

BEPC request for overhead power crossing in Debing Township

From: Shauna Laber (slaber@bepc.com)

To: Charlie.sorenson@yahoo.com

Date: Thursday, October 1, 2020, 05:24 PM CDT

Good afternoon, Chairman Sorenson:

Thank you for taking my telephone call today regarding a request for Basin Electric Power Cooperative to construct a 230kV overhead transmission line project in your township. We are applying for the road crossing permit for the county and they are seeking concurrent approval from the townships affected by the project.

Attached you will find a preliminary project map with proposed structure locations (black dots) and the local road ways that will be crossed as well as the form required by Mountrail County. I can attend your next meeting to further describe the project or I can email or mail additional information. Let me know what will work the best for you and your board and I will get any information you need to help in this process.

The structures in this area will be a single pole, stainless steel material, and we may require temporary or permanent approaches, however, we will verify that and make an application for that work specifically prior to construction, currently planned for early 2022.

I appreciate you and your boards time and effort to review this request.

Sincerely,

Shauna
