

Metering (for illustrative purposes)

Injection capacity capped @ max wind output

1. Battery load will be settled at Wholesale Storage Load (WSL) meter.
2. Bowman generation to grid will be settled via Gen & Site Load Meter

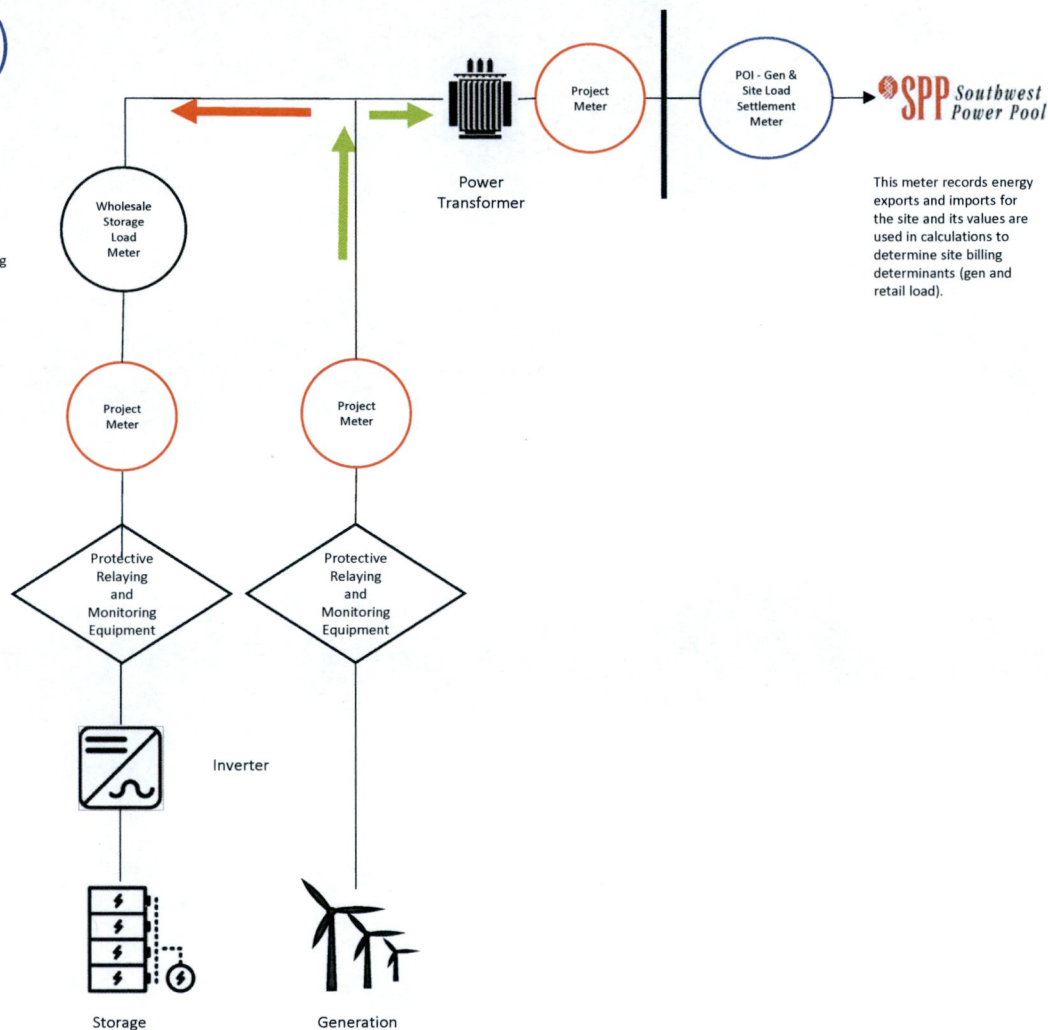

Notes:

→ Generation

→ Charging / Load

○ Local meter for shadow settlements

This meter records energy for battery charging, energy conversion process losses, and protective relaying and monitoring losses

This meter records energy exports and imports for the site and its values are used in calculations to determine site billing determinants (gen and retail load).
