CO2 Pipeline Project Concerns  
Gaylynn Becker, Ph.D.  
Bismarck, ND

PSC Commission please obtain the following answers in making a decision on this pipeline.

1. How are these costs being paid for?
  - a. Is it with more national debt?
2. Who is making the money, And how much money are they making?
3. What are the benefits for North Dakota?
4. What are the risks and pitfalls for North Dakota?
5. Who's paying for training expenses and equipment for first responders such as: firefighters, law enforcement, ambulance personnel, etc.?
6. Who's liable for an accidental leak in one year from now 10 years from now or 15 years from now?
7. Do we or you want to pass this liability to our descendants?
8. How will the value of the land along this pipeline be affected?
9. If there's a leak, what will happen to the value of my house here in Bismarck?
10. Why didn't the pipeline company educate the public, prior to Paying land-owners access on their land, prior to this point in time?
11. Where were our state leaders in providing us this information reflected in testimony as well as in my questions Prior to today?
12. I've seen people bully other people of all ages. Is this pipeline company bullying us by threatening land-owners with lawsuits if they don't sign over their land access?
13. Is this pipeline company also bullying: townships, counties, cities, and the state of North Dakota in a similar manner?
14. Is this just the first carbon dioxide pipeline that will be laid here?
15. How many other pipelines will follow with even bigger threats of lawsuits?
16. If we allow this pipeline to go through and with all the dangers of which we are now aware, how will we stop future pipelines with equally or more dangerous exposures? If you allow them to lay the pipe then lay them 10 feet down to reduce risk.
17. What is the purpose of the pipeline?
18. Is this really preventing CO2 from getting high into the atmosphere or stratosphere?
19. We need to seriously ask ourselves, "What are we doing?"

The rest of the country and world are making North Dakota a dangerous garbage waste dump! It'll be a threat to not only us, but our children, our grandchildren, and our great grandchildren, and so on.

I am appalled that these green energy renewable resource dangerous waste products are going to be dumped in our backyard here in North Dakota. Oh, where are other so-called green energy waste products going to be dumped? Your decision will make a precedent. Again, "What in blazes are we doing!"
