RE: NATURAL GAS CAPACITY EXPANSION PROJECT
REQUEST FOR JURISDICTIONAL DETERMINATION
CASE NO. PU-21-35

Dear Mr. Johnson:

In response to your January 21, 2021 letter asking for the following:

- *A general map similar to Figure 1 in the Request showing the Fargo/West Fargo service area and identifying the location of all distribution centers (points of demarcation between transmission and distribution) in relation to the pipeline segment that is proposed to be constructed.*
- *The name of the owner of each transmission pipeline connecting at those distribution centers/points of demarcation.*
- *The value for 20 percent of SMYS for the project pipe and the hoop stress at which the project pipe will operate.*

I am enclosing a map depicting the proposed pipeline segment, as well as relevant town border stations and the name of the transmission pipeline owner connecting at those town border stations. Additionally, I note that the current design of the proposed pipeline segment indicates that the pressure at 20 percent of SMYS is 611 psig, and the current design indicates the project pipe will operate at 10.5 percent hoop stress.

Please let me know if you need any additional information.

Sincerely,

/s/

Matt Harris
Lead Assistant General Counsel
