in part to the situation at Vogtle and the negative effect of tax reform. However, Southern excludes certain items that we include in our earnings presentation. These added a net of $0.05 to share profits in the first quarter.

Southern is selling two of its gas utilities. The company will receive $1.7 billion ($200 million above book value) for Elizabethtown Gas and Elkton Gas. The closing is expected by the end of the third quarter. The proceeds will offset past equity needs.

The board of directors increased the quarterly dividend by $0.02 a share (3.4%) in the second quarter. We project the same increase each year over the 3- to 5-year period.

This stock has one of the highest dividend yields in the electric utility industry. This is nearly two percentage points above the industry average. Total return potential to 2021-2023 is also above average for a utility. The stock has not performed well in recent years due to the cost overruns at Vogtle and a plant in Mississippi that was supposed to run on gasified coal, but will run as a gas-fired facility. Investors must be willing to accept some construction risk at Vogtle, however.

BUSINESS: Sempra Energy is a holding co. for San Diego Gas & Electric Company, which sells electricity & gas mainly in San Diego County, & Southern California Gas Company, which distributes gas to most of Southern California. Owns 80% of Oncor (acq'd 3/18), which distributes electricity in Texas. Customers: 4.9 mill. electric, 6.6 mill. gas. Electric rev. breakdown: residential, 41%; commercial, 42%; industrial, 10%; other, 7%. Purchases most of its power; the rest is gas. Has nonutility subsidiaries. Sold commodities business in '10. Power costs: 34% of revs. '17 reported deprec. rates: 2.4%-5.5%. Has 20,000 employees. Chairman, President and CEO: Debra L. Reed. Inc.: CA. Address: 488 8th Ave., San Diego, CA 92101. Tel.: 619-696-2000. Internet: www.sempra.com.

Sempra Energy has completed its acquisition of Energy Future Holdings. Sempra paid $9.45 billion in cash for the company that owns 80% of Oncor, a transmission and distribution electric utility in Texas. The company financed the purchase with a combination of 65% equity and 35% debt. Sempra's 2018 earnings guidance of $5.30-$5.80 a share includes a $0.20 contribution from Oncor. We have adjusted our estimates and projections to include the acquisition, and have boosted our 2018 estimate by $0.20 a share, to $5.50. Note that Oncor will not be consolidated for financial reporting purposes due to the "ringfencing" that was required as a condition for regulatory approval.

The company's domestic utilities have a general rate case pending. Southern California Gas and San Diego Gas & Electric have adjusted their filings to reflect the effects of the new federal tax law. The latest requests are for increases of $475 million for SoCalGas and $217 million for SDG&E at the start of 2019.

The new federal tax law is negative for Sempra in the near term, but should be beneficial in the long run. The company took a noncash, nonrecurring charge of $870 million ($3.45 a share) in the fourth quarter of 2017 for the effects of the new tax law, including a plan to repatriate about $1.6 billion of undistributed foreign earnings over the next five years. The near-term losses of a liquefied natural gas project will have a lower tax shield, but will benefit from the lower tax rate once the project is operational. Sempra expects that the profit in the first full year (2020) will rise by $65 million-$75 million over the previous projection of $300 million-$350 million.

The board of directors raised the dividend, effective with the April payment. The annual increase was $0.29 a share (8.8%). We project a continuation of strong dividend growth through 2021-2023. Even so . . .

We advise investors to look elsewhere. This untimely stock is one of the few utility issues that has risen in price so far in 2018. In addition, utilities in California will face legal and regulatory risks associated with wildfires until the state makes changes that will ameliorate these risks.

Vectren was formed on March 31, 2000 through the merger of Indiana Energy and SIGCORP. The merger was consummated with a tax-free exchange of shares and has been accounted for as a pooling of interests. Indiana Energy common stockholders received one Vectren common share for each share held. SIGCORP stockholders exchanged each common share for 1.333 common shares of Vectren.

BUSINESS: Vectren Corp. is a holding company formed through the merger of Indiana Energy and SIGCORP. Supplies electricity and gas to an area nearly two-thirds of the state of Indiana. Owns gas distribution assets in Ohio. Has a customer base exceeding 1.1 million. 2017 Electricity revenues: residential, 38%; commercial, 29%; industrial, 31%; other, 2%. 2017 Gas revenues: residential, 67%; commercial, 22%; other, 11%. Nonutility operations include Infrastructure Services and Energy Services. Est'd plant age: electric, 10 years. '17 depreciation rate: 3.9%. Has about 5,500 employees. Chairman, President, & CEO: Carl L. Chapman. Incorporated: Indiana. Address: One Vectren Square, Evansville, Indiana 47708. Telephone: 812-491-4000. Internet: www.vectren.com.

Shares of Vectren have moved lower in price over the past three months. We think the equity had been particularly vulnerable due to the rich valuation the stock commanded late last year. Moreover, the company posted mixed results for the December quarter. The top line increased modestly, on a year-to-year basis. However, earnings per share of $0.74 were no match for the prior-year tally. This was due to weakness at the company's nonutility operations. A large transmission pipeline project in the back half of 2016 and the expiration of federal tax deductions related to energy efficiency savings made for an unfavorable comparison at this segment. Even so, solid earnings performance at the utility group provided support. This segment benefited from gas infrastructure replacement programs in Indiana and Ohio. This more than offset the anticipated decrease in usage from a large electric customer (that had recently completed its transition to a co-generation facility).

Prospects appear favorable for the coming years, and we expect solid growth from 2018 onward. The company's utility operations ought to further benefit from investment in gas infrastructure programs. Elsewhere, the nonutility group should also fare well, as gas utilities continue to invest in their infrastructure systems. We expect demand will be healthy, given the need to replace aging infrastructure. Still, a measure of unevenness will likely persist at this segment.

This stock is ranked to track the broader market averages for the coming six to 12 months. The equity does not stand out for long-term total return potential, either. The shares' price-to-earnings ratio remains elevated, despite the recent selloff. As a result, this issue presently trades well within our Target Price Range. The dividend yield has improved somewhat since our December review, but is not particularly compelling for a utility. In the plus column, Vectren earns high marks for Safety, Financial Strength, Price Stability, and Earnings Predictability. Moreover, volatility is below average. But all things considered, subscribers can probably find more-attractive choices elsewhere at this time.

BUSINESS: WEC Energy Group, Inc. (formerly Wisconsin Energy) is a holding company for utilities that provide electric, gas & steam service in WI & gas service in IL, MN, & MI. Customers: 1.6 mill. elec., 2.8 mill. gas. Acq'd Integrys Energy 6/15. Sold Point Beach nuclear plant in '07. Elec. rev. breakdown: residential, 35%; small commercial & industrial, 31%; large commercial & industrial, 21%; other, 13%. Generating sources: coal, 49%; gas, 18%; renewables, 4%; purchased, 29%. Fuel costs: 37% of revs. '17 reported deprec. rates (utility): 2.3%-3.3%. Has 8,100 employees. Chairman & Interim CEO: Gale E. Klappa. President & CEO: Allen L. Leverett. Inc.: WI. Address: 231 W. Michigan St., P.O. Box 1331, Milwaukee, WI 53201. Tel.: 414-221-2345. Internet: www.wecenergygroup.com.

Several factors should enable WEC Energy Group's earnings to rise in 2018 and 2019. Every year, the company's utilities receive rate relief through various regulatory mechanisms. Most notably, Peoples Gas in Chicago gets current recovery of its expenditures for an accelerated gas main-replacement program. This spending is expected to amount to $280 million-$300 million annually through 2023. Cost-reduction efforts should boost profits. Our 2018 earnings estimate is at the top end of WEC Energy's guidance of $3.26-$3.30 a share. Management's target for annual earnings growth is 5%-7%. Also . . .

WEC Energy's gas utility in Minnesota was granted an interim rate hike that took effect at the start of 2018. The increase was $9.5 million (3.8%), subject to refund. The company filed for a raise of $12.6 million (5.0%), based on a 10.3% return on equity. A final order is expected by yearend.

Construction of a gas-fired generating plant is under way in Michigan. The 180-megawatt facility is expected to be completed next year at a cost of $277 million. The company will recover half of its investment in the plant in rates and the other half through a 20-year contract with a large industrial customer.

The board of directors raised the dividend in the first quarter of 2018. The increase was $0.13 a share (6.25%) annually. WEC Energy's targets for the dividend are a payout ratio of 65%-70% and yearly growth of 5%-7% (matching its goal for earnings).

The new tax law benefited income in the fourth quarter of 2017. WEC Energy booked a noncash, nonrecurring gain of $0.65 a share.

The dividend yield of this timely stock is about average, by utility standards. Still, this might be sufficient for risk-averse investors, considering that the equity is ranked 1 (Highest) for Safety. However, even after the pullback in utility stocks in early 2018, the recent quotation is at the low end of our 2021-2023 Target Price Range. Accordingly, despite good dividend growth prospects, total return potential is unspectacular, albeit average for a utility.

Paul E. Debbas, CFA *March 16, 2018*

BUSINESS: Westar Energy, Inc., formerly Western Resources, is the parent of Kansas Gas & Electric Company. Westar supplies electricity to 708,000 customers mostly in Kansas. 2017 Electric revenue sources: residential and rural, 32%; commercial and business, 28%; industrial, 16%; other, 24%. The company sold its investment in ONEOK in 2003 and 85% ownership in Protection One in 2004. 2017 depreciation rate: 2.5%. Estimated plant age: 17 years. Fuels: coal, 41%; nuclear, 7%; gas, 30%; renewable, 22%. Has 2,205 employees. Chief Executive Officer and President: Mark A. Ruelle. Chairman: Charles Q. Chandler. Incorporated: Kansas. Address: 818 South Kansas Avenue, Topeka, Kansas 66612. Telephone: 785-575-6300. Internet: www.westarenergy.com.

The proposed merger of equals between Westar Energy and Great Plains Energy is on track to close in the first half of 2018. Under the agreement, no premium would be paid and no cash would be exchanged with respect to either entity. A holding company would be created in which Westar stockholders receive one share for each of their current shares, and Great Plains stockholders receive 0.5981 shares for each share that they own. The tax-free transaction has been approved by each company's stockholders and is expected to be finalized in May or June. In addition, settlements have been reached in Missouri and Kansas. Approval from the state commissions are expected in the coming weeks.

We continue to advise investors to hold their shares. The companies are targeting average annual earnings and dividend growth of 6%-8%, with a targeted payout ratio of 60%-70%. The utilities also expect to save $550 million in the first five years upon completion of the deal, and $140 million to $170 million annually thereafter. If the transaction fails to win regulatory approval, Westar would receive a $190 million termination fee from GXP.

The combined entity expects to set its initial dividend at a level that maintains the current payout for Great Plains stockholders. This would result in an increase of about 15% for Westar stockholders.

The new tax legislation will not have a material impact on earnings. In February, Westar asked the Kansas Corporation Commission to update its prices and reduce rates by approximately $74 million, which is the amount it expects to save each year under the new tax law. The company's request also included $11 million of initial savings in contemplation of its proposed merger with Great Plains Energy, and $29 million in savings achieved from refinancing debt. A decision by the KCC on all matters is due in September.

This stock is unranked for Timeliness due to the pending transaction. Although state regulators blocked the initial merger between Westar and Great Plains, the revised accord has been altered to appeal to all parties involved. Thus, we expect the deal to proceed as planned.

BUSINESS: Xcel Energy Inc. is the parent of Northern States Power, which supplies electricity to Minnesota, Wisconsin, North Dakota, South Dakota & Michigan & gas to Minnesota, Wisconsin, North Dakota & Michigan; Public Service of Colorado, which supplies electricity & gas to Colorado; & Southwestern Public Service, which supplies electricity to Texas & New Mexico. Customers: 3.6 mill. electric, 1.9 mill. gas. Elec. rev. breakdown: residential, 31%; sm. comm'l & ind'l, 36%; lg. comm'l & ind'l, 18%; other, 15%. Generating sources not available. Fuel costs: 40% of revs. '17 reported depr. rate: 3.1%. Has 11,500 employees. Chairman, Pres. & CEO: Ben Fowke. Inc.: MN. Address: 414 Nicollet Mall, Minneapolis, MN 55401. Tel.: 612-330-5500. Internet: www.xcelenergy.com.

Xcel Energy is awaiting orders on rate cases in three states. The largest ones are Public Service of Colorado's multiyear electric and gas applications. The utility requested electric hikes totaling $245 million from 2018 through 2020, and gas increases totaling $139 million over that span. Each filing is based on a 10% return on a 55.25% common-equity ratio. An interim gas increase of $63 million took effect at the start of 2018, and the company is asking for a $75 million interim gas raise at the start of June. Southwestern Public Service asked the regulators in Texas and New Mexico for a total of $97 million, based on a 10.25% return on a 58% common-equity ratio. Rulings are expected this summer in New Mexico and early in the fourth quarter (retroactive to January of 2018) in Texas.

Rate relief is boosting Xcel's earning power and enabling the company to reduce the gap between its earned and allowed returns on equity. Management's earnings guidance for 2018 is $2.37-$2.47 a share. Our estimate of $2.45 is near the upper end of this range. We forecast more-modest profit growth in 2019. Xcel's goal for long-term earnings growth is 5%-6% annually.

Xcel's utilities have some proposals pending involving renewable energy. The aim is to retire coal-fired units and replace them with renewables, gas, and storage — and to do this without raising rates for customers. SPS received approval in New Mexico, and awaits a decision in Texas, for a $1.6 billion project to add wind in the two states. P.S. of Colorado expects a ruling in July on its plan to spend up to $1.5 billion to add wind, solar, and gas.

The board of directors raised the common dividend, effective with the April payment. The increase was $0.02 a share (5.6%) quarterly, the same as in recent years. Xcel's goals for the dividend are growth of 5%-7% annually and a payout ratio of 60%-70%.

This untimely stock has a dividend yield and 3- to 5-year total return potential that are about average, by utility standards. This might be acceptable for conservative accounts, given the issue's top rank for Safety.

Paul E. Debbas, CFA *April 27, 2018*

Copyright 2018 Zacks Investment Research

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +25% per year. These returns cover a period from 1988-2017. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zack Ranks stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations.

Copyright 2018 Zacks Investment Research

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +25% per year. These returns cover a period from 1988-2017. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zack Ranks stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations.

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +25% per year. These returns cover a period from 1988-2017. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zack Ranks stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations.

Copyright 2018 Zacks Investment Research

At the center of everything we do is a strong commitment to independent research and sharing its profitable discoveries with investors. This dedication to giving investors a trading advantage led to the creation of our proven Zacks Rank stock-rating system. Since 1988 it has more than doubled the S&P 500 with an average gain of +25% per year. These returns cover a period from 1988-2017. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stock prices plus any dividends received during that particular month. A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations. Zack Ranks stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations.
