**RE: Harmony Solar ND, LLC's Ten Year Plan for 2020-2030
Case No. PU-20-_____**

**Harmony Solar ND 2, LLC's Ten Year Plan for 2020-2030
Case No. PU-20-_____**

Dear Mr. Kahl:

Attached for filing are electronic copies of the following documents:

1. Harmony Solar ND, LLC's Ten Year Plan: 2020-2030;
2. Notice of Filing Ten Year Plan (Harmony Solar ND): 2020-2030;
3. Harmony Solar ND 2, LLC's Ten Year Plan: 2020-2030;
4. Notice of Filing Ten Year Plan (Harmony Solar ND 2): 2020-2030; and
5. Certificate of Service.

If you have any questions, please let me know.

Sincerely,

MOLLIE M. SMITH

MMS/bd
Enclosures

cc: Melissa Schmit (w/ encl., via e-mail)

70121182 v2

TEN YEAR PLAN: 2020-2030
Harmony Solar ND, LLC

June 2020

In accordance with N.D.C.C. § 49-22-04 and N.D.A.C. Ch. 69-06-02, Harmony Solar ND, LLC (“Harmony Solar”), submits the following Ten Year Plan for years 2020 through 2030.

- (1) *A description of the general location, size, and type of all facilities to be owned or operated by the utility during the ensuing ten years, as well as those facilities to be removed from service during the ten-year period.*

Harmony Solar is proposing to develop and construct an up to 200 MW solar energy conversion facility known as the Harmony Solar Project (“Project”). The Project will be located 15 miles west of Fargo in Cass County, ND. The Project will consist of solar arrays, inverters, access roads, an electrical collection system, an O&M building and a Project step-up substation. The Project will be fully enclosed within a safety fence.

On August 27, 2017, Harmony Township issued a Conditional Use Permit for the Project. On February 26, 2019, the North Dakota Public Service Commission (“Commission”) issued Findings of Fact, Conclusions of Law and Order granting Certificate of Site Compatibility No. 58 to Harmony Solar for the Project (*see* Case No. PU-18-219). Harmony Solar plans to have the Project commercially operational as early as the fourth quarter 2022, following the completion of construction and testing.

Harmony Solar does not currently have any facilities within North Dakota and, therefore, has no plans to decommission any facilities. The Project will have an estimated life of greater than 10 years. As such, Harmony Solar does not have any plans to decommission any proposed facilities within the timeframe of this plan.

- (2) *An identification of the location of the tentative preferred site for all electric energy conversion facilities and the tentative location of all electric transmission facilities on which construction is intended to be commenced within the ensuing five years and such other information as may be required by the commission. The site and corridor identification shall be made in compliance with the criteria published by the commission pursuant to section 49-22-05.1.*

The Project will be located west of Fargo, North Dakota approximately 4 miles northeast of Casselton in eastern Cass County. As set forth in the Commission’s Order (referenced above), the location of the Project complies with the Commission’s siting criteria, including the exclusion and avoidance area criteria

referenced in N.D.C.C. § 49-22-05.1 and identified in N.D.A.C. Ch. 69-06-08. Maps depicting the Project's designated site, and additional detail regarding the site, are provided in Case No. PU-18-219.

- (3) *A description of the efforts by the utility to coordinate the plan with other utilities so as to provide a coordinated regional plan for meeting the utility needs of the region.*

Throughout the development of the Project, Harmony Solar has and will continue to engage and coordinate with the Midcontinent Independent Transmission System Operator ("MISO"), the local transmission owner, Xcel Energy, and the local electrical cooperatives regarding the Project.

In June of 2017, Harmony Solar moved its request to MISO for interconnection of 200 MW of solar generation at Xcel Energy's Bison Substation into the Definitive Planning Phase. Harmony Solar's Interconnection Application was filed per the MISO Business Practice Manual O 15 for Generator Interconnection. Harmony Solar's Interconnection and MISO's administration of the application are consistent with MISO's Open Access Transmission, Energy and Operating Reserves Market Tariff, and per the operating policies of the Midwest Reliability Organization designed to facilitate the administration of efficient energy markets.

- (4) *A description of the efforts to involve environmental protection and land-use planning agencies in the planning process, as well as other efforts to identify and minimize environmental problems at the earliest possible stage in the planning process.*

Harmony Solar utilized internal environmental personnel, as well as quality external environmental consultants, to study and identify avoidance and exclusion areas within the Project site, in accordance with N.D.C.C. Ch. 49-22 and N.D.A.C. Ch. 69-06-08. As set forth in the Commission's Order (referenced above), the location of the Project complies with the Commission's siting criteria, including the exclusion and avoidance area criteria referenced in N.D.C.C. § 49-22-05.1 and identified in N.D.A.C. Ch. 69-06-08. As discussed above, Harmony Township issued a conditional use permit for the Project. Throughout Project development, Harmony Solar has consulted with applicable local, state, and federal agencies and entities, and will continue to do so, as appropriate.

- (5) *A statement of the projected demand for the service rendered by the utility for the ensuing ten years and the underlying assumptions for the projection, with that information being as geographically specific as possible, and a description of the manner and extent to which the utility will meet the projected demands.*

Harmony Solar is proposing to construct this facility to sell energy, capacity and renewable energy credits ("RECs"), either bundled or unbundled, to one or more electric utilities and/or commercial customers. Harmony Solar is actively

marketing the project to a number of potential off-takers and may sell the power in the form of a power purchase agreement ("PPA"), or the Project could be owned directly by a utility.

As an independent power producer, Harmony Solar is not limited to the needs of one region and is able to bid into multiple wholesale markets across the region. For example, over the past year Harmony Solar was eligible to bid into multiple corporate/industrial power supply proposal requests in the region. Utilities and other customers seeking to diversify and build their energy generation portfolios are attracted to solar energy projects because of long-term, fixed, competitive pricing, high capacity value, environmental benefits and existing and potential renewable energy policies.

Renewable Energy Policies

In 2007, the North Dakota Legislature enacted a statutory provision adopting the national "25x'25" initiative, which establishes a goal of having not less than twenty-five percent of the total energy consumed within the United States come from renewable resources by January 1, 2025.¹ Additional renewable resources will be needed to meet the 25x'25 initiative.

A need also exists for renewable energy produced in North Dakota to meet state renewable portfolio standards. Eleven of the MISO states currently have either mandated or voluntary renewable portfolio standards or policies.² North Dakota is proximate to some of these other jurisdictions that have renewable policies. Minnesota, in particular, has a standard that requires Xcel Energy to obtain 30% of its energy from renewables by 2020, and all other utilities to obtain 25% of their energy from renewables by 2025.³ In addition, Minnesota investor-owned utilities are required to obtain 1.5% of their energy from solar by 2020. Under current state standards, total United States renewable portfolio standard demand will increase from 310 terawatt hours ("TWh") in 2019 to 600 TWh in 2030.⁴ Given existing renewable energy capacity, an additional 230 TWh increase in renewable resources will be required to meet demand through 2030.⁵ In addition, the regional transmission grid is being expanded to deliver renewable energy

⁵ *Id.* at 26.

generation in a cost-effective manner.⁶ North Dakota’s available land and good insolation, along with newly constructed transmission lines, create an ideal environment for solar energy projects to meet regional renewable and solar standards or policies.

Economic Energy and Capacity

With improving technology and falling costs, utilities are beginning to include solar projects in their resource plans as long-term economic energy and capacity resources. In North Dakota, peak solar generation has a high correlation with the MISO’s coincident peak, which determines the reserve margins MISO utilities must maintain for reliability and reserve sharing purposes. Recent solar pricing has shown that utility scale solar provides electricity during daylight hours at a cost per MW-hour on par, or less than, many gas-fired electric generators. New solar energy facilities are less expensive to construct than new conventional energy sources, even without government subsidies.⁷ In general, alternative energy sources provide lower costs per MW-hour than conventional sources.⁸

Commercial and Industrial Demand

In addition to traditional utility demand for solar energy, a growing number of corporations are turning to renewable energy to save money on energy and meet sustainability goals. Corporate customers either purchase renewable energy directly or obtain renewable benefits and cost savings through financially settled contracts, sometimes called virtual PPAs. In addition, many utilities are creating “green tariffs,” which allow customers to purchase up to 100% renewable energy from the utility.

Beyond the growing demand from utilities, non-traditional power buyers, such as Google, IKEA, Apple, eBay, Facebook, General Motors, Johnson & Johnson, Kellogg’s, Microsoft, Nike, and Wal-Mart, have announced plans to purchase renewable energy. In fact, over 6.53 gigawatts (“GW”) of renewable energy have been purchased by non-utilities as of the end of 2018.⁹ That compares to 2.78 GW procured by non-utilities in 2017 and approximately 1.73 GW in 2016. These businesses have a rapidly growing appetite for affordable clean energy, and North Dakota solar is poised to help meet that demand.

TEN YEAR PLAN: 2020-2030
Harmony Solar ND 2, LLC

June 2020

In accordance with N.D.C.C. § 49-22-04 and N.D.A.C. Ch. 69-06-02, Harmony Solar ND 2, LLC (“Harmony Solar 2”), submits the following Ten Year Plan for years 2020 through 2030.

- (1) *A description of the general location, size, and type of all facilities to be owned or operated by the utility during the ensuing ten years, as well as those facilities to be removed from service during the ten-year period.*

Harmony Solar 2 is proposing to develop and construct an up to 200 MW solar energy conversion facility known as the Harmony Solar 2 Project (“Project”). The Project will be located 15 miles west of Fargo in Cass County, ND. The Project will consist of solar arrays, inverters, access roads, an electrical collection system, an O&M building and a project step-up substation. The Project will be fully enclosed within a safety fence.

Harmony Solar 2 does not currently have any facilities within North Dakota and, therefore, has no plans to decommission any facilities. The Project will have an estimated life of greater than 10 years. As such, Harmony Solar 2 does not have any plans to decommission any proposed facilities within the timeframe of this plan.

- (2) *An identification of the location of the tentative preferred site for all electric energy conversion facilities and the tentative location of all electric transmission facilities on which construction is intended to be commenced within the ensuing five years and such other information as may be required by the commission. The site and corridor identification shall be made in compliance with the criteria published by the commission pursuant to section 49-22-05.1.*

The Project will be located west of Fargo, North Dakota approximately 4 miles northeast of Casselton in eastern Cass County. A map of the proposed site for the Project is provided in **Exhibit A**, attached hereto. The Project will be designed so as to comply with the exclusion and avoidance areas referenced in Section 49-22-05.1 of the North Dakota Century Code and identified in Sections 69-06-08-01 of the North Dakota Administrative Code.

- (3) *A description of the efforts by the utility to coordinate the plan with other utilities so as to provide a coordinated regional plan for meeting the utility needs of the region.*

Throughout the development of the Project, Harmony Solar 2 has and will continue to engage and coordinate with the Midcontinent Independent

Transmission System Operator (“MISO”), the local transmission owner, Xcel Energy, and the local electrical cooperatives regarding the Project.

In June of 2020, Harmony Solar 2 submitted an interconnection application to MISO for 200 MW of solar generation at the Bison Substation. Harmony Solar 2’s Interconnection Application was filed per the MISO Business Practice Manual 015 for Generator Interconnection. Harmony Solar 2’s Interconnection and MISO’s administration of the application are consistent with MISO’s Open Access Transmission, Energy and Operating Reserves Market Tariff, and per the operating policies of the Midwest Reliability Organization designed to facilitate the administration of efficient energy markets.

- (4) *A description of the efforts to involve environmental protection and land-use planning agencies in the planning process, as well as other efforts to identify and minimize environmental problems at the earliest possible stage in the planning process.*

Harmony Solar 2 has utilized internal environmental personnel, as well as external environmental consultants, to conduct studies and analyses of the Project to ensure it will comply with the siting criteria set forth in Chapter 49-22 of the North Dakota Century Code, as well as Section 69-06-08-01 of the North Dakota Administrative Code. Additionally, Harmony Solar 2 has consulted and will continue to consult with applicable state and federal agencies to avoid, minimize, and/or mitigate any impacts to the environment from the construction and operation of the Project. Harmony Solar 2 has been and will continue to work with Cass County and Harmony Township to ensure conformance with local land use regulations.

- (5) *A statement of the projected demand for the service rendered by the utility for the ensuing ten years and the underlying assumptions for the projection, with that information being as geographically specific as possible, and a description of the manner and extent to which the utility will meet the projected demands.*

Harmony Solar 2 is proposing to construct this facility to sell energy, capacity and renewable energy credits (“RECs”), either bundled or unbundled, to one or more electric utilities and/or commercial customers. Harmony Solar 2 is actively marketing the Project to a number of potential off-takers and may sell the power in the form of a power purchase agreement (“PPA”), or the Project could be owned directly by a utility.

As an independent power producer, Harmony Solar 2 is not limited to the needs of one region and is able to bid into multiple wholesale markets across the region. For example, over the past year Harmony Solar 2 was eligible to bid into multiple corporate/industrial power supply proposal requests in the region. Utilities and other customers seeking to diversify and build their energy generation portfolios

are attracted to solar energy projects because of long-term, fixed, competitive pricing, high capacity value, environmental benefits and existing and potential renewable energy policies.

Renewable Energy Policies

In 2007, the North Dakota Legislature enacted a statutory provision adopting the national "25x'25" initiative, which establishes a goal of having not less than twenty-five percent of the total energy consumed within the United States come from renewable resources by January 1, 2025.¹ Additional renewable resources will be needed to meet the 25x'25 initiative.

A need also exists for renewable energy produced in North Dakota to meet state renewable portfolio standards. Eleven of the MISO states currently have either mandated or voluntary renewable portfolio standards or policies.² North Dakota is proximate to some of these other jurisdictions that have renewable policies. Minnesota, in particular, has a standard that requires Xcel Energy to obtain 30% of its energy from renewables by 2020, and all other utilities to obtain 25% of their energy from renewables by 2025.³ In addition, Minnesota investor-owned utilities are required to obtain 1.5% of their energy from solar by 2020. Under current state standards, total United States renewable portfolio standard demand will increase from 310 terawatt hours ("TWh") in 2019 to 600 TWh in 2030.⁴ Given existing renewable energy capacity, an additional 230 TWh increase in renewable resources will be required to meet demand through 2030.⁵ In addition, the regional transmission grid is being expanded to deliver renewable energy generation in a cost-effective manner.⁶ North Dakota's available land and good insolation, along with newly constructed transmission lines, create an ideal environment for solar energy projects to meet regional renewable and solar standards or other policies.

Economic Energy and Capacity

With improving technology and falling costs, utilities are beginning to include solar projects in their resource plans as long-term economic energy and capacity resources. In North Dakota, peak solar generation has a high correlation with the
