SQUARE BUTTE ELECTRIC COOPERATIVE

TEN-YEAR PLAN

INTRODUCTION

Square Butte Electric Cooperative was organized in May 1972 as a cooperative corporation under the laws of the State of North Dakota.

Square Butte was organized principally to finance and arrange for the construction and operation of the Milton R. Young Unit 2, a 455 MW steam electric generator and a 463 mile \pm 250 kilovolt D.C. transmission line from its generating unit (located near Center, North Dakota) to Duluth, Minnesota.

Currently, 82.00 percent of the electrical energy produced by Young 2 is sold to Minnkota and the balance is sold to Minnesota Power.

On December 31, 2009 Square Butte sold its D.C. line to Minnesota Power. As part of the sale of the D.C. line, Minnkota began receiving an increasing allocation of Young 2 electrical output beginning in mid-2014 when a new 345 kV transmission line from Center to Grand Forks was completed. Minnkota's allocation will increase, in varying increments, until 2026, at which point Minnkota will receive 100 percent of the electrical energy produced by Young 2.

SECTION C: Proposed Energy Conversion Facilities on Which Construction is Intended Within the Ensuing Five Years

Minnkota's largest generation resource continues to be the Milton R. Young Station. Recognizing the ever increasing pressure on utilities to reduce carbon dioxide (CO₂) emissions, Minnkota has been leading the development of Project Tundra. The goal of Project Tundra is to install carbon capture and storage technologies at the Young Station to capture and permanently store the CO₂ more than a mile underground in geologic formations. The carbon capture system will utilize Fluor Corporation's Econamine FG PlusSM technology and will be sized to capture more than 90% of the CO₂ emissions from Unit 2. A total of about 4 Million tonnes/year of CO₂ would be captured and permanently sequestered from the atmosphere, which is the equivalent of permanently removing about 800,000 vehicles from the road.

Another driver for Minnkota's pursuit of Project Tundra is to create a new benchmark – a large-scale demonstration at an existing plant that can be commercially and economically replicated across the region, the country, and the world. Minnkota recognizes that carbon regulations present a longer-term risk to maintaining affordable and reliable resources that emit CO₂. If constructed, Project Tundra could help provide continued reliability and affordability of electricity from the power plant, while also preserving prior plant infrastructure investment. Using a technology-driven solution can help to reduce risk to our member-owners given the uncertainty of future CO₂ regulations.

Project Tundra has received important bi-partisan support, and has partnered with federal and State of North Dakota partners to advance its research and development. Leveraging state and federal funding, the Project Tundra team has now completed the Front-End Engineering & Design, or FEED study for the carbon capture system. Additional studies of optimizations and potential cost-saving opportunities are expected to continue through the end of 2022. The Class VI CO₂ storage facility achieved final permitting through the ND Division of Mineral Resources, and was granted final approval by the ND Industrial Commission on January 21, 2022. Minnkota continues to seek outside investment in the project, entities that can harness applicable tax credits for carbon capture projects, so that the financial risk to

Minnkota members can be limited. Presently, Project Tundra is expected to result in ~530 MW net of near “zero carbon” power for sale to our members with limited or no increase in cost, while still enabling continued use of North Dakota’s abundant, reliable and low-cost lignite coal resources as well as ensuring the capital investment in the Young Station can continue to be utilized. More details of Project Tundra can be found at www.projecttundrand.com
