The following documentation is for information purposes as requested by the Public Service Commission of North Dakota in regard to the Andeavor NGL Pipeline Project.

The documents following include:

## ND Dept of Health Permit to Discharge Hydrostatic Test Water

October 9, 2018

Andeavor Field Services, LLC  
Michael Tyler  
1801 California Street  
Suite 1200  
Denver, CO 80202

Re: NDPDES Permit No. NDG070675

We have received your "Application for Permit to Discharge - NDPDES Industrial-Short Form C" and have granted authority to discharge under the General Permit for Temporary Dewatering/Hydrostatic Testing Permit NDG070000. Your facility has been assigned permit no. **NDG070675**. This permit has been issued by the North Dakota Department of Health (NDDoH) with the understanding that all other applicable permits and permissions have been obtained for the start of the following project. The application indicates that the discharge(s) for the Y-Grade Hub Pipeline Project will consist of water from MBI's fresh water well, West Dakota Water, and MBI's frac water well discharged from three hydrotests on newly constructed virgin steel and virgin carbon steel pipe.

<u>Discharge Point</u>	<u>Volume (gallons)</u>	<u>Location</u>	
001H	159,600	Fryburg Rail Terminal	TWN 139N, RGE 100W, SEC 3, Billings County
002H	164,512	South Y Grade Hug	TWN 141N, RGE 99W, SEC 34, Billings County
003H	239,400	Watford Receipt Facility	TWN 145N, RGE 98W, SEC 4, Billings County

**All discharge points shall be inspected daily.** On a daily basis record the total volume of discharge and make a visual inspection for Oil and Grease. Analytical parameters for pH and Total Suspended Solids (TSS) shall be tested for this project. The parameter for Chlorine shall be tested only if the water source has been chlorinated. The parameter of Oil and/or Grease is waived unless a sheen is observed in the discharge; if observed then collect a sample for Total Petroleum Hydrocarbon (TPH). The department shall be contacted on all findings of Oil and Grease. All discharges made directly to a surface water body or wetland shall be inspected closely in order to minimize any turbidity issues. Best Management Practices (BMPs) must be used to minimize the impact of the discharge.

**ADDITIVES:** No additives were reviewed for this project.

You are currently signed up to submit DMRs through the department's Electronic Reporting Information System (ERIS). All DMR reports will be submitted through ERIS. The reports cover three months each.

If any other testing is conducted during this project, copies of the results of any such test should be forwarded to the Department. **Should you wish to no longer be covered under this permit, you must submit a written request to terminate and cite the reasons for termination.** Coverage shall be maintained until a written notification to release has been issued to the permittee by NDDoH. Should you have any questions about your permit or how to complete the DMRs, please contact me at (701) 328-5237.

Sincerely,

  
Sarah Waldron Feld
