ABSTRACT

In September and October, 2021, Cultural Resource Analysts, Inc., personnel completed a Class I Literature Review and Class II Architectural Reconnaissance Inventory for the proposed Badger Wind Project in Logan and McIntosh Counties, North Dakota. The survey was conducted at the request of Kimberly Peters of DNV Energy USA, Inc., on behalf of Orsted.

The proposed Badger Wind Project includes two alternative layouts. Layout Options 1 and 2 both propose to construct wind turbines primarily within agricultural fields located to the northwest, northeast, and southwest of the town of Wishek, with some variation in turbine locations and concentrations. Project Layout Option 1 comprises 94 turbine locations in Logan and McIntosh Counties; this includes up to 74 turbine locations that would be built to achieve full nameplate capacity and 20 alternate turbine locations. Layout Option 1 proposes its densest concentration of turbines northwest and southwest of Wishek. This layout option also proposes the construction of two laydown areas, a marshalling yard, and a batch plant near the intersection of 37th Avenue SE and 80th Street SE in McIntosh County. Project Layout Option 2 comprises 79 turbine locations in Logan and McIntosh Counties; this includes up to 74 locations that would be built to achieve full nameplate capacity and 5 alternate turbine locations. The greatest concentration of wind turbines proposed for Layout Option 2 are situated northwest of Wishek and would include the construction of the same laydown yards, marshalling area, and batch plant described above for Project Layout Option 1. Following the completion of both the architectural reconnaissance inventory and the subsequent report, it was determined that Layout Option 2 was the only plan under consideration and that Layout Option 1 was no longer being considered.

The purpose of the study was to identify historic architectural resources within the area of potential effects for the proposed Project and to evaluate each identified resource's eligibility for inclusion in the National Register of Historic Places. Based on the North Dakota State Historic Preservation Office Guidelines, the area of potential effects for wind turbines 400 feet or higher is defined as parcels within the proposed locations of the wind turbines, and a two-mile buffer extending outwards from each proposed turbine location. The area of potential effects for the proposed Project took into consideration both Layout Options 1 and 2.

Prior to initiating fieldwork, personnel initiated a review of records maintained by the North Dakota State Historic Preservation Office, to determine if previously documented architectural resources 45 years of age or older were located in the area of potential effects for the proposed Project. This review indicated that 23 aboveground cultural resources have been previously documented within the area of potential effects (32LO00026 [Site 41], 32LO00027 [Site 577], 32LO00033 [Site 574], 32LO00138 [Site 53], 32LO00139, 32MT00027 [Site 572], 32MT00028 [Site 123], 32MT00039 [Site 458], 32MT00043, 32MT00044 [Site 38], 32MT00055, 32MT00071 [Site 372], 32MT00072 [Site 344], 32MT00085 [Site 50], 32MT00087 [Site 331], 32MT00100, 32MT00282 [Site 111], 32MT00391, 32MT00425 [Site 360], 32MTX00021 [Site 99] 32MTX00022 [Site 89], 32MTX00063 [Site 235], 32MTX00020 [Site 86]). The review indicated that of the 23 historic above-ground resources identified within the area of potential effects, two (32MT00087 [Site 331] and 32MT00425 [Site 360]) were previously recommended eligible for inclusion in the National Register of Historic Places. The remaining 21 previously recorded architectural resources have either not been fully evaluated for listing in the National Register of Historic Places, or were previously determined not eligible for inclusion.

During the field survey, Cultural Resource Analysts, Inc., personnel identified a total of 578 aboveground resources (Sites 1–578) within the area of potential effects, 18 of which (Sites 32LO00026 [Site 41], 32LO00027 [Site 577], 32LO00033 [Site 574], 32LO00138 [Site 53], 32MT00027 [Site 572], 32MT00028 [Site 123], 32MT00039 [Site 458], 32MT00044 [Site 38], 32MT00071 [Site 372], 32MT00072 [Site 344], 32MT00085 [Site 50], 32MT00087 [Site 311], 32MT00282 [Site 111], 32MT00425 [Site 360], 32MTX00021 [Site 99], 32MTX00022 [Site 89], 32MTX00063 [Site 235], 32MTX00020 [Site 86]) have been previously surveyed. Of the 23 cultural resources identified during

the records review, five (32LO00139, 32MT00043, 32MT00055, 32MT00100, and 32MT00391) were determined to no longer be extant. In addition, the primary historic resource at 32MT00087 was determined to have been razed between 2010 and 2012. However, previously recorded historic architectural features associated with the site remain and were reinvestigated as part of the current Class II Architectural Reconnaissance Inventory. Cultural Resource Analysts, Inc., recommends that Sites 1–82, 84–91, 93–330, 332–359, 361–393, 395–551, 553–573, and 575–577 are not eligible for listing in the National Register of Historic Places under Criterion A, B, or C. Site 578 is recommended as not individually eligible for listing in the National Register of Historic Places under Criterion A, B, or C. However, Site 578 was determined to be a contributing resource to Site 574 under Criterion A. Cultural Resource Analysts, Inc., further recommends an undetermined status for Sites 83 and 92, as they were either not accessible or not visible in the field and could not be properly evaluated for National Register eligibility; if later determined eligible for listing in the National Register of Historic Places, the proposed project will not result in any adverse direct or indirect effects to those sites because of existing vegetative buffers and distances from the proposed Project. Cultural Resource Analysts, Inc. personnel determined that 13 sites (Sites 1, 4, 21, 70, 115, 232, 311, 331, 360, 394, 397, 552, and 574) warranted a detailed evaluation in order to determine each site's eligibility for listing in the National Register of Historic Places. After further examination, Cultural Resource Analysts, Inc. further recommends Sites 1, 4, 21, 70, 115, 232, 311, and 397 are not eligible for listing in the National Register of Historic Places under Criterion A, B, or C.

In addition, Cultural Resource Analysts, Inc., recommends that five resources, Site 331 (32MT00087), Site 360 (32MT00425), Site 394 (32MT00435), Site 552 (32MT00437), and Site 574 (32LO00033) are eligible for listing in the National Register of Historic Places. Site 331 is recommended eligible under Criteria A and C for its association with the development of Wishek during the first half of the twentieth century. Additionally, Site 331 is an excellent example of the use of the elliptical bottom form in McIntosh County. Site 360 is recommended eligible under Criteria A and C for its association with the Works Projects Administration during the Great Depression, as well as the social development of Wishek throughout much of the twentieth century. Furthermore, Site 360 is an excellent example of the use of Art Morderne style architecture in the design of a Works Projects Administration building in McIntosh County. Site 394 is recommended eligible under Criterion C as an excellent example of mid-twentieth-century Contemporary style architecture in McIntosh County. Site 552 is recommended eligible under Criterion A for its association with the Works Projects Administration and the development of Wishek throughout much of the twentieth-century. Site 574 is recommended eligible under Criterion A for its association with the development of Logan and McIntosh Counties in terms of the railroad industry in the late nineteenth and first half of the twentieth century. As a result of the loss of several resources within downtown Wishek, as well as infill and extensive alterations to many of the remaining buildings, no historic districts are present within the town of Wishek. Therefore, Cultural Resource Analysts, Inc., recommends that five architectural resources (Sites 331, 360, 394, 552, and 574) are eligible for listing in the National Register of Historic Places.

Neither Layout Options 1 or 2 for the proposed Badger Wind Project will directly impact the resources recommended as eligible for listing in the National Register of Historic Places. Wind turbines from the Badger Wind Project, for both Layout Options 1 and 2, will likely be visible in the distance from the resources recommended eligible for listing in the National Register of Historic Places. However, the visual impact of the wind turbines will not intrude upon their immediate setting or diminish any qualities that make them eligible. The qualities of the properties that warrants their listing in the National Register of Historic Places will not be diminished, thus Cultural Resource Analysts, Inc. recommends a finding of No Adverse Effect for Layout Options 1 and 2 of the proposed Badger Wind Project. As was indicated above, following the completion of the architectural reconnaissance inventory and associated report, Layout Option 2 is now the only layout option being considered for the Badger Wind Project.

LIST OF TABLES

Table 1. Surveyed Resources Recommended Not Eligible. A-3

I. INTRODUCTION

In September and October of 2021, Cultural Resource Analysts, Inc. (CRA), personnel completed a Class I Literature Review and Class II Architectural Reconnaissance Inventory for two alternatives for the proposed Badger Wind Project in Logan and McIntosh Counties, North Dakota. (Figure 1). The survey was conducted at the request of Kimberly Peters of DNV Energy USA, Inc., on behalf of Orsted.

The proposed project encompasses a portion of the southwest corner of Logan County and the northwest corner of McIntosh County in south-central North Dakota, approximately one mile southwest, west, northwest, and northeast of the city of Wishek. The project area is bordered in the north by 71st Street SE in Logan County, to the east by 46th Avenue SE in Logan County, to the south by 85th Street SE in McIntosh County, and to the west by 31st Avenue SE in McIntosh County. The project area is bisected east to west by State Highway 13.

The area of potential effects (APE) for the proposed project, which took into consideration the scale and nature of the project and the environmental settings, was defined, in accordance with the North Dakota State Historic Preservation Office (ND SHPO) *Guidelines Manual for Cultural Resource Inventory Projects* (Revised Edition), as a two-mile radius surrounding the proposed turbine locations of Layout Options 1 and 2.

The purpose of the survey was to:

1) Identify and document all historic architectural resources (above ground resources 45 years of age or older) located within the APE;

2) Evaluate their eligibility for listing in the National Register of Historic Places (NRHP) and recommend boundaries, if eligible; and

3) Evaluate the effects of the project on any properties listed in, or eligible for listing in, the NRHP.

The following report presents a summary of the survey findings. The report was prepared by and under the supervision of Robert Ball, who served as Principal Investigator and was issued a Cultural

Resource Annual Permit as an Architectural Historian by the ND SHPO on August 16, 2021. Fieldwork was completed under the direct supervision of Mr. Ball, who was assisted by Architectural Historians John Dickerson and Alyssa Reynolds, all of whom meet the Secretary of the Interior's Professional Qualifications for Architectural History. Fieldwork was completed in approximately 280 personnel hours between September 27 and October 19, 2021 at the request of Kimberly Peters of DNV Energy USA, Inc. on behalf of Orsted. Conditions ranged from warm and sunny to cold and windy. All survey efforts were restricted to the public right-of-way (ROW) unless the parcels were leased for use in relation to the Badger Wind Farm.

During the field survey, 578 individual architectural resources (Survey Sites 1–578) were identified and surveyed, including 18 previously surveyed properties (32LO00026 [Site 41], 32LO00027 [Site 577], 32LO00033 [Site 574], 32LO00138 [Site 53], 32MT00027 [Site 572], 32MT00028 [Site 123], 32MT00039 [Site 458], 32MT00044 [Site 38], 32MT00071 [Site 372], 32MT00072 [Site 344], 32MT00085 [Site 50], 32MT00087 [Site 331], 32MT00282 [Site 111], 32MT00425 [Site 360], 32MTX00021 [Site 99], 32MTX00022 [Site 89], 32MTX00063 [Site 235], 32MTX00020 [Site 86]) (Figures 2a–2p and 3a–3g). Of the 23 cultural resources identified during the records review, five (32LO00139, 32MT00043, 32MT00055, 32MT00100, and 32MT00391) were determined to no longer be extant. Of the 18 extant previously recorded resources identified during the field survey, 32MT00425 (Site 360) was previously recommended eligible for inclusion in the NRHP.

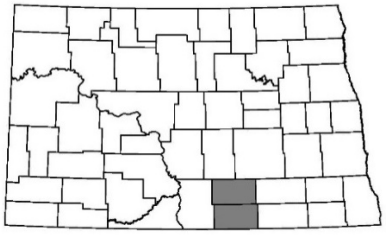

Figure 1. Map of North Dakota showing the location of Logan and McIntosh Counties.

Furthermore, 32MT00087 (Site 331), the Old Wishek City Hall, was listed in the NRHP in 2005 under Criteria A, B, and C. The primary historic resource at 32MT00087, the City Hall constructed in the Mission Revival style, was demolished sometime between 2010 and 2012. However, Feature 4, the historic Wishek water tower, is extant and was documented as part of the current reconnaissance inventory.

Of the 578 sites identified during the field survey, CRA recommends that Site 331 (32MT00087), Site 360 (32MT00425), Site 394 (32MT00435), Site 552 (32MT00437), and Site 574 (32LO33) are eligible for inclusion in the NRHP. Site 578 is not recommended individually eligible for inclusion in the NRHP, however, further investigation revealed the railroad trestle at Site 578 to be a contributing resource to the overall NRHP eligibility of Site 574. Therefore, Site 578 is recommended eligible for inclusion in the NRHP under Criterion A as a contributing resource to Site 574. A detailed explanation of each site's eligibility can be found in section VI: Inventory of Historic Resources, of this report. CRA further recommends that Sites 1–359, 361–393, 395–551, 553–573, and 575–577 are not eligible for listing in the NRHP under Criterion A, B, or C.

II. PROJECT DESCRIPTION AND ENVIRONMENTAL SETTING

Two possible layouts have been suggested for the proposed Badger Wind Project (Layout Options 1 and 2). Layout Option 1 recommends the construction of up to 94 wind turbines within Logan and McIntosh Counties. Wind turbines for Layout Option 1 are located to the northwest, northeast, and southwest of Wishek, with the heaviest concentrations of wind turbines located to the northwest and southwest. Layout Option 1 proposes the construction of two laydown areas and a marshalling yard along 37th Avenue SE, approximately 550 ft north of its intersection with 80th Street SE. A batch plant is proposed along 37th Avenue SE, approximately 415 ft south of its intersection with 80th Street SE. Following the completion of both the architectural reconnaissance inventory and the subsequent report, it was determined that Layout Option 2 was the only plan under consideration and that Layout Option 1 was no longer being considered.

Layout Option 2 suggests the construction of up to 85 wind turbines within Logan and McIntosh Counties. Wind turbines for Layout Option 2 are located to the northwest, northeast, and southwest of Wishek, with the densest concentration of wind turbines being located northwest of Wishek. Layout Option 2 proposes the construction of the same laydown areas, marshalling yard, and batch plant as Layout Option 2.

The APE for the project encompasses historic architectural resources 45 years of age or older that are located within a two-mile radius of the proposed turbine locations within Layout Options 1 and 2. Included within the APE are undulating agricultural fields interspersed with ephemeral drainages (Figures 4–10). Included within the APE is almost the entirety of the town of Wishek, in north central McIntosh County. Wishek is laid out in a grid pattern with the east to west oriented State Highway 13/Beaver Avenue serving as the town's main street. Land use in Wishek is primarily residential. Commercial development is concentrated along State Highway 13, and the section of the town situated north of State Highway 13 and between 4th Street and 7th Street (see Figure 9). Historic building stock in Wishek generally dates to the early to mid-twentieth century. Non-historic structures dating to the late twentieth and early twenty-first centuries are scattered throughout the town.

The proposed Badger Wind Project is situated within portions of Logan and McIntosh Counties, which lie in south-central North Dakota within the Southern Missouri River Study Unit (SMRSU) as defined by the ND SHPO and the North Dakota State Historical Society (ND SHPO 2009:16; Gregg et al. 2008:5.1). This unit has been subdivided into four portions, stemming east to west: The Missouri Coteau, the Coteau Slope, the Missouri River Trenches, and an unnamed upland area west of the Missouri River Trenches. The area of investigation for the proposed Badger Wind Project is located on the eastern end of the SMRSU within the Missouri Coteau. Located approximately 36 mi west of the area of investigation lies the Missouri River. Undulating grassy plain, interspersed with both named and unnamed drainages. The southern extent of Beaver Lake is within the area of investigation. Vegetation consists of a variety of weeds and grasses with intermittent stands of trees located along parcel boundaries and around residences.

III. LITERATURE REVIEW

Prior to entering the field, available surveys, reports, studies, maps, and other data pertinent to the project's location were identified and reviewed as part of the Class I literature review. This task began with a review of the historic architectural resources records, maintained by the ND SHPO, to determine if previously documented architectural resources were located within the APE for the proposed project. In total, 23 previously recorded historic architectural resources (32LO00026 [Site 41], 32LO00027 [Site 577], 32LO00033 [Site 574], 32LO00138 [Site 53], 32LO00139, 32MT00027 [Site 572], 32MT00028 [Site 123], 32MT00039 [Site 458], 32MT00043, 32MT00044 [Site 38], 32MT00055, 32MT00071 [Site 372], 32MT00072 [Site 344], 32MT00085 [Site 50], 32MT00087 [Site 331], 32MT00100, 32MT00282 [Site 111], 32MT00391, 32MT00425 [Site 360], 32MTX00021 [Site 99], 32MTX00022 [Site 89], 32MTX00063 [Site 235], and 32MTX00020 [Site 86]) were identified within the project study area and 2-mile buffer during the historic architectural records review. Of

these 23 previously recorded historic resources, two represent cemeteries (32MT00027 [Site 572] and 32MT00282 [Site 111]), three churches (32MT00039 [Site 458], 32MT00071 [Site 372], and 32MT00072 [Site 344]), one airport (32MTX00020 [Site 86]), and a railroad (32LO00033). Remaining resources represent historic farmsteads and/or residences (32LO00160 [Site 21], [32LO00138 [Site 53], 32MT00028 [Site 123], 32LO00026 [Site 41], 32MT00044 [Site 38], 32MTX00022 [Site 89], 32MTX00021 [Site 99], bridges (32LO00027 [Site 577], 32MT00085 [Site 50]), a commercial structure (32MTX00063 [Site 235]), water tower (32MT00087 [Site 331]), and the Wishek Civic Center (32MT00425 [Site 360]). Furthermore, of the 23 total previously recorded historic resources, six (32MT00043, 32MT00055, 32MT00087, 32MT00100, 32LO00139, and 32MT00391) were razed sometime prior to the current investigation. Of the 23 previously recorded resources, two (32MT00087 [Site 331] and 32MT00425 [Site 360]) were previously recommended eligible for inclusion in the NRHP. The remaining 21 previously recorded historic resources were either recommended not eligible for the NRHP or not evaluated.

As part of the archival research, the Logan and McIntosh Counties Recorders offices were visited by CRA architectural historians in order to complete chain-of-title research for the 11 sites (Site 1, 4, 70, 115, 232, 311, 360, 394, 397, 552, and 574) that warranted detailed discussions in order to provide eligibility recommendations. Additionally, the Wishek Public Library and the Bismarck Veterans Memorial Library, were visited in person to consult county histories in order to develop a historic context for the project APE and resources within it. These resources are listed in the bibliography. Archival research also included a review of the following available maps to help identify potential historic resources in the APE.

1901 Rich Lands Along the Minneapolis, ST. Paul & Sault Ste. Marie R'Y in North Dakota (ndstudies.gov). Depicted on this map are the North Dakota counties, as well as those counties' more significant settlements. Rail lines are shown in red connecting many of these towns and cities. The Soo Rail Line is depicted as connecting Kulm and Wishek, and Wishek to Ashley. The rail line then continues northwest past Beaver Lake and onto Napoleon (Figure 11).

1911 Atlas of McIntosh County, North Dakota (George A. Ogle & Company 1911). Residences and parcels are depicted within each township on this map complete with owner names. Rural schools are mapped along county roads in each township. The Soo Rail Line is depicted traveling along the north side of Wishek and includes a round house northwest of town (Figure 12). West of Wishek, the rail line turns northwest and southeast before continuing in both directions.

1916 Atlas of Logan County, North Dakota (George A. Ogle & Company 1916). Residences and parcels are depicted within each township on this map and include landowner names. The map includes rural county roads, mapped school houses, and major geographic features, such as Beaver Lake (Figure 13). The village of Burnstad is mapped adjacent to the Soo Rail Line, which travels from the southeast before turning west, north of Burnstad (see Figure 13).

1960 Atlas of McIntosh County, North Dakota (Northwest Atlas Company 1960). This map depicts parcel boundaries, landowner names, county and state roads, railroads, schools, cemeteries, and churches. However, residences are not mapped for individual parcels.

1967 Atlas of Logan County, North Dakota (Directory Service Company 1967). Residences with accompanying landowner names, as well as cemeteries, railroads, and geographic landforms are depicted within each township alongside county roads. The Soo Rail Line is depicted along the west side of the town of Burnstad. Additionally, Beaver Lake State Park is mapped as being on the west bank of Beaver Lake.

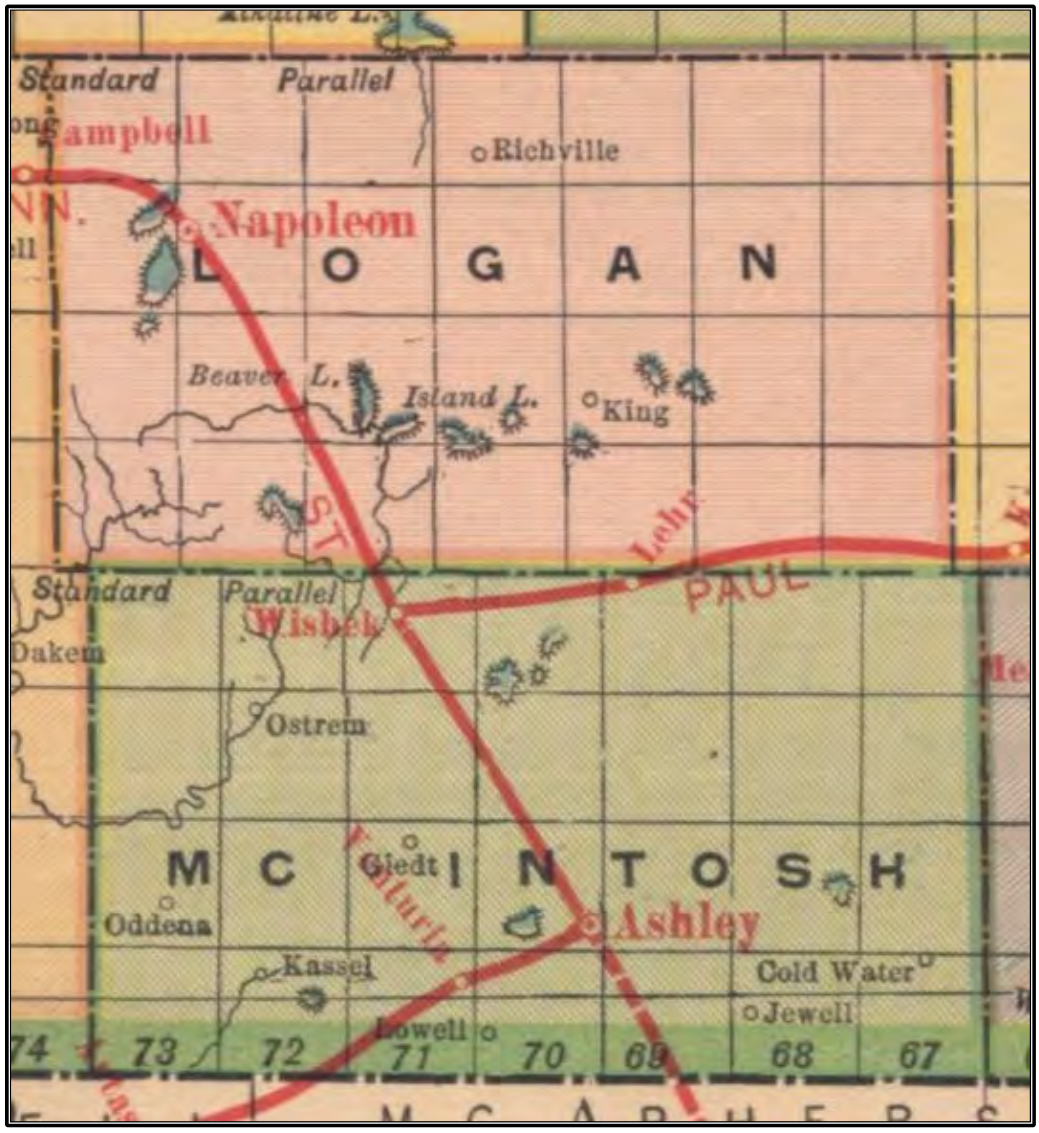

Figure 11. 1901 Soo Rail Line map depicting North Dakota counties and existing rail lines (ndstudies.gov 2021).

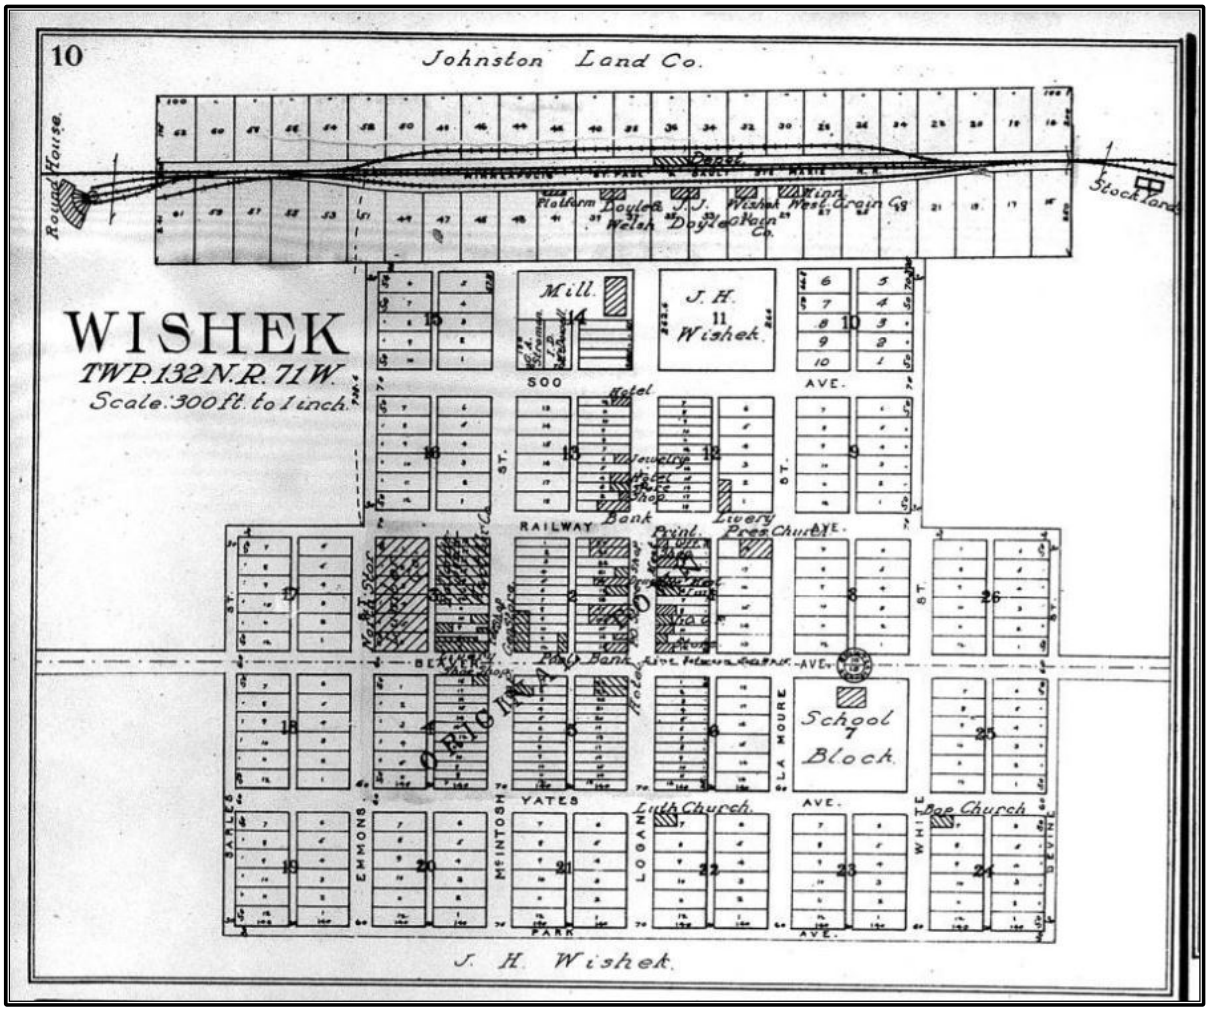

Figure 12. 1911 map of Wishek (George A. Ogle & Company 1911).

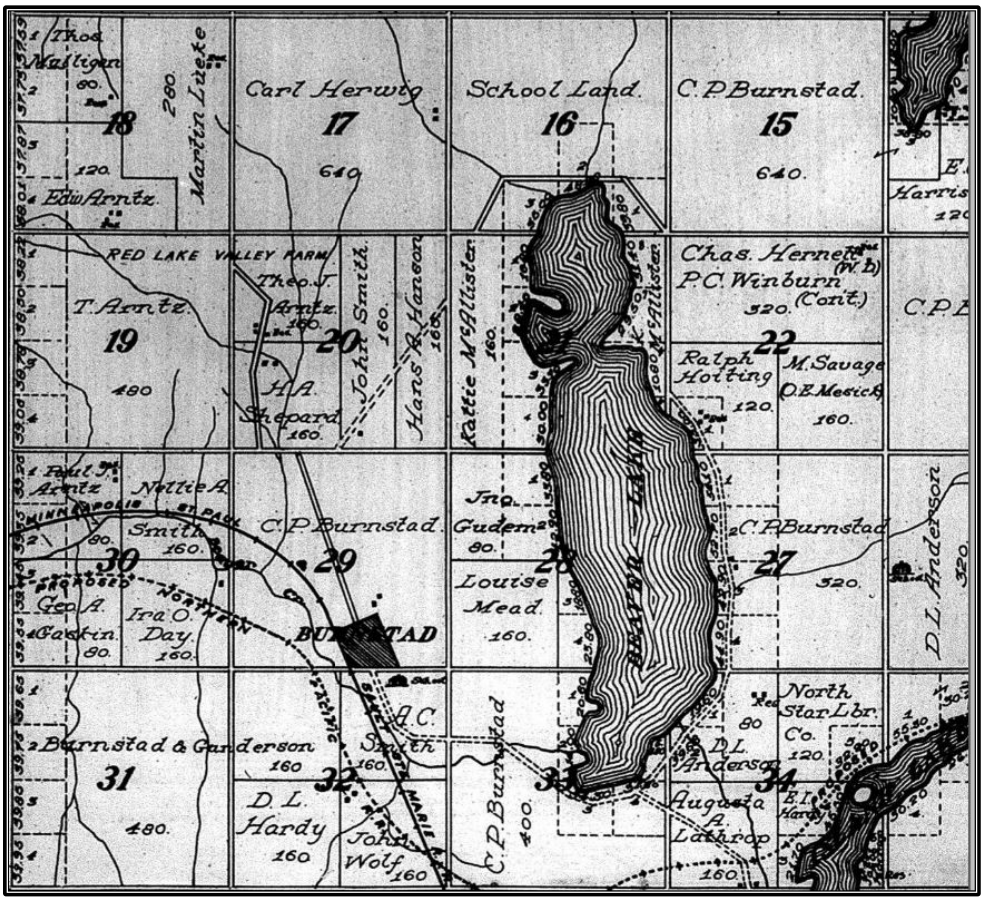

Figure 13. 1916 Atlas of Logan County showing Beaver Lake, Burnstad, and the Soo Rail Line in the northern portion of the APE (George A. Ogle & Company 1916).

1980 USGS Weisser Dam East, 7.5-minute series topographic quadrangle (USGS 1980); 1982 USGS Burnstad, North Dakota, 7.5-minute series topographic quadrangle (USGS 1982a); 1982 USGS Danzig, North Dakota, 7.5-minute series topographic quadrangle (USGS 1982b); 1982 USGS Lehr, North Dakota, 7.5-minute series topographic quadrangle (USGS 1982c); 1982 USGS May Lake, North Dakota, 7.5-minute series topographic quadrangle (USGS 1982d); 1982 USGS May Lake NW, North Dakota, 7.5-minute series topographic quadrangle (USGS 1982e); 1982 USGS Wishek, North Dakota, 7.5-minute series topographic quadrangle (USGS 1982f); 1982 USGS Wishek NE, North Dakota, 7.5-minute series topographic quadrangle (USGS 1982g); 1982 USGS Wishek SW, North Dakota, 7.5-minute series topographic quadrangle (USGS 1982h). These topographic quadrangle maps depict an undulating prairie landscape interspersed with ephemeral drainages, creeks, ponds, and lakes. Residences and outbuildings are depicted as being scattered throughout the area and reflect the rural agricultural industry that has dominated the area of interest. The number of outbuildings have diminished in some areas or homes have disappeared. New residences are depicted as well. The town of Burnstad remains, but has diminished in size. Additionally, the town of Wishek continues to demonstrate sustained growth.

IV. HISTORIC CONTEXT

Logan County

Organized on September 1, 1884, Logan County, North Dakota, is located in the south-central portion of the state. Counties bordering Logan County include Kidder and Stutsman to the north, Lamoure to the east, McIntosh to the south, and Emmons to the west. The county was named in honor of General John Alexander Logan, who served the United States during the Mexican-American War and the Civil War. Logan County includes ten separate townships: Bryant, Dixon, Finn, Glendale, Gutschmidt, Hagg, Janke, Red Lake, Sealy, and Starkey.

Comprised largely of rural, family owned, farmsteads measuring on average 1,298 acres, Logan County relies heavily on the agriculture industry supplemented with livestock and poultry. “It has been said that some of the best ranching and farming land in the entire state of North Dakota is located 100 miles southeast of Bismarck in an area near Beaver Lake” (Gavett 2009:115).

The same year the county was founded, 1884, Napoleon was chosen as the county seat. The town was named in honor of Napoleon Goodsill, a lumber merchant from Bedford, Iowa. In 1886, a group of settlers, known as The Pennsylvania Colony, settled in Logan County near Beaver Lake. Like others before them, the settlers of the Pennsylvania Colony moved to the high plains of North Dakota hoping to homestead on government land. However, the winter of 1886–1887 proved to be one of the most severe in recorded record. Local Native American groups called it the “Plenty Snow Winter.” What followed was a sequence of relentless blizzards that inundated the prairie with more than five feet of snow, driving winds, and subzero temperatures. Man and animal alike suffered at the fury of Mother Nature. By Spring 1887, only a single member of the Pennsylvania Colony remained (Gavett 2009:121). Among the many settlers of Logan County are numerous Ukrainian-Russian migrants that had strong German roots.

Logan County’s first school was built in Napoleon in 1886, and was a two-room, frame structure. By 1894 the county had grown to include 8 schools (Gavett 2009: 122 and 123). On September 20, 1898, the Soo Rail Line arrived at Napoleon. The arrival of the rail line helped stimulate growth for the local economy. By 1906, Napoleon had grown to include “two lumber yards, a grain elevator, three stores, a bank, a new court house, a church, a doctor, a druggist…, a creamery, billiard hall, and a barber shop” (Gavett 2009:125). The railroad only beat the automobile by eleven years, and in 1909 Napoleon witnessed the construction of a Buick dealership that was followed in 1913 by a Krit dealership. The first radio appeared in Napoleon in 1922.

Logan County continued to grow throughout the twentieth century. The area was heavily impacted by the Great Depression and received aid through the WPA for the construction of Beaver Lake State Park. Following the Depression, Logan County answered the country's call to arms, and in total lost 22 servicemen during World War II. Today, Logan County continues to be a largely rural area that relies heavily on the agriculture industry.

McIntosh County

Established on October 4, 1884, from lands removed from Logan County, McIntosh County is bordered to its north by Logan County, to the east by Dickey County, and to the west by Emmons County. The county's southern boundary is formed by the North Dakota state line. Following the county's formation, the town of Hoskins was the only thing resembling a town within its limits, and was therefore chosen to serve as the county seat (Gavett 2009:151). Following the arrival of the Soo Rail Line, and its bypassing of Hoskins in 1887, John Henry Wishek, with the help of others, set about platting the town of Ashley along the lines' projected route. Due to the railroads growing influence on the development of McIntosh County, the county seat was relocated to Ashley. During McIntosh County's early days, John H. Wishek played a key role in the platting of Ashley, Wishek, Danzig, Venturia, Artas, and Pollock. "Undeniably, it was through his efforts that the Soo Line Railroad laid its tracks into McIntosh County" (Gavett 2009:151). Originally settled by Americans from the eastern states of Ohio and Michigan, McIntosh County became a destination for German-Russian immigrants hoping to homestead on government land (mcintoshnd.com 2021). Largely comprised of rural family-owned farmsteads, McIntosh County continues to be a largely rural county that supports the area's agricultural industry. "Although livestock and poultry remain an important part of the typical farm, the mainstay continues to be wheat, corn, and barley" (Gavett 2009:153).

V. SURVEY METHODOLOGY

The survey was conducted in accordance with the "Archaeology and Historic Preservation: Secretary of the Interior's Standards and Guidelines" (National Park Service [NPS] 1983). In addition, guidelines offered in the following documents were followed: National Register Bulletin #24 Guidelines for Local Surveys: A Basis for Preservation Planning (NPS 1985); and North Dakota SHPO Guidelines Manual for Cultural Resource Inventory Projects: Revised Edition (State Historical Society of North Dakota 2020).

Following the completion of Class I literature search, CRA architectural historians completed a Class II reconnaissance inventory of the APE, during which all architectural resources that were 45 years of age or older were documented. Topographic maps and aerial photographs depicting the project APE were referenced to get an initial count and understanding of the locations of architecturally significant resources within the APE.

CRA architectural historians then visited the project APE, field-checked the location and character of all standing structures within the APE, and documented all aboveground resources 45 years of age or older. The location of each property was marked on a map and a pin was placed on the property using Google Earth Pro. Each resource was then photographed and described.

In addition to documenting individual properties, CRA also considered the potential for historic districts (including rural historic districts) within the APE. After evaluating the results of the fieldwork, there appears to be no potentially NRHP-eligible districts within the APE. The APE is comprised primarily of undulating upland prairie defined by cultivated agricultural fields and residential development. The majority of the historic building stock dates to the late nineteenth or early to mid-twentieth centuries but does not represent a cohesive

collection of architectural types or styles. While there are areas where clusters of Ranch houses are present, individual resources lack integrity of design, materials, workmanship, and feeling due to replacement materials, altered fenestration, and incompatible additions. Moreover, the development within the APE reflects that of other rural areas throughout North Dakota.

In total, 578 historic architectural resources (Survey Sites 1–578) were documented within the APE. Of these resources, 17 (32LO00026 [Site 41], 32LO00027 [Site 577], 32LO00033 [Site 574], 32LO00138 [Site 53], 32MT00027 [Site 572], 32MT00028 [Site 123], 32MT00039 [Site 458], 32MT00044 [Site 38], 32MT00071 [Site 372], 32MT00072 [Site 344], 32MT00085 [Site 50], 32MT00282 [Site 111], 32MT00425 [Site 360], 32MTX00021 [Site 99] 32MTX00022 [Site 89], 32MTX00063 [Site 235], 32MTX00020 [Site 86]) had been previously surveyed. Sites 1–578 were assessed individually in order to determine their potential for listing in the NRHP.

In consultation with the ND SHPO, only those resources that appear to be potentially significant are documented in detail within the text of the report. Therefore, Sites 1, 4, 70, 115, 232, 311, 360, 394, 397, 552, and 574 were forwarded for full descriptions and eligibility determinations. The descriptions and evaluations for those resources recommended ineligible for the NRHP are found in Appendix A of this report and include a representative photograph, field survey number, estimated date of construction, resource name, physical address, North Dakota inventory number, style, and brief NRHP assessment. Additional photos of the architectural resources documented during the Class II reconnaissance inventory can be found in Appendix B.

In regards to the town of Wishek, the Badger Avenue/Centennial Street areas were evaluated by CRA to determine if Wishek has a NRHP-eligible commercial historic district. The commercial corridor of Wishek extends from the Dakota Frontier Cooperative (Site 277) to the east along Badger Avenue to its intersection with Seventh Street. Along Centennial Street, it extends south from Second Avenue North to First Avenue South. Most of the surviving structures exhibit alterations through additions and/or replacement materials. Several are also vacant as well as empty lots are situated along portions of both Badger Avenue and Centennial Street. Earlier maps and aerials confirm that the majority of these empty lots were previously occupied by structures, mostly commercial establishments but also a few residences.

While the corridor's buildings retain integrity of location and association, the loss of buildings and the resulting empty lots, the alterations to historic structures through additions and/or replacement materials have greatly diminished integrity of design, setting, materials, workmanship, and feeling. With the lack integrity, CRA recommends that Wishek's Badger Avenue/Centennial Street business corridor is not eligible for listing in the NRHP as a historic district.

The residential areas were also evaluated as potential NRHP-eligible historic districts. While, a large amount of the original housing stock dating from the early twentieth through the mid-twentieth century remains within Wishek, most have been modified through additions and replacement materials including windows, doors roofing, and siding, while some also exhibit deteriorating conditions. Many of the additions are large and have drastically altered the historic footprint as well. Modern houses have infilled historic lots resulting in a lack of a cohesive, historic district. CRA recommends the residential areas as not eligible for listing in the NRHP as a historic district.

Therefore, CRA recommends that the area within the proposed project's APE does not demonstrate sufficient integrity or contain a significant concentration of thematically or architecturally related resources to warrant listing in the NRHP as a historic district under Criterion A, B, or C.

In general, in order for a property to be eligible for listing in the NRHP, it must be at least 50 years old and possess both historic significance and integrity. Significance may be found in four aspects of American history recognized by the NRHP Criteria: A) association with historic events or activities; B) association with important persons; C) distinctive design or physical characteristics; or D) potential to yield significant information.

NRHP eligibility under Criterion D, which is typically used to assess archaeological sites, was not applied to architectural resources for this project. A resource must meet at least one of these criteria to be eligible for listing in the NRHP. Integrity must also be evident through historic qualities including location, design, setting, materials, workmanship, feeling, and association.

VI. INVENTORY OF HISTORIC RESOURCES

All historic architectural resources (at least 45 years old) within the APE were documented. Information obtained from the McIntosh County Property Valuation Administration (PVA) office, historic maps, and architectural analysis was used to establish an approximate date of construction for each resource. CRA personnel did not have access to the interior of surveyed resources, unless otherwise noted. Those resources that appear to be potentially significant are documented in detail below. Evaluations are found after each description. Resources identified during the survey and not recommended as eligible for listing in the NRHP are summarized in Table 1 found in Appendix A. Table 1 includes a representative photograph, physical address, estimated construction date, inventory number, and brief NRHP assessment for each resource. Additional photographs are included as Appendix B.

Site 1

ND Survey #: 32LO00157

Photographs: Figures 14–34

Map: Figure 2b

Quad: Wishek Northeast, North Dakota 1982

Lat: 46.402727

Long: -99.615249

Property Address: 3850 70th Street SE
Wishek, North Dakota 58495

Construction Date: 1932

Description: Site 1 (32LO00157) consists of the Beaver Lake State Park and its supporting structures located at 3850 70th Street SE, north of the community of Wishek, and southeast of the Logan County seat of Napoleon. The park is located on the west bank of Beaver Lake and comprises 273 acres. Seventieth Street SE provides access to the park from its southern extent and bisects the property. The park was accessed by CRA architectural historians for the purpose of completing the historic reconnaissance inventory.

Beaver Lake State Park is first visible on the 1952 historic aerial imagery (USGS 1952a). However, information reviewed at the Wishek Public Library concluded that the park was dedicated on July 24, 1932.

Situated on the western shore of Beaver Lake among rolling hills, the park is interspersed with picnic shelters, camping areas, docks that provide access to Beaver Lake, administration buildings, and modern amenities. The primary historic resource at the Beaver Lake State Park is the approximately 15 ft tall poured concrete Old Settlers Monument (Feature 1) (32LO143) that includes a rounded glacial fieldstone veneer collected from the surrounding landscape (Figure 14). Resting on a square, poured concrete foundation, lined with fieldstones, the monument is set on a two tier platform. The monument tappers upwards, forming an obelisk. A granite plaque decorates the monument's west elevation and records the individual names of the park's founders. A

single-leaf entry pierces the monument's east elevation and is filled with a vertical board door secured with a barrel bolt lock (Figure 15). The monument's east elevation overlooks Beaver Lake.

Northwest of the monument, approximately 350 ft, is a fire signal bell placed atop a large granite boulder (32LOx68) (Feature 2) (Figures 16 and 17). The granite boulder was relocated from elsewhere during the 1918 construction of State Highway Number 34, the state's first state highway, through a section of Logan county. It was dedicated to the construction of the state highway in 1938 and relocated to Beaver Lake State Park. The bell atop the granite boulder is the first fire bell utilized by Logan County's original volunteer fire department. While signaling a fire on November 11, 1930, the bell was cracked and later donated to Beaver Lake State Park. South of the granite boulder and bell, two signs provide context for the objects.

Approximately 300 ft southwest of the monument is the one-story, side-gable, frame, Beaver Lake State Park Office (Feature 3) (Figure 18). Oriented south, the building is clad in vinyl siding that extends to grade and is sheltered beneath a moderately pitched roof sheathed in asphalt shingles. The façade (south) elevation of the office is pierced by a single-leaf entry filled with an unglazed metal door and flanked by three asymmetrically placed one-over-one, double-hung, wood sash windows. Two windows pierce the west elevation. The rear (north) and east elevations are void of fenestrations. Based on recent aerial images reviewed, the office building (Feature 3) was built between 2009 and 2010.

Figure 14. Site 1 (32LO00157): West and south elevations of the Beaver Lake State Park monument (Feature 1), looking northwest.

Figure 15. Site 1 (32LO00157): East and north elevations of the Beaver Lake State Park monument (Feature 1), looking southwest.

Figure 16. Site 1 (32LO00157): Overview of the boulder and fire bell (Feature 2) (32LOx68), looking northeast.

Figure 17. Site 1 (32LO00157): Historic image of the granite boulder and fire signal bell (Feature 2) (32LOx68) (Beaver Lake State Park 1952).

Figure 18. Site 1 (32LO00157): South and west elevations of the Beaver Lake State Park Office (Feature 3), looking northeast.

Located approximately 430 ft south of the monument is a one-story, side-gable, frame, picnic-shelter (Feature 4). Oriented northeast, overlooking Beaver Lake, the picnic shelter rests on a poured concrete slab, is clad in vinyl siding, and sheltered beneath a moderately pitched roof sheathed in asphalt shingles (Figure 19). The façade (northeast) is open-air and includes three round metal posts that provide roof support. Subsequent elevations are enclosed, or partially enclosed, and lack fenestrations. Historic aerial imagery reviewed indicates that the picnic shelter (Feature 4) was constructed between 1952 and 1975 (USGS 1952a and 1975a).

Approximately 1,170 ft south of the monument is the entrance sign for Beaver Lake State Park (Feature 5) (Figure 20). The signage includes two discontiguous sections that are bisected by 70th Street SE. Both sections include a veneer of rounded, multi-colored, mortared fieldstones. Both sections include two tapered piers that are topped by a cap. The tallest piers flank 70th Street SE with the shorter piers positioned to the outside. Each section includes a knee wall that connects the piers, with the western wall being concave and the eastern wall being flat. The eastern knee wall is topped by a wooden sign constructed of dimensional lumber that includes the name of the park. A review of the available historic and modern aerial imagery suggests that the sign (Feature 5) was likely constructed between 1975 and 1997 (USGS 1952a and 1975a).

Approximately 255 ft southwest of the monument, and oriented northwest, is a one-story, front-gable, poured concrete vault toilet (Feature 6) (Figure 21). Resting on a poured concrete slab, the vault toilet is sheltered beneath a front-gable roof clad in composite shingles and features weatherboard in the gable field. Two, round, exhaust vents pierce the roof.

Figure 19. 17. Site 1 (32LO00157): East and north elevations of the southern picnic shelter (Feature 4), looking southwest.

Figure 20. Site 1 (32LO00157): Overview of the southwest elevation of the Beaver Lake State Park entrance sign (Feature 5), looking north.

Figure 21. Site 1 (32LO00157): Façade and southwest elevations of a vault toilet (Feature 6) at Beaver Lake State Park, looking southeast.

The façade is pierced by two, single-leaf entries filled with unglazed metal doors that include louvered vents near grade. Two, fixed, rectangular metal sash windows pierce the rear (southeast) elevation. A review of the recent aerial imagery indicates that the vault toilet was built between 2016 and 2021.

Approximately 320 ft northwest of the monument, and oriented southwest, is a one-story, front-gable, vault toilet (Feature 7) (Figure 22). Resting on a poured concrete slab, the vault toilet is clad in vinyl siding and sheltered beneath a side-gable roof clad in composite shingles. The façade is pierced by two, single-leaf entries filled with unglazed metal doors. Two black exhaust vents project from the below grade storage tank along the rear (northeast) elevation. A review of the recent aerial imagery indicates that the vault toilet was built between 2016 and 2021.

Located northwest of the monument, at a distance ranging from 400 to 520 ft, are three one-story, front-gable, frame cabins (Features 8–10) (Figures 23–25). Each feature is oriented northeast, overlooking Beaver Lake, clad in weather board siding, and sheltered beneath a roof sheathed in asphalt shingles. A faux brick skirt covers each foundation. The façade (northeast) of each cabin is pierced by a single-leaf entry filled with a single-light metal door and flanked by a single window. Side elevations are void of fenestrations. The rear (southwest) elevation of each cabin is pierced by a single window topped by a small window in the gable field. Based on a review of the available aerial imagery, the cabins were built between 2003 and 2005.

Figure 22. Site 1 (32LO00157): Façade and northwest elevations of the vault toilet (Feature 7) at Beaver Lake State Park, looking southeast.

Figure 23. Site 1 (32LO00157): Northeast and southeast elevations of the cabin (Feature 8), looking northwest.

Figure 24. Site 1 (32LO00157): Northeast and northwest elevations of the cabin (Feature 9), looking southwest.

Figure 25. Site 1 (32LO00157): Northeast and southeast elevations of the cabin (Feature 10), looking northwest.

Approximately 900 ft north of the monument is an amphitheater (Features 11–13) situated on the western shore of Beaver Lake (Figures 26–28). A small sign (Feature 11) constructed of mortared field stone is directly adjacent to the road and approximately 85 ft northwest of the projector booth (Figure 26). A one-story, side-gable, frame projection booth (Feature 12) is situated west of the lake and is pierced by a single-leaf entry on its west elevation and a single projection window on its east elevation (Figure 27). Approximately 10 ft east of the projection booth are six rectangular benches arranged in groups of three that are accompanied by an elevated screen attached to two round posts (Feature 13) (Figure 28). The base of the screen is enclosed by mortared fieldstone. Aerial imagery reviewed suggests that the amphitheater (Features 11–13) was likely constructed between 1997 and 2009.

Located approximately 1,130 ft northwest of the monument is a one-story, side-gable, frame restroom (Feature 14) (Figure 29). Clad in vinyl siding that extends to grade, the restroom is sheltered beneath an asphalt shingle roof. The southwest elevation is pierced by two symmetrically placed single-leaf entries filled with unglazed metal doors. The northwest and southeast elevations are both pierced by four separate, vinyl sash, awning windows. The northeast elevation is pierced by three evenly placed single-leaf entries filled with unglazed metal doors. Aerial imagery reviewed suggests that the restroom building (Feature 14) was likely constructed between 1997 and 2009.

Figure 26. Site 1 (32LO00157): Amphitheater sign (Feature 11), looking southeast.

Figure 27. Site 1 (32LO00157): Projector booth (Feature 12) at the amphitheater, looking northwest.

Figure 28. Site 1 (32LO00157): Seating and screen (Feature 13) at the amphitheater, looking northeast.

Figure 29. Site 1 (32LO00157): Southwest and northwest elevations of the restroom (Feature 14), looking northeast.

Northwest of the monument, approximately 1,530 ft, is a one-story, gable-on-hip-roof, frame bathhouse (Feature 15) (Figure 30). Oriented west, the bathhouse is clad in vertical board and features a three-quarter height brick veneer knee wall that extends to grade and is topped by a row-lock brick sill. The structure is sheltered beneath a low pitched asphalt shingle roof that includes enclosed wide overhanging eaves. The east roof plane is pierced by an internal metal vent. Two single-leaf entries, set perpendicular to the façade, and filled with unglazed metal doors, pierce the partially recessed façade. The south elevation is pierced by two rectangular windows set below the eaves (see Figure 30). The north elevation mirrors the south (Figure 31). The rear (east) elevation is pierced by a centrally placed single leaf entry filled with an unglazed metal door (see Figure 31). A poured concrete sidewalk encircles the bathhouse (see Figures 30 and 31). A review of the available historic aerial imagery reveals that the bathhouse (Feature 15) was built sometime between 1952 and 1975 (USGS 1952a and 1975a).

Approximately 1,660 ft north of the monument, and oriented southeast, is a one-story, front-gable poured concrete vault toilet (Feature 16) (Figure 32). Resting on a poured concrete slab, the vault toilet is sheltered beneath a front-gable roof clad in composite shingles and features weatherboard in the gable field. Two, round, exhaust vents pierce the roof. The façade is pierced by two, single-leaf entries filled with unglazed metal doors that include louvered vents near grade. Two, fixed, rectangular metal sash windows pierce the rear (northwest) elevation. A review of the recent aerial imagery indicates that the vault toilet was built between 2016 and 2021.

Located approximately 2,100 ft northwest of the monument is a one-story, side-gable, frame picnic-shelter (Feature 17). Oriented northeast, overlooking Beaver Lake, the picnic shelter rests on a poured concrete slab, is clad in vinyl siding, and is sheltered beneath a moderately pitched roof sheathed in asphalt shingles (Figure 33). The façade (northeast) is open-air and includes three round metal posts that provide roof support. Subsequent elevations are enclosed, or partially enclosed, and lack fenestrations. Historic aerial imagery reviewed indicates that the picnic shelter (Feature 17) was constructed between 1952 and 1975 (USGS 1952a and 1975a).

Figure 30. Site 1 (32LO00157): Façade and southeast elevations of the bath house (Feature 15), looking northeast.

Figure 31. Site 1 (32LO00157): Rear (east) and north elevations of the bath house (Feature 15), looking southwest.

Figure 32. Site 1 (32LO00157): Façade and southeast elevations of the vault toilet (Feature 16), looking northwest.

Figure 33. Site 1 (32LO00157): Façade and northwest elevations of the picnic shelter (Feature 17), looking south.

Approximately 2,590 ft northwest of the monument is a gable-roof structure (Feature 18) that was inaccessible by CRA architectural historians during the current survey (Figure 34). Based on a review of the historic aerial imagery, the structure at Feature 18 was likely constructed between 1952 and 1975 (USGS 1952a and 1975a).

NRHP Evaluation: Not Eligible. Dedicated on July 24, 1932, Beaver Lake State Park is situated on the western shore of the stream fed 968-acre Beaver Lake. Dedicated to the "early settlers who had lived on the shores of the Beaver Creek," the park comprises 273 acres of public recreation area situated within Logan County. Following a request by local residents, on August 25, 1930, the recently formed board for the organization of the Beaver Lake State Park approved the purchase of 143 acres along Beaver Creek for $1,437 (Beaver Lake State Park Anniversary Book 1952: unknown). As a result of the worsening Great Depression, funds for the improvement of the park were lacking. On December 1, 1933, the park board approved a proposal to be submitted to the County Emergency Relief Committee for the use of 15 individuals, up to 1,000 hours, for improvements to be completed at the park. The next year, on June 29, 1934, the Federal Emergency Administration (FERA) approved the construction of fences, roads, ground clearing, and the construction of a bath house, at a cost of $1,325, provided by FERA (Beaver Lake State Park Anniversary Book 1952: unknown).

Beaver Lake State Park derives its significance primarily from its association with its construction by the WPA during the Great Depression. However, building stock relating to this period is absent. Records reviewed at the Wishek Public Library suggest that the park was originally imbued with a concession/refreshment stand, baseball diamond, race track, pier, and stone fountain (Beaver Lake State Park Anniversary Book 1952: unknown). The razing of the aboveground resources relating to the period of historical significance diminishes the park's characteristics of integrity. Furthermore, more complete examples of works completed by the

Figure 34. Site 1 (32LO00157): Overview of the service road and sign leading to Feature 18, looking northwest.

WPA during this period exist locally in Wishek (Sites 135, 360, and 552) and display a greater degree of integrity. Therefore, as a result of a loss of the historic building stock and the inclusion of modern amenities, Site 1 is not eligible for listing in the NRHP under Criterion A or B.

State parks have become a common fixture of counties and states throughout the country. State parks were popular sites for the public to congregate for social gatherings and nature outings prior to and after World War II. The parks can be utilized by many people for a variety of reasons, and typically at the same time. Although Beaver Lake State Park dates to the early 1930s, the structures comprising the park are utilitarian in nature and do not exhibit a specific period in time. The office building (Feature 3), vault toilets (Features 6, 7, and 16), prefabricated cabins (Features 8–10), amphitheater (Features 11–13), and the public restroom (Feature 14) are all less than 50 years of age. The monument (Feature 1 [32LO143]), signal bell (Feature 2 [32LOx68]), bathhouse (Feature 15), and the picnic shelters (Features 4 and 18) are all older, but represent various periods of construction. Therefore, the collection of support structures, most of which are not 50 years, do not raise the significance of the park to the level of listing in the NRHP under Criterion C. The replacement materials of the buildings and the modern construction also diminish the integrity of the site's design and materials. Therefore, lacking significance and integrity, the Beaver Lake State Park is not eligible under Criterion C. Consequently, CRA recommends that Site 1 (32LO00157) is not eligible for inclusion in the NRHP under Criterion A, B, or C.

Site 4

ND Survey #: 32LO00158

Photographs: Figures 35–45

Map: Figure 2c

Quad: Wishek, North Dakota 1982

Lat: 46.354122

Long: -99.526046

Property Address: 43rd Avenue Southeast
Wishek, North Dakota 58495

Construction Date: 1925–1950

Description: Site 4 (32LO00158) consists of a farm located west of 43rd Avenue SE, approximately 815 ft south from its intersection with 73rd Street SE. The structures are situated on a 320-acre parcel comprised of pasture and fields with several small ponds and dotted with mature trees. The residence is set back approximately 0.35 mi from the ROW, and is accessed by a gravel driveway.

Site 4 is first depicted on a 1952 USGS aerial photograph (USGS 1952b). According to the aerial and the building materials, and form, the residence was constructed circa 1925–1950.

The residence (Feature 1) associated with Site 4 is oriented south and is a two-story, two-bay (w/d), hip-roof, American Foursquare (Figure 35). Resting on a continuous, poured concrete foundation, the dwelling is clad in weatherboard siding, and wood shingles cover its roof. Windows throughout the residence, unless otherwise noted, contain one-over-one, double-hung, metal sashes. The rear face of the roof contains an internal, brick chimney.

The façade of the residence features an enclosed, one-story, hip-roof porch that contains a centered, single-leaf entry filled by a single-light, wood panel door flanked by single windows to either side (see Figure 35). The porch rests on wood piers. Two single windows are located above the porch in the second story of the façade.

Figure 35. Site 4 (32LO00158): Façade of the residence (Feature 1), looking north.

The east elevation contains two single windows in both the first and second stories of the residence (Figure 36). Three of the windows have been covered with boards. The west elevation mimics the east with two single windows piercing both the first and second stories (Figure 37). The windows found in the first floor have been covered with wood. The rear (north) elevation of the residence contains a one-and-one-half-story room topped by a hip roof that is accessed on the east elevation via a single-leaf entry filled by a two-light, wood panel door (see Figure 37). Two windows pierce the north elevation near the roof line (see Figure 37). The north elevation of the main mass of the residence contains a single window in the first floor just west of the hipped-roof addition (see Figure 36).

There are eight outbuildings associated with the main residence. The first is a large, modern metal barn (Feature 2) located approximately 340 ft to the northeast of the residence. It is topped by a front-gable roof sheathed in metal panels and clad in metal panels (Figure 38). On both of its gable elevations, large, metal-clad sliding doors are present. The non-gable elevations are devoid of openings. According to recent Google Earth photographs, the barn dates to between 2003 and 2005.

The second outbuilding is a second, metal clad barn (Feature 3) topped by a gable roof sheathed in metal panels (see Figure 38). It is located immediately west of the first barn. The south elevation contains a large, siding door. No openings were visible within the west elevation. Based on recent and historic aerials, the barn (Feature 3) was present in 1997 but does not appear on a 1975 aerial (USGS 1975b). Thus the barn likely dates to between 1975 and 1997.

The third outbuilding is a frame shed (Feature 4) located approximately 95 ft northwest of the residence (Figure 39). It is topped by a side-gable roof sheathed in wood shingles and clad in a combination of weatherboard siding and metal panels. The south elevation contains a single-leaf entry filled with a solid, wood door. Based on recent and historic aerials, the outbuilding (Feature 4) dates to between 1975 and 1997 (USGS 1975b).

Figure 36. Site 4 (32LO00158): North and east elevations of the residence (Feature 1), looking southwest.

Figure 37. Site 4 (32LO00158): North and west elevations of the residence (Feature 1), looking southeast.

Figure 38. Site 4 (32LO00158): Metal barns (Features 2 and 3), looking northeast.

Figure 39. Site 4 (32LO00158): Shed (Feature 4) and grain bin, looking northwest.

The fourth outbuilding is a large, frame barn (Feature 5) that is located approximately 100 ft northwest of the residence (Figure 40). It is topped by an arched roof sheathed in wood shingles and clad in weatherboard siding. The south elevation contains three sets of sliding doors, two of which are located in the side shed additions found on either side elevation of the barn. Three small windows also pierce the first level of the barn. The barn's second level contains two, large, wood sliding doors. The upper level contains two, small windows. The side-shed addition's roof on the barn's east elevation is sheathed in metal panels and is pierced by three windows on its east elevation (see Figure 40). Based on historic aerials, the barn (Feature 5) was present in 1952 and likely dates to circa 1925–1952 (USGS 1952b).

The fifth outbuilding is a large, metal building (Feature 6) located approximately 130 ft west of the residence (Figure 41). It is topped by a saltbox roof sheathed in metal panels and clad in metal panels. The façade contains a series of sliding doors. Based on historic and recent aerials, the metal building (Feature 6) dates to between 1975 and 1997 (USGS 1975b).

The sixth outbuilding is a frame building (Feature 7) located approximately 125 ft southwest of the residence (Figure 42). It is topped by a side-gable roof sheathed in wood shingles and clad in weatherboard siding. The east elevation contains a set of sliding doors and the north elevation has a window that has been filled in. Based on historic aerials, the building (Feature 7) was present in 1952 and likely dates to circa 1925–1952 (USGS 1952b).

The seventh outbuilding is a frame building (Feature 8) located approximately 145 ft south of the residence (Figure 43). It is topped by a front-gable roof sheathed in wood shingles and clad in weatherboard siding. The north elevation contains a double-leaf entry filled with wood doors constructed from plywood. Based on recent and historic aerials, the building (Feature 8) dates to between 1975 and 1997 (USGS 1975b).

Figure 40. Site 4 (32LO00158): Large barn (Feature 5), looking northwest.

Figure 41. Site 4 (32LO00158): Metal building (Feature 6), looking southwest.

Figure 42. Site 4 (32LO00158): Frame outbuilding (Feature 7), looking south.

Figure 43. Site 4 (32LO00158): Frame outbuilding (Feature 8), looking south.

The eighth structure is a railroad boxcar (Feature 9) located approximately 240 ft east of the residence (Figure 44). The boxcar has been placed on a trailer for the ability to move it to various locations. It is topped by an arched roof, clad in wood panels, and appears that several windows have been cut into it. Based on recent and historic aerials, the building (Feature 8) dates to between 1975 and 1997 (USGS 1975b).

In addition to the eight outbuildings, there are seven modern, metal grain bins (Features 10–14) placed around the outbuildings (Figure 45). The majority are located to the southwest of the residence. Based on a review of recent aerials, only one dates prior to 2005 and it likely dates to between 1975 and 1997 (USGS 1975b).

NRHP Evaluation: Not Eligible. Deed research completed at the Logan County Recorder's Office in Napoleon indicated that the Gurion County Investment Company sold the parcel in question to R. Slattebak on September 27, 1909 for the sum of $44,800 (DB4:206). R. Slattebak was in possession of the land until its sale on April 6, 1929 to Albert Hebben for $3,809.70 (DB26:277). The ownership of the property by R. Slattebak for 20 years likely suggests that R. Slattebak was the individual responsible for the construction of the residence at Site 4 (32LO00158). The parcel changed ownership several more times throughout the remainder of the twentieth century, being sold in 1939, 1941, 1972, and lastly in 1999 to Boyd and Nancy Piatz who are the current landowners (DB62:693). Research did not reveal any connections between Site 4 (32LO00158) and events or persons of historic significance. As such, the property is not eligible for listing in the NRHP under Criterion A or B.

The American Foursquare is a two-story house, typically with two to three bays and a hip roof often pierced by dormers. The entrance is most often off-center, set into one front facing corner of the house, sheltered by a large porch often embellished with a restrained use of Colonial Revival or Craftsman ornamentation. In the largest homes, the porch occasionally wraps around one side, in a

Figure 44. Site 4 (32LO00158): Boxcar (Feature 9), looking southeast.

Figure 45. Site 4 (32LO00158): Grain Bins (Features 10–14), looking west-southwest.

manner reminiscent of the Queen Anne porch. Occasionally the doorway appears in the center of the façade. Sidelights are sometimes used and occasionally there is one light rather than the typical two lights. Window sash is usually 1/1, 2/1, or 2/2 double hung. The use of paired or even triple windows is common. By the early twentieth century this style of house was widely available as both stock builder forms and as prefabricated catalog houses (Jakle et. al. 1989:140-141). The American Foursquare is considered part of the Prairie movement that dominated residential architecture during the early decades of the twentieth century. Details such as wide overhanging eaves and prominent front porches can be attributed to the Prairie design influence.

The residence lacks distinctive features or materials to elevate its architectural significance and distinguish it from other examples found locally and statewide. As such, although it maintains a moderate degree of integrity, this example does not rise to a level of significance for eligibility for listing in the NRHP under Criterion C.

Of the eight associated outbuildings located on the farm, six are non-historic, along with seven modern, metal grain bins. The remaining outbuildings represent common forms that do not contain unique characteristics to distinguish themselves from other similar examples found locally and statewide. Along with material changes including additions and replacement cladding and/or windows, the outbuildings are not recommended as individually eligible for listing in the NRHP.

The property is also not eligible for listing in the NRHP as a historic farmstead. The residence as well as agricultural support structures associated with Site 4 (32LO00158) were historically part of a larger farmstead that included additional farm structures that are no longer extant (USGS 1952b). Agricultural outbuildings associated with this site date to the second half of the twentieth century, and represent common examples or their types and

lack distinctive features, materials, or functions to elevate their significance. Additionally, the loss of historic farm structures and the material alterations to historic structures diminish the buildings' integrity as a group and compromise the site's integrity of setting, feeling, and association. As such, the property is not an excellent example of an agricultural property dating from the early to mid-twentieth century indicating agricultural practices in Logan County during this period as its spatial plan, dwellings, and domestic and agricultural outbuildings are not unique to Logan County or the region. Moreover, the layout of the farmstead's aboveground resources, field patterns, and internal circulation patterns are not unique to the area or region (USGS 1952b, 1975b). These factors lead CRA to recommend the site as not eligible as a farmstead under Criterion A, B, or C.

Consequently, CRA recommends that Site 4 (32LO00158) is not eligible for inclusion in the NRHP under Criterion A, B, or C.

Determination of Effect: N/A

Site 21

ND Survey #: 32LO00160

Photographs: Figures 46–49

Map: Figure 2b

Quad: Burnstad, North Dakota 1982

Lat: 46.393470

Long: -99.687116

Property Address: 35th Avenue Southeast
Burnstad, North Dakota 58495

Construction Date: 1925–1952

Description: Site 21 (32LO00160) consists of a barn and outbuildings located on 35th Avenue Southeast, approximately 0.55 mi northwest of its intersection with 71st Street Southeast. The structures are situated on an undulating, grassy parcel of indeterminate size. The barn is situated approximately 275 ft west from the ROW. A gravel driveway extends along the east side of the property and curves south toward the barn. The site was surveyed from the ROW.

The barn at Site 21 is first depicted on the 1952 historic aerial imagery (USGS 1952a). Based on the barn's first aerial appearance, as well as its form and materials, it seems likely that the barn at Site 21 was constructed between 1925 and 1952. A review of the historic aerials also indicates that a residence was originally located north of the barn, but was demolished between 2005 and 2006.

Oriented north to south, the barn is a two-story, arched roof, frame structure (Figure 46). Resting on a concrete block foundation, the barn is clad in drop-board-siding and sheltered beneath an asphalt shingle roof. Shed-roof additions projecting from the barn's side elevations are sheathed in corrugated metal. Piercing the south elevation is a centrally placed single-bay entry filled by a sliding wooden door on a metal track. A window flanks the entry to either side, with the west being filled with plywood sheeting. A centrally placed double-bay entry filled with wooden doors set on metal tracks pierces the second floor of the barn's south elevation. An upright rectangular louvered vent is situated within the gable. Two, single-bays filled with wood doors on metal tracks pierce the shed-roof additions that project from the barn's east and west elevations.

The east elevation of the shed-roof addition is pierced by a single-leaf entry filled with a vertical board door attached to the barn with strap hinges (see Figure 46). Three evenly spaced windows pierce the east elevation south of the entry. The north elevation is pierced by a central open bay topped by an open hay loft entry (Figure 47). Two symmetrically placed windows pierce the gable-field. The rolling topography partially obstructed views of the barn's north elevation. The west elevation was not visible from the ROW.

Figure 46. Site 21 (32LO00160): South and east elevations of the barn (Feature 1), looking northwest.

Figure 47. Site 21 (32LO00160): North and east elevations of the barn (Feature 1), looking southwest.

A one-story, side-gable, frame animal shelter (Feature 2) is located approximately 240 ft northwest of the barn (Figure 48). Clad in drop-board-siding, the structure is sheltered beneath a wood shingle roof that features exposed rafter tails. As a result of the natural topography, the structure's foundation material was not visible from the ROW. An open, off-center, single-leaf entry pierces the south elevation. The gable-field of the east elevation is pierced by an open window. All subsequent elevations were not visible from the ROW. A board fence encloses the immediate area south and west of the structure. Based on a review of the available historic aerial imagery, the animal shelter (Feature 2) was likely built between 1925 and 1952 (USGS 1952a).

Located approximately 210 ft northwest of the barn is a one-story, gable-roof, structure (Feature 3) (Figure 49). The structure's gables are oriented north to south and the roof is sheathed in wood shingles. Due to the natural rolling topography across Site 21, the structure's east roof plane was the only visible architectural feature from the ROW. Based on a review of the available historic aerial imagery, the outbuilding (Feature 3) was likely built between 1925 and 1952 (USGS 1952a).

A one-story, gable-roof, structure is situated approximately 295 ft northwest of the barn (Feature 4) (see Figure 49). Clad in horizontal wood siding, the structure's gables are oriented north to south and the roof is sheathed in wood shingles and features exposed rafter tails. The east elevation is void of fenestration. All subsequent elevations were not visible from the ROW. Based on a review of the available historic aerial imagery, the outbuilding (Feature 4) was likely built between 1925 and 1952 (USGS 1952a).

Figure 48. Site 21 (32LO00160): South and east elevations of the animal shelter (Feature 2), looking northwest.

Figure 49. Site 21 (32LO00160): East elevations of the two structures (Features 3 and 4), looking west.

NRHP Evaluation: Not Eligible. Research did not reveal connections between Site 21 (32LO00160) and events or persons of historic significance; therefore, it is not eligible for listing in the NRHP under Criterion A or B.

The barn is an example of a common agricultural form and does not represent a significant type. While the interior of the barn was not visible from the ROW, given its early to mid-twentieth-century date of construction, it most likely does not contain log or mortise and tenon construction. Moreover, although the barn is sheltered beneath an arched roof, an uncommon widely distributed feature, overall, the barn lacks unique design features or materials to distinguish it from other examples found locally and statewide. The shed-roof additions diminish the barn's integrity of design, materials, and workmanship. Moreover, the loss of the associated residence compromises the resource's integrity of setting and association.

The animal shelter (Feature 2) and ancillary structures (Features 3 and 4) are all common agricultural forms and lack the significance and integrity to rise to the level of individual eligibility under Criterion C for listing in the NRHP.

Consequently, CRA recommends that Site 21 (32LO00160) is not eligible for inclusion in the NRHP under Criterion A, B, or C.

Determination of Effect: N/A.

Site 70

ND Survey #: 32MT00431

Photographs: Figures 50–65

Map: Figure 2h

Quad: Wishek, North Dakota 1982

Lat: 46.273302

Long: -99.483282

Property Address: 43rd Avenue Southeast
Wishek, North Dakota 58495

Construction Date: 1925–1950

Description: Site 70 (32MT00431) consists of a farm located west of 43rd Avenue SE, approximately 1 mi north from its intersection with ND 13. The structures are situated on a 160-acre parcel comprised of pasture and fields with several small ponds and dotted with mature trees. The residence is set back approximately 200 ft from the ROW, and is accessed by a gravel driveway.

Site 70 is first depicted on a 1952 USGS aerial photograph (USGS 1952c). According to the aerial and the building materials and form, the residence was constructed circa 1925–1950.

The residence associated with Site 70 is oriented west and is a one-and-one-half-story, two-bay (d/w), front-gable, form (Figure 50). Resting on a continuous, poured concrete foundation, the dwelling is clad in weatherboard siding, and new metal panels cover its roof. Windows throughout the residence, unless otherwise noted, contain a combination one-over-one and six-over-one, double-hung, wood sashes. An internal, concrete block chimney is present along the ridgeline.

The façade of the residence features an enclosed, one-story, shed-roof entryway that contains a centered, single-leaf entry filled by a solid, wood panel door that opens to the south (see Figure 50). A diamond shaped window is located on the west elevation of the enclosed entryway. The main level of the façade is pierced by a single window, south of the entryway and by a smaller window in the upper floor (see Figure 50). A basement window is located within the foundation as well.

The south elevation contains two single windows as well as a single window at the basement level (see Figure 50). The north elevation contains two single windows (Figure 51). The rear (north) elevation of the residence is pierced by an off-center, single window (see Figure 51).

There are eighteen outbuildings associated with the main residence. The first is a frame outbuilding (Feature 2) located approximately 60 ft to the east of the residence. It is topped by a front gable roof sheathed in asphalt shingles and clad in rolled, asphalt shingle siding (Figure 52). On its façade is a single-leaf entry filled with a solid, wood door flanked by a single window. The west elevation is also pierced by a single window. Based on recent and historic aerials, the outbuilding (Feature 3) was present in 1975 but does not appear on a 1952 aerial (USGS 1952c and 1975c). Thus the outbuilding likely dates to between 1952 and 1975.

The second outbuilding is a frame garage (Feature 3) topped by a front gable roof with stepped parapet wall sheathed in asphalt shingles (Figure 53). It is located approximately 70 ft southeast of the residence. The façade contains a sliding, wood door and a single window. No openings were present within the east and west elevations. The rear elevation contains a single, window opening. Based on recent and historic aerials, the garage (Feature 3) was present in 1975 but does not appear on a 1952 aerial (USGS 1952c and 1975c). Thus the garage likely dates to between 1952 and 1975.

Figure 50. Site 70 (32MT00431): Façade and south elevations of the residence (Feature 1), looking east.

Figure 51. Site 70 (32MT00431): Rear (east) and north elevations of the residence (Feature 1), looking southwest.

Figure 52. Site 70 (32MT00431): Frame outbuilding (Feature 2), looking northeast.

Figure 53. Site 70 (32MT00431): Frame garage (Feature 3), looking north.

The third outbuilding is a large barn (Feature 4) located approximately 55 ft west of the residence (Figure 54). It is topped by a front gable roof sheathed in asphalt shingles and clad in weatherboard siding. The south elevation contains a sliding, wood door flanked by a single window. Above this is a large opening, that has been closed in, to access the loft. A small single-pane window is located near the top of the lost access. Side shed additions are located along both non-gable elevations. They have roofs sheathed in new metal panels and contain several small windows. Based on historic aerials, the barn (Feature 4) was present in 1952 and thus likely dates to between 1925–1952 (USGS 1952c).

The fourth outbuilding is a frame shed (Feature 5) that is located approximately 20 ft west of the barn (Feature 4) (Figure 55). It is topped by a shed roof sheathed in metal panels and clad in weatherboard siding. The shed has two sections and each contains an entry on its east elevation. Based on historic aerials, the shed (Feature 5) was present in 1952 and likely dates to circa 1925–1952 (USGS 1952c).

The fifth outbuilding is another frame shed (Feature 6) located approximately 195 ft southwest of the residence (Figure 56). It is topped by a shed roof sheathed in metal panels and clad in weatherboard siding. Like Feature 5, this shed is constructed in two sections with the northern portion containing two, single-leaf entries filled with wood doors. The southern portion contains a row of three windows on its façade. Based on historic aerials, the shed (Feature 6) was present in 1952 and likely dates to circa 1925–1952 (USGS 1952c).

Figure 54. Site 70 (32MT00431): Barn (Feature 4), looking west-northwest.

Figure 55. Site 70 (32MT00431): Shed (Feature 5), looking northwest.

Figure 56. Site 70 (32MT00431): Shed (Feature 6), looking southwest.

The sixth outbuilding is a frame garage (Feature 7) located approximately 120 ft southwest of the residence (Figure 57). It is topped by a side-gable roof sheathed in asphalt shingles and clad in weatherboard siding. The east elevation contains a sliding door and the north elevation has two small windows. Based on historic aerials, the garage (Feature 7) was present in 1952 and likely dates to circa 1925–1952 (USGS 1952c).

The seventh outbuilding is a frame garage (Feature 8) located approximately 200 ft southwest of the residence (Figure 58). It is topped by a front-gable roof sheathed in wood shingles and clad in weatherboard siding. The façade contains a sliding wood door. Based on historic aerials, the garage (Feature 8) was present in 1952 and likely dates to circa 1925–1952 (USGS 1952c).

The eighth outbuilding is a frame garage (Feature 9) located approximately 210 ft southwest of the residence (see Figure 58). It is topped by a front-gable roof sheathed in wood shingles and clad in weatherboard siding. The façade contains a sliding wood door. Based on historic aerials, the garage (Feature 9) was present in 1952 and likely dates to circa 1925–1952 (USGS 1952c).

The ninth outbuilding is a frame garage (Feature 10) located approximately 375 ft southwest of the residence (Figure 59). It is topped by a front-gable roof sheathed in metal panels and clad in rolled asphalt siding. The façade contains two sliding wood doors. Based on historic aerials, the garage (Feature 10) was present in 1975 but not on an earlier 1952 aerial and thus dates to between 1952 and 1975 (USGS 1952c and 1975c).

The tenth outbuilding is a metal building (Feature 11) located approximately 430 ft southwest of the residence (Figure 60). It is topped by a front-gable roof sheathed in metal panels and clad in metal. The façade contains two sliding doors. Based on recent aerials, the building (Feature 11) was present in 1997 but not on an earlier 1975 aerial and thus dates to between 1975 and 1997 (USGS 1975c).

Figure 57. Site 70 (32MT00431): Garage (Feature 7), looking southwest.

Figure 58. Site 70 (32MT00431): Garages (Features 8 and 9), looking southwest.

Figure 59. Site 70 (32MT00431): Garage (Feature 10), looking southwest.

The eleventh outbuilding is an animal shelter (Feature 12) located approximately 365 ft southwest of the residence (Figure 61). It is topped by a shed roof sheathed in metal panels and clad in metal. Based on recent aerials, the building (Feature 12) was present in 1997 but not on an earlier 1975 aerial and thus dates to between 1975 and 1997 (USGS 1975c).

The twelfth outbuilding is also an animal shelter (Feature 13) located approximately 225 ft west of the residence (Figure 62). It is topped by a shed roof sheathed in metal panels and clad in metal. Based on recent aerials, the building (Feature 13) was present in 1997 but not on an earlier 1975 aerial and thus dates to between 1975 and 1997 (USGS 1975c).

The thirteenth outbuilding is shed (Feature 14) located approximately 330 ft west-northwest of the residence (Figure 63). It is topped by a shed roof sheathed in wood shingles and clad in plywood. Based on historic aerials, the building (Feature 14) was present in 1975 but not on an earlier 1952 aerial and thus dates to between 1952–1975 (USGS 1952c and 1975c).

The fourteenth outbuilding is an animal shelter (Feature 15) located approximately 345 ft northwest of the residence (Figure 64). It is topped by a shed roof and clad in vertical board siding. Based on recent aerials, the building (Feature 15) was present in 1997 but not on an earlier 1975 aerial and thus dates to between 1975 and 1997 (USGS 1975c).

The fifteenth outbuilding is a metal building (Feature 16) located approximately 375 ft northwest of the residence (see Figure 64). It is topped by a shed roof sheathed in metal panels and clad in metal. The façade contains two sliding doors. Based on recent aerials, the building (Feature 16) dates to between 1997 and 2003.

The sixteenth outbuilding is also a metal building (Feature 17) located approximately 560 ft northwest of the residence (see Figure 64). It is topped by a gabled roof sheathed in metal panels and clad in metal. The façade contains two large openings for access. Based on historic aerials, the building (Feature 17) was present in 1975 but not on an earlier 1952 aerial and thus dates to between 1952 and 1975 (USGS 1952c and 1975c).

Figure 60. Site 70 (32MT00431): Metal Building and garage (Features 10 and 11), looking southwest.

Figure 61. Site 70 (32MT00431): Animal shelter (Feature 12), looking west.

Figure 62. Site 70 (32MT00431): Animal shelter (Feature 13), looking west.

Figure 63. Site 70 (32MT00431): Shed (Feature 14), looking west-northwest.

Figure 64. Site 70 (32MT00431): Animal shelter and metal buildings (Features 15–17), looking northwest.

Figure 65. Site 70 (32MT00431): Animal shelter (Feature 18), looking north-northeast.

The seventeenth outbuilding is an animal shelter (Feature 18) located approximately 390 ft north-northeast of the residence (Figure 65). It is topped by a shed roof and clad in vertical board siding. Based on recent aerials, the building (Feature 18) was present in 1997 but not on an earlier 1975 aerial and thus dates to between 1975 and 1997 (USGS 1975c).

In addition to the seventeen outbuildings, there are two modern, metal grain bins (Feature 19) (see Figure 60). Based on recent aerials, they are present in 1997 but not on an earlier 1975 aerial and thus dates to between 1975 and 1997 (USGS 1975c).

NRHP Evaluation: Not Eligible. Deed research completed at the Logan County Recorder's Office in Napoleon indicated that the property in question was bought and sold a total of eight times during the twentieth century. An additional three sales are noted for the twenty-first century. On February 23, 1926, S.G. and Minnie Palmer sold the parcel in question to George Wolf for $8,585.25 (B33:104). George Wolf retained ownership of the property in question through 1951, when on February 16, he transferred ownership to Albert G. Wolf for $1 and other considerations (DB54:450). Therefore, it seems likely that the residence and a portion of the ancillary structures, were constructed at Site 70 by George Wolf. The property in question is still retained by the Wolf Family, despite having changed ownership several times. Research did not reveal any connections between Site 70 (32MT00431) and events or persons of historic significance. As such, the property is not eligible for listing in the NRHP under Criterion A or B.

The residence is a typical example of a common vernacular form of the early to mid-twentieth century. The dwelling lacks distinctive features or material treatments which could elevate its architectural significance and distinguish it from other similar examples found locally and statewide.

Although the house associated with the site exhibits adequate overall integrity, it displays a simple form without distinctive architectural features or design elements. As such, it does not possess the attributes necessary to raise its significance to a level meriting inclusion in the NRHP under Criterion C.

Of the seventeen associated outbuildings located on the farm, six are non-historic, along with two modern, metal grain bins. The remaining outbuildings represent common forms that do not contain unique characteristics to distinguish themselves from other similar examples found locally and statewide. The outbuildings have also undergone material changes, including additions and replacement cladding and/or windows, and are not recommended as individually eligible for listing in the NRHP.

The property is also not eligible for listing in the NRHP as a historic farmstead. Agricultural outbuildings associated with this site date to the second half of the twentieth century, and represent common examples of their types and lack distinctive features, materials, or functions to elevate their significance. Additionally, the loss of historic farm structures and the material alterations to historic structures diminish the buildings' integrity as a group and compromise the site's integrity of setting, feeling, and association. As such, the property is not an excellent example of an agricultural property dating from the early to mid-twentieth century indicating agricultural practices in Logan County during this period as its spatial plan, dwellings, and domestic and agricultural outbuildings are not unique to Logan County or the region. Moreover, the layout of the farmstead's aboveground resources, field patterns, and internal circulation patterns are not unique to the area or region (USGS 1952c and 1975c). These factors lead CRA to recommend the site as not eligible as a farmstead under Criterion A, B, or C.

Consequently, CRA recommends that Site 70 (32MT00431) is not eligible for inclusion in the NRHP under Criterion A, B, or C.

Determination of Effect: N/A.

Site 115

ND Survey #: 32MT00432

Photographs: Figures 66–79

Map: Figure 2l

Quad: May Lake NW, North Dakota 1982

Lat: 46.205771

Long: -99.693666

Property Address: 8375 33rd Avenue Southeast
Wishek, North Dakota 58495

Construction Date: 1908

Description: Site 115 (32MT00432) is a centennial farmstead comprised of a vernacular dwelling and agricultural outbuildings, located at 8375 33rd Avenue SE, approximately 3,758 ft south of its intersection with 83rd Street SE. The farmstead is located on a 158.7-acre parcel that is bisected by an ephemeral drainage to the north. The residence and agricultural support structures are situated on an upland ridge overlooking cultivated agricultural fields. The farmstead structures are located in the eastern portion of the parcel and accessed by a gravel driveway leading west from 33rd Avenue SE. Access to the property was granted by the landowner for the purpose of completing the historic architectural survey.

The residence at Site 115 (332MT00432) is first depicted on the 1952 historic aerial imagery (USGS 1952d). During the historic architectural resource survey, Jerry L. Bettenhausen, the current landowner, specified that his grandfather, Christian Bettenhausen built the residence in 1908 as a one-story residence, and added the second story in 1910 (Jerry L. Bettenhausen, personal communication 2021).

Oriented south, the two-story, three-bay (d/w/w), double-pile, side-gable, frame vernacular residence (Feature 1) rests on a basement foundation that is concealed behind by a faux brick skirt. The current landowner indicated that the basement was added to the residence in the 1980s (Jerry L. Bettenhausen, personal communication 2021). Clad in vinyl siding, the residence exhibits a moderately

pitched roof with closed, wide, overhanging eaves and is sheathed in asphalt shingles (Figure 66). An interior brick chimney pierces the western end of the ridge line. Unless otherwise indicated, windows throughout the residence are filled with one-over-one, double-hung, wood sashes, and replacement vinyl sash casement windows.

The façade exhibits an off-center single-leaf entry filled with a replacement, multi-light door, set behind a decorative wooden storm door (Figure 67). Two casement windows pierce the façade east of the entry. Three asymmetrical windows pierce the second story of the façade. A one-story, full-width, hip-roof porch shelters the façade and is supported by eight replacement turned posts resting on a wood deck. Information obtained from the landowner indicated that the porch was added to the residence in 1910 (Jerry L. Bettenhausen, personal communication 2021).

Two windows pierce the first and second floors of the west elevation (see Figure 66). Wood shingles, brackets, and a half-circle louvered vent are present in the gable field. A one-story, side-gable, addition projects from the west elevation. A centrally placed single-leaf entry pierces the south elevation of the addition and is filled with a multi-light door sheltered behind a decorative storm door. The entry opens onto a set of precast concrete steps.

The west elevation of the addition is pierced by a single window and feature wood shingles in the gable field. The first floor of the east elevation of the residence exhibits a ribbon of three windows and a casement window. Two windows pierce the second story. Wood shingles and brackets are present in the gable field (Figure 68). The rear (north) elevation is pierced by a single window flanked by an octagonal casement window. Two evenly spaced windows pierce the second-story of the rear (north) elevation.

Figure 66. Site 115 (32MT00432): Façade and west elevations of the residence (Feature 1), looking northeast.

Figure 67. Site 115 (32MT00432): Façade of the residence (Feature 1), looking north.

Figure 68. Site 115 (32MT00432): Façade and east elevations of the residence (Feature 1), looking northwest.

A one-story, front-gable, frame garage (Feature 2) is located approximately 40 ft west of the residence (Figure 69). Two, single-bay, vehicular entries pierce the garage's south elevation and are filled with two-light, metal panel, overhead doors. A single-leaf entry filled with a single-light, metal door, and flanked by a single window pierces the east elevation. Fenestrations are absent from the rear (north) and west elevations. Based on a review of the available aerial imagery, the garage (Feature 2) was built before 1975 (USGS 1975d).

A circular cement-stave silo with a hemispheric cover (Feature 3) is located approximately 155 ft southwest of the residence (Figure 70). Constructed of individual precast cement sections, the silo is wrapped in evenly spaced metal cables that confine the cement staves. A metal ladder ascends the south side of the silo and provides access to a vertically sliding metal door that pierces the hemispheric cover. A small, gable-roof structure at the base of the silo connects it to the adjacent barn. In large white letters painted on the east side of the silo is the name Chris P. Bettenhausen, with the date 1953 below it (see Figure 70). Jerry L. Bettenhausen confirmed that this represents the silo's date of construction (Jerry L. Bettenhausen, personal communication). Decorative symbols, labeled in white paint, encircle the top of the cement-stave section of the silo.

Approximately 141 ft west of the residence, and directly adjacent to the silo, is a two-story, frame, front-gambrel, transverse-frame barn (Feature 4) (Figure 71). Oriented north to south the barn rests on a poured concrete foundation, is clad in horizontal wood boards, and sheltered beneath a replacement standing seam metal roof. The main mass of the south elevation is pierced by a large, off-center, single-bay vehicular entry filled with an overhead door (Figure 72). Portions of the barn's cladding has been replaced with sheets of plywood. An off-center opening pierces the south elevation above the vehicular-entry. Shed-roof additions project from the east and west elevations of the barn's main mass and are pierced by a single-bay vehicular entry and a single-leaf entry along the south elevation. Fenestrations on the east elevation include a centrally placed single-leaf entry set behind an aluminum storm door (see Figure 71). A ribbon of four vertical rectangular windows, and three four-light, wood-sash, hopper windows pierce the east elevation north of the entry. Two, four-light, wood-sash, hopper-lights flank the entry to the south. The rear (north) elevation is pierced by a single-bay vehicular entry and features a projecting gable-roof metal pole barn addition (see Figure 71). The barn is first depicted on the 1952 historic aerial imagery (USGS 1952d). During the architectural survey, the landowner indicated that the barn was built in 1933 (Jerry L. Bettenhausen, personal communication 2021).

Located approximately 210 ft northwest of the residence and oriented to the east, is a non-historic metal pole barn (Feature 5) (Figure 73). Constructed between 1975 and 1997, the gable-oriented pole barn is clad in metal siding and sheltered beneath a metal panel roof. A double-leaf entry, filled with two sliding metal doors, pierces the barn's east elevation. Fenestrations are absent from the north and south elevations.

Approximately 410 ft northwest of the residence and oriented to the east, is another non-historic metal pole barn (Feature 6). Constructed between 1997 and 2003, the gable-oriented pole barn was not visible during the current investigation and was therefore not photographed.

West of the residence, approximately 290 ft, is a one-story, side-gable, frame, animal shelter (Feature 7) that features a partially collapsed roof (Figure 74). Clad in corrugated metal and horizontal wood boards, the shelter is constructed of circular posts and dimensional lumber. The animal shelter is surrounded by a large animal pen enclosed by a board fence that has been modified to include vertical wooden boards and corrugated metal that likely serve as wind blocks. Based on a review of the available historic aerial imagery, the animal shelter was constructed between 1952 and 1975 (USGS 1952d and 1975d).

Figure 69. Site 115 (32MT00432): South and east elevations of the garage (Feature 2), looking northwest.

Figure 70. Site 115 (32MT00432): East side of the silo (Feature 3), looking west.

Figure 71. Site 115 (32MT00432): North and east elevations of the barn (Feature 4), looking southwest.

Figure 72. Site 115 (32MT00432): South elevation of the barn (Feature 4), looking north.

Figure 73. Site 115 (32MT00432): East and north elevations of the metal pole barn (Feature 5), looking southwest.

Figure 74. Site 115 (32MT00432): East and south elevations of the animal shelter (Feature 7), looking northwest.

A metal pole barn (Feature 8) is located approximately 215 ft southwest of the residence (Figure 75). Oriented north, the one-story, front-gable, frame, pole barn is clad completely in standing seam metal. The north elevation of the pole barn is pierced by a double-leaf vehicular entry filled with two sliding doors. A single leaf entry pierces the east elevation. A review of the historic aerial imagery indicates that the metal pole barn (Feature 8) was built between 1952 and 1975 (USGS 1952d and 1975d).

Located approximately 195 ft southwest of the residence is a one-story, side-gable, frame outbuilding (Feature 9). Oriented east, the outbuilding is clad in weather board siding and sheltered beneath an asphalt shingle roof that has been placed over wood shingles and includes exposed rafter tails (Figure 76). Tall grasses obstructed views of the outbuilding's foundation. Two single-leaf entries pierce the east elevation of the outbuilding. The northern entry is missing its entry door and the southern entry is filled with a vertical board door that is partially detached from the building's main mass. A hatch, attached with strap hinges, pierces the gable ends (see Figure 76). The outbuilding is first depicted on the 1952 historic aerial imagery (USGS 1952d). Therefore, based on its first aerial appearance, as well as its form and materials, it seems likely that the outbuilding (Feature 9) was constructed between 1925 and 1952.

Approximately 480 ft south of the residence is a group of eight circular, metal, grain bins of varying heights (Figure 77). Arranged in a line east to west, with one offset to the north, the grain bins are all clad in metal sheets and capped by a pyramidal cover. Historic aerial imagery reviewed indicates that the grain bins were constructed sometime between 1952 and 1975 (USGS 1952d and 1975d). Three of the eight are shorter and with a larger diameter and these have been designated Feature 10. Two of the eight are shorter and have a smaller diameter and these have been designated Feature 13. One of the eight is taller and has a smaller diameter that the other taller grain bin and it has been designated Feature 14. Two of the eight are taller and have a larger diameter than the other grain bins and they have been designated Feature 15.

Figure 75. Site 115 (32MT00432): North and east elevations of the metal pole barn (Feature 8), looking southwest.

Figure 76. Site 115 (32MT00432): East and south elevation of the outbuilding (Feature 9), looking northwest.

Figure 77. Site 115 (32MT00432): Overview of the eight grain bins (Features 10, 13–15), looking south.

Oriented north and located approximately 60 ft southeast of the residence is a one-story, front-gable, frame outbuilding (Feature 11) (Figure 78). Resting on a poured concrete foundation, the outbuilding is clad in horizontal wood boards that have been partially covered by replacement vinyl siding and is sheltered beneath a roof covered by wood shingles on its eastern pitch and roofing felt to the west. The façade (north) elevation of the outbuilding is pierced by an off-center single-leaf entry filled with a single-light metal door and flanked to the west by a one-over-one, double-hung, vinyl sash window. The entry opens onto a poured concrete pad that includes a partially constructed shed-roof porch. The east and west elevations are both pierced by a single window. The south elevation is pierced by a single-bay, vehicular entry, filled by a metal panel overhead door. A review of the available aerial imagery indicates that the outbuilding (Feature 11) was likely constructed sometime between 1975 and 1997 (USGS 1975d).

Situated approximately 460 ft east of the residence is a sign (Feature 12) that reads "Bettenhausen Centennial Farm, Established 1907" (Figure 79). The metal sign is attached to two horizontal pieces of dimensional lumber that connect, on each side, to three round, wooden posts set directly into the ground. Situated beneath the sign is a cut piece of reddish granite. A brick border along the ground surface encloses the large granite block with decorative plantings. The sign was not visible on the aerial imagery reviewed, however, since the sign denotes the farms age as 100 years old, it seems likely that the sign was constructed sometime between 2007 and the present.

NRHP Evaluation: Not Eligible. Deed research completed at the McIntosh County Recorder's office indicates that on June 21, 1907 the Nebraska Land Company sold an unspecified amount of land to Christian P. and Katherine Bettenhausen for $5,760 (DB16:566). Records indicate that on August 30, 1912, Christian P. and Katherine Bettenhausen sold the property in question to William H. and Albina Bettenhausen for $7,900 (DB23:75). Ownership of the property was transferred

Figure 78. Site 115 (32MT00432): Façade (north) and east elevation of the outbuilding (Feature 11), looking southwest.

Figure 79. Site 115 (32MT00432): Overview of the Bettenhausen Centennial Farm sign (Feature 12), looking west.

again on October 8, 1958, when William and Albina sold the property to Christian and Iona Bettenhausen for $12,800 (DB67:491). On October 9, 2013 ownership of the property was sold to Jerry L. and Bonnie Bettenhausen for a total of $285,600 (DB131:100). Research did not reveal connections between Site 115 (32MT00432) and events or persons of historic significance; therefore, Site 115 is not eligible for listing in the NRHP under Criterion A or B.

The residence at Site 115 (32MT00432) is an example of a residential form dating to the early twentieth century. The addition of a second floor, the excavation of a basement, and the use of replacement materials have adversely affected the integrity of design, materials and workmanship of the residence. Furthermore, the dwelling does not exhibit elements that would raise its architectural significance such as decorative shingles and scrollwork in the gables, or porch embellishments. The historic residence at Site 115 (32MT00432) displays diminished integrity, and is an example of a large, vernacular, early twentieth-century rural residence associated with a large agricultural property that lacks architectural significance for listing in the NRHP under Criterion C. Therefore, CRA recommends the residence associated with Site 115 (32MT00432) is not eligible for listing in the NRHP under Criterion C.

The outbuildings and the centennial sign (Features 2–15) are common domestic and agricultural forms and lack the significance and integrity to rise to the level of individual eligibility under Criterion C for listing in the NRHP.

The property is also not eligible for listing in the NRHP as a historic farmstead. The residence as well as agricultural support structures associated with Site 115 (32MT00432) were historically part of a larger farmstead that included additional farm structures that are no longer extant (USGS 1952d). Although the majority of the agricultural outbuildings associated with the site date to the mid- to late twentieth century, they are common examples or their types and lack distinctive features, materials, or functions

to elevate their significance. Additionally, the loss of historic farm structures and the material alterations to historic structures diminish the buildings' integrity as a group and compromise the site's integrity of setting, feeling, and association. As such, the property is not an excellent example of an agricultural property dating from the early to mid-twentieth century indicating agricultural practices in McIntosh County during this period as its spatial plan, dwellings, and domestic and agricultural outbuildings are not unique to McIntosh County or the region. Moreover, the layout of the farmstead's aboveground resources, field patterns, and internal circulation patterns are not unique to the area or region (USGS 1952d and 1975d) Therefore, although it maintains a moderate degree of integrity, the property lacks the significance to be eligible for listing in the NRHP as a historic farmstead.

Consequently, CRA recommends that Site 115 (32MT00432) is not eligible for inclusion in the NRHP under Criterion A, B, or C.

Determination of Effect: N/A.

Site 232

ND Survey #: 32MT00433

Photographs: Figures 80–85

Map: Figure 3b

Quad: Wishek, North Dakota 1982

Lat: 46.259228

Long: -99.556024

Property Address: 703 Beaver Avenue
Wishek, ND 58495

Construction Date: 1960

Description: Site 232 (32MT00433) is the Rohweder Rentals Apartments, formerly the Boschee Motel, and consists of a former residence that serves as the office building, and a separate building that contains 14 units located at 703 Beaver Avenue, at the northeast corner of its intersection with 7th Street South. The structures are situated on a level parcel that includes a grassy yard lot and mature plantings. The office building is situated approximately 20 ft north of the ROW. The paved drive and parking lot extend to the north from the ROW along the east and north sides of the office building.

Site 232 is first depicted on the 1982 Wishek, 7.5-minute series topographic quadrangle map (USGS 1982). However, information reviewed online indicates a construction date of 1960 (Bismark Tribune 1961:6).

The office is located in a two-story, three bay (d/w/w), frame vernacular house (Feature 1) (Figure 80). It is topped by an asymmetrical side gable roof that includes a gambrel roof along its façade (south) elevation and is covered in asphalt shingles. An external brick chimney, that tapers near grade, extends vertically past the roof line of the west elevation. Oriented to the south, the dwelling rests on a continuous parged basement foundation, and is clad in replacement composite siding. Windows, unless otherwise specified, are filled with three-over-one, and one-over-one, double-hung, wood sashes. A small metal sign is located in the residence's southern yard lot and includes the name Rohweder Rental Apartments.

An off-center, single-leaf, entry pierces the façade (see Figure 80). The entry door was not visible from the ROW and is set behind a replacement aluminum storm door. The entry opens onto a poured concrete stoop sheltered beneath a projecting gable-roof that includes decorative wrought-iron supports. The entry is reached via concrete steps that are preceded by a poured concrete sidewalk that provides access from the ROW. A picture window with flanking sidelights and sheltered beneath an aluminum canopy, pierce the main mass of the residence east of the entry. A single window pierces a hip-roof addition along the façade. Two, single-light, hip-roof, dormers pierce the south plane of the roof. Two basement windows pierce the foundation.

A one-story, hip-roof, frame, addition projects from the residence's east elevation (see Figure 80). An off-center, single-leaf entry pierces the east elevation of the addition and is

Figure 80. Site 232 (32MT00433): Façade and east elevations of the residence (Feature 1), looking northwest.

filled with a single-light wood door sheltered behind a replacement aluminum storm door. A fixed-light window and a one-by-one, aluminum sash window pierce the addition south of the entry. An aluminum canopy shelters the sliding sash window. The entry opens onto an uncovered frame patio. A single window pierces the eastern gable field of the residence's main mass. The residence's west elevation is pierced by a picture window with flanking sidelights sheltered beneath a metal canopy, and a single window (Figure 81). Two windows filled with glass block pierce the basement foundation of the west elevation. A single window pierces the gable field of the west elevation. Three asymmetrical windows pierce the rear (north) elevation (see Figure 81). The north plane of the roof is pierced by a centrally placed shed-roof dormer that features a paired window. A single window pierces the basement foundation.

The 14 rooms are housed in a building (Feature 2) located to the north and east of the residence (Figure 82). The building is topped by a low pitch, hip-roof, with wide overhanging eaves, is clad in composite siding, and rests on a continuous concrete block foundation. The southeastern unit rests on continuous poured concrete basement foundation. Each of the units includes a single door filled with either an unglazed wood door or a replacement fanlight door. Windows throughout the apartment complex include one-over-one double-hung wood sashes and wood sash projecting windows. An off-center single-leaf entry pierces the east elevation and is flanked to the north by a single window, and to the south by five projecting windows. The rear (north) elevation contains seven projecting windows (Figure 83). A one-car, frame garage projects from the west elevation of the southeast apartment (Figure 84). The garage is east of the residence and topped by a shed-roof. The garage, oriented to the south towards Beaver Avenue, is clad in composite siding and is pierced by a single-bay vehicular entry filled with a metal panel garage door. A single-leaf entry pierces the west elevation. A historic photograph from 1973 indicates that the garage was built between 1973 and 2005 (Figure 85).

Figure 81. Site 232 (32MT00433): Rear (north) and west elevations of the residence (Feature 1), looking southeast.

Figure 82. Site 232 (32MT00433): North and west elevations of the apartment units (Feature 2), looking northeast.

Figure 83. Site 232 (32MT00433): Rear (north) and west elevation of the apartment complex (Feature 2), looking southeast.

Figure 84. Site 232 (32MT00433): Overview of the residence and apartments (Feature 2), looking north.

Figure 85. Site 232 (32MT00433): Historic photograph of the Boschee Motel, looking northwest (Wishek Diamond Jubilee 1973: 177).

NRHP Evaluation: Not Eligible. Rohweder Rentals Apartments, formerly the Boschee Motel (Site 232 [32MT00433]) is indicative of motor courts constructed throughout the country as roadside traveling accommodations transitioned from cottage courts comprised of individual buildings containing single or double lodging arrangements to motels containing up-to-date features often in a long, low, single-story structure with overnight rooms aligned adjacent to one another.

Research did not uncover any association between the Rohweder Rentals Apartments and any notable events or persons. Deed research completed at the McIntosh County Recorder's office indicated that on December 12, 1942, Ida and Anne E. Alexander sold the property in question to Leaman and Edna Boschee for the $1 cash in hand (Deed Book [DB] 43:497). Newspaper records reviewed online indicate that Leaman and Edna Boschee moved to Wishek and began construction on the Boschee Motel in 1960 (Bismarck Tribune 1996:9). The Boschee's opened their motel for business in September 1961, which included an open house that provided local residences of Wishek with tours of the new facility, as well as snacks and coffee. On July 18, 1980, Leaman and Edna Boschee purportedly sold the Boschee Motel to Wayne and Eidella Baumann for $100,000 and included the motel and all of the fixtures and appliances (DB 93: 679). Contrary to the information reviewed as part of the chain-of-title research, an article reviewed online in the Bismarck Tribune from June 8, 1987, announced a real estate auction for the Boschee Motel and lists the owners as Leaman and Edna Boschee. The owners make clear in the announcement that "because of age and health we have decided to sell this motel and home (Bismarck Tribune 1987: 17)." A second article indicates that in early 1995 "longtime owners Leaman and Lillian Boschee sold the motel to David Just (Bismarck Tribune 1995: 13)." An obituary for Edna Boschee dated April 9, 1996 confirms the 1995 sale of the Boschee Motel (Bismark Tribune 1996:9).

Although the Rohweder Rentals Apartments retains a number of the characteristics associated with motor courts constructed during the early to mid-1960s, it does not rise to the level of significance to be eligible for listing in the NRHP under Criterion A.

Research has not connected this property to persons of historic significance; therefore, it is not eligible for listing in the NRHP under Criterion B.

The residence (Feature 1) associated with Site 232 (32MT00433) is an undistinguished example of a typical, mid-twentieth-century vernacular form. It does not feature distinguishing architectural features or design elements. Furthermore, its integrity of workmanship and materials has been compromised due to the use of replacement materials, such as one-over-one wood window sashes in the gable field, the reconfiguration of the façade (south) roof pitch, and the addition constructed on the residence's east elevation. As a result, Site 232 is not eligible for listing in the NRHP under Criterion C.

The building that comprises the motel's 14 units (Feature 2) is a common motel form and does not exhibit any distinctive, architectural characteristics that would make it eligible for listing in the NRHP under Criterion C. Consequently, CRA recommends that Site 232 (32MT00433) is not eligible for inclusion in the NRHP under Criterion A, B, or C.

Determination of Effect: N/A.

Site 311

ND Survey No.: 32MT00434

Photographs: Figures 86–90

Map: Figure 3d

Quad: Wishek, North Dakota 1982

Lat: 46.258608

Long: -99.559444

Property Address: 12 5th Street South
Wishek, North Dakota 58495

Construction Date: 1913

Description: Site 311 (32MT00434) consists of a residence and garage located at 12 Fifth Street South, approximately 150 ft south of its intersection with Badger Avenue. The structure is situated on a flat, grassy parcel. The residence is set back approximately 15 ft from the ROW. An overgrown, gravel driveway leads from Fifth Street South along the north side of the residence to the detached garage at the rear of the parcel. A sidewalk runs between Fifth Street South and the parcel. A paved walkway provide access to the residence.

Site 311 is first depicted on a 1952 aerial photograph (USGS 1952e). McIntosh County PVA lists the construction date of the residence as 1913. Based on its first appearance on an aerial photograph, PVA data, as well as its form and materials, it is likely that this residence was constructed in 1913.

Oriented east, this residence (Feature 1) is a two-story frame house (Figure 86). The house is sheltered by a hip roof sheathed in new, metal panels. The house is clad in stucco and the PVA lists the foundation material as concrete. One interior concrete block chimney pierces the ridgeline of the roof. Unless otherwise noted, windows are filled with replacement, one-over-one, double-hung, vinyl sashes.

The façade (east elevation) features a two story porch topped by a hipped roof (see Figure 86). The first story of the porch contains a centered, single-leaf entry filled with a modern storm-door. It is flanked to either side by rows of windows of one-over-one, double-hung, wood sashes. A small wrap-around porch roof extends out above the first-story porch level. It is sheathed in matching, new metal panels with decorative bracketing located beneath the roof. The second-story porch also contains a row of eight windows filled with one-over-one, double-hung, wood sashes along the façade and two windows on both the north and south elevations.

Figure 86. Site 311 32MT00434): Façade and south elevation of the residence (Feature 1), looking northwest.

The first and second stories of the south elevation are pierced by two single windows (see Figure 86). The north elevation is pierced by a set of paired windows in the first story and two single windows in the second story (Figure 87). The rear (west) elevation contains a one-story section topped by a hip roof sheathed in matching, new metal. The rear (west) elevation contains an off-centered single-leaf entry filled by a replacement door and storm door. Flanking it to the south is a set of paired windows (Figure 88). The north elevation of the one-story section is pierced by a single window (see Figure 87) and the south elevation contains a set of paired windows (see Figure 88). Above the one-story section, the second story of the main mass of the residence is pierced by three single windows (see Figure 88).

Associated with the main residence is a detached, frame garage (Feature 2) located approximately 50 ft to the west at the rear of the parcel (Figure 89). It is topped by a front-gable roof sheathed in new, metal panels and clad in rolled asphalt shingle siding. The façade contains two bays, one filled with an overhead door and the other filled with two, wood swinging doors. The south elevation contains a single-leaf entry, a garage bay, and three single windows (Figure 90), while the west elevation contains a ribbon of six windows (see Figure 90).

NRHP Evaluation: Not Eligible. Current property owner, Kathy Louise Huguenin, stated that the property was formerly used as the Nickisch Funeral Home. Deed research completed at the McIntosh County Recorder's office indicated that on November 10, 1938, Adolph and Wilma Gall sold the property in question to Gottlieb Nickisch for $1 cash in hand (DB 41:279). Research indicates that Gottlieb Nickisch was Elmo Nickisch's father and may at some point transferred the property to his son Elmo Nickisch. Newspaper records reviewed online indicate that Elmo Nickisch started the Nickisch Funeral Home of Wishek in 1931 and moved it to a renovated residence in 1950 (Bismarck Tribune 1973:24). He is also listed as the McIntosh County Corner in 1941 (Bismarck Tribune 1964:1). However, information from the deed research indicates he had the property until 1958 when it sold to the county for $12,000 (DB 67:348). Based on the research information, the property appears to have only served as a funeral home for a short

Figure 87. Site 311 (32MT00434): Façade and north elevation of the residence (Feature 1), looking southwest.

Figure 88. Site 311 (32MT00434): Rear (west) elevation of the residence (Feature 1), looking east.

Figure 89. Site 311 (32MT00434): Façade of the garage (Feature 2), looking west.

Figure 90. Site 311 (32MT00434): South and west elevations of the garage (Feature 2), looking northeast.

duration related to its overall age. Research did not uncover any association between the Elmo Nickisch Funeral Home and any notable events or persons. As such, the property is not eligible for listing in the NRHP under Criterion A or B.

The residence is an undistinguished example of a common vernacular form of the early twentieth century. The dwelling lacks distinctive features or material treatments which could elevate its architectural significance. The overall integrity of the resource has been diminished by the use of replacement materials including windows, door, and siding treatment. As such, it does not possess the attributes necessary to raise its significance to a level meriting inclusion in the NRHP under Criterion C.

Consequently, CRA recommends that Site 311 (32MT00434) is not eligible for inclusion in the NRHP under Criterion A, B, or C.

Determination of Effect: N/A.

Site 331

ND Survey #: 32MT00087

Photographs: Figures 91–94

Map: Figure 3e

Quad: Wishek, North Dakota 1982

Lat: 46.258232

Long: -99.558405

Property Address: 1st Avenue South
Wishek, North Dakota 58495

Construction Date: 1905–1928

Description: Site 331 (32MT00087) consists of a previously recorded municipal water tower and heater house situated along First Avenue South, approximately 115 ft west of its intersection with Centennial Street. The water tower was originally surveyed in 2005 as Feature 4 of the Old Wishek City Hall NRHP Registration Form (Ackerman et al. 2005). The water tower is situated on a flat grassy parcel of indeterminate size and is set back approximately 20 ft north from the ROW. A paved driveway provides access from First Avenue South. The property was accessed by CRA architectural historians in order to complete the architectural resource survey.

The water tower at Site 331 is first depicted on the 1982 Wishek, North Dakota, 7.5-minute series topographic quadrangle map (USGS 1982f). Information reviewed in the 2005 NRHP Registration Form for the Old Wishek City Hall, indicates that the water tower (Feature 4) at Site 31 was constructed in 1946 (Ackerman et al. 2005).

The water tower (Feature 4) exhibits a riveted-steel tank with an elliptical bottom. The tank is sheltered beneath a conical roof with a finial cap and is encircled by a balcony that features a sawtooth railing (Figure 91). The sawtooth railing likely suggests Pittsburgh-Des Moines Steel is responsible for the water tower's construction. The steel tank is elevated on a four-post, lattice-girder trestle tower that includes tie rods and support struts. A riser pipe extends from the tower's elliptical bottom and pierces the roof of the heater house positioned directly below the steel tank. A caged access ladder ascends the southeast-most leg of the water tower. Currently, the steel tank is painted aqua green and features the town's name in black lettering.

The heater house is comprised of a one-story, single-bay, gable-roof, brick structure oriented to the south (Figure 92). Resting on a poured-concrete foundation, the heater house is clad in brick laid in a common bond and sheltered beneath an asphalt shingle roof. An internal brick chimney pierces the west-facing roof plane. The principle (south) elevation is pierced by a centrally placed single-leaf entry filled with a replacement fan-light metal panel door. The gable is clad in plywood and pierced by a rectangular vent. All subsequent elevations are void of fenestrations (Figure 93).

Figure 91. Site 331 (32MT00087): Overview of the Wishek Water Tower (Feature 4), looking south.

Figure 92. Site 331 (32MT00087): South and west elevations of the heater house, looking northeast.

Figure 93. Site 331 (32MT00087): North and east elevations of the heater house, looking southwest.

NRHP Evaluation: Eligible. The water tower is considered to have a high level of historic integrity as it relates to the development of Wishek during the first half of the twentieth century. Situated one block south of what was historically the town's commercial block, the placement of the water tower helped assure increased fire protection. When installed, the water tower, through a gravity pressure system, provided greater dependability during emergencies and helped insure the safety of the community. Therefore, the water tower at Site 331 retains integrity of materials, design, workmanship, setting, association, location, and feeling. As a result, the site is eligible under Criterion A as an excellent example of municipal water development during the first half of the twentieth century. Furthermore, Site 331 provided stimulus for the continued growth of Wishek by both directly and indirectly impacting the development of the commercial district by providing access to reliable fire protection.

The water tower at Site 331 was likely built by the Pittsburgh-Des Moines Steel Company. Although a builder's plate was not located during the resource survey, the distinctive sawtooth balcony railing is indicative of the company's design. In his evaluation of water towers in South Dakota, Gregory R. Mathis points out that "water towers manufactured by Pittsburgh-Des Moines are easily recognized by their distinctive 'sawtooth' or 'W' style, balcony railings (Mathis 2012:49). Site 331 is an example of an elevated municipal water storage tank from the first half of the twentieth century that was important for the development of the town of Wishek. The water tower is indicative of a specific period of construction and development for water towers throughout the United States, during the first half of the twentieth century. This period represents a transition from wooden storage tanks to the safer and more economical steel replacement. Furthermore, this period saw the introduction of the elliptical bottom.

Figure 94. Site 331 (32MT00087): Recommended NRHP boundary for the Wishek water tower.

The water tower retains its historical elements and does not show any significant alterations to the structure. It should be noted that a modern antenna has been attached to the balcony along the north side of the steel tank. Historical design elements, such as the elliptical bottom, conical roof, sawtooth balcony railing, and the lattice-girder-trestle tower, demonstrate a construction period within the first half of the twentieth century. Therefore, the water tower is a significant example of the elliptical bottom form and is considered eligible for inclusion in the NRHP under Criterion C.

The proposed boundary for Site 331 (32MT00087) is limited to the base of the water tower itself (see Figure 94). It total, this proposed boundary includes approximately 1,650 square feet located within the survey area.

Determination of Effect: No Adverse Effect. Design plans for Layout Options 1 and 2 for the proposed Badger Wind Project indicate that the closest proposed wind turbine for both Layout Options 1 and 2 would be located approximately 1.93 mi to the southwest of the recommended NRHP boundary for Site 331 (32MT00087) within an agricultural field west of State Highway 3. Layout Options 1 and 2 for the Badger Wind Project are proposing construction within rural agricultural fields, and therefore neither version will diminish any of the characteristics for which the water tower is eligible for listing in the NRHP and the site will retain its integrity to convey its significance. If, following the completion of the proposed Badger Wind Project, the wind turbines are visible in the background from Site 331, it will not change those aspects of the property's settings that are important to understanding its original design and historic role as fire protection for the burgeoning commercial district. As a result, Layout Options 1 and 2 of the proposed project will have no adverse effect to the NRHP-eligible water tower (Site 331 [32MT00087]).

Site 360

ND Survey #: 32MT00425

Photographs: Figures 95–106

Map: Figure 3e

Quad: Wishek, North Dakota 1982

Lat: 46.258381

Long: -99.555243

Property Address: 21 8th Street South
Wishek, North Dakota 58495

Construction Date: 1941

Description: Site 360 (32MT00425) consists of the Wishek Civic Center and ancillary structures located at 21 Eighth Street South, at its intersection with First Avenue South. The structures are situated on a relatively flat grassy parcel that measures 2.15 acres. The Civic Center is set back approximately 30 ft north from the ROW. A gravel driveway provides access from First Avenue South, west of the civic center, with a secondary access on Eighth Street South to the rear of the structure. Both driveways access a large gravel parking lot west of the Civic Center. The property was accessed by CRA architectural historians in order to complete the architectural resource survey.

The Civic Center at Site 360 is first depicted on the 1982 Wishek, North Dakota, 7.5-minute series topographic quadrangle map (USGS 1982f). However, information reviewed at the Wishek Public Library indicated a construction date of 1938 (Roth 1984).

Oriented south, the building (Feature 1) exhibits a two-story, 11-bay (w/w/w/w/w/dd/w/w/w/w/w), rectilinear form constructed in the Art Morderne style that is sheltered beneath a flat and barrel roof. The building is clad in locally sourced multicolored granite fieldstone laid in random fashion, and rests on a continuous poured concrete foundation. Asphalt shingles cover the building's longspan barrel roof. A two-story, double-pile, vestibule is situated along the building's façade and rear elevation

The façade (south) elevation is accessed via a symmetrically placed double-leaf entry, filled with two, replacement fully glazed commercial doors (Figure 95). A glass block transom set in a poured concrete surround, is positioned above the entry. Two bronze plaques, attached to the building's main mass on either side of the entry with four screws, include the words "Works Projects Administration Project" and are topped by an American Bald Eagle holding a shield and with head turned to the west (Figure 96). Flanking the entry to either side are two stone veneer pilasters that project vertically past the roof line. The entry is sheltered beneath a rounded porch roof projecting from the building's main mass and opens onto a poured concrete sidewalk set at grade and provides access from the ROW. The sidewalk encircles the Civic Center. Windows along the building's façade are situated in groups of two and three and filled with replacement, one-over-one, double-hung vinyl sashes that include snap-in-grids to mimic four-over-four sashes. Two windows west of the entry have been infilled, of which one features a commercial grade exhaust vent. Windows along the second story of the façade mirror the first story. Windows throughout the building feature poured concrete sills.

The building's east elevation exhibits four buttresses that represent portions of the building's six longspan, laminated wooden arches (Figure 97). The east elevation of the entry vestibule is pierced by two single windows, the southern most of which has been filled. Three ribbons of four windows pierce the longspan of the east elevation. A single-leaf basement entry filled with an unglazed door, set below grade, pierces the longspan's northern end. Three single windows pierce the east elevation of the rear vestibule. Fenestrations observed on the building's west elevation mirrors the east elevation (Figure 98).

The rear (north) elevation features an off-center single-leaf entry filled by an unglazed metal door (see Figure 98). A single window flanks the entry to the west. Three windows pierce the rear (north) elevation east of the entry.

Located approximately 45 ft northwest of the Civic Center is a one-story, frame, octagonal gazebo (Feature 2) (Figure 99). The roof is sheathed in asphalt shingles and includes a square belfry topped by a hipped-roof and filled with a bell. The gazebo's roof is supported by eight square columns resting directly on a poured concrete slab. Based on a review of the recent aerial imagery, the gazebo was constructed between 2010 and 2013.

Located approximately 110 ft north of the civic center is a wooden sign indicating the site of the original Wishek High School (Feature 3) (Figure 100). Two square brick veneer pillars topped by poured concrete caps and resting on a poured concrete slab support the sign. A single light projects from the north side of each pillar. A review of the modern aerial imagery online suggests that the sign (Feature 3) was constructed between 2013 and 2016. Further investigation also revealed that the Original Wishek High School was razed between 1997 and 2003.

Approximately 115 ft northwest of the Civic Center, and oriented to the north, is a granite monument measuring approximately 3 ft tall and 2 ft wide (Feature 4) (Figure 101). The monument commemorates Wishek's 1998 centennial. A metal plaque along the monument's top, denotes the location of the monument as Wishek Centennial Park and provides a lists of directors, as well as the mural artist. Furthermore, the bottom half of the monument is inscribed with a seal that denotes the day and year of the celebration.

Situated approximately 160 ft northwest of the Civic Center in a portion of Centennial Park that includes both deciduous and coniferous trees, is a statue of "Barney the Badger (Feature 5) (Figure 102)." Constructed on plywood, wire mesh, concrete, and lumber, the statue is an oversized representation of the Wishek High School mascot. The statue sits atop a two tiered, poured concrete, plinth. The north side of the plinth's top tier includes a square plaque detailing the statue's origins and method of construction. Built in 1978, a time capsule was interred in the statue.

Figure 95. Site 360 (32MT00425): Façade of the Civic Center (Feature 1), looking north.

Figure 101. Site 360 (32MT00425): Overview of the Wishek Centennial Park monument (Feature 4), looking south.

Figure 102. Site 360 (32MT00425): North side of the Barney the Badger statue (Feature 5) looking south.

NRHP Evaluation: Eligible. Information reviewed at the ND SHPO indicates that Site 360 (32MT00425) was previously surveyed by the State Historical Society of North Dakota in 2012. Survey forms reviewed did not provide information relating to the project and principle investigator for the survey in question. The previous investigation recommended that Site 360 (32MT00425) was eligible for inclusion in the NRHP under Criteria A and C for its association with the WPA, the social history of Wishek, and its architecture.

As part of the Roosevelt Administration's efforts to provide Americans across the country with work relief, the Works Progress Administration was organized in 1935. Renamed in 1939 to the Works Projects Administration (WPA), this federal agency provided employment to largely unskilled laborers on construction projects that comprised public infrastructure. The WPA was successful in completing multiple projects in the area, and included the Wishek Civic Center, Beaver Lake State Park. South Wishek Park, and the installation of sidewalks around the town of Wishek. Planning for the Wishek Civic Center commenced in 1938, with construction starting three years later in 1941. The site chosen for the Civic Center was 15 ft south of the original site of the Wishek High School, which the Civic Center served until the school's demolition sometime between 1997 and 2003. Constructed at a cost of $54,312, of which $39,272 was provided by the WPA with the remaining $15,040 supplied by the town of Wishek, the construction provided work for 60 individuals (Roth 1984:446).

The Wishek Civic Center was designed by architect Gilbert R. Horton. Perhaps one of Horton's most notable methods for construction was his prolific use of glacial erratics (fieldstones) gathered from surrounding agricultural fields. By utilizing this locally abundant resource, Horton was able to provide a more economical solution to the construction supply problems of the Great Depression. Furthermore, since abundant labor was required to transport and shape the granite fieldstones, the project was a reliable source of employment for local laborers (Long 1991:42). Of the auditoriums designed by Gilbert Horton, colloquially referred to as Horton Halls, a total of five exploited fieldstones for their exterior cladding (Long 1991:43). To facilitate the use of the granite fieldstones, Horton hired a single experienced stone mason to teach laborers how to select and shape the desired stones. Of the 60 men employed in the construction of the Civic Center, skilled laborers earned 52¢ an hour, while unskilled laborers earned between 33¢ and 40¢ an hour (Roth 1984:446).

In addition to his use of fieldstones, Gilbert Horton applied "the broad laminated arch concept to accomplish the clear span [needed] for larger designs (Long 1991:11)." Between 1934 and 1940 Gilbert Horton designed and completed 11 recreation halls with funding provided by the WPA. Long points out that these buildings, "reflected Gilbert Horton's experimentation with labor-intensive inexpensive building techniques" (Long 1991:38) (Figures 103 and 104). In total, six known Depression-era Horton halls were constructed using the laminated wood arches (Long 1991:43). Taken together Horton's use of the local fieldstone, and the use of the laminated arch concept, are terrific examples of his architectural adaptations to the hardships of the Great Depression.

The Wishek Civic Center retains its historic elements such as the longspan arch and fieldstone cladding. It retains integrity of materials, design, workmanship, setting, association, location, and feeling. As a result, the site is eligible under Criterion A as an excellent example of a Great Depression era auditorium in rural southern North Dakota and its association with the community of Wishek as a gathering place for the community. The associated Wishek High School was razed between 1997 and 2003, however, the Civic Center continues to be utilized for public events. Therefore, it continues to convey its association with the local community development that was made possible by the Federal WPA.

Figure 103. Historic overview of the Civic Center (Feature 1) during construction, looking north (Roth 1984:447).

Figure 104. Historic overview of the Civic Center (Feature 1) during construction showing the exposed arches, looking south (Roth 1984:448).

Figure 105. Site 360 (32MT00425): Recommended NRHP boundary for the Wishek Civic Center.

The site also appears eligible under Criterion C as an outstanding example of Great Depression-era architecture as expressed through the designs utilized by Gilbert Horton, such as the fieldstone veneer and laminated arch longspan. With retained elements such as the multicolored fieldstone veneer, Art Morderne characteristics, and the six span laminated arch roof with buttresses, the site retains integrity of design, feeling, and materials that have historically been associated with Gilbert Horton and Depression Era architecture. As a result, Site 360 is recommended eligible for listing in the NRHP under Criteria A and C. The recommended NRHP boundary for the site includes Centennial Park and its accompanying appurtenances as contributing resources to the site.

The proposed NRHP boundary begins at the intersection of First Avenue South and Eighth Street South and travels north along Eighth Street South for approximately 320 ft to its intersection with Beaver Avenue (Figure 105). The boundary then travels west on Beaver Avenue for 320 ft until it reaches its intersection with Seventh Street South. The boundary then turns south and travels 320 ft south along Seventh Street South until it reaches its intersection with First Avenue South. The boundary then travels east 320 ft along First Avenue South, arriving back at its place of origin.

Determination of Effect: No Adverse Effect. Design plans for Layout Options 1 and 2 for the proposed Badger Wind Project indicate that the closest proposed wind turbine for both Layout Options 1 and 2 would be located approximately 2 mi to the southwest of the recommended NRHP boundary (Figure 106) for Site 360 (32MT00425) within an agricultural field west of State Highway 3. Layout Options 1 and 2 for the Badger Wind Project are proposing construction within rural agricultural fields, and therefore neither version will diminish any of the characteristics for which the Wishek Civic Center is eligible for listing in the NRHP and the site will retain its integrity to convey its significance. If, following the completion of the proposed Badger Wind Project, the wind turbines are visible in the background from Site 360, it will not change those aspects of the property's settings that are important to understanding its original design and historic role as a community gathering place in Wishek. As a result, Layout Options 1 and 2 of the proposed project will have no adverse effect to the NRHP-eligible Wishek Civic Center (Site 360 [32MT00425]).

Figure 106. Site 360 (32MT00425): Overview towards the proposed Badger Wind Project, looking northeast.

Site 394

ND Survey No.: 32MT00435

Photographs: Figures 107–112

Map: Figure 3e

Quad: Wishek, North Dakota 1982

Lat: 46.257644

Long: -99.552296

Property Address:
112 10th Street South
Wishek, North Dakota 58495

Construction Date: 1955

Description: Site 394 (32MT00435) consists of a residence, garage, and outbuilding located at 112 Tenth Street South, approximately 135 ft south from its intersection with First Avenue South. The structures are situated on a flat, grassy parcel. The residence is set back approximately 25 ft from the ROW. A paved driveway leads from Tenth Street South. A sidewalk runs between Tenth Street South and the parcel, with another sidewalk leading to the front entry.

Site 394 is first depicted on the 1982 Wishek, North Dakota, 7.5-minute topographic quadrangle (USGS 1982). Information reviewed online at the McIntosh County PVA office indicates that the residence was built in 1955. Therefore, based on the PVA data, as well as the residence's form and materials, it seems likely that it was constructed in the 1955.

Oriented east, this Contemporary style residence (Feature 1) is a one-story, four-bay (d/w/d/www), frame house (Figure 107). The house is sheltered by a shed roof that pitches to the west and includes wide, boxed, overhanging eaves. The roof sheathing was not visible from the ROW. The house is clad in aluminum siding and features a stepped, stone veneer, knee wall on the bottom half of the façade. The foundation is covered by a faux brick skirt. Two interior concrete block chimneys pierce the westward sloping roof. Unless otherwise noted, windows are filled with replacement vinyl casement windows.

Figure 107. Site 394 (32MT00435): Façade and south elevation of the residence (Feature 1), looking northwest.

The façade (east) elevation features a centrally placed, single-leaf entry filled with a replacement wood door pierced by an off-center, vertical, rectilinear, window (see Figure 107). The entryway is flanked to the north by a picture window with flanking sidelights and to the south by a single window. The entry opens onto a poured concrete stoop that is accessed by a single poured concrete step. A frame access ramp overlays the stoop and projects east, providing access from the sidewalk. The southern end of the façade features a covered, single vehicle, carport sheltered beneath a flat-roof and supported by v-shaped metal posts. A single-leaf entry filled with a replacement wood door pierced by an off-center, vertical, rectilinear, window is sheltered beneath the carport.

The south elevation is pierced by two windows beneath the carport. A single window pierces the south elevation outside of the carport (see Figure 107). The north elevation is pierced by a single window (Figure 108). The rear (west) elevation is pierced by an off-center single-leaf entry that is filled with a replacement wood door that includes an off-center, vertical, rectilinear, window (Figure 109). Two rectangular casement windows pierce the rear elevation north of the entry.

Located approximately 35 ft west from the residence is a one-story, shed-roof outbuilding (Feature 2) (see Figure 109). The roof sheathing is not visible from the ROW. The outbuilding is clad in composite vertical board siding. Recent aerial imagery reviewed did not aid in determining a date range for the outbuilding (Feature 2). However, based on the outbuilding's form and materials, it seems likely that it was constructed sometime after 1990.

Located approximately 55 ft west from the residence is a one-story, shed-roof garage (Feature 3) (Figure 110). The roof sheathing was not visible from the ROW. The garage is clad in aluminum siding. An off-center, single-bay, vehicular entry pierces the south elevation and is filled with an overhead metal panel garage door. A flat roof carport, supported by v-shaped metal posts projects from the garage's south elevation (see Figure 110). Aerial imagery was not useful in determining a date of construction for the garage; however, based on the garage's form and materials, it seems likely that it is contemporary to the residence.

Figure 108. Site 394 (32MT00435): Façade and north elevations of the residence (Feature 1), looking southwest.

Figure 109. Site 394 (32MT00435): Rear (west) and south elevation of the residence (Feature 1), looking northeast.

Figure 110. Site 394 (32MT00435): South and west elevations of the garage (Feature 3), facing northeast.

NRHP Evaluation: Eligible. Chain-of-title research completed at the McIntosh County Recorder's office indicated that the residence in question is part of Lot 5 and the north half of Lot 4 that was sold on June 6, 1951 by E.P and Lydia Pfeifle to Theodore Boschee for the sum of $2,450 (DB54:571). The property has been retained under the same ownership since 1951, and it was therefore likely Theodore Boschee had the residence built at 112 Tenth Street South. Research did not reveal connections between Site 394 (32MT00435) and events or persons of historic significance. As such, Site 394 is not eligible for listing in the NRHP under Criterion A or B.

The dwelling associated with Site 394 (32MT00435) is an excellent example of the Contemporary style in McIntosh County. It presents the low, horizontal form, flat roof with wide boxed overhangs, and horizontal windows located just below the roof line commonly associated with the style. Furthermore, the residence retains a high degree of integrity. With the exception of the replacement doors and windows, the residence retains its original form and materials that identify it as a Contemporary style. Moreover, the residence at Site 394 represents the only known example of Contemporary style architecture in Wishek. Therefore, CRA recommends that Site 394 (32MT00435) is eligible for listing in the NRHP under Criterion C as an excellent example of the Contemporary style in McIntosh County.

The shed and garage (Resources A and B) lack significance as common domestic outbuilding types; therefore, the shed and garage (Resources A and B) are not eligible for individual listing in the NRHP under Criterion C.

Based on the nature of the resource and the area of significance, CRA recommends that the NRHP boundary for Site 394 (32MT00435) include the residence and the immediate domestic yard (Figure 111).

Determination of Effect: No Adverse Effect. Design plans for Layout Options 1 and 2 for the proposed Badger Wind Project indicate that the closest proposed wind turbine for both Layout Options 1 and 2 would be located approximately 2 mi to the southwest of the recommended NRHP boundary (Figure 112) for Site 394 within an agricultural field west of State Highway 3. As a result of the distance from the nearest proposed wind turbine, the APE for the proposed project, for both Layout Options 1 and 2, extends into the recommended NRHP boundary but the proposed Badger Wind Project is outside the NRHP boundary. Following the completion of the proposed Badger Wind Project, whether its Layout Option 1 or 16, if the wind turbines are visible from Site 394, it will not adversely affect the architectural elements for which the site is considered significant. Therefore, the characteristics for which the residence is eligible for listing in the NRHP will not be diminished by the construction of the proposed Badger Wind Project, and the site will retain its integrity to convey its significance. As a result, Layout Options 1 and 2 of the proposed project will have no adverse effect to the NRHP-eligible residence (Site 394 [32MT00435]).

Figure 111. Site 394 (32MT00435): Recommended NRHP boundary.

Figure 112. Site 394 (32MT00435): Overview towards the proposed Badger Wind Project, looking west.

Site 397

ND Survey No.: 32MT00436

Photographs: Figures 113 and 114

Map: Figure 3e

Quad: Wishek, North Dakota 1982

Lat: 46.256950

Long: -99.552280

Property Address: 202 10th Street South
Wishek, North Dakota 58495

Construction Date: 1925–1950

Description: Site 397 (32MT00436) consists of a residence located at 202 Tenth Street South, on the southwest corner of its intersection with Second Avenue South. The structure is situated on a flat, grassy parcel. The residence is set back approximately 25 ft from the ROW. A gravel driveway leads from Tenth Street South to the south side of the residence. Sidewalks run between Tenth Street South and Second Avenue South and the parcel. Two paved walkways provide access to the residence, the first from Tenth Street South to the front door and from Second Avenue South to a rear entrance.

Site 397 is first depicted on a 1952 aerial photograph (USGS 1952e). McIntosh County PVA lists the construction date of the residence as 1900, however, that may simply be a place holder. Based on its first appearance on an aerial photograph, as well as its form and materials, it is likely that this residence was constructed between 1925 and 1950.

Oriented east, this residence is a two-story, three-bay (w/d/w), frame house (Feature 1) (Figure 113). The house is sheltered by a hip roof sheathed in asphalt shingles. The house is clad in aluminum siding and the PVA lists the foundation material as concrete. One interior concrete block chimney pierces the ridgeline of the roof. Unless otherwise noted, windows are filled with a combination of three-over-one, double-hung, wood sashes and one-over-one, double-hung, wood sashes. The façade (east elevation) features a centrally placed, single-leaf entry filled with a solid door and storm

Figure 113. Site 394 (32MT00436): Façade and south elevation of the residence (Feature 1), looking northwest.

door (see Figure 113). The entryway is flanked to either side by single windows. The entry opens onto a poured concrete stoop that is accessed by concrete steps. Two wall dormers adorn the second story of the façade. Each contains a single window.

The first story of the south elevation is pierced by two single windows. Two wall dormers are present at the second story roofline with each containing a single window (see Figure 113). The north elevation is pierced by a single window in each of the two stories (Figure 114). The rear (west) elevation contains a one-story addition topped by a shed roof. It is pierced by a single window on both its north and west elevations (see Figure 114). An entrance is located on the south elevation of the addition that is accessed via concrete steps. Two wall dormers are present at the second-story roofline with each containing a single window.

NRHP Evaluation: Not Eligible. Deed research completed at the McIntosh County Recorder's Office indicated that on November 29, 1924 the Wishek Investment Company sold the parcel in question to Elizabeth Sieler for $445 (DB35:575). Information reviewed online at the McIntosh County PVA office indicated that the residence at Site 397 was constructed in 1925. Therefore, it seems likely that Elizabeth Sieler commissioned the construction of the residence. The property in question was bought and sold an additional five times before its November 11, 1992 purchase by current landowner James J. Materi from Laurence Materi (DB105:138). Research did not reveal any connections between Site 397 (32MT00436) and events or persons of historic significance. As such, the property is not eligible for listing in the NRHP under Criterion A or B.

Other than the wall dormers observed along three elevations, the residence is a typical example of a common vernacular form of the early to mid-twentieth century. Although the wall dormers stand out as being different from other residence's observed in Wishek, overall the dwelling lacks distinctive features or material treatments which could elevate its architectural significance and distinguish it

Figure 114. Site 397 (32MT00436): Rear (west) and north elevation of the residence (Feature 1), looking southeast.

from other similar examples found locally and statewide. Furthermore, the dwelling's overall integrity has been diminished by the use of replacement materials including windows, door and siding. The residence displays a simple form without distinctive architectural features or design elements. As such, it does not possess the attributes necessary to raise its significance to a level meriting inclusion in the NRHP under Criterion C.

Consequently, CRA recommends that Site 397 (32MT00436) is not eligible for inclusion in the NRHP under Criterion A, B, or C.

Determination of Effect: N/A.

Site 552

ND Survey #: 32MT00437

Photographs: Figures 115–138

Map: Figure 3g

Quad: Wishek, North Dakota 1982

Lat: 46.254581

Long: -99.556019

Property Address: 4th Avenue S and 7th Street S
Wishek, ND 58495

Construction Date: 1925

Description: Site 552 (32MT00437) is the location of the South Wishek Park. Located south of Fourth Avenue S, between Ninth Street S and Seventh Street S, the park consists of a flat, grassy area interspersed with mature trees bound by Fourth Avenue S to the north, Nineth Street S to the east, and Seventh Street S to the west. A cultivated agricultural field is situated along the parks southern boundary. Included within the park is a public swimming pool, bathhouse, tennis and basketball courts, pavilions, two baseball diamonds, drinking fountain, and a monument dedicated to the various branches of the US military.

The park is first depicted on the 1952 historic aerial imagery (USGS 1952e). A review of the materials housed at the Wishek Public Library indicates that the park was first constructed in 1925, expanded in 1934, and then again in 1945 (Wishek Diamond Jubilee 1973: 13–15).

Oriented to the south, the primary historic structure at the South Wishek Park is a one-story, side-gable, frame bathhouse (Feature 1) (Figure 115). Clad in veneer of local fieldstones that

extends to grade, the bathhouse is sheltered beneath a moderately pitched roof sheathed in asphalt shingles that includes exposed rafter tails. An internal brick chimney and rounded metal vent both pierce the north roof plane. Windows throughout the structure include single-light, wood sash, awning windows set below the roof line, and one-over-one, double-hung wood sashes. Windows throughout the structure include concrete sills and lintels.

The façade features a centrally placed projecting gable that is pierced by a single-leaf entry filled with a single light wood door (see Figure 115). The entry is flanked to either side by single windows. The entry opens onto a set of rounded, poured concrete steps. The gable field is clad in weather board. The east and west elevations of the south projecting gable are both pierced by a single rectangular window situated just below the roof line. Flanking the gable projection to either side is a set of three windows.

A set of three windows and a single window pierce the west elevation just below the roof line (see Figure 115). The gable end is clad in weather board siding. The east elevation mirrors the west elevation. The rear (north) elevation is pierced by two symmetrically placed entries filled with unglazed wood panel doors (Figure 116). An off-center single-leaf entry filled with a two-light wood panel door and a single window pierce the rear elevation between the symmetrically placed entries. To the outside of the entries are three-light, wood-sash windows located just below the eaves.

Approximately 15 ft north of the Bathhouse is a public swimming pool (Feature 2) (Figure 117). Measuring 120 ft north to south and 40 ft wide, the pool varies in depth from 2.5 ft in the south to 10.5 ft in the north. The pool is surrounded by a poured concrete deck and is enclosed by a chain-link-fence. A small wading pool (Feature 3) is located near the southeast corner of the pool and measures approximately 20 ft north to south and 10 ft east to west (Figure 118). Information reviewed at the Wishek Public Library indicated that the pool was constructed with the aid of the WPA in 1939 (Figure 119). In 1971, the Wishek swimming pool underwent a substantial improvement project that added a sun deck, wading pool, a slide, and a heating system for the pool (Wishek Diamond Jubilee 1973: 13–15) (Figure 120).

Located approximately 110 ft northeast of the Bathhouse is a one-story, side-gable, frame building (Feature 4) (Figure 121). Oriented to the north, the building is clad in a fieldstone veneer and sheltered beneath a roof sheathed in asphalt shingles that includes exposed rafter tails. An internal brick chimney pierces the southern roof plane. The north elevation is pierced by a single-leaf entry filled with an unglazed wood door attached to the main mass with strap hinges. A poured concrete lintel tops the entry. The east and west elevations are both pierced by a three-light wood sash window that includes a poured concrete lintel and sill. The rear elevation is void of fenestration. Based on a review of the historic aerial imagery, as well as the buildings form and materials, it was likely constructed between 1925 and 1952 (USGS 1952e).

North of the Bathhouse is a basketball court (Feature 5) (Figure 122). Oriented north to south, the basketball court includes an approximately 100 ft long and 35 ft wide poured concrete pad. Situated at the north and south ends of the pad is a basketball goal attached to metal posts set directly into the ground. The basketball courts are first depicted on the 1952 historic aerial imagery (USGS 1952e). It appears from the current shape of the court that it was recently redone sometime after 2018 as older aerials depict two full-size courts next to each other.

South of the basketball court are two, side-by-side, tennis courts (Feature 6). Enclosed by a 10 ft tall chain-link-fence, the tennis courts include two sets of metal posts made for attaching a net (see Figure 122). The tennis courts are first depicted on the 1952 historic aerial imagery (USGS 1952e). Information reviewed at the Wishek Public Library suggests that the tennis courts were first constructed in 1934 by the WPA and featured a clay deck. This clay deck was later covered by concrete in 1940 (Wishek Diamond Jubilee 1973: 13–15). It is likely that the current basketball court is located where the original tennis courts sat.

Figure 115. Site 552 (32MT00437): Façade and west elevations of the bathhouse (Feature 1), looking northeast.

Figure 118. Site 552 (32MT00437): Overview of the wading pool (Feature 3), looking southwest.

Figure 119. Site 552 (32MT00437): Historic photograph of the public swimming pool (Feature 2) and Bathhouse (Feature 1), looking southeast (Spirit of Wishek 1945: unknown).

Figure 120. Site 552 (32MT00437): Historic photograph of the Wishek public swimming pool (Feature 2) and Bathhouse (Feature 1) after the 1971 improvements (Wishek Diamond Jubilee 1973:14).

Figure 121. Site 552 (32MT00437): North and east elevations of the outbuilding (Feature 4), looking southwest.

Figure 122. Site 552 (32MT00437): Overview of the basketball and tennis courts (Feature 5), looking southeast.

Approximately, 60 ft east of the Bathhouse is a one-story, front-gable, frame outbuilding (Feature 7) (Figure 123). Oriented to the south, the outbuilding rests on a poured concrete foundation, is clad in vertical board siding, and sheltered beneath a standing seam metal roof. The south elevation is pierced by a centrally placed, single-leaf entry filled with an unglazed wooden door. The entry is flanked to either side by a one-over-one, double-hung, wood sash window. The west elevation is pierced by a single-bay vehicular entry and a single window. A single window pierces the east elevation. The north elevation is void of fenestrations. Aerial imagery reviewed indicates a construction date between 1975 and 1997 (USGS 1975e).

Located in the northern half of the South Wishek Park is a collection of children's playground equipment consisting of both plastic and historic metal pieces. (Feature 8) (Figure 124). The historic playground equipment includes a set of swings, a slide, monkey bars, and a merry-go-round all made of metal. Modern, plastic equipment includes slides, jungle-gyms, see-saws, and merry go rounds. Historic aerials reviewed were not useful in establishing a date of construction for the playground equipment. Information reviewed at the Wishek Public Library suggests that the remaining historic playground equipment was first introduced to the park by the WPA during the 1934 park enlargement program (Wishek Diamond Jubilee 1973: 13–15).

Located approximately 335 ft northeast of the Bathhouse is a one-story, frame, octagonal gazebo (Feature 9) (Figure 125). The roof is sheathed in asphalt shingles and supported by eight square columns that include a brick veneer and are resting directly on a poured concrete slab. Based on a review of the recent aerial imagery, the gazebo was constructed between 1997 and 2003.

Figure 123. Site 552 (32MT00437): South and west elevations of the outbuilding (Feature 7), facing northeast.

Figure 124. Site 552 (32MT00437): Overview of the children's playground equipment (Feature 8) in the northern half of South Wishek Park, looking northeast.

Figure 125. Site 552 (32MT00437): Overview of the octagonal gazebo (Feature 9), looking southwest.

Approximately 405 ft northeast of the Bathhouse is a one-story, side-gable, brick, shelter (Feature 10) (Figure 126). Resting on a poured concrete pad, the shelter is constructed of brick laid in a common bond, sheltered beneath a moderately pitched asphalt shingle roof that includes wide overhanging eaves. An external chimney constructed from local fieldstone pierces the eaves of the west elevation. The north elevation is pierced by a centrally placed, unfilled, entry that is flanked to either side by unfilled windows (see Figure 118). The entry opens onto a poured concrete pad sheltered beneath a full-length, shed-roof porch, supported by four, square, brick columns. A single, unfilled, window pierces the east elevation (Figure 127). Three, unfilled, symmetrical windows pierce the rear (south) elevation. The shelter is first depicted on the 1952 historic aerial imagery (USGS 1952e). However, based on information reviewed at the Wishek Public Library, it seems likely that the shelter was constructed as part of the 1940 WPA construction efforts and was built from brick that was donated by the Soo Line Railroad (Wishek Diamond Jubilee 1973: 13–15).

Northeast of the Bathhouse, approximately 375 ft, is an approximately 3 ft tall, square water fountain (Feature 11). Clad in a brick veneer, the water fountain sits atop a square base that is clad in a brick veneer and topped by a poured concrete cap (Figure 128). Historic aerial imagery reviewed for the water fountain was not useful in determining a date of construction. However, information reviewed at the Wishek Public Library suggests that the water fountain was constructed in honor of Philip Bender, one of the original park boosters, who passed away on July 4, 1964. The Bender family commissioned the water fountains construction in the park shortly after his death (Wishek Diamond Jubilee 1973: 13–15).

Figure 126. Site 552 (32MT00437): Façade and west elevations of the shelter (Feature 10), looking southeast.

Figure 127. Site 552 (32MT00437): Rear (south) and east elevations of the shelter (Feature 10), looking northwest.

Figure 128. Site 552 (32MT00437): Overview of the water fountain (Feature 11), looking northwest.

Located in the northeast corner of the South Wishek Park, approximately 570 ft northeast of the Bathhouse, is a memorial to the branches of the US military (Feature 12) (Figure 129). The central piece of the monument includes two granite stelas on a granite base. The western feature includes the five seals of the US Armed Forces, and the other an engraved image of the raising of the flag by the US Marines at Iwo Jima. Two smaller granite monuments flank the stelas. Three flags are positioned to the rear of the monuments. Two granite benches are located to the north. Enclosed by a chain fence and mature plantings, the entire monument rests on a poured concrete pad. Based on a review of the recent aerial imagery, it seems likely that the monument was constructed between 1975 and 1997 (USGS 1975e).

Approximately 480 ft southeast of the Bathhouse is a one-story, side-gable, concrete block shelter (Feature 13) (Figure 130). Resting on a poured concrete pad, the shelter is constructed of concrete block, and sheltered beneath a moderately pitched asphalt shingle roof that includes wide overhanging eaves. The façade is pierced by a centrally placed, unfilled, entry that is flanked to either side by unfilled windows (see Figure 130). The entry opens onto a poured concrete pad sheltered beneath a full-length, shed-roof porch, supported by four, square, concrete block columns. A single, unfilled, window pierces both the north and south elevations, which includes weatherboard in the gable fields (Figure 131). Three unfilled, symmetrical windows pierce the rear (west) elevation. A review of the historic aerial imagery was inconclusive; however, based on the building's form and materials, it was likely constructed during the same time period as Feature 8. Therefore, it seems likely that the shelter (Feature 13) was constructed in 1940 by WPA laborers.

Figure 129. Site 552 (32MT00437): Overview of the memorial to the armed forces (Feature 12), looking south.

Figure 130. Site 552 (32MT00437): Façade and south elevations of the shelter (Feature 13), looking northwest.

Figure 131. Site 552 (32MT00437): Rear (west) and north elevations of the shelter (Feature 13), looking southeast.

Located approximately 325 ft east of the Bathhouse is a one-story, side-gable, frame, restroom (Feature 14) (Figure 132). Resting on a poured concrete pad, the restroom is clad in a brick veneer laid in a common bond, and sheltered beneath a moderately pitched standing seam metal roof (see Figure 132). The façade is pierced by three evenly spaced entries filled with unglazed metal doors. Subsequent elevations are void of fenestrations. Recent aerial imagery reviewed suggests that the restroom (Feature 14) was constructed between 2013 and 2016.

Southeast of the Bathhouse, approximately 440 ft, is a baseball diamond (Feature 15) (Figure 133). It includes a large grandstand located behind home plate (Figure 134). Flanking the grandstand are two dugouts that feature a shed-roof supported by six, square, wooden posts set directly into the ground, and dirt floors (Figure 135). The playing field is enclosed by a chain-link fence. The baseball diamond is first depicted on the 1952 historic aerial imagery (USGS 1952e). Information reviewed at the Wishek Public Library indicated that the baseball diamond was constructed in 1945 and included the dugouts (Wishek Diamond Jubilee 1973: 13–15).

South of the Bathhouse, approximately 250 ft is a softball diamond (Feature 16) (Figure 136). It includes two dugouts that feature a shed-roof supported by six, square, wooden posts set directly into the ground, and dirt floors (Figure 137). The playing field is enclosed by a chain-link fence. The softball diamond is first depicted on a 1984 aerial photograph but is not present on an earlier 1960 aerial imagery (USGS 1960).

Figure 132. Site 552 (32MT00437): Façade and east elevations of the restroom (Feature 14), looking southwest.

NRHP Evaluation: Eligible. First organized in 1925, South Wishek Park, was formed from an un-platted parcel donated by John H. Wishek Sr., John H. Wishek Jr., and Max Wishek, on the southern outskirts of the town of Wishek. Originally comprising what is now the northeast section of the park, the Wishek Association of Commerce undertook the planting of trees in the newly formed park. In 1934, Wishek initiated the city park enlargement program and purchased a 300 ft by 660 ft vacant lot west of the original park. As part of the enlargement program, the Federal government contributed 500 trees, monetary contributions, and labor to be supplied by the Works Progress Administration (WPA). Work completed in South Wishek Park represents one of three WPA projects completed in the town, that includes the installation of poured concrete sidewalks and the construction of the Wishek Civic Center (Site 360). Furthermore, labor provided by the WPA helped establish Beaver Lake State Park (Site 1), north of Wishek. Through the accumulation of both public and private funds, the park enlargement program successfully installed children's playground equipment and three tennis courts. In 1938, following its approval in a city wide vote, a $6,000 bond was issued by the city of Wishek for the construction of a public swimming pool. In 1939 the Wishek Public Swimming Pool was constructed using WPA labor. The following year, on June 26, 1940 WPA laborers had successfully completed the Bathhouse, shelters, tennis court improvements, and the excavation of a well.

The South Wishek Park retains its historic elements such as the Bathhouse, public swimming pool, tennis courts, baseball diamonds, and shelters. It retains integrity of materials, design, workmanship, setting, association, location, and feeling. As a result, the site is eligible under Criterion A as an excellent example of a Great Depression era public park in rural southern North Dakota and its association with the community of Wishek as a gathering place for the community. Furthermore, the park continues to convey its association with the local community development that was made possible by the Federal WPA.

The site also appears eligible under Criterion C as an outstanding example of Great Depression era architecture as expressed through the use of fieldstones and brick donated

by the local Soo Line Railroad. With retained elements such as the multicolored fieldstone veneer, original wood sash windows, poured concrete lintels and sills, the site retains integrity of design, feeling, and materials that have historically been associated with WPA construction projects. As a result, Site 552 is recommended eligible for listing in the NRHP under Criteria A and C. The recommended NRHP boundary for the site includes all of South Wishek Park and its accompanying appurtenances as contributing resources to the site.

The proposed NRHP boundary begins at the intersection of Fourth Avenue S and Seventh Street S travels east along Fourth Avenue South for approximately 655 ft to its intersection with Ninth Street S (Figure 138). The boundary then travels south on Ninth Street S for 780 ft until it reaches the parcels boundary with the adjacent agricultural field. The boundary then turns west and travels 710 ft until it reaches a gravel parking lot utilized by the adjacent baseball diamonds. The boundary then travels north on Seventh Street S for 765 ft, arriving back at its place of origin.

Determination of Effect: No Adverse Effect. Design plans for Layout Options 1 and 2 for the proposed Badger Wind Project indicate that the closest proposed wind turbine for both Layout Options 1 and 2 would be located approximately 1.75 mi to the southwest of the recommended NRHP boundary (see Figure 136), for Site 552 within an agricultural field west of State Highway 3. The APE for Layout Options 1 and 2 extend into the recommended NRHP boundary but both alternatives are outside the NRHP boundary. Since Layout Options 1 and 2 of the Badger Wind Project recommend construction within rural agricultural fields, the proposed project will not diminish any of the characteristics for which the South Wishek Park is eligible for listing in the NRHP and the site will retain its integrity to convey its significance. If, following the completion of Layout Option 1 or 16 of the Badger Wind Project, wind turbines are visible in the distance from the South Wishek Park it will not diminish those aspects of the property's settings that are important to understanding its original design and historic role as a community gathering place in Wishek. As a result, Layout Options 1 and 2 of the proposed project will have no adverse effect to the NRHP-eligible South Wishek Park (Site 552 [32MT00437]).

Site 574

ND Survey #: 32LO00033

Photographs: Figures 139–143

Map: Figures 2b, 2d, 2e, 2g, 2j, and 2k

Quad: Wishek Northeast, North Dakota 1982

Lat: 46.259819

Long: -99.570122

Property Address: 250 ft northeast of the intersection of State Highway 13 and State Highway 3

Construction Date: circa 1898

Description: Site 574 (32LO00033) consists of the portion of the historic Soo Rail Line located within the survey area and consists of a previously surveyed abandoned rail segment and approximately 21.3 mi of linear railroad corridor that this currently controlled by the Dakota Missouri Valley and Western. The rail corridor consists of the original 1898 grade built between Kulm, Wishek, and Bismarck on the Aberdeen Bismarck and Northwestern grade. In addition to the raised railroad grade, Site 574 includes two railroad bridges, one of which is recommended as a contributing resource (Site 578). The second bridge was not visible from the ROW. Starting in Logan County, near 70th Street SE in the northwestern extent of the survey area, the rail corridor travels southeast, exiting the survey area approximately 2,860 ft northwest of the intersection of 83rd Street SE and 41st Avenue SE in McIntosh County. A second linear corridor travels east at Wishek and parallels State Highway 13 for 5.75 mi before exiting the survey area approximately 0.45 mi northeast of the intersection of State Highway 13 and 44th Avenue SE. In total, approximately 21.3 mi of linear rail corridor is within the survey area. CRA architectural historians surveyed portions of Site 574 from the ROW.

Figure 138. Site 552 (32MT00437): Recommended NRHP for the South Wishek Park.

The rail corridor at Site 574 is first depicted on the 1901 Soo Rail Line Map (nd.gov 2021) (see Figure 11). Based on a review of recent online aerial imagery, as well as observations made during the historic resource survey, the section of rail corridor located west of Wishek was abandoned between 2001 and 2021.

The portion of the rail corridor that intersects with State Highway 13 west of Wishek, was previously surveyed and recommended eligible for inclusion in the NRHP (Feature 1) (Figure 139).

Approximately 5.75 mi northwest of the rail corridor's intersection with State Highway 13 is a railroad bridge that carries the active section of the Dakota Missouri Valley and Western railroad over an unnamed drainage (Feature 2) (Figure 140). As a result of the undulating topography, the bridge (Feature 2), was not visible from the ROW. A review of the historic aerial imagery was inconclusive, although it does depict a railroad bridge at the location of Feature 2 (USGS 1952a and 1975a). However, it remains uncertain if the historic bridge is extant.

Approximately 9.25 mi northwest of the rail corridor's intersection with State Highway 13 is an eight span trestle bridge (Site 578) (Feature 3) (Figure 141). The bridge is constructed of vertical round support beams with a roadbed of railroad ties topped with flat stringers. One of the piers has been replaced by a poured concrete pier, and a second has been enclosed in a box constructed of horizontal wood planks. A round support beam has been added to both piers (see Figure 141). Either end of the bridge features a crib abutment constructed from heavy timbers and includes rock fill. The bridge carries the Dakota Missouri Valley and Western over Beaver Creek. A bridge is first depicted at this location on the 1952 historic aerial imagery (USGS 1952a). However, based on the bridge's form and materials, it seems likely that it was constructed sometime between 1900 and 1925. Although not recommended individually eligible for inclusion in the NRHP under Criteria A, B, or C, the trestle bridge (Feature 3) (Site 578) is recommended as a contributing resource to Site 574 under Criterion A for its contributions to transportation development in North Dakota during the late nineteenth and early twentieth-century.

Figure 139. Site 574 (32LO00033): Overview of the abandoned rail segment west of Wishek (Feature 1), looking south.

Figure 140. Site 574 (32LO00033): Overview towards extant railroad bridge along the Dakota Missouri Valley and Western (Feature 2), looking west.

Figure 141. Site 574 (32LO00033): Overview of the frame timber railroad bridge (Feature 3) along the Dakota Missouri Valley and Western, looking southwest.

NRHP Evaluation: Eligible. Information reviewed at the ND SHPO indicates that Site 574 (32LO00033) was previously surveyed in 2013 as part of the Logan-McIntosh, Emmons Counties Phase 4 Expansion Project (Jackson, Michael A. et al. 2013). The previous investigation did not evaluate Site 574 (32LO00033) for its eligibility for inclusion in the NRHP. An abandoned segment of rail line (32MT00074) was previously surveyed west of Wishek, near its intersection with State Highway 13 and recommended eligible for listing in the NRHP as an archaeological site.

In 1898, the Soo Rail Line arrived in Wishek, North Dakota. Known officially as the Minneapolis, St. Paul, and Sault Ste. Marie, the rail line was the result of the 1888 purchase of two existing railroads, the Aberdeen, Bismarck and the Northwestern Railway (nd.gov 2021). The historic Soo Rail Line is a late nineteenth- and early twentieth-century linear railroad corridor that was important as an early transportation route in southeast North Dakota. The rail corridors within the survey area represent at least two separate periods of construction, 1898 and 1904, and served as important links between commercial centers and encouraged the growth of the areas agricultural industry through the first half of the twentieth century.

In addition to the rail corridors importance to both transportation and agriculture throughout southeast North Dakota, it was an important factor in the community planning and development of early Wishek. Founded in 1898 along the quickly approaching Soo Rail Line, by 1917 the arrival of the trains had significantly transformed Wishek into an important center for trade and the agricultural industry. One newspaper article suggests that in April 1917, among many other amenities, Wishek housed eight stores, two banks, two lumber yards, three hotels, a bottling works plant, and a $13,000 modern restaurant built by the Soo Rail Line (The Bismarck Tribune 1917:8). Wishek's growth was spurred on by the fact that it served as the terminal of what was known as the Pollack Branch of the Soo Rail Line, as well as the main terminal for the line's Missouri River Division. Furthermore, Wishek was the location of the rail line's master mechanic, who employed 60 men (The Bismarck Tribune 1917:8). The Soo Rail Line, which included an eight-stall engine house at Wishek, employed a large number of North Dakotans (The Bismarck Tribune 1913:6; Schmidt and Vermeer 2006:76). Lastly, the Soo Rail Line, like many railroads, built telegraph lines adjacent to their rail lines. While providing communication between stations, the telegraph lines were utilized by railroad towns, such as Wishek, for a means of communicating with distant cities.

Site 574 (32LO00033) retains historic integrity associated with the 1898 and 1904 railroad corridors. These linear corridors serve as reminders of North Dakota's extensive late nineteenth- and early twentieth-century railroad movements. Furthermore, the construction of these corridors significantly influenced the course of state and local history. Following the economic depression of the 1890s, the construction of rail corridors helped connect existing cities and supported growth as centers for the agriculture industry. From 1900 to 1910, the Soo Rail Line doubled its total track, 60 percent of which was laid in North Dakota.

Within that same time period, in 1905 alone, the Soo affiliated land development company, Minnesota Loan & Trust Company platted 25 new town sites along the edge of the rail corridors (Schmidt and Vermeer 2006:76 and 77).

Therefore, the rail corridor associated with Site 574 retains integrity of materials, design, workmanship, setting, association, location, and feeling. As a result, the site is eligible under Criterion A as an excellent example of a the late nineteenth- and early twentieth-century transportation development, and represents the railroad movement in southeastern North Dakota during this time. Additionally, Site 574 provided essential impetus for the growth of Wishek by both directly and indirectly impacting the development of the commercial and agricultural industry by providing access to distant markets.

Although Feature 3 (Site 578) is not recommended as individually eligible for listing in the NRHP and the resource alone does not appear to reach the level of importance by NRHP standards for individual eligibility under Criterion A, B, or C, Feature 3 (Site 578) is recommended as a contributing resource to the proposed Soo Rail Line (Site 574). Therefore, Feature 3 (Site 578) is recommended eligible under Criterion A as a late nineteenth- and early twentieth-century transportation related resource in connection with the railroad industry in Logan and McIntosh Counties. Research completed did not reveal connections between Site 574 (32LO00033) and persons of historic significance; therefore, Site 574 (32LO00033) is not eligible for listing in the NRHP under Criterion B.

In order for a rail line corridor to be eligible for inclusion in the NRHP under Criterion C it must display significant and distinctive characteristics of a type, period, or method of construction, or that represents the work of a master. Many of the associated railroad support structures that were previously located in Wishek, including the eight-stall engine house, a rail depot that was built in Minneapolis and shipped to Wishek in sections (nd.gov), and the Soo Rail Line restaurant have all been razed. Moreover, the extant railroad bridge that was visible from the ROW (Feature 3) (Site 578) represents a standard design that has been modified due to wear and tear in order to meet the corridors operational needs. Therefore, Site 574 is not eligible for inclusion in the NRHP under Criterion C.

The proposed boundary for Site 574 (32LO00033) encompasses the rail corridor ROW, as well as the railroad bridges (Features 2 and 3 [Site 578]), that were historically utilized for the transportation of the train and its cargo (Figure 142). It total, this proposed boundary includes approximately 21.3 mi of rail line located within the survey area.

Determination of Effect: No Adverse Effect. Layout Options 1 and 2 of the current project propose to build a new wind farm, positioned along the proposed rail line corridor (Site 574) throughout much of the APE. For Layout Option 2, the rail corridor (Site 574) is directly adjacent to the recommended location of turbines 35–39 and 50–52 (Figure 143). Furthermore, Layout Option 2 proposes to construct portions of its electrical design beneath the rail corridor, connecting proposed turbine locations 36 and 37, as well as 50 and 51. The closest proposed turbine locations for Layout Option 1 are approximately 0.90 mi and 1.10 mi west of the rail line corridor. However, a segment of the proposed electrical design for Layout Option 1 will pass beneath Site 574 approximately 0.40 north of 78th Street SE. Since the proposed wind turbines are confined to the adjacent agricultural fields and the electrical design for Layout Options 1 and 2 will drill beneath the existing rail corridor, neither Layout Option 1 or 2 for the proposed Badger Wind Project will diminish the ability of Site 574 to convey its historical significance to the late nineteenth- and early twentieth-century transportation development in North Dakota. Furthermore, the completion of the Badger Wind Project, Layout Options 1 and 2, will not adversely affect the ability of Site 574 to convey its historical significance to the agricultural and commercial industry in Wishek during the first half of the twentieth century. As a result, Layout Options 1 and 2 of the proposed project will have no adverse effect to the NRHP-eligible historic rail line corridor (Site 574 [32LO00033]).

VII. CONCLUSIONS

In September and October, 2021, CRA personnel completed a Class I Literature Review and Class II Architectural Reconnaissance Inventory for the proposed Badger Wind Project in Logan and McIntosh Counties, North Dakota. The survey was conducted at the request of Kimberly Peters of DNV Energy USA, Inc., on behalf of Orsted.

The proposed Badger Wind Project includes two alternative layouts. Layout Options 1 and 2 both propose to construct wind turbines primarily within agricultural fields located to the northwest, northeast, and southwest of the town of Wishek, with some variation in turbine locations and

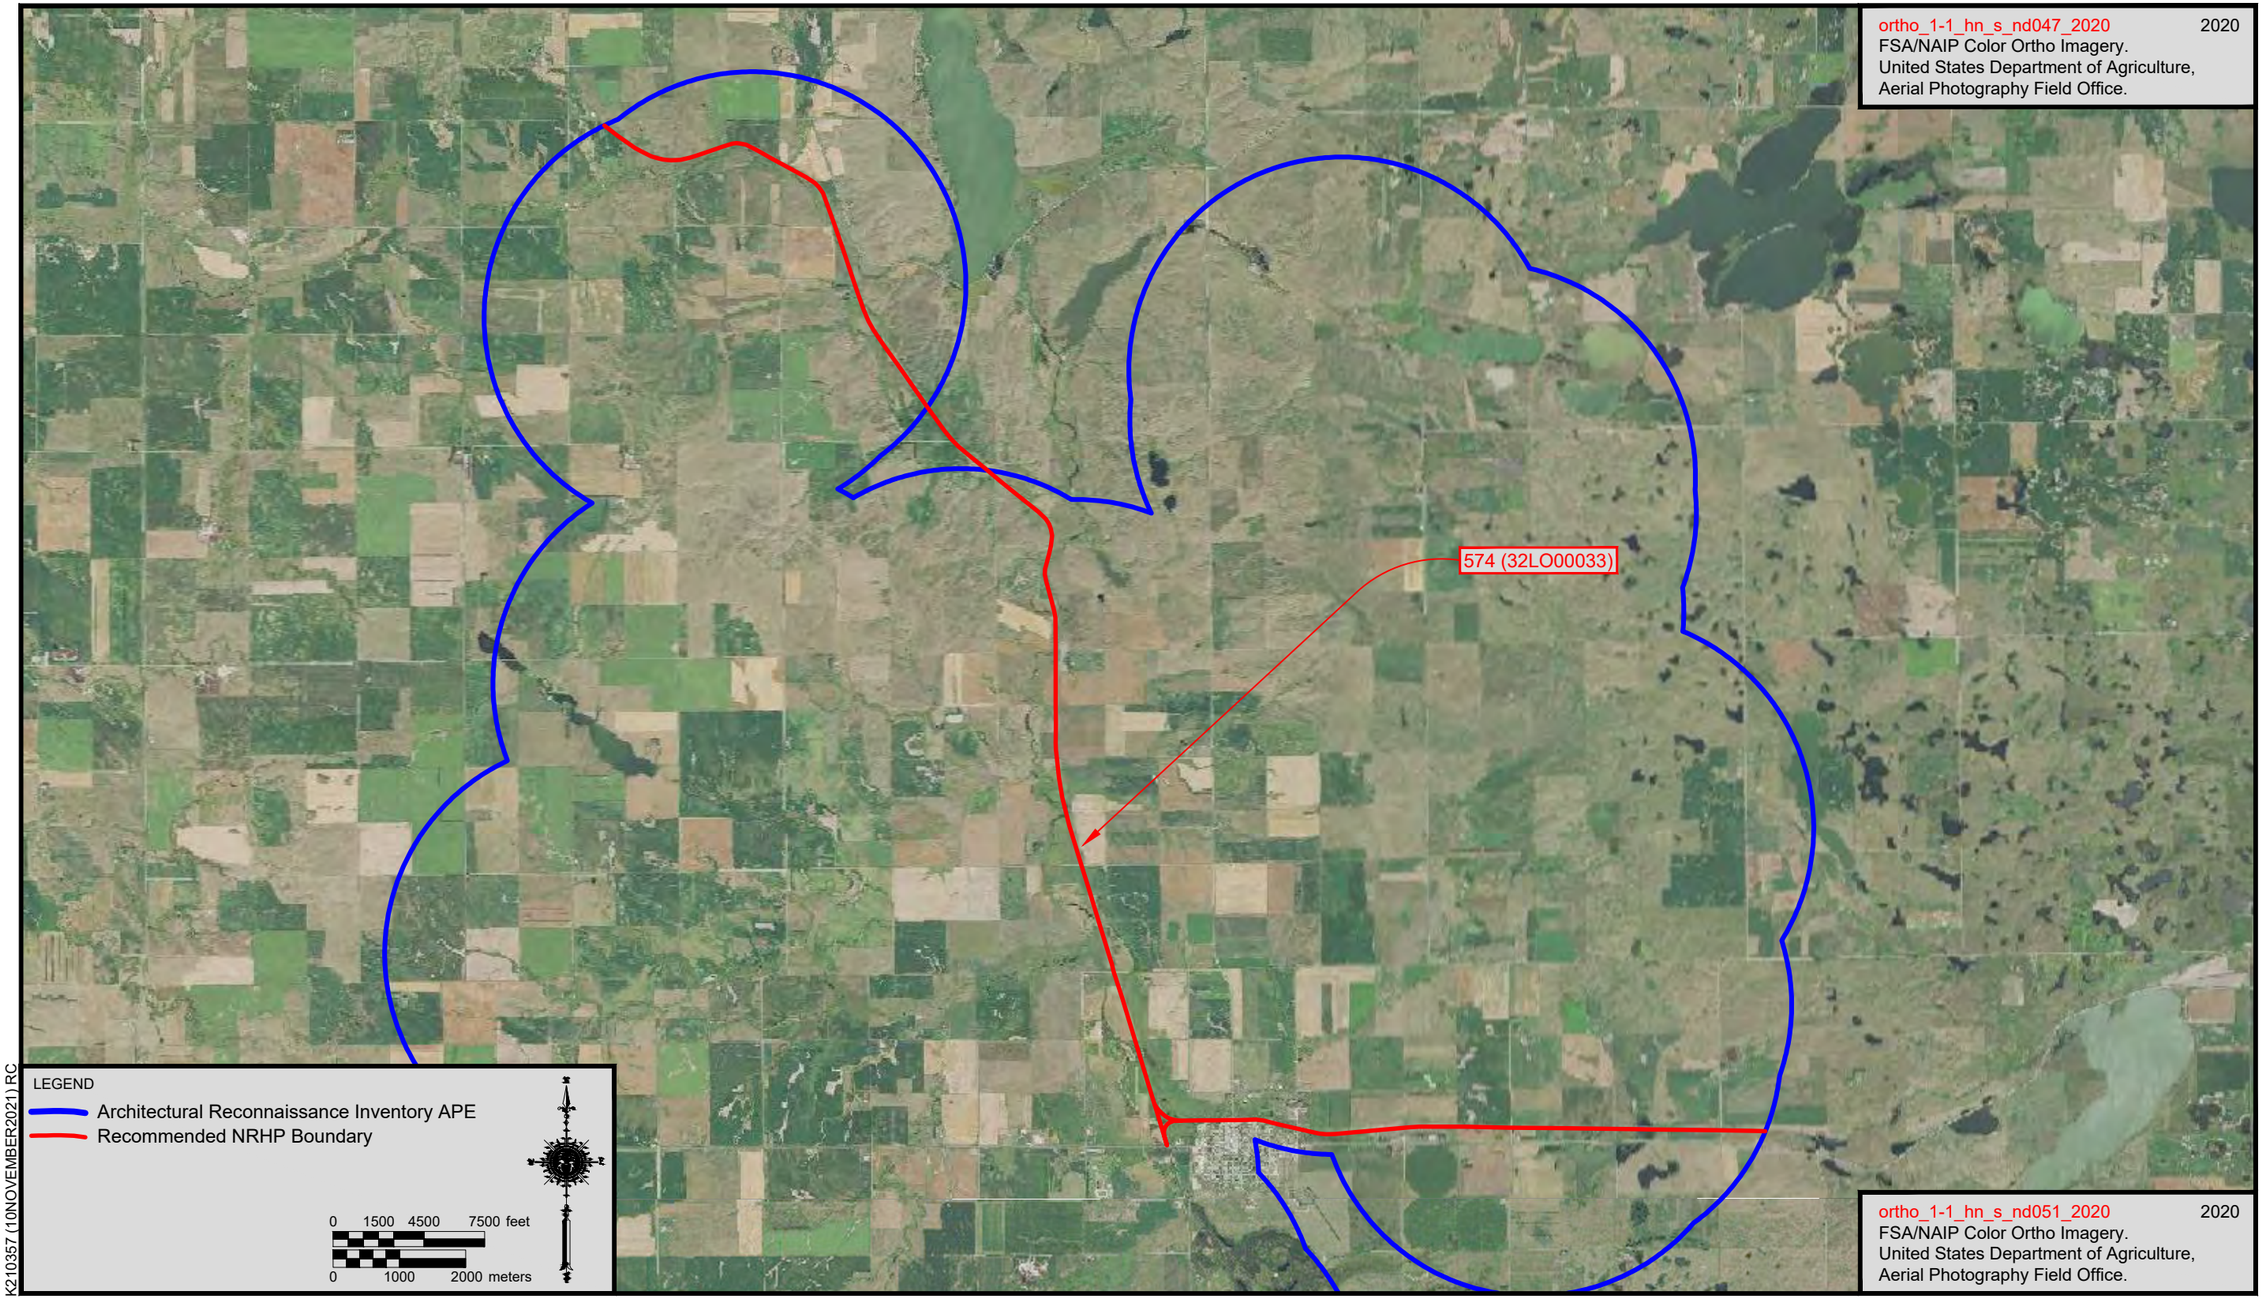

Figure 142. Site 574 (32LO00033): Recommended NRHP boundary for Site 574.

Page Intentionally Left Blank

Figure 143. Site 574 (32LO00033): Overview towards proposed turbine locations, looking southwest.

concentrations. Project Layout Option 1 comprises 94 turbine locations in Logan and McIntosh Counties; this includes up to 74 turbine locations that would be built to achieve full nameplate capacity and 20 alternate turbine locations. Layout Option 1 proposes its densest concentration of turbines northwest and southwest of Wishek. This layout option also proposes the construction of two laydown areas, a marshalling yard, and a batch plant near the intersection of 37th Avenue SE and 80th Street SE in McIntosh County. Project Layout Option 2 comprises 79 turbine locations in Logan and McIntosh Counties; this includes up to 74 locations that would be built to achieve full nameplate capacity and five alternate turbine locations. The greatest concentration of wind turbines proposed for Layout Option 2 are situated northwest of Wishek and would include the construction of the same laydown yards, marshalling area, and batch plant described above for Project Layout Option 1. Following the completion of both the architectural reconnaissance inventory and the subsequent report, it was determined that Layout Option 2 was the only plan under consideration and that Layout Option 1 was no longer being considered.

The purpose of the study was to identify historic architectural resources within the APE for the proposed Project and to evaluate each identified resource's eligibility for inclusion in the NRHP. Based on the ND SHPO Guidelines, the APE for wind turbines 400 ft or higher is defined as parcels within the proposed locations of the wind turbines, and a two-mile buffer extending outwards from each proposed turbine location. The APE for the proposed Project took into consideration both Layout Options 1 and 2.

Prior to initiating fieldwork, personnel initiated a review of records maintained by the ND SHPO, to determine if previously documented architectural resources 45 years of age or older were located in the APE for the proposed project. This review indicated that 23 aboveground cultural resources have been previously documented within the APE (32LO00026 [Site 41], 32LO00027 [Site 577], 32LO00033 [Site 574], 32LO00138 [Site 53], 32LO00139, 32MT00027 [Site 572], 32MT00028 [Site 123], 32MT00039 [Site 458], 32MT00043, 32MT00044 [Site 38],

32MT00055, 32MT00071 [Site 372], 32MT00072 [Site 344], 32MT00085 [Site 50], 32MT00087 [Site 331], 32MT00100, 32MT00282 [Site 111], 32MT00391, 32MT00425 [Site 360], 32MTX00021 [Site 99] 32MTX00022 [Site 89], 32MTX00063 [Site 235], 32MTX00020 [Site 86]). The review indicated that of the 23 historic above-ground resources identified within the APE, two (32MT00087 [Site 331] and 32MT00425 [Site 360]) were previously recommended eligible for inclusion in the NRHP. The remaining 21 previously recorded architectural resources have either not been fully evaluated for listing in the NRHP, or were previously determined not eligible for inclusion.

During the field survey, CRA personnel identified a total of 578 aboveground resources (Sites 1–578) within the APE, 18 of which (Sites 32LO00026 [Site 41], 32LO00027 [Site 577], 32LO00033 [Site 574], 32LO00138 [Site 53], 32MT00027 [Site 572], 32MT00028 [Site 123], 32MT00039 [Site 458], 32MT00044 [Site 38], 32MT00071 [Site 372], 32MT00072 [Site 344], 32MT00085 [Site 50], 32MT00087 [Site 331], 32MT00282 [Site 111], 32MT00425 [Site 360], 32MTX00021 [Site 99], 32MTX00022 [Site 89], 32MTX00063 [Site 235], 32MTX00020 [Site 86]) have been previously surveyed. Of the 23 cultural resources identified during the records review, five (32LO00139, 32MT00043, 32MT00055, 32MT00100, and 32MT00391) were determined to no longer be extant. In addition, the primary historic resource at 32MT00087 was determined to have been razed between 2010 and 2012. However, previously recorded historic architectural features associated with the site remain and were reinvestigated as part of the current Class II Architectural Reconnaissance Inventory. CRA recommends that Sites 1–82, 84–91, 93–330, 332–359, 361–393, 395–551, 553–573, and 575–577 are not eligible for listing in the NRHP under Criterion A, B, or C. Site 578 is recommended as not individually eligible for listing in the NRHP under Criterion A, B, or C. However, Site 578 was determined to be a contributing resource to Site 574 under Criteria A. CRA further recommends an undetermined status for Sites 83 and 92, as they were either not accessible or not visible in the field and could not be properly evaluated for NRHP eligibility; if later determined eligible for listing in the NRHP, the proposed project will not result in any adverse direct or indirect effects to those sites because of existing vegetative buffers, and distances from the proposed Project. CRA recommends that Sites 1–330, 332–359, 361–393, 395–551, 553–573, and 575–579 are not eligible for listing in the NRHP under Criterion A, B, or C. CRA personnel determined that 13 sites (Sites 1, 4, 21, 70, 115, 232, 311, 331, 360, 394, 397, 552, and 574) warranted a detailed evaluation in order to determine each site's eligibility for listing in the NRHP. After further examination, CRA further recommends Sites 1, 4, 21, 70, 115, 232, 311, and 397 are not eligible for listing in the NRHP under Criterion A, B, or C.

In addition, CRA recommends that five resources, Site 331 (32MT00087), Site 360 (32MT00425), Site 394 (32MT00435), Site 552 (32MT00437), and Site 574 (32LO00033) are eligible for listing in the NRHP. Site 331 is recommended eligible under Criteria A and C for its association with the development of Wishek during the first half of the twentieth century. Additionally, Site 331 is an excellent example of the use of the elliptical bottom form in McIntosh County. Site 360 is recommended eligible under Criteria A and C for its association with the WPA during the Great Depression, as well as the social development of Wishek throughout much of the twentieth century. Furthermore, Site 360 is an excellent example of the use of Art Morderne style architecture in the design of a WPA building in McIntosh County. Site 394 is recommended eligible under Criteria C as an excellent example of mid-twentieth-century Contemporary style architecture in McIntosh County. Site 552 is recommended eligible under Criteria A for its association with the WPA and the development of Wishek throughout much of the twentieth-century. Site 574 is recommended eligible under Criteria A for its association with the development of Logan and McIntosh Counties in terms of the railroad industry in the late nineteenth and first half of the twentieth-century. As a result of the loss of several resources within downtown Wishek, as well as infill and extensive alterations to many of

the remaining buildings, no historic districts are present within the town of Wishek. Therefore, CRA recommends that four architectural resources (Sites 360, 394, 552, and 574) are eligible for listing in the NRHP.

Neither Versions 14 or 16 for the proposed Badger Wind Project will directly impact the resources recommended as eligible for listing in the NRHP. Wind turbines from the Badger Wind Project, for both Layout Options 1 and 2, will likely be visible in the distance from the resources recommended eligible for listing in the NRHP. However, the visual impact of the wind turbines will not intrude upon their immediate setting or diminish any qualities that make them eligible. The qualities of the properties that warrants their listing in the National Register will not be diminished, thus CRA recommends a finding of No Adverse Effect for Layout Options 1 and 2 of the proposed Badger Wind Project. As was indicated above, following the completion of the architectural reconnaissance inventory and associated report, Layout Option 2 is now the only layout option being considered for the Badger Wind Project.

APPENDIX A. SURVEYED RESOURCES RECOMMENDED NOT ELIGIBLE

Page Intentionally Left Blank

BW Exhibit 14

Table 1. Surveyed Resources Recommended Not Eligible.

	Survey No.	Date	Name	Address	ND Survey #	Style	NRHP Assessment
	2	1952–1975	Farmstead	43rd Avenue SE	n/a	Modern residence and agricultural outbuildings	Not Eligible. The resource has no apparent significant historical associations. Due to the demolition of the historic residence, this property no longer has the integrity to convey its significance. The extant agricultural support buildings are a common construction type found throughout North Dakota. Furthermore, the site is not eligible as a farmstead because of the addition of new outbuildings and the replacement of the original farmhouse.
	3	circa 1913	Red Lake Community Cemetery	70th Street SE	n/a	Cemetery	Not Eligible. The resource has no apparent significant historical associations. This cemetery and the grave markers within are not excellent examples of a type, period, or method of construction and do not exhibit the works of a master or possess high artistic value.
	5	1952–1975	Agricultural buildings	70th Street SE	n/a	n/a	Not Eligible. The resource has no apparent significant historical associations. Due to the demolition of the historic residence, this property no longer has the integrity to convey its significance. The extant agricultural support buildings are a common construction type found throughout North Dakota.

BW Exhibit 14

	Survey No.	Date	Name	Address	ND Survey #	Style	NRHP Assessment
	6	1925–1952	Farmstead	73rd Street SE	n/a	Vernacular	Not Eligible. The resource has no apparent significant historical associations. Not an excellent example of a type, period, or method of construction and does not exhibit the works of a master or possess high artistic value. The extant agricultural support buildings are a common construction type found throughout North Dakota. In addition, the property does not constitute a NRHP-eligible farmstead. The residence and outbuildings exhibit a typical, unremarkable arrangement on the landscape.
	7	1952–1975	Quonset Hut	Along Burnstad Avenue	n/a	Quonset Hut	Not Eligible. The resource has no apparent significant historical associations. Not an excellent example of a type, period, or method of construction and does not exhibit the work of a master or possess high artistic value. Quonset huts are a common agricultural outbuilding type found throughout North Dakota.

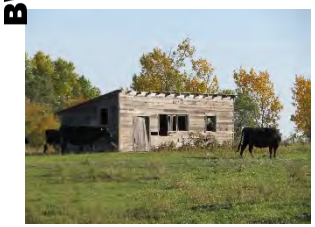

BW Exhibit 14

	Survey No.	Date	Name	Address	ND Survey #	Style	NRHP Assessment
	8	1925–1952	Farmstead	73rd Street SE	n/a	Vernacular	Not Eligible. The resource has no apparent significant historical associations. Not an excellent example of a type, period, or method of construction and does not exhibit the works of a master or possess high artistic value. The residence features replacement materials and windows along with multiple additions. Agricultural outbuildings represent common construction types found throughout North Dakota.
	9	1952–1975	House	Burnstad Avenue	n/a	Linear Ranch	Not Eligible. The resource has no apparent significant historical associations. Not an excellent example of a type, period, or method of construction and does not exhibit the works of a master or possess high artistic value. Due to the infilling and installation of replacement windows and door, this structure no longer has the integrity to convey its significance.
	10	1925–1952	Agricultural outbuildings	73rd Street SE	n/a	Transverse Frame Barn	Not Eligible. The resource has no apparent significant historical associations. Due to the demolition of the historic residence, this property no longer has the integrity to convey its significance. Extant agricultural support buildings are a common construction type found throughout North Dakota.

BW Exhibit 14

	Survey No.	Date	Name	Address	ND Survey #	Style	NRHP Assessment
	11	1952–1975	Residence	Along Burnstad Avenue	n/a	Bi-level	Not Eligible. The resource has no apparent significant historical associations. Not an excellent example of a type, period, or method of construction and does not exhibit the works of a master or possess high artistic value. Multiple additions have increased the residence's footprint.
	12	1925–1952	Farmstead	43rd Avenue SE	n/a	Linear Ranch	Not Eligible. The resource has no apparent significant historical associations. Due to the demolition of the historic residence, this property no longer has the integrity to convey its significance. Extant agricultural support buildings are a common construction type found throughout North Dakota. The modern house also includes replacement siding.
	13	1925–1952	Commercial building	Along Burnstad Avenue	n/a	Vernacular	Not Eligible. The resource has no apparent significant historical associations. Not an excellent example of a type, period, or method of construction and does not exhibit the works of a master or possess high artistic value. The building's integrity has been compromised by the use of replacement cladding and doors. Moreover, window bays have been covered with standing seam metal panels. This building no longer has the ability to convey its significance.

BW Exhibit 14

	Survey No.	Date	Name	Address	ND Survey #	Style	NRHP Assessment
	14	1925–1952	Agricultural outbuildings	74th Street SE	n/a	n/a	Not Eligible. The resource has no apparent significant historical associations. Due to the loss of its historic residence, this property no longer has the integrity to convey its significance. Extant agricultural support buildings are a common construction type found throughout North Dakota.
	15	1952–1975	Barn	Along Burnstad Avenue	n/a	n/a	Not Eligible. The resource has no apparent significant historical associations. Not an excellent example of a type, period, or method of construction and does not exhibit the works of a master or possess high artistic value.
	16	1925–1952	Agricultural outbuildings	43rd Avenue SE	n/a	n/a	Not Eligible. The resource has no apparent significant historical associations. Due to the demolition of the historic residence, this property no longer has the integrity to convey its significance. Extant agricultural support buildings are a common construction type found throughout North Dakota.

BW Exhibit 14

	Survey No.	Date	Name	Address	ND Survey #	Style	NRHP Assessment
	17	1925–1952	Farmstead	71st Street SE	n/a	House and agricultural outbuildings	Not Eligible. The resource has no apparent significant historical associations. Not an excellent example of a type, period, or method of construction and does not exhibit the works of a master or possess high artistic value. The residence features replacement materials, such as vinyl siding and windows. Agricultural support buildings are a common construction type found throughout North Dakota.
	18	1925–1952	House	41st Ave SE	n/a	Vernacular	Not Eligible. The resource has no apparent significant historical associations. Not an excellent example of a type, period, or method of construction and does not exhibit the works of a master or possess high artistic value. Extant ancillary structures are partially collapsed.
	19	1925–1952	Farmstead	35th Avenue SE	n/a	Vernacular	Not Eligible. The resource has no apparent significant historical associations. Not an excellent example of a type, period, or method of construction and does not exhibit the works of a master or possess high artistic value. The residence features replacement windows and doors along with the enclosure of the facade porch.

BW Exhibit 14

	Survey No.	Date	Name	Address	ND Survey #	Style	NRHP Assessment
	20	1925–1952	Windmill	41st Ave SE	32L0111	n/a	Not Eligible. The resource has no apparent significant historical associations. Not an excellent example of a type, period, or method of construction and does not exhibit the works of a master or possess high artistic value. Portions of the blade are missing.
	22	1952–1975	Farmstead	41st Avenue SE	n/a	Compact Ranch	Not Eligible. The resource has no apparent significant historical associations. The residence is not an excellent example of a type, period, or method of construction and does not exhibit the works of a master or possess high artistic value. Features replacement vinyl windows and siding. Agricultural buildings are a common construction type found throughout North Dakota. Some outbuildings feature additions.
	23	1952–1975	Radio tower	35th Avenue SE	n/a	n/a	Not Eligible. The resource has no apparent significant historical associations. Not an excellent example of a type, period, or method of construction and does not exhibit the works of a master or possess high artistic value. The radio tower is a common construction type found throughout North Dakota.

BW Exhibit 14

	Survey No.	Date	Name	Address	ND Survey #	Style	NRHP Assessment
	24	1925–1952	Agricultural outbuildings	78th Street SE	n/a	n/a.	Not Eligible. The resource has no apparent significant historical associations. Extant agricultural support buildings are a common construction type found throughout North Dakota. These buildings are partially collapsed as well.
	25	1952–1975	Farmstead	35th Avenue SE	n/a	n/a	Not Eligible. The resource has no apparent significant historical associations. Due to the demolition of the historic residence, this property no longer has the integrity to convey its significance. Extant agricultural support buildings are a common construction type found throughout North Dakota.
	26	1952–1975	Concrete bridge	40th Avenue SE	n/a	n/a	Not Eligible. The resource has no apparent significant historical associations. Not an excellent example of a type, period, or method of construction and does not exhibit the works of a master or possess high artistic value.

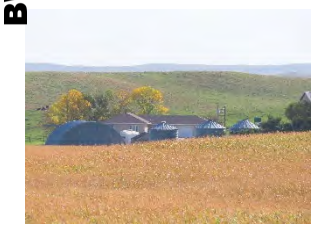

BW Exhibit 14

	Survey No.	Date	Name	Address	ND Survey #	Style	NRHP Assessment
	27	1952–1975	Farmstead	71st Street SE	n/a	Vernacular	Not Eligible. The resource has no apparent significant historical associations. Not an excellent example of a type, period, or method of construction and does not exhibit the works of a master or possess high artistic value. Several of the modern agricultural outbuildings seem to have replaced earlier outbuildings based on aerial imagery, significantly compromising the farmstead's ability to convey its significance as it has lost its integrity.
	28	Circa 1926	St. Luke Lutheran Cemetery	40th Avenue SE	n/a	Cemetery	Not Eligible. The resource has no apparent significant historical associations. This cemetery and the grave markers within are not excellent examples of a type, period, or method of construction and do not exhibit the works of a master or possess high artistic value.
	29	1925–1952	House	823 2nd Avenue North	n/a	Vernacular	Not Eligible. The resource has no apparent significant historical associations. Due to the installation of replacement windows and door, along with replacement siding, this structure no longer has the integrity to convey its significance.

BW Exhibit 14

	Survey No.	Date	Name	Address	ND Survey #	Style	NRHP Assessment
	30	1952–1975	House	40th Avenue SE	n/a	Vernacular	Not Eligible. The resource has no apparent significant historical associations. Not an excellent example of a type, period, or method of construction and does not exhibit the works of a master or possess high artistic value. Includes replacement windows, doors, and siding along with additions.
	31	1952–1975	House	Along W Cabin Avenue	n/a	Vernacular	Not Eligible. The resource has no apparent significant historical associations. Not an excellent example of a type, period, or method of construction and does not exhibit the works of a master or possess high artistic value.
	32	1952–1975	Farmstead	40th Avenue SE	n/a	Ranch house	Not Eligible. The resource has no apparent significant historical associations. House it not an excellent example of a type, period, or method of construction and does not exhibit the works of a master or possess high artistic value. Agricultural support buildings are a common construction type found throughout North Dakota.

BW Exhibit 14

	Survey No.	Date	Name	Address	ND Survey #	Style	NRHP Assessment
	33	1952–972	Farmstead	37th Avenue SE	n/a	Agricultural outbuildings and modern house	Not Eligible. The resource has no apparent significant historical associations. Due to the demolition of the historic residence, this property no longer has the integrity to convey its significance. Extant agricultural support buildings are a common construction type found throughout North Dakota.
	34	1952–1975	Wishek Livestock Market	40th Avenue SE	n/a	n/a	Not Eligible. The resource has no apparent significant historical associations. The commercial building is not an excellent example of a type, period, or method of construction and does not exhibit the works of a master or possess high artistic value. The commercial building features several additions. Agricultural support buildings are a common construction type found throughout North Dakota.
	35	1925–1952	Farmstead	73rd Street SE	n/a	Vernacular	Not Eligible. The resource has no apparent significant historical associations. The residence is not an excellent example of a type, period, or method of construction and does not exhibit the works of a master or possess high artistic value. Agricultural support buildings are a common construction type found throughout North Dakota.

BW Exhibit 14

	Survey No.	Date	Name	Address	ND Survey #	Style	NRHP Assessment
	36	1925–1952	Farmstead	79th Street SE	n/a	Vernacular	Not Eligible. The resource has no apparent significant historical associations. The resource has no significant historical associations. House it not an excellent example of a type, period, or method of construction and does not exhibit the works of a master or possess high artistic value. Windows feature replacement materials and the façade porch has been enclosed. Agricultural support buildings are a common construction type found throughout North Dakota. Several windows on the outbuildings have been boarded over.
	37	1952–1975	Pole barn	37th Avenue SE	n/a	n/a	Not Eligible. The resource has no apparent significant historical associations. Not an excellent example of a type, period, or method of construction and does not exhibit the works of a master or possess high artistic value.

BW Exhibit 14

	Survey No.	Date	Name	Address	ND Survey #	Style	NRHP Assessment
	38	1925–1952	Farmstead	80th Street SE	32MT44	Vernacular	Not Eligible. The resource has no apparent significant historical associations. House is not an excellent example of a type, period, or method of construction and does not exhibit the works of a master or possess high artistic value. Features replacement aluminum siding, vinyl windows, replacement roofing and doors. Altered façade porch. Agricultural support buildings are a common construction type found throughout North Dakota.
	39	1952–1975	Farmstead	37th Avenue SE	n/a	Compact Ranch	Not Eligible. The resource has no apparent significant historical associations. House is not an excellent example of a type, period, or method of construction and does not exhibit the works of a master or possess high artistic value. Agricultural support buildings are a common construction type found throughout North Dakota.
	40	1952–1975	Farmstead	80th Street SE	n/a	n/a	Not Eligible. The resource has no apparent significant historical associations. Due to the demolition of the historic residence, this property no longer has the integrity to convey its significance. Agricultural support buildings are a common construction type found throughout North Dakota.

BW Exhibit 14

	Survey No.	Date	Name	Address	ND Survey #	Style	NRHP Assessment
	41	1952–1975	Farmstead	36th Avenue SE	32LO26	n/a	Not Eligible. The resource has no apparent significant historical associations. Due to the demolition of the historic residence, this property no longer has the integrity to convey its significance. Grain bins are a common construction type found throughout North Dakota.
	42	1952–1975	Substation	80th Street SE	n/a	n/a	Not Eligible. The resource has no apparent significant historical associations. Not an excellent example of a type, period, or method of construction and does not exhibit the works of a master or possess high artistic value.
	43	Circa 1907	Salem Lutheran Cemetery	34th Avenue SE	n/a	n/a	Not Eligible. The resource has no apparent significant historical associations. This cemetery and the grave markers within are not excellent examples of a type, period, or method of construction and do not exhibit the works of a master or possess high artistic value.

	118	1925–1952	Farmstead	81st Street SE	n/a	n/a	Not Eligible. The resource has no apparent significant historical associations. Not an excellent example of a type, period, or method of construction and does not exhibit the works of a master or possess high artistic value. The residence is missing its window sashes and is in a state of disrepair. Therefore, due to its blighted state, this dwelling no longer has the integrity to convey its significance. In addition, the property does not constitute a NRHP-eligible farmstead. The residence and outbuildings exhibit a typical, unremarkable arrangement on the landscape.
	119	1925–1952	Agricultural Buildings	85th Street SE	n/a	n/a	Not Eligible. The resource has no apparent significant historical associations. Due to the demolition of the historic residence, this property no longer has the integrity to convey its significance. The extant historic outbuildings are not excellent examples of a type, period, or method of construction and do not exhibit the works of a master or possess high artistic value. The current residence is comprised of a mobile home.

	Survey No.	Date	Name	Address	ND Survey #	Style	NRHP Assessment
	120	1925–1952	Agricultural Buildings	Highway 3	n/a	n/a	Not Eligible. The resource has no apparent significant historical associations. Due to the demolition of the historic residence, this property no longer has the integrity to convey its significance. The extant historic outbuildings are not excellent examples of a type, period, or method of construction and do not exhibit the works of a master or possess high artistic value.
	121	1925–1952	Agricultural Buildings	85th Street SE	n/a	n/a	Not Eligible. The resource has no apparent significant historical associations. Due to the demolition of the historic residence, this property no longer has the integrity to convey its significance. The extant historic outbuildings are not excellent examples of a type, period, or method of construction and do not exhibit the works of a master or possess high artistic value.
	122	1952–1975	Commercial Building	Highway 13	n/a	Vernacular	Not Eligible. The resource has no apparent significant historical associations. Not an excellent example of a type, period, or method of construction and does not exhibit the works of a master or possess high artistic value.
