

Bowman Wind, LLC
Bowman Wind Project
Docket No. PU-21-121

Late-Filed Exhibit No. 35 – Television Reception Mitigation

At the August 24, 2021 public hearing, Commissioner Christmann requested that Bowman Wind, LLC (“Bowman Wind”) address further how it would mitigate any potential television reception issues caused by the Bowman Wind Project (“Project”).

Potentially, there may be impacts to off-air television reception due to Project facilities. Should this problem arise, there are options available to mitigate the effects. The mitigation options that Bowman Wind may consider include: 1) a payment to each affected household for the cost of replacing coverage via either satellite or cable TV, or equivalent; or 2) a payment to the local cable TV company or equivalent to provide monthly programming at the affected channels to affected households. Bowman Wind will monitor concerns with television reception through construction and operation, and will continue to mitigate (pay for) problems caused by Bowman Wind using the most efficient solution that adequately addresses an issue, should it arise.
