

COYOTE CREEK MINE

October 3, 2025

Mr. Jonathan Emmer
Director Reclamation Division
Public Service Commission
600 East Boulevard Avenue
Department 408
Bismarck, ND 58505-0480

Dear Mr. Emmer:

Coyote Creek Mine is electronically submitting Revision 14 to Surface Coal Mining Permit NACC-1302. Revision 14 updates the permit to include modified post-mining topography in sections 23-26 & 36, T143N, R89W, section 31, T143N, R88W, and section 6, T142N, R88W. It also revises the design of Pond P24-06 and adds design plans for diversion D25-01. The post-mine section was updated to incorporate a slightly modified reclaimed native grassland seed mix. The native grassland ecosites were finalized. Native grassland and cropland acres were swapped in Sections 24 and 25 to create larger contiguous blocks of native grassland and cropland. This change allows for proper management of these tracts. There was no overall change in acres of cropland or native grassland, and all land use adjustments were discussed and approved by the landowner. The final location of the Sec. 36 farmer access road was added to the permit.

Please contact me with any questions.

Sincerely,

COYOTE CREEK MINING COMPANY, L.L.C.

Jeremy Eckroth
