North Dakota Public Service Commission  
600 East Boulevard Ave, Dept 408  
Bismarck, ND 58505-0480

Re: PU-21-241 and PU-21-305

Dear Mr. Renfandt:

I am responding to your letters of July 13<sup>th</sup> concerning Case Numbers PU-21-241 and PU-21-305 regarding ND One Call Complaints against BEK Consulting submitted by Montana Dakota Utilities Company. Corresponding locate tickets are 21079676 for PU-21-241 and 2179680 for PU-21-305.

Prior to starting any project, the first step we take is to call in locates. Attachment #1 is a site plan sheet showing the limits of the project. The site plan has been color coded and labeled, identifying the locate ticket associated with each colored area. Sheet two lists the labeled areas and the locate tickets pulled for each area. Once the locates are called in and the areas were located, we hired a vac-service company and we potholed and exposed the utilities in the areas we needed to install sanitary or storm sewer and the areas where sub-cutting was required to bring the planned road sub-grade to the proper elevation. The elevation of the utility exposed was recorded and compared to the plan elevation of the road subgrade, sanitary and storm sewer, to determine if there was a conflict and if the utility needed to be re-located.

Attachment #2 shows the areas of the project that were potholed, and the elevation of the utility recorded. BEK incurred over \$20,000 in vac-service expense pre-locating utilities before we began actual excavation operations. These were not the only potholing locations performed. While excavating for the sanitary and storm sewer installation work, or sub-cutting for the road grade, probing and hand digging was performed when the excavation work approached the utility to verify the location and elevation of the utility was not in conflict with our work.

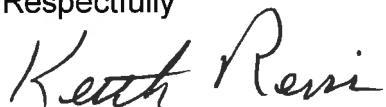

As is on every project, the plans a contractor is given to build a project, showing existing buried utilities, are only as good as the information available to the engineer designing the project. This information comes from the utility companies that installed the utilities into the ground originally and from as-builts of previous projects performed. Another factor is how the utility was installed, did they maintain an even depth, straight line or did they weave around or go up over obstacles under the ground. During our exploration work, we found unmarked utilities on the opposite side of the road from where they were shown on the plans and utilities that changed elevation by a couple of feet within a distance of 10–15 feet.

In the complaints filed by MDU, both gas and electric utilities (overhead) were involved. In several areas where space was tight, we requested the overhead line be de-energized or be provided with a guard over the line to prevent arcing, which was denied. After the incident where our excavator took out two phases of the primary on an overhead line, we shut the project down until after the 4<sup>th</sup> of July Holiday. Prior to starting operations again, we brought in signs warning of overhead lines and constructed a set of two poles with a rope between with ribbons attached to alert our workers of the overhead dangers (Attachment #3). We have since added two more sets of these overhead alert devices to prevent further incidents.

The incidents with the gas utilities involved our grading crew responsible for sub-cutting the streets to bring the subgrade to the plan elevation. I question MDU's comments regarding the two steel service lines found damaged and their innuendo that the crew was trying to hide the damage and not report it. It is not known when it was struck and if you have an exposed service line sticking out for the whole world to see it a very good indication you are not trying to hide and not report it. After the last hit, it was evident that there was something lacking on the grading crew. The incident resulted in the dismissal and replacement of grading foreman, the operator was taken for a drug and alcohol screening and a letter of reprimand in his personnel file. We spent time with the crew reviewing and discussing the issues that them to that point how we will move forward and reviewed safe work practices.

Lonnie Kern, owner of BEK Consulting has over 20 years of experience in this type of work and his priority is the safety of his employees and the public. The accusation by MDU that BEK is blatantly hitting their utilities is defamatory and unfounded. Attachment #4 is a picture of one of MDU's excavations relocating one of their gas lines where they trenched through two sewer lines and a fiber line. Brings to mind John 8:7.

Respectfully

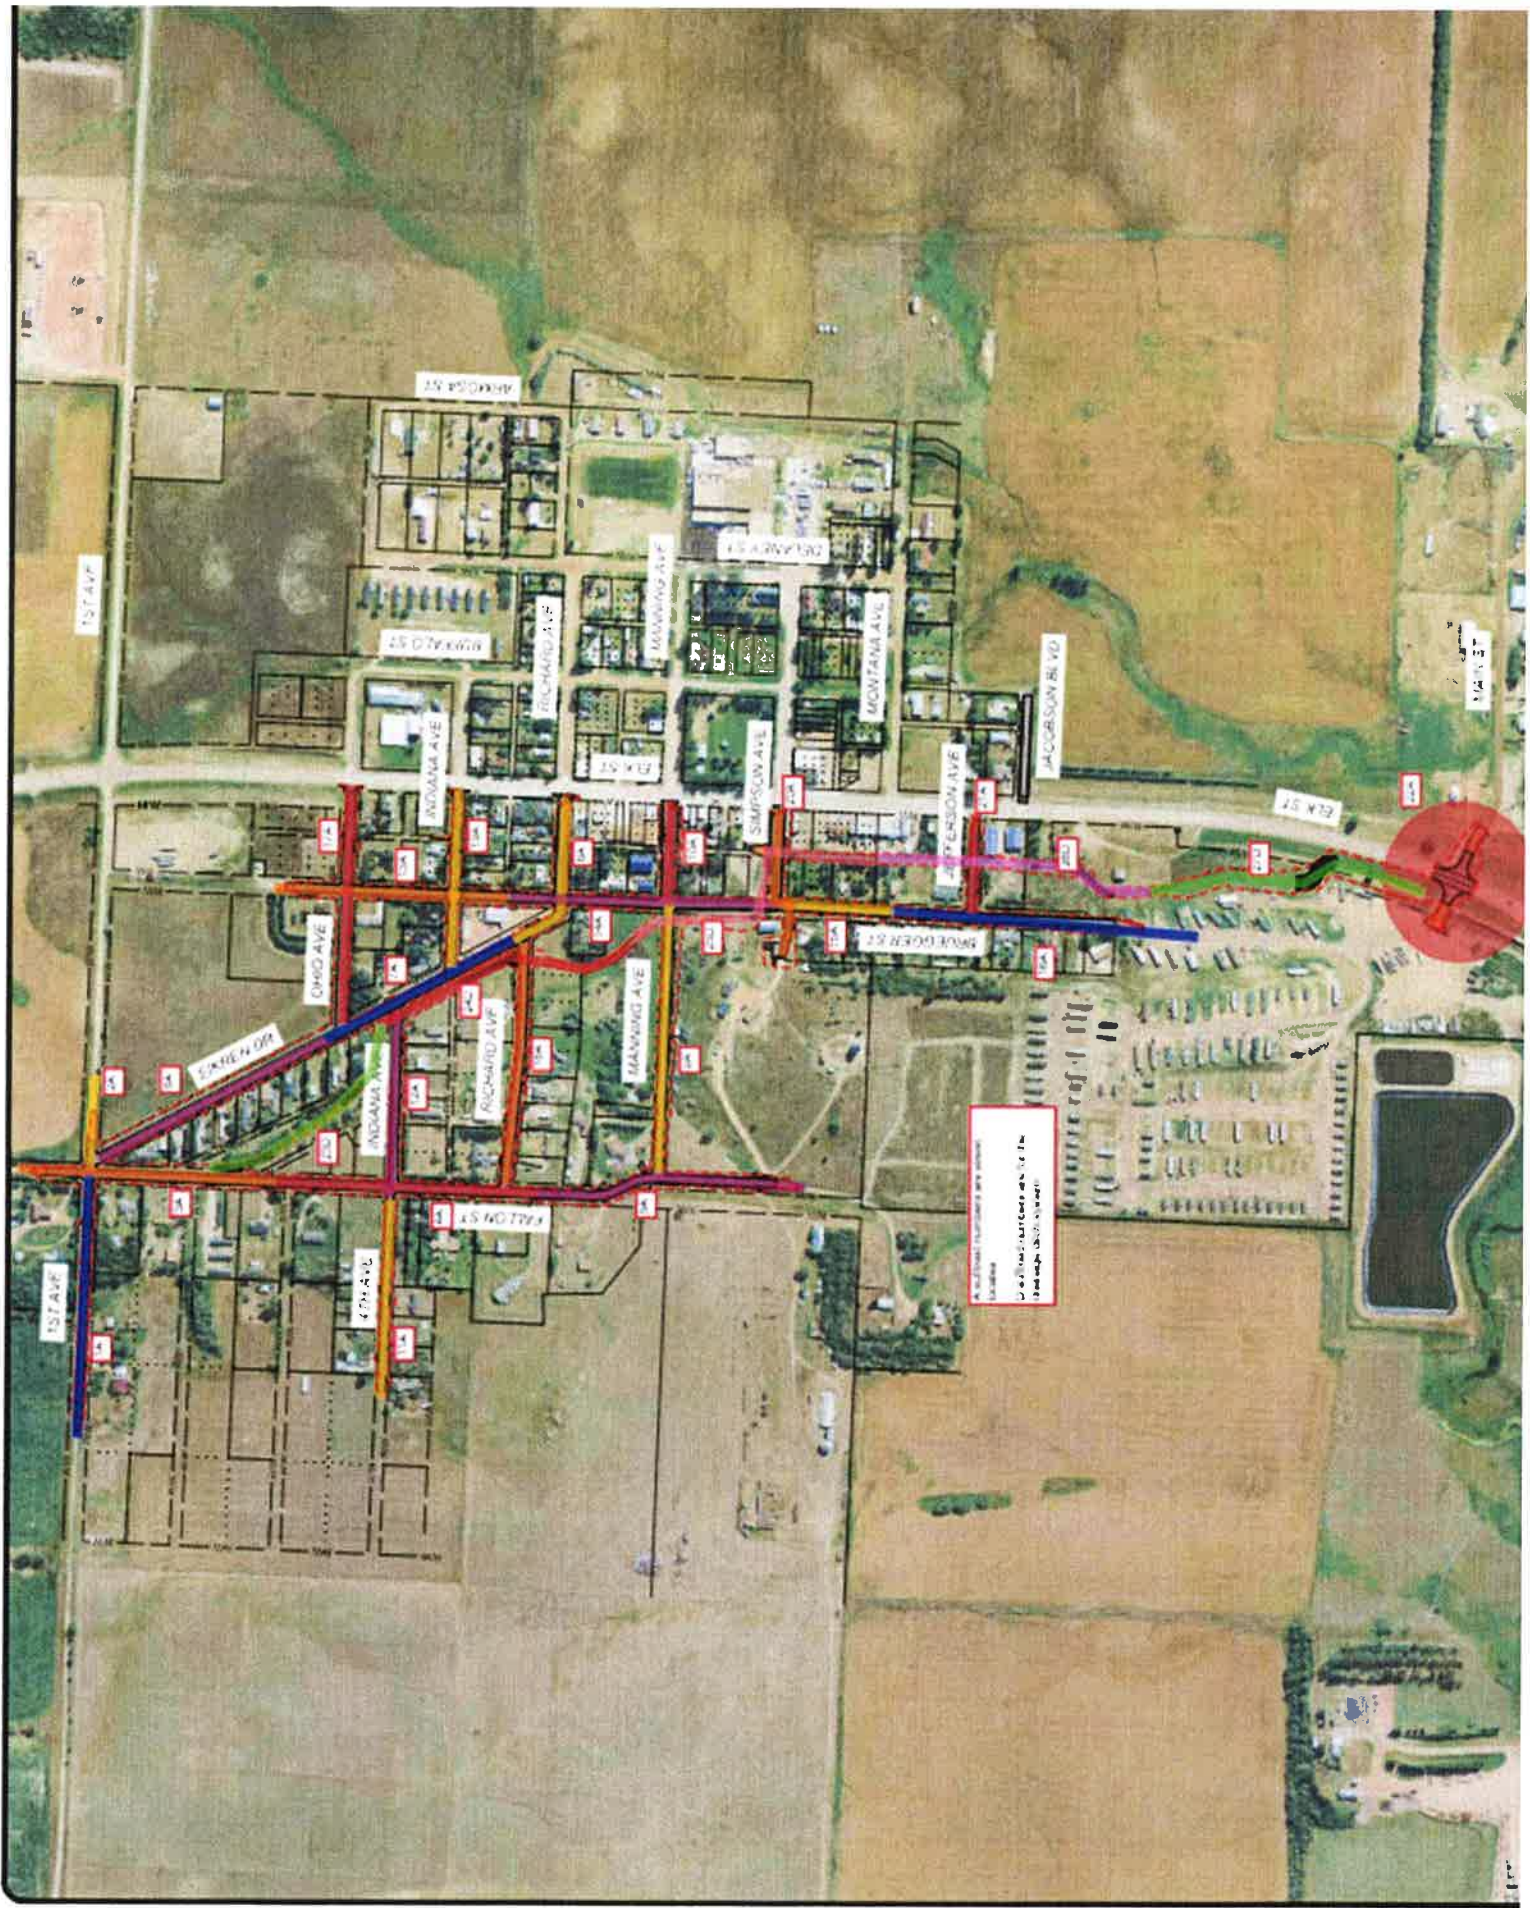

A handwritten signature in black ink that reads "Keith Reiss". The signature is written in a cursive, flowing style.

Keith Reiss  
Safety Manager
