

Bowman Wind, LLC  
Bowman Wind Project  
Docket No. PU-21-121

**Late-Filed Exhibit No. 39 – Update Regarding Current  
Project Area and Layout**

Provided herewith as Late-Filed Exhibit No. 39(a) is an updated figure showing the current Project layout and Project Area, reflecting the following updates:

- The Project layout has been updated to remove turbines T18b and S18a (and associated facilities) and the battery storage facility. The updated Project layout includes 84 potential turbine locations, of which up to 74 will be constructed.
  - With removal of the battery storage facility and turbines T18b and S18a (and associated facilities), the proposed Project layout impacts approximately 89.7 acres of land. However, since this impact calculation is based on all 84 proposed turbine locations, and only up to 74 turbines will be constructed, the actual permanent impacts will be less.
  - With removal of the battery storage facility, the updated estimated cost for construction of the Project is approximately \$300 million.
- The Project Area has been updated to reflect the current participation status:
  - Bowman Wind, LLC (“Bowman Wind”) secured agreements for two of the parcels previously identified as “pending participant” parcels in Figure 5 of BW Exhibit No. 3 (the W/2NE/4 of Section 15 and the S/2 of Section 22 in Hart Unorganized Territory). Those parcels are now shown as participating in the updated figure provided herewith.
  - Receptor R-148 (located in the SE/4 of Section 29, Adelaide Township) signed a good neighbor agreement, including a sound waiver. Receptor R-148 is now shown as participating in the updated figure provided herewith.
  - Bowman Wind removed an 80-acre parcel from the Project Area (the W/2W/2 of Section 14 in Hart Unorganized Territory), which had previously been identified as a “pending participant” parcel in Figure 5 of BW Exhibit No. 3. Bowman Wind did not obtain a participation agreement for this parcel, and the current Project layout remains in compliance with all applicable requirements without this parcel.
  - As reflected in the updated figure, all parcels within the proposed Project Area are under agreement with Bowman Wind and, as such, are participating parcels. With the updates described above, there are now 40,947.8 acres in the Project Area.

The updates to the Project Area and layout are depicted on the Updated Comparison Figure provided herewith as Late-Filed Exhibit No. 39(b), which compares the previous Project Area and layout (depicted on Figure 5 of BW Exhibit No. 3) with the current Project Area and layout.
